Christmas seems a long time back, but this is the first opportunity we've had to thank many of you for the Christmas cards which rolled in. **Alex** and **Joan Sarjeant** made their greeting simply a newsletter on the Sarjeants to all their friends—a novel and pleasing idea. From it, we learn that the family has moved from Levittown to a big, comfortable home in Newtown, Conn.—smack in the middle of Alex's territory for Pelton and Crane dental suppliers. Also of note was the arrival of Dean, to join his four brothers and sisters.

From the home with the charming address, Stove Pipe Road, Voorheesville, N. Y., **Pete Frederick** penned a Christmas note of a third pair of pattering feet expected in March. Pete's one of these traveling men—eight of the last 17 weeks on the west coast, and this is apparently a normal thing. He's with General Electric.

Midwest '51's got detailed instructions on how to get to a Dec. 27 blast organized by **Bob Bowler, Dave Hilton** and **Pete Henderson** at Pete's home in Winnetka. We haven't heard the results yet—the Chicago press carried no riot reports—but there was a suspicious note in the nationwide weather table for Dec. 28: Winnetka was 10 degrees warmer than surrounding communities.

And speaking of Bowler, we have a hunch he's gone into real estate up there in Lake Bluff. He reports with straight face that **Jim** and **Joan Culberson** just settled there and that **Chip Blomgren** has a house deal "working." But right now, the Bowlers are more famous in another respect in those parts. Seems the baptism of one William Grier Bowler II was "one of the noisiest exhibitions in the history of the Episcopal Church." 'Twas witnessed by Godparents **Herb Knight** and the Hiltons.

Elsewhere about the nation... **Neal Crampton,** a technical representative for E. I. du-

Pont of Wilmington, Del.... **Brookie Dodge,** a production supervisor with Polaroid in Waltham, Mass. (bet there's a ski rack on his car) and **Dick Terry,** a like position with the same outfit in Cambridge... **Dick MacDonald,** Hotpoint district sales manager in Nashville... **Bob Maguire,** teaching at Duke ... **Ed Mansfield,** asst. eccy prof at Carnegie Tech... **Dr. Al Tarlov,** research at U. of Chicago... **George Marshall,** dealing in IBM computer systems from Toledo... **Walt Schreiner,** GE accounting specialist in Schenectady... **Al Streelman,** Schenley Distillers industrial relations manager, Cincinnati... **Dr. Bob Kent** in Rochester, Minn. (Mayo Clinic perhaps?)... **Gerald McMahon** in Grand Union management, Scarsdale.

'52

Secretary, RAYMOND J. BUCK JR.
5 South Park St., Hanover, N. H.

Treasurer, EDWARD J. FINERTY JR.
33 Dean St., Attleboro, Mass.

This has been a delightfully cold and snowy winter for Hanover. The first flakes fell in early December and we've had a ground cover ever since. The Dartmouth Skiway up at Holt's Ledge in Lyme opened in mid-December and has been drawing bigger and bigger crowds. Hope you get a chance to see the new color film on the Skiway.

The Bucks have enjoyed the snow and even the 20 degree below zero temperatures recorded in December despite the fact that it played havoc with the construction schedule of our new Hanover home.

December has also been a big month for births. **Dek Davidson's** handsome, unique Christmas card gave the stork equal billing with St. Nick in announcing the birth of Russell Armstrong Davidson on December 10. This is the second son for Dek and Louise. Dek handles New York sales for Timber Structures, Inc. during business hours and is on the Board of Governors of the Dartmouth Club of New York in "off" hours. The combination often means a late train out to Thornwood, N. Y.

Over in the marble capital of the nation, Proctor, Vt., the Santa stork brought **Walt and Betsy Lashar** a young lady, Susan Elizabeth, born December 12. Young Susie has two older brothers, Waltie and Timmy. Walt Sr.'s with the Proctor Trust Company.

Bill and Dottie Price also switched sexes with the birth of William Russell Price on December 8. The two previous Price children were girls, Patty and Cynthia. Bill's with Price-Waterhouse in the Boston area.

The big news in Worcester, Mass., banking circles is the promotion of one **Robert Brace** to assistant treasurer of the Worcester County Trust Company. Bob was a credit analyst. One item I stumbled over in Bob's record, which I don't think was announced to the class, was his election last spring as secretary for the Southworth Machine Company of Portland, Me. Bob's a member of the Worcester Young Businessmen's Association and the University Club of Worcester.

Lt. **Bill Sweet,** U.S. Navy, reports that he and Joan will be heading back to the States in 1959 after a long stay in Subic Bay, the Philippines. An extra passenger is expected to make the trip back with them.

The Rev. **Ed Sumner** has received a new assignment. He began duties on Jan. 1 as vicar of St. Luke's Episcopal Church in Woodstown, N. J., and as rector of St. Stephen's Episcopal Church in Mullica Hill, N. J. He'll be living in Woodstown at 33 East Grant Street.

Another classmate in the ministry, **Dave Duncombe,** was scheduled for examination for ordination, and ordination to the Christian ministry, on Dec. 14 in the First Con-

Lt. Sumner E. Moulton '52 USNR receives a letter of commendation from Rear Admiral Joseph M. Carson, chief of naval air basic training, for his outstanding service in the successful rescue of a downed pilot from the Gulf of Mexico on December 12.

gregational Church of Watertown, Conn. Dave has his Master's Degree from Columbia and has also studied at Union Theological Seminary and American University in Washington, D. C. He's currently working on his Ph.D. in religion. He's been chaplain at Taft School for the past three years, also teaching courses in religion and social studies.

The engagement of Patricia Maisel of Buffalo, N. Y., and **Bob Cotsen** was announced recently in the New York Times. Bob is currently stationed in Wiltshire, England, as a captain in the Air Force Medical Corps. He gained his medical degree from Harvard in '56 and recently completed his residency at Boston City Hospital. His fiancée was in the Class of 1957 at Smith and was with the American Cancer Society in Boston.

Joe Novak has left his Navy days behind and is now living and working in New York City. Another ex-serviceman now back in the civilian law field is **Buzz Barton.** Buzz is living in Everett, Mass., a cross-country hop after service days in San Francisco.

Quaker Oats has assigned **Bob Ash** to Productos Quaker, S.A. which places him in Cali, Colombia, South America. The address is Apartado Aereo 2074.

Randy Nubel has left Garden City, Long Island, for the University of Texas in Houston where he's in educational administration according to the information I've received. Good luck, pardner. Another long distance mover is **Dave Springer** who reversed the national population trend to the west by moving from Mason City, Iowa, to Westchester County in New York. His new address is 31 Munson Place, Yorktown Heights.

Bill Stewart, however, offset the east's gain in Springer by shifting from South Bend, Ind., to West Covina, Calif. His new home is on 814 Susanna Avenue.

Another '52 giving up Navy blue for civilian days is Dr. **Sum Moulton** who has left Uncle Sam's service in Florida in time to enjoy winter in Portland, Maine.

This month we close with a reminder that a complete file is kept on the class by your secretary, and it contains all the information appearing in the magazine and newsletters. If you want up-to-date information on someone, just drop me a line. And if you're not quite sure that we've got all the pertinent info on your kids, job, etc., send that along too.

'53

Secretary,
FREDERICK H. STEPHENS JR.
1050 Parker, Detroit 14, Mich.

Treasurer, CHARLES B. BUCHANAN
1404 Potato Point Rd., Appleton, Wis.

At its recent meeting in October 1958, the Class Executive Committee strongly felt that a current class directory would be appreciated after the buffeting winds of the first five years had been quelled. The strong administrative team of **Tom Bloomer, Ted Spiegel,** and **Bob Henderson** are responsible for bringing us this completed list. Our thanks go to them for a fine job. It is sincerely hoped that this list will be one more tool to continue the excellent class esprit in the months just ahead.

Santa Claus made his special rounds, with his friend the Stork, to three '53 homes just prior to Christmas. Prancer escorted Debra Beth on November 25 into a crib in the **Jack Levine** household, and Vixen bounded with joy over the **Clery** threshold to present Howard Kingsbury Clery III on December 5, only to be followed by Cupid racing past the missile guards to announce the arrival of Kathleen on December 6 to **Paul and Joan McConnell** in Los Alamos, N. M. "But wait a minute," Santa says, "I also wish to announce that last June I journeyed on water skis to **Al and Patty Ives'** to deliver Paul Brenner on June 17." Two grand boys for the Ives' now, both in training for the Big Green, says Patty.

From Springfield, Mass., comes the announcement that **Bill Craven** has joined the staff of Paine, Webber, Curtis. Bill previously had been with the New York Telephone Co. and more recently administrative assistant to the sales manager of the Holyoke Division of the Worthington Corp. Bill and Barbara make their home in Easthampton, Mass. Just recently **John Peterson** was appointed a field engineer for the Norton Co. in their Philadelphia district office. John joined this outstanding abrasive grinding firm in 1954 after receiving his degree from Tuck. **Wally Ashnault** was recently admitted to the New York Bar Association which makes wife Sally and all of us very proud. Congratulations and best wishes to you gentlemen.

Let the wind blow, let it rain and snow and engagement and wedding news will follow. First flurry-Dorine Joyce Ackerman's engagement to **Harvey Medlinsky** in New York. Dorine is a graduate of New York University and Yale School of Drama. She is currently a costume designer for several TV shows. A February wedding is planned. And in November **Jim Porath** broke the ice and took Jean Priscilla Murphy as his bride in Lynn, Mass. A reception was later held at the Boston Yacht Club in Marblehead. A colorful usher corps included the names of one **Paul Paganucci** and **Wally Ashnault.** Jean is a graduate of Simmons College and Jim is now a partner in the accounting firm of Thomas B. Donnelly & Co. The home fires will burn in Marblehead.

BITS OF BANTER — **Larry Barnett** with Minneapolis-Honeywell in Minneapolis; **John Becher,** a town planning consultant in Rye, N. Y.; **Capen Farmer,** an advertising copywriter with the F. W. Dodge Corp. in New York; **Al Kraus** teaching at the Viewport School in Amenia, N. Y.; **Bob Nessen** associated with the law firm of Dewey, Ballentine, Bushby, Palmer, and Wood in New York; **Jim Oberlander** with the Northern Trust Co. in Chicago; **John Auerbach,** a resident in urology at the Stanford University Hospital in San Francisco; and **Walt Gerbereaux** is associated with the Fruit Dispatch Co. in Cincinnati as a produce merchandising representative.

Bye for now — and Happy Snowfaring for those in the Arctic belt.

'54

Secretary, WILLIAM H. MANSFIELD
2457 39th Place, N.W.
Washington 7, D. C.

Treasurer, LT. BENJAMIN J. BOWDEN
109 Corning St., Beverly, Mass.

"...The wolfwinds are wailing at the doorways..." as we go to press this month. The slopes have been good, and it's been mighty cold. So if you are located near **George and Mary Brooks** at Boston University's African Studies program or **Bobby McGrath** in his new general insurance—"McGrath Agency"—on North Main St. in Laconia, N. H., you are probably having another winter of fine skiing.

If you find yourself around **Jerry Evans** at the Woodrow Wilson School at Princeton or with **Bill Grover,** heeling for an MBA at Wharton, University of Pennsylvania, most likely you don't have the time to wax the boards. If you are anywhere near **Jim Greenwood** in flight operations aboard the carrier "Forrestal" or sitting in classes with Banaras Hindu University student **Frank Van Aalst** in Banaras, India, you have probably forgotten what a T-bar looks like.

Frostbite threatened the Executive Committee at its annual gathering in the New York City Dartmouth Club just before Christmas. Ben Bowden, Don Belcher, Clint Gaylord, John Heston, John Heyn, Art Patterson, Skip Weymouth, Rod Rockefeller, Perry Davis, Bill Rogers and your correspondent were on hand for the meeting during which plans for the 1960 Class Reunion in Hanover were outlined. A report of the meeting will be coming your way soon.

Clint is a methods analyst with IBM in Endicott, N. Y.; Don is back at his med studies at the U. of Pennsylvania; Perry is peddling insurance with the G. P. Shoemaker Agency in the City and in his spare time pushing his new Greenwich Village publishing house—Agape Books; and Artie was all smiles after his November engagement to Jane Carpenter, a Colby Juniorite turned Ann Arbor, Mich., school marm. The Patter looks to a summer wedding.

A number of classmate Christmas cards carried pictures of the kiddies this year. We were most surprised and about ready to mail Hazqui editors **Jon and Katie Moore** a congratulation card when we saw a little lad on their greeting. Fortunately on the second glance of our double-take we discovered that the youngster was a youthful Liberian. The card was done in an African décor.

Audrey Gutlon, wife of Providence, R. I., toy dealer **Pete Gutlon,** threatened to launch her son's model Atlas rocket on a Washington probe if the writer didn't get the name of her new son correct this month. So before the count-down is completed let us announce that the youngster's name is Richard Scott, not Peter Jay, as we reported earlier. Audrey said the **George and Lois Graboys** and **Shelly and Betty Ann Woolf** joined the Gutlons after the Glee Club concert in Providence recently.

Rip Coffin will be rumbling into Washington, D. C., this month to take up a desk at the Bureau of the Budget. Rip writes that **Bob and Barb Flood** were joined by a baby girl, Jennifer, this summer. Bob is toiling for Commonwealth Edison in Chicago with **Steve Mullins.**

Dave and Dottie Fitch write of seeing **Clark Murphy, Neil Hendry, Jim Stead,** Alcoa's **Ray Freud,** Loomis Sayles' **Ned Hoban, Jim Fisher** and **Walt Clarkson** in Hanover this fall.

Second-year Harvard lawman **Dave Snow** was one of sixteen men elected to the Board of Student Advisers at Harvard Law School this year, and **Dick Perkins** was appointed instructor at State University College of Forestry, Syracuse University in New York. At Allied Chemical Company's plant in Marcus Hook, Penna., **Dean Hildebrandt** is undergoing technical production training, and in Kingston, N. Y., IBM lists a product engineer, **Pete Schenck.**

Jonathan Moore '54, public affairs assistant with the U.S.I.S. in Liberia, and Lt. (jg) Bob Leopold '55 chat in the wardroom of the USS BIGELOW which touched Monrovia, Liberia on a goodwill cruise in December.

Freddie Alpert is back on the payroll of Alpert Inc. in New Bedford, Mass., and the Continental Baking Co. in Somerville, Mass., lists **Ozzie Conlin** as personnel manager. **Lt. Jay Chandler** is with the Navy medics on a New York, fleet post office address, and **Pres Clark** is in the Comptroller's Office of the Merchants National Bank of Boston, Mass.

Tom Harrington is order auditing with U.S. Electrical Motors in Milford, Conn. Tom, wife Margaret and new daughter Louise, born June 2, are living in nearby Westport. **Tom and Purdy Thompson** acquired a tax exemption on October 21, a son, Ferris McKeen.

Betrothed in October were Sandra Jampol, a New Yorker and grad of Pratt Institute and the Fashion Institute of Technology, and **Stu Roth.** Stu is a graduate of Dickinson College. Engaged in Atlanta, Ga., in November were Anne Ivie of SMU and Pan American's **Dick Wheelock** of Dallas, Texas.

Married on October 4 in Portland, Me., were Wellesleyite Katherine Hildreth and **John Pierce. Dick Fowler** did the best-manning as **Bob Woodberry** and **Dick Brace** seated the customers. John is associated with H. M. Payson Co. in Portland, Me. He and Kattie have their mailbox in Prout's Neck, Me.

Stu Stearns, Chris Rood and **Phil Christophe** were in the party that pointed **Bob Marrs** down the aisle in South Norwalk, Conn. Bob and Susanne Rood Smith, a Hood Collegian were married on the same day as the Pierces. Bob is with Scott Paper Co.

Also in October **Dunc Roberts** and Alison Bunn said final vows. Alison is an Averett College (Danville, Va.) grad from Passaic, N. J. New York City's Hanover Banker **Ray Freud** was among the ushers. Living in Metuchen, N. J., are **Al and Ann** (Snyder) **Donahower,** married on November 1 in Bryn Mawr, Penna. Ann was an Endicott Junior graduate.

Mike Biggs '54, Jack Christy '54, and Stu Sanders '56 seen at the annual Christmas alumni dinner of the San Francisco-Northern California Dartmouth Club in December.

Hope next month thaws some of those writer's cramps out, because we are in need of material on this end. We'll be looking forward to hearing from you.

'55

Secretary, LT. THOMAS E. BYRNE III
OMS Box 114, Moody AFB
Valdosta, Ga.

Treasurer, PAUL MERRIKEN
1024 National Bank of Commerce Bldg.
New Orleans 12, La.

There's nothing like a brisk week or two in the wintry Nor'East to revive ones vitality. Having experienced same, your recorder herewith attacks the pile of literature accumulated over the holidays.

Rog Dolliver forwarded a long note from Goodfellow AFB in San Angelo, Tex., where he is with the Air Force Security Service. Since graduation, Rog has been busy continuing his education and serving his Air Force tour. After leaving Dartmouth in '55 Rog, **Glen Wathen, Tom Conner,** and **Sky Huntoon** toured the U.S. on a three-month sojourn that has already been mentioned in this column. Rog then entered the University of California and spent two years there working toward his doctorate. He now possesses teaching and administrative credentials, and a Master's Degree in Education Administration and hopes to continue working toward his Doctor's Degree after returning to civilian life. Before his assignment to Goodfellow, Rog was an instructor in the Aviation Cadet Pre-Flight program at Lackland AFB in San Antonio.

Other news found its way to my cluttered desk, this time penned by **Dick Meurer.** Dick's employed as Assistant to the Terminal Trainmaster for the Louisville and Nashville Railroad at Birmingham, Ala. At present, Dick is training operators for a new 8.5 million dollar automatic freight classification yard there. Dick recently heard from **Al Alvarez** who was, at the time, back in Cuba "working for the government." As of January 1, it would seem that Al's most recent occupation is open for conjecture. Dick also sends word that **Blake Irons** is soon due to close out his Army career at the Opama Ordnance Depot in Japan and return to civilian life.

Bob Leopold has decided to make Uncle Sam his permanent employer and remain in Navy blue. Bob's home port is Norfolk, Va., where his family is located. (This "family," by the way, now includes David Reeves Leopold born last November 29.) Bob just completed a three-month cruise off the coast of Africa, stopping in 18 different ports during the 14 weeks at sea. Most of the trip was spent traversing the west coast from Dakar to Capetown, cruising up the east coast to Kenya province, and then retracing the course. Bob found the continent relatively void of Dartmouth men; however, he did run into Jon Moore '54 and his wife Kate at Monrovia, Liberia.

Carl Wisenfeld recently completed a six-month Army tour and has settled with his family in Roselle, N. J. Carl is a fledgling lawyer, having graduated from Columbia Law School last June.

Bill Wilbur is now Mr. Wilbur once more, after suffering the rigors of an 18-month tour of duty with the Army in France. Bill is employed by Colgate-Palmolive as an Assistant Product Manager and is living in New York City.

Jody and **Mary Matthewson** (with Number One Son, Kent) are stationed at Norfolk with the Navy. Jody's an engineering officer on a destroyer, and has about six more months to go. When his tour is up

next August, Jody and his family will head for New York City where he'll be working with the Wall Street Journal, Inc.

Jack Porvaznik writes that he's an interne at the Massachusetts General Hospital in Boston in the general surgical program. Jack and wife Eunice boast one heir, John William, born on November 15.

Steve Little and his wife Frances are located in Phoenix, Ariz., where Steve is enrolled in the June '59 class of the American Institute of Foreign Trade. Steve is specializing in France and the Far East, and Frances, a Radcliffe graduate, is taking advantage of the opportunity to study the languages and customs of the country they plan to settle in.

Bob Brown is engaged to Patricia Jeanne Crawford of New York City. Pat graduated from the University of Southern California in 1955. Helen Gagnon and **Fred Ceres** were married this January. Fred is with the Massachusetts Mutual Life Insurance Company in Springfield, having completed a four-year tour of duty with the Air Force. Helen is a native of Manchester, employed by the Household Finance Company there.

Bill Hochman became engaged to Michele Gilman, a Simmons College alumna, Bill recently graduated from Harvard Law School and is now serving with the Army.

Jack Palmer and Ann Dobson were engaged during the Christmas holidays, and plan to marry next summer. Jack will graduate from Stanford Medical School in 1960. Ann attended Mills College and will graduate from the Stanford School of Nursing next March.

Word comes from China concerning **Doug Archibald's** most recent adventures (China, Me., that is). Doug's enrolled at the University of Michigan studying English literature on a Woodrow Wilson National Fellowship.

Neal Allen and Joan Wheaton were engaged this past December. Joan is a graduate of Mary Hitchcock and is on the staff at New York Hospital. Neal completed his Navy tour recently and is now with the N.Y. Trust Company. **Larry Hagar** is now employed by the Rapid Service Press in Boston and is going through the training program there.

That's about the extent of the news for this month. Keep writing, hear? So long for now.

'56

Secretary, RICHARD A. MARSH
110 Prospect St., Gloucester, Mass.

Treasurer, RICHARD H. DEVOTO
Box 108, New Dorm, Golden, Colo.

Members of the Mary Hitchcock Memorial Hospital staff recently held a discussion program outlining the new professional education program for high school students. Assisting on the panel was **Fen Riley.** Such national foundations as the March of Dimes are planning to launch a tremendous new scholarship program in medicine and the associate fields. In the past such grants have helped finance people such as Dr. Jonas Salk.

Pete Harpending and Carolyn Ann Fantasia were November bride and groom. At present Pete is a senior at Harvard Law School. The couple is living in Cambridge.

Dick McClintock and Barbara Wyatt plan to wed this coming June. The groom-to-be claims his Vassar gal is more familiar with Princeton and Yale but brain washing has given the Big Green an edge. Dick is in his third year at Harvard Medical School — present address is 70 Westland Avenue, Boston 15, Mass.

Lt. (j.g.) **Jon Robarge,** who has just completed 18 months of service with the 7th Fleet in the Far East, is spending a short leave at home. Soon he will fly to San Francisco where he will be attached to the Naval Air Station at Alameda, Calif.

Lt. Thomas D. Young '57 is a member of the Marine Corps' famous VMF (AW) 531 squadron which is now flying the new F4D-1 Skyray, a supersonic all-weather jet interceptor.

A short note on **Hugh Erwin** being with the U.S. Army at the Redstone Arsenal, Huntsville, Ala. Hugh's younger brother, Pete, is a junior at Dartmouth.

Miss Sara Herr became the bride of Ensign **Blake Field,** USNR. The couple will live in Arlington, Va.

Chuck Carrington is a med student residing in New York City. **Toby Julian** is a supervisory assistant with the New England Tel. and Tel. Co., 18 Euclid Avenue, Natick, Mass. **Don Sokol,** another medical man, is studying at the Parker Hill Medical School. **Breck Viets** is working at advertising in New York and **Rick Worrell** at law in Boston to round out the employed list this month.

General Mills has recently transferred **John "Scopes" Edison** to the New York area. His letter box reads: 55 Maxwell Road, Garden City, Long Island, N. Y.

Here are the up-to-date flashes on the '56 PX story: Ens. Blake E. Field, OP-9224, Rm 5E683, 4277 S. 35th St., Arlington 6, Va.; PFC John Gwynn, US 52464584, USAREUR Liaison Group (7945) APO 403, New York, N. Y.; Lt. George Haliday, USN, USS Blenny (SS-324) Fleet Post Office, New York, N. Y.; Leroy T. Brown, U.S. Army, 50th Co., 5th Stn, Bn., Fort Benning, Ga.

Again as always, a short so long and a hope you'll scratch a note soon.

'57

Secretary, CLARENCE D. KERR III
91 Bradley Place
Mineola, L. I., N. Y.

Treasurer, FRANK A. BRUNI
3962 Jewell St., San Diego 9, Calif.

For those of you who read the first paragraph of this article only, this BMOC Award will come first. It goes to "Gaston," an olive owned by **Don Cowlbeck.** The personable olive lives in an Olivett, a machine designed by Don to introduce the stranger, an olive, to that exacting mixture of friendly ingredients that comprise a Martini. The Award does not go to Don because of his invention of the Olivett but to Gaston for lasting three and one-half years of being dunked in Martinis. For those who are interested, the Olivett is on sale at better stores everywhere.

The annual report of the West African segment of the Class has come in. **John Berge** is in Liberia right on the border of what used to be French Guinea. Except for suffering from hangover fever, a common tropical disease resulting from a visit to the largest city around, Monrovia, John is well. He also states, "No, I have not done any big game hunting. The reason for that is that there is no big game. I have seen one leopard, a number of snakes, and a host of rats. The natives eat all. I stick to canned foods."

Art Johnson filled a letter full of many names and travels of classmates. Art, after graduation from Tuck spent six months at Officers' Basic School, Fort Sill, toured the West for a few weeks, and then went to work for Continental Can on a Sales training program in New York at the first of the year. **Bill Duvall** same as above (he and Art survived the Army together) and is now working for U.S. Steel in a sales training

Present at the wedding of Samuel G. Smith '58 and Robin Ann Miesem in Summit, N. J. were: (front row, left to right) Robert H. Smith '50; Larrie Calvert '57; Robin M. Smith, the bride; Samuel G. Smith '58, the groom; Peter J. Smith '48; and in the back row (left to right) Pete Paxon '59; John Foster '58; Mort Scharman '57; Don Mauer '58; Thayer A. Smith '10; Bruce Gemberling '58; Ernie Arnold '55; Chap Jacobus '58; and Al Greener '58.

program also in N.Y.C. **John Donnelly** a PFC at Ft. Leonard Wood, Mo., is driving a truck for six months. As a civilian John works for Minneapolis-Honeywell in Minneapolis. **Tom Donahoe** is an airman in the Air Force Reserve in Denver. Otherwise Tom is working for Arthur Anderson Accounting in Chicago. **Quigg Porter** married Joan Mason in June and is working for the Northern Trust Company in Chicago. **Chuck Schroeder** is in the Navy at Charleston, S. C., and was married to Miss Beth Rennett. **Ron Fraser** is in the Army for six months. **Bill Kramer** is working for IBM in Boston. **Dick Stacey** is at Tufts Medical School. **Bob Goodman** is at Northwestern Law School while **Bob Porter** is going to Oklahoma U. to get a Master's in Petroleum Geology. **Dick Bohanon** is also at Oklahoma but working on a law degree. **Bob Sproul** is in Korea with Army Intelligence. **Bill Newman** is going to Thomas Jefferson Med. School in Philadelphia. **Don Saunders** is working for the Linde Corporation in San Francisco. **Pete Wardle** is out of the Air Force and is also working in San Fran. **Wayne Kakela** is going to photographer's school somewhere near Mexico City and is managing a small inn during his spare time. **Eric and Pat Eichler** had a second baby, Denise. Their first child Kurt, was second in line for the Class Baby title by virtue of the fact that he was born fourteen days after Cindy Weiss.

From Art's letter you can see that there are people spread all over the globe. If any of you are about to move do write me and let me know where you are going and I will let you know if there are any classmates nearby.

A few days ago **Ed Matthews** survived dinner at our house and The Executive left this thought. "For a while the class will be on the move but there will be a gradual settling down and looking toward the future class activities. The best way to do this is to get ideas from you as to what you would like to do as a class. Do rush your comments to us. The sibling contest was a fertile success. Keep up the People Movement and we'll look forward to hearing from you."

Ed's Address 303 Woodbury Hall, Hanover, N. H.

Mine is at the head of the column. Best Regards, Skip.

'58

Secretary,
CHARLES H. COWPERTHWAITE
2901½ Baseline Rd.
Boulder, Colo.

Treasurer, GARY FINERTY
45 Wood St., Milton 86, Mass.

I never thought I'd meet the deadline on this one. I'm just back on my schedule again after two weeks of delightful rousing and revelry, featuring the benevolency of Santa Claus and many fine Dartmouth reunions—quite common at vacationtime in this part of the country. Starting off the season was the annual Dartmouth luncheon in Denver which was attended by some 120 seniors from high schools throughout the area. Later in the day, a congenial group of alumni, undergraduates, and their wives or dates gathered at the University Club of Denver to tip a few. Most invigorating. To get back on more common ground, however, I've been receiving a lot of interesting '58 news lately. And so, with the fates still willing and censors obliging, we will begin to roll.

The following first-year junior counselors are reportedly enrolled at the Stanford Law School: **Bill Sarantopoulos, Paul Robertson, Tom Maguire, Joe Livermore, Jim Meeker, Phalen Hurewitz** and Bill Breer '57. In the class ahead of them are Monte Pascoe and Dick Leavitt, both '57s. At Harvard Law School is **Leon Goodrich. Dave Glendinning's** a pastoral assistant at the Calvary Episcopal Church of Danvers, Mass. He's also a junior at the Episcopal Theological School in Cambridge. **Doug Pease** is on the Washington "Star" staff in Washington, D. C. Regret to report that **Bill Yahr,** now in the Med. School in Hanover, accidentally shot himself in the leg while putting his revolver back in its holster. Brutal facts require pretty brutal reporting you know. At any rate, Bill was in Dick's House last I heard and recovering rapidly, I hope.

Received a welcome letter from class agent, **Stu Gord,** the other day, in which he reported, among other things, that he and Barbara LeBuhn were married on Dec. 27. Stu's been down at the Navy Supply School in Athens, Ga., since the middle of June, but has now transferred to a destroyer, "The Laws," based in San Francisco. There's envy written all over my face, you Gords. Following is some of the news that Stu passed on.

Phil Bell, who was Stu's best man, has completed his Marine basic training at Quantico and has applied for duty in Okinawa. Phil must have got the place mixed up with Tahiti or else must desire the insular life in the extreme. Good luck to you at any rate. Seems that Stu has run me into a little SAE monopoly here, but nevertheless, I will go on. **Skip Louis's** going to be or already is on a destroyer out of Norfolk, having also been down at Athens with Stu. **Bob Gilges** is now out of Navy OCS and has been assigned to a minesweeper, "The Dominant," operating along the East coast. He expects to leave for the Mediterranean in April. Wish to apologize to **Phil and Marcia Drescher** for not getting their wedding announcement in the column for so long. Dresch, you old rascal, you might have written. Houdini slips up again. **Ray Robbins** is on a minesweeper, as is Dresch. **Bill Van Law** and wife (the former Judy Wenger), who were married several weeks ago, were last seen in Charleston, S. C. A big hello to you people. Hope to get you off a line in the near future. Also heard that **Rog Rice** was in the same vicinity and contemplating the marital state.

I understand that **Bill Caley** was married to Ann Cavill on Dec. 27, **John Trimble** attending in some capacity. Also heard for the first time that **Pete Olsen** was married to Sue Stocking last summer. Pete's now on a DDR based in San Diego. Sorry to report that **Larry Weltin** was involved in an accident while down at Quantico. It appears that a friend was driving Larry's new car and fell asleep at the helm. Demolished the car but Larry fortunately came out pretty much unscathed.

A picture received recently concerning **Sam Smith's** wedding gave ample evidence that a Dartmouth man can look good even with a champagne glass in his hand. Sam and Robin Ann Miesem were married last summer in Summit, N. J. After honeymooning in Bermuda (where they happened to see **Otto and Sally Wagenbach**) they returned to Rochester, N. Y., where Sam's at the University of Rochester Med. School along with three other '58s: **Lee Wight, Phil Stoddard,** and **Jack Devany.**

A few other wedding announcements include that of **Gary Finerty** who married Judy Alfano in Milton, Mass., last November. They now make their home in Wollaston. Just after he was commissioned as an ensign in the Coast Guard, **John Bennett** was married to Patricia Chilton in a ceremony at Ridgewood, N. J. Also married recently were **Dave Harwood** and Margaret Halsted at Manchester, Vt. **Bob Gebhardt** was Dave's best man while **John Ceely** and **Ted Harris** ushered. A few days ago in Denver, Cynthia Ann Bauer became the bride of **Bud Rauscher.** Bud's just completing work for his Master's Degree at the University of Denver. The other night I talked to an old Denver cronie of mine, **Pete Williamson** only to discover that it was really true. Pete was married to Sue Kettering of Hinsdale, Ill. only a few weeks ago. Best of luck, old Pedro. I'm with you all the way and look forward to seeing you and Sue out in 'Rado land very soon.

A highly disorganized bunch of stuff this month, I fear, but I hope it got to you. How are all those New Year resolutions coming along?

ASSOCIATED SCHOOL NEWS

Thayer School

Credit is due Prof. George Taylor for ferreting out the following information from **Martin Anderson TT'58.** Martin visited Hanover in December following his graduation from the Army Security Agency School at Fort Devens. It seems that it is customary at the end of the course to reward the top men in Leadership and in Academic Work by presenting them with engraved silver bowls. At this year's graduation exercises **both** bowls were awarded to Martin by the General with the comment that "one is for peanuts and the other for potato chips." Or, perhaps, Martin, you can use them as bookends for the Goodrich Prize?

At the Dartmouth Polar Conference held in Hanover in December, the Thayer School was represented by the following faculty members having Polar experience and interests: Dean Kimball '29, Dr. Millett Morgan, Dr. Huntington Curtis, Russ Stearns '38, and Ed Brown '34.

An interesting story about Bobby Fletcher came to the attention of the writer recently while discussing covered bridges with Prof. Carl Long and **John Minnich '29.** According to this story, Professor Fletcher was engaged to report on the safety of an old covered bridge across the Connecticut at Orford. After making a visual inspection of the old timbers, Professor Fletcher was standing on the New Hampshire shore contemplating, no doubt, the perplexing indeterminatedness of the structure when he noticed a steam roller crossing from the Vermont side. After the crossing was safely completed, Professor Fletcher inquired and learned from the driver that the steam roller weighed fifteen tons. In his report on the bridge, Bobby is said to have stated simply and con-

fidently, "This bridge is safe for loads up to fifteen tons." Professor Long has been working recently on a similar problem involving a wooden bridge but, unfortunately, the condition of the floor boards, to say nothing of the reverse curvature of the arches, has prevented him from applying Professor Fletcher's scientific methods.

Ron Read ME'58 writes that he has taken on an evening job at the Lawrence Institute of Technology teaching Machine Design and Fluid Mechanics. This assignment is in addition to his full-time job as a Junior Engineer with Vickers, Inc.

Among the recent alumni visitors here were **Tom Candler TT'47** with Kaye, Cynthia, Pamela, and his parents. Tom is President of Candler-Rushe, Inc., pile driving experts.

During the holidays, we had a fine visit with **Hanque Parker CE'47** and his family. Hanque is currently finishing up the last details of the Winston Brothers contract on the St. Lawrence Seaway and is living in Montreal.

Medical School

During Christmas vacation relative quiet reigned on the hill. One of the nicest features of it was the large number of greetings received from so many alumni, and we regret that limited space prevents publishing all the wonderful family group pictures submitted. Sincere thanks to you all.

Considerable interest has been shown over the entire country in the Special Care Unit, developed at the Mary Hitchcock Memorial Hospital under the direction of William T. Mosenthal, M.D., Assistant Professor of Surgery. More than twenty hospitals have sent representatives to study the setup, coming from as far away as Pittsburgh; and over one hundred inquiries have been received, including some from far away places like California, Texas, and Canada. The New England Hospital Assembly Travelling Institute has sponsored descriptions of the unit at Waterville, Maine; Chelsea, Mass.; and Hartford, Conn.; and Scope weekly carried a full-page picture feature on this work.

On December 8, Dr. Horace W. Magoun, Professor of Anatomy at the University of California at Los Angeles School of Medicine, delivered the Squibb Centennial Lecture here on "The Development of Ideas Relating the Mind and the Brain."

Chris Buxton T'55 chats with rugger Alvin Krutsch '59 at a dinner given by Dartmouth alumni from the London area for the rugby team during its recent tour of England.

In Chicago, the School was represented at the American Academy of Dermatology meetings by Prof. Otis F. Jillson who presented two papers, one on Physical Allergy and another on Insect Allergy. At the same meetings, Prof. Walter C. Lobitz Jr. conducted a panel discussion. Prof. Leslie K. Sycamore of the Radiology Department attended the New England Roentgen Ray Society as a member of its executive committee.

Hilly Poindexter M'27, honorary M.A. '57, has transferred his Public Health activities from Southeastern Asia to Baghdad, Iraq. The **Wave Ellsworths M'47**, now practicing in Spokane, Wash., recently welcomed their fifth, Brian Alan. Unofficial and undetailed word has reached us that **Bill Goulburn M'52** was married recently to Marie Snavely. **Bob Millhouse M'53** reports that he and **Howie Geist M'53** are stationed at Orlando, Florida, with the Air Force. Before going on active duty, Bob completed a residency in Pediatrics at Los Angeles Children's Hospital. **Pud Harrison M'54** has postponed his arrival at the Mayo's in Rochester, Minn., from July to October due to some conflict in the date of discharge from the service.

Tom Clark M'54 reports seeing **Ben Gilson M'55** and his family in Yokosuka, Japan. Both Tom and Ben are wearing Navy blue, but the former expected to be state-side before Christmas. **Al Edmundson M'55**, now at Brookhaven National Laboratories with his wife and daughter, hopes to complete his Ph.D. this year, and then try teaching and more research. **Bart Onofrio M'55** is rumored to be somewhere in the South Pacific in service.

The holidays and good skiing brought many younger alumni back. We heard of or saw: Freddy Chang M'57, Bob Charman M'58, Mark Cloutier M'58, Bob Forcier M'58, and Bill Gallagher M'58.

A Boston newspaper recently carried a story on the engagement of **Ken Herrmann M'57** to Sara Jane Evens, with a June wedding in prospect. A large group of the M'58's gathered in Winchester, Mass., on December 20 to attend the wedding of their classmate, **Bob Shirley**, to Althea Hersey.

HARRY W. SAVAGE '26

Tuck School

Bob Williamson T'47, graduated from Harvard Law School last June, is now with the Cleveland law firm of Spieth, Bell and McCurdy. He was re-elected president of the German Shepherd Dog Club of America in September.

Chuck Fryer T'52 has moved from research into the contact department at Young & Rubicam.

Bill Fitzgerald T'56 is a supervisor in Chrysler's Market Research Department.

Mr. Olsen delivered "A Review of the Report of the Commission on University Education for Hospital Administration" at the National Symposium on Graduate Education for Hospital Administration, held at the University of Chicago.

Mr. Davis participated in a panel discussion of "New Techniques in Teaching Marketing Research" at the American Marketing Association meetings in Chicago.

The latest in **Mr. Burger's** series of AMA seminars on report writing ended in January (the first half was in December). He also spoke to the Philadelphia chapter of the Institute of Internal Auditors on "Effective Report Writing."

Kind of a short report, isn't it? All right, if you want a longer one, let me know what's happening to you.

R. S. BURGER

CAREER WITH A FUTURE

The Sun Life of Canada, one of the world's great life insurance companies, offers men of ambition and integrity an outstanding professional career in its expanding field forces. If you are interested in a career with unlimited opportunities, then Sun Life has the answer.

- ***Expert Continuous Training***
- ***Excellent Income Opportunity***
- ***Generous Welfare Benefits***

For full information about a Sun Life sales career, write to W. G. ATTRIDGE, Director of Agencies, Sun Life of Canada, Montreal.

IN MEMORIAM

1894

BERTRAND ADONIRAM SMALLEY — always known to us of '94 as "B. Smalley" — died after a long illness at his home, 10 Beaufort Rd., Jamaica Plain, Mass., on December 22. This reduces the number of living '94 graduates to eleven, and removes from the earthly scene one of the Class's strongest personalities. Bert was always a leader, both in college and during the 65 years of our alumni life.

B. Smalley was born in Lebanon, N. H., October 29, 1870. He graduated from Lebanon High School in 1887, and for three years worked as a telephone operator, before deciding to enter Dartmouth with his brother, Fred Lyman Smalley. During those three years he also read medicine, with the idea of following in his father's and grandfather's footsteps. Entering late in the fall of 1890, B. speedily became a leading spirit in '94. He engaged in athletics, especially football and track. He was active in the literary life of the college, writing frequently for the *Literary Monthly* and *The Dartmouth*, and in junior year won the Lockwood prize for composition.

He graduated with Phi Beta Kappa rank, and entered immediately on journalistic work in Boston, first with the old *Boston Record* and later with the *Transcript*, and twenty years later, though retired from journalism, was appointed to write the history of the *Transcript* on that paper's 100th birthday anniversary.

In 1906 B. left journalism to become private secretary to the president and advertising manager of the Rueter Brewery, and for 17 years served as publicity man for that concern. Leaving Rueter's when prohibition ruined the brewery business, he was signed on by the New England Telephone Co. to handle its publicity, and continued in that capacity until the rules of the company compelled his retirement for age. Even after that he continued for a time to edit the leaflet "Between Ourselves" which is enclosed with the monthly bills of the Telephone Company.

Two notable things B. Smalley did for the Class of '94. He organized the campaign in the Class for raising money for the new gymnasium, in which campaign the Class exceeded its quota of contributions. It was he who initiated the project of the 1894 Cup, presented each year to the class having the largest percentage of its living graduates at reunions. He was reunion chairman for '94 in 1914, when the Class mustered 83.3 per cent, — and yet did not win the cup. B. also served for several years as class agent.

He married in 1898 Mary E. Cobb, who predeceased him in 1943. There were no children.

P. S. M.

1898

ARCHIBALD RAY KENDALL died December 4 in St. Petersburg, Fla. His home was at 2836 5th Ave., North.

He was born in 1875 in Windsor, Vt., the son of Elton P. and Ida M. Kendall, and prepared for college at Bradford Academy. He was a member of the class during 1894-1895.

After leaving college, he was with the Boston & Maine Railroad until 1912. He then devoted himself to insurance, conducting the business in Concord and Portsmouth, N. H., and Boston.

He was vice-president and general manager of New Hampshire Mutual Liability Co., and New England Mutual Casualty Co.; secretary of Capital Fire Insurance Co.; assistant secretary of Phoenix Mutual Fire Insurance Co.; trustee of Merrimack County Savings Bank; councillor of the U. S. Chamber of Commerce; chairman of Highway Safety Committee of Concord, and chairman of Building Committee. The latter part of his activity was devoted to real estate. He retired in 1947.

Archie on June 12, 1900 married Katherine Devine, who died in 1923. His second wife, Jane Armstrong, whom he married in 1923, died in 1933. He is survived by his widow, the former Elizabeth Ayers whom he married in 1933, and their son Warren A. Kendall.

1902

In the unexpected death on December 28 at Plymouth, Mass., of ROBERT FRANCIS ESTABROOK the College and his classmates have lost an outstanding alumnus and loyal friend. Ever since graduation Esty had rendered notable service to the American Telephone and Telegraph Co. in various places and official positions: first, in its engineering department in New York, Pittsburgh, and Minneapolis; then, after 1923, as general traffic manager of the New England Telephone and Telegraph Co. of Boston. In 1928 he was appointed vice-president and general manager and in 1940 was elected to the executive committee to succeed Dartmouth's Matt Jones. He had, in fact, become widely known as an expert in telephone traffic problems and largely instrumental in extending nationwide long-distance phone service.

This distinguished career proved him an efficient and hard-headed man of affairs, but was accompanied by a deep and genial interest in people, books, and witty conversation. One of his latest interests was to have a house-party conversation concerning his classmate "Dr. Bob" Smith, founder of Alcoholics Anonymous, tape-recorded and transferred to discs presented to the College archives and A.A.

A member of Delta Kappa Epsilon, he followed with genuine interest all that went on in college and was a member of the Mandolin Club. In study he illustrated the cultural value of President Tucker's advice: "Elect as far afield of your professional study as possible while in college, for it is your last opportunity to acquire a liberal education." Esty did so "elect" and became an ardent disciple of Professor Charles Darwin Adams, one of the greatest teachers of the Dartmouth lineage, whose strenuous requirements in the study of Greek discouraged most undergraduates, but whose brilliant and scholarly lectures on the poets, orators, dramatists, and philosophers of ancient Greece have remained an inspiring memory among the few, like our Esty and George Elderkin, archaeologist of Princeton, who became "Charlie D." electors all four years of college. In recent years Esty often mentioned this important cultural experience.

In college he became an ardent bibliophile. A few weeks before his death he presented to the Baker Library, together with other valuable material, a bound copy of the earliest translation of Theophrastus published in America, giving it, he said, "in memory of C. D. Adams."

The son of George W. Estabrook, 1861, he came to Dartmouth from Fitzwilliam, N. H., where he was born June 18, 1880. In 1921 he was married to Ethel Pedrick of Philadelphia. They resided in Brookline during most of his Boston years. After his retirement in 1945, they moved to Bay Pond Road, Powder Point, in Duxbury, Mass.

The burial service, held in the Church of Our Savior of Brookline, was attended by many of his business associates and his Dartmouth friends and classmates.

Besides his wife Ethel, he leaves an adopted daughter, Mrs. John S. Moeller of Pittsburgh, and two sisters, Miss Anne and Miss Margaret Estabrook of Brookline; also a half-sister, Mrs. Thomas T. Baldwin of Newton, Mass.

BRADLEE WATSON '02

1903

RALPH WILLIAM PILLSBURY died in Concord, N. H., on September 25. He was born in Boscawen, N. H., March 24, 1880, and made his home in Boscawen the remainder of his life.

Until his retirement some years ago Ralph was connected with the New Hampshire Fish and Game Department in Concord.

On June 24, 1903 Ralph was married to Myrtle Ellen Willey of Norwich, Vt., who died in 1955. He is survived by a daughter Martha and three sons, Robert, Harold and Justin.

1907

JOSEPH MARSHALL COBURN was born in Boston on November 30, 1881 and died at the Veterans Hospital in Bedford, Mass., on December 24, 1958.

Cobe prepared for Dartmouth at Phillips (Andover) Academy. He initiated his literary career by being a member of the Dartmouth Literary Magazine board, and by being chosen class odist.

After graduation he taught at Westmoreland, N. H., and at Governor Dummer Academy for two years, and then entered upon a long and interesting career in the newspaper field. He served on daily papers in Lynn, Worcester and Boston, and had numerous interesting assignments among which were: breaking ground for the Cape Cod Canal, interviewing Julia Ward Howe: the election of Dr. Nichols to the Dartmouth presidency. Cobe also had a varied and interesting military career. He went to the Mexican border as a member of Troop A of the 1st Squadron Cavalry of Massachusetts National Guard. With 50 members of his troop he was an escort to Marshal Joffe when he visited Boston. In World War I his troop became Company A, 102nd Machine Gun Battalion in the Yankee Division, and was on active duty at the front. He became incapacitated later and was classified for "light duty." On his return, he became active again in the National Guard and the Army Reserve, and was commissioned Captain, Retired Reserve. At the outbreak of World War II, he tried to enlist, but was not accepted because of his age.

On December 9, 1910, Cobe married Catherine Cahill, who died on December 18, 1910. On December 26, 1914, he married Ethel M. Hyman, who died on April 15, 1951. A cousin, W. K. Coburn, survives.

Cobe's home in recent years has been at 35 Pacific St., Lynn, Mass. Few Dartmouth graduates have been more devoted to his college and his class than Cobe.

1908

ARTHUR DANIEL WESTON, former Chief Sanitary Engineer and Deputy Commissioner of the Mass. Dept. of Health, passed away on Dec. 19, at his home in Edgartown, Mass.

Art was born in Boston on July 18, 1884, and prepared for Dartmouth at Boston English High School. He was forced by family circumstances to leave college in the middle of his sophomore year but by self-study and experience rose to hold one of the highest engineering positions in the Commonwealth. He joined the Dept. of Health soon after leaving college; in 1929 he became assistant engineer and in 1930, chief engineer and director of the division of sanitary engineering, until his retirement in 1950.

In September, 1917, Art went overseas as a 1st Lt. of the 26th Engineers and in 1919 was promoted to Capt. in the 38th Engineers with oversight of all water supply materials for the entire A.E.F. in France. During World War II he was a Lt. Col. in the Massachusetts Militia.

Art devoted his life to the development and protection of water supplies and worked closely with the Lawrence Experimental Station. He was a member and officer of numerous engineering and water supply associations, prominent in civic, fraternal and recreational activities and received many citations and awards for service. More complete details may be found in the 1908 50-year class book.

After his retirement in 1950, Art became associated with Charles A. Maguire and Associates of Boston and Providence. In 1954, former Governor Herter appointed him to the New Bedford, Woods Hole, Martha's Vineyard and Nantucket Steamship Authority and to a recess commission of the state legislature studying planning, zoning, and subdivision control in Bristol and Plymouth Counties.

Art is survived by his wife, the former Edna W. Vose; two children, Julian Vose of New York and Mrs. Virginia Besse; and three grandchildren.

1909

BENJAMIN PRESCOTT BURPEE passed on at the Elliot Hospital in Manchester, N. H., on November 27.

Ben was born March 20, 1889 in Manchester, the son of William Byron and Mattie Lillian (Batchelder) Burpee. He prepared for Dartmouth at Manchester High School. In college he was a member of the Chi Tau Kappa, which became the Dartmouth chapter of Sigma Alpha Epsilon. He attended Harvard Medical School and received his M.D. degree in 1914. Joining the first Harvard Medical Unit, he was a captain in the R.A.M.C., B.E.F., in 1916-17. Upon the entry of the United States into the war, he transferred to the A.E.F. In March 1918 he was captured by the Germans and was a prisoner of war for more than nine months. He was discharged as a major in 1919.

He returned to Manchester and was on the staffs of the Elliot and Balch Hospitals, specializing in obstetrics and pediatrics. More than 10,000 babies were delivered by him during his active practice. The Christina Parker House, maternity section of the Elliot Hospital, was built by Ben and his wife about 1931 and always had their interest. For more than 18 years Dr. Burpee was on the New Hampshire board of registration in medicine and for the last few years served as its president.

On October 11, 1919 Ben went to Greenfield, Mass., to marry Marguerite Burke, whom he had met while interning at the Boston City Hospital and who had served as a lieutenant in the medical corps during the war. Their family was a happy one and a few years ago was chosen as the New Hampshire family of the year. Members of the family include his wife; two daughters, Mrs. William A. Walsh and Mrs. Robert N. Lord of Manchester; two sons, Benjamin P. Burpee Jr. of Manchester and William B. Burpee of Nashua; and ten grandchildren.

Funeral services were held at his home, 250 North Bay Road, on December 1, with the large attendance of state and municipal officials, college friends from Dartmouth and Harvard, delegations from medical and service organizations and friends, attesting to the esteem in which he was held and the loss each felt as another entered beyond that golden curtain to receive his reward for work well done.

WALTER HOWARD FOSTER passed away at the Brooks Hospital in Brookline, Mass., on November 21. His home was at 1679 Beacon St., Brookline.

Walt was born on September 14, 1887, at Dover, N. H., the son of Charles G. and May Belle (Clement) Foster, and came to Dartmouth from Dover High School.

At the end of sophomore year, he became associated with the editorial department of *Foster's Daily Democrat*, published by G. I. Foster & Co. in Dover. About 1923, he went to Brookline as city editor of the *Brookline Chronicle*, a position he held for over 30 years. He was also associated with the *Brookline Citizen*. During the period from 1941 to 1952, he was night editor of the old *Boston Post*. His life as an editor and moulder of public opinion covered a span of nearly half a century and made him one of the respected deans of New England newspapermen.

Walter is survived by a son, Gale P. Foster of Hingham, Mass.; a daughter, Miss Doris Foster of New York City; a brother, Philip C. Foster, editor of *Foster's Daily Democrat;* and several nephews and cousins of Dover.

Funeral services were held on November 24 at All Saints' Episcopal Church, Brookline, Mass.

1910

FREDERIC CARLETON BROOKS died on December 9 at his home, 750 Gaylord St., Denver, Colo.

Fred was born in Leadville, Colo., August 15, 1885, son of Frank and Amanda (Presley) Brooks. His family moved to Denver while he was young and he prepared for college at East Denver High School. He and Ralph Van Zant '10 were schoolmates and both chose Dartmouth in the days when the College was not so well and favorably known in the western states. Fred was a member of Beta Theta Pi.

He returned to Denver after graduation and entered the oil business in which he became widely known. He was associated with the Powerine Oil Co. for 35 years. When that company was purchased in 1945 by the Carter Oil Co. he became sales manager for that concern. He retired in 1950.

During World War II, Fred served with the Petroleum Administration for War. For several years he was the secretary of the Petroleum Maritime Association in Denver.

He married Hortense Elizabeth Meyers, February 20, 1912 in Denver. Survivors besides his widow are his daughter, Mrs. Louise B. Campbell; his son, Franklin M. Brooks; his sister, Mrs. Louise Brooks Cramer, and two grandchildren, all of Denver.

HAROLD CULVER BENJAMIN died suddenly on December 10 at Morton Plant Hospital, Clearwater, Fla., following a heart attack suffered while playing golf. The Class was represented at the funeral services by Larry and Miriam Bankart, George and May Allen, Leon and Florence Kendall, and Jesse and Gladys Wilson.

Hal was born at Medford, Mass., July 3, 1888, son of Wallace O. and Marilla H. Benjamin. He attended Medford High School and Ossipee School in preparation for college. He served as a member of the 1910 *Aegis* Board and was a member of Phi Gamma Delta.

He spent the first few years after graduation in the produce commission business in Boston. In 1912 he went to Fresno, Calif., to be associated with Stone & Webster. In 1917 he entered the Pipestone (Minn.) Produce Co. as manager and part owner. He retired two years ago and decided to make his permanent home in Florida. He built a house at 310 Crestwood Lane, Largo, and had lived there less than two months when he was stricken.

Hal was a member of the Masonic organizations, a member of the Saint Paul Athletic Club and served several years as secretary of the Kiwanis Club.

On May 30, 1919 he married Hedwig Elvera Swenson at Montevideo, Minn. She and their son, Wallace Culver Benjamin '44, are the survivors.

1911

AUBREY BICKFORD BUTLER died December 13 at the Northampton, Mass., Hospital following a short illness, although he never fully recovered from a coronary attack about a year ago. He had continued his activity, but at a reduced rate. His home was at 330 Elm St.

Aubrey was born in Paris, March 10, 1887, to Mr. and Mrs. J. Albert Butler, who were on a trip abroad. Their home was in Chelsea, Mass., where Aubrey attended high school. After his four years at Dartmouth he did graduate work in horticulture, which was the start of his becoming an authority on roses, gardenias and camellias. He later received many awards for the culture of these flowers and no flower show in Boston was complete without an exhibit by him.

He worked a year with Thomas H. Galvin in Boston and then another year with H. W. Field in Northampton. In 1913 he became treasurer of Butler & Ullman, Inc., florists, which continued under this name after Mr. Ullman's withdrawal from the firm. Many a Dartmouth boy has bought flowers for his Smith date at Aubrey's Main Street store. He also had large greenhouses on Prospect St., where he raised his three favorite flowers to ship throughout New England.

He was a director of the Boston Flower Exchange, and vice-president in 1955; a director of the Society of American Florists; a trustee and past vice-president of the Massachusetts Horticultural Society and a former president of the Northeastern unit of the Society of American Florists.

With all his business activities, Aubrey always had time to serve his community. He was president of the board of trustees of Cooley Dickinson Hospital from 1933 to 1949, and then continued as a member of the executive committee. He was a trustee of, and highly instrumental in the development of Look Memorial Park, the city's public play area. He had been associated with the Nonotuck Savings Bank in several capacities and in recent years had headed its board of officers as president.

In 1913 Aubrey married Lulu B. Ruder of Northampton, and some years after her death he married Mary H. Sullivan who, with his son, J. Parker Butler '37, have been associated with him in his business. He also leaves two sisters, Mrs. Patricia Fuller of Mobile, Ala. and Mrs. Dorothy Kennedy of Beverly Hills, Calif.

Deaths

[A listing of deaths of which word has been received within the past month. Full notices may appear in this issue or may appear in a later number.]

Smalley, Bertrand A. '94, Dec. 22
Estabrook, Robert F. '02, Dec. 28
May, Walter M. '05, Jan. 3
Thrall, Henry D. '06, Jan. 4
Coburn, Joseph M. '07, Dec. 24
Weston, Arthur D. '08, Dec. 20
Benjamin, Harold C. '10, Dec. 10
Brooks, Frederic C. '10, Dec. 9
Butler, Aubrey B. '11, Dec. 13
Rose, G. Kellogg, Jr. '15, Dec. 25
McCarthy, Charles T. '18, Dec. 25
White, William A., Jr. '19, Dec. 28
Tracy, William E. '20, Dec. 19
Frederickson, James F. '21, Oct. 25
Coe, James L. '23, Oct. 21
Bertch, J. Widman '23, Nov. 27
Brunn, Paul A. '25, Jul. 21, 1957
Hawley, William C., Jr. '25, Dec. 15
Sleeper, Laurence L. '28, Dec. 30
Danforth, Theodore L. '31, Jan. 3
Gage, Frederic P. '32, Dec. 26
Van Riper, Howard C. '38, Jan. 4
Murphy, Francis P., A.M. '37, Dec. 19

WILLIAM EDWARD CURTIS, stricken with a heart attack on November 28, died the following day in the St. Petersburg, Fla., Hospital.

Bill was born in Saugus, Mass., June 21, 1885, and received his early education in the Worcester public schools and South High School. He entered the University of Massachusetts and transferred to Dartmouth where he got his B.S. degree in 1911. At South High in 1906 he set a shotput record of 41 feet that stood for 21 years.

Bill started his teaching career at Great Barrington High School for Boys, then served as principal of Somerset High School and David Prouty High School in Spencer, Mass.

George Kellogg Rose Jr. '15

In 1918 he began teaching at the High School of Commerce in Worcester. From 1932 until his retirement in 1953 he was assistant principal at Grafton Street Junior High School, where he was largely a disciplinary officer. In 1953 he retired to St. Petersburg.

Bill was on the track squad and a member of Kappa Sigma fraternity at Dartmouth. He was a past president of the Worcester County Teachers' Association and a member of Morning Star Lodge of Masons, Worcester Dartmouth Club, and the High School Masters Club.

His wife, the former Elizabeth G. Shepardson of Worcester, and a daughter, Mrs. David M. Morley of Roanoke, Va., survive him. Betty will continue the home in St. Petersburg at 1527 5th St., North.

1912

ROYAL JOYSLIN HASKELL died on December 4 at his home on New Bedford Rd., Rochester, Mass., after a long illness.

Born in Rochester, January 27, 1890, Roy attended Tabor Academy. After receiving his B.S. degree with the Class in 1912 he did post-graduate work at N. Y. State College of Agriculture and at Cornell, where he received his Ph.D. in 1917.

From Cornell, Roy went to Washington, where he became associated first with the Bureau of Plant Industry and later with Cooperative Extension Service, where he served as specialist in plant pathology. Joining the U.S. Department of Agriculture in 1929, he became extension plant pathologist and in 1941, acting extension horticulturist. From 1955 until his retirement in 1957 he was chief, plant industry branch, in the Federal Extension Service of the Department of Agriculture. In this capacity he worked closely with the state agricultural colleges. Last year he was honored with the Department's Superior Service Award and was cited for outstanding contributions to the nation's plant pathology and horticulture programs.

Roy had served as secretary, treasurer and president of the American Phytopathological Society; he was a fellow of the American Association for the Advancement of Science; and was a member of the American Society for Horticultural Science, the Botanical Society of Washington and the Washington Academy of Science, and many other professional societies. He was a member of the F.A.A.M. and O.E.S.

Roy was married on May 29, 1916, to Myrta May Brown, who survives him with their son, Royal Jr., now studying at Johns Hopkins.

1915

GEORGE KELLOGG ROSE JR., retired vice-president of the Chase Manhattan Bank and former head of its Grand Central Branch in New York, died December 25 in Passaic General Hospital after an illness contracted about a year ago. He lived at 34 Stanford Place, Montclair, N. J.

Kell was born in Passaic, N. J., attended Passaic High School and graduated from Dartmouth with an A.B. degree in 1915. He had lived in Montclair for the last 22 years and retired last July after 40 years service with the bank.

In college, he was a member of Sigma Chi and an active participant in college and class affairs. Upon graduation, he attended the Graduate School of Banking at Rutgers University, a member of the first class of banking from that school. He was a Navy veteran of World War I, being Chief Yeoman in charge of Bookkeeping Division at Fleet Supply Base in Brooklyn, N. Y.

Kell was president of the Class of 1915 at

the time of our 25th Reunion in 1940 and headed the production of our 25-year Class Book, an impressive record of Class accomplishments up to that time. Since then he had played a prominent part in Class administration and had been doing an outstanding job as Bequest Chairman for the Class right up to the time of his death.

He was a prominent figure in banking and business circles, being a member of the advisory committee of Chase Manhattan Bank, a panel member of the American Arbitration Association, a member of the endowment fund committee of the Robert E. Lee Memorial Foundation, and divisional vice-chairman of the executive committee and chairman of the National Advisory Council of Junior Achievement, New York, and a trustee of Achievement Foundation.

He was very active in community life and had been a trustee of the First Presbyterian Church of Passaic for twenty years and a deacon there eight years. He was also a member of the Montclair Glee Club.

He leaves his wife, Mrs. Helen Pratt Rose, whom he married in 1918; two daughters, Mrs. Dorothy Murphy of Montclair and Mrs. Margaret Shedrick of Wilmington, Del.; a sister, Mrs. Leonard Marks of Nobleboro, Me.; and five grandchildren.

It was requested that in lieu of flowers contributions be made to the Dartmouth 1915 Class Memorial Fund or to Sloan Kettering Institute Cancer Research of New York.

Services were held December 28 at the First Presbyterian Church in Passaic, at which the Class was represented by Mr. and Mrs. Dale Barker, Mr. and Mrs. Fred Child, Mr. and Mrs. Dick Clarke, Mr. and Mrs. Bob Griffin. Mr. and Mrs. Roy Lafferty, Gus Braun and Carl Gish. Dale Barker, Fred Child and Roy Lafferty acted as honorary pallbearers.

Interment was at Bolton Landing, N. Y. Fifteeners present were Dr. and Mrs. Jack Bowler from Hanover and Mr. and Mrs. Charles Griffin from Norwich.

The Class of 1915 paid its respects to Kell by a contribution to the 1915 Memorial Fund.

1916

JULIAN RICHARD HOVEY, son of the famous Dartmouth poet Richard Hovey '85 and grandson of Charles E. Hovey 1852, passed away at the age of 66 on November 27 at the Palomar Hospital in Escondido, Calif. He rests in the Valley Center Cemetery, and is survived only by his widow, the former Anne Shipley, to whom he was married January 31, 1924.

Julian was born in Tours, France, February 9, 1892, although the newspaper account of his death states that he was born in New York City. His father was the author of "Men of Dartmouth" and other songs and poems which tell of his love for the Northland. After graduating from Central High School, in Washington, D. C., where he lived with his mother, the former Henriette Knapp, and his grandmother, Julian entered Dartmouth with the Class of 1916. He was not a good student according to conventional standards, but shared his father's love for Nature and the great outdoors, and spent much of his time in solitary walks in the country around Hanover.

He left college before graduating and worked as a playground director in Washington. In 1919 he was employed by a beet sugar factory in Scotts Bluff, Nebr., and in 1918 he moved to California. In 1920 he was an assistant director of moving pictures, and in 1921-22 he was employed by the City of Los Angeles as a foreman.

In 1924, the year of his marriage, he was in the magazine department of the Rosicrucian Fellowship, and the next item of record shows him ranching at Valley Center, near Escondido, where he made his home until his death. The last communication from Julian was a letter of appreciation written at the time of the discovery of his father's grave in North Andover, Mass., and the placing of a Dartmouth marker at the grave.

His classmates remember him as a very quiet, retiring recluse, pleasant but uncommunicative, and a real naturalist. The line of Poet Richard Hovey dies out with Julian.

1919

WILLIAM ALLEN WHITE died suddenly on December 28 of a heart attack at his home, 60 Concord Ave., Milton, Mass. His sudden passing came as a great shock to all '19ers.

Born on April 29, 1896, in Boston, Bill attended Roxbury Latin School. While in college he was very active in undergraduate affairs and was a member of Phi Gamma Delta and Sphinx. Graduating in 1919, he attended Harvard Medical School from which he received his M.D. in 1921.

A surgeon and physician in Boston for 37 years, Bill was president of the Boston City Hospital staff at the time of his death and a member of the staffs of the Faulkner, New England, Malden and Milton Hospitals. He was a member of the American College of Surgeons, New England Surgical Society, and the Boston Surgical Society.

Bill leaves his wife, Marion; a daughter, Mrs. Janet McClure of Cohasset; a son, William Allen White 3rd '49, and two sisters, to all of whom goes the heartfelt sympathy of the Class in their great sorrow.

Services were held December 30 at the Waterman Chapel in Boston. They were attended by Rock Hayes, president of the Class, and classmates Jack Clark, Henry Clay, Howie Cole, Morris Freedberg, Al Goggins, Ray Hinds, Ed Martin, Jigger Merrill, Jock Murray, Elmer Pilsbury, Bob Proctor, Maddie and Arthur Havlin and Mildred and John Chipman.

Bill was a most loyal Dartmouth man and classmate, never missing a reunion or our fall Woodstock-Hanover parties, and his passing leaves a gap in 1919 that will be hard to fill. He had a great sense of humor and with his many years of service to his fellow man, he will be sorely missed by his host of friends.

1920

ELLIOTT WARD CHENEY, since 1942 associate professor of physics at Lehigh University, died on November 24 in St. Luke's Hospital in Bethlehem, Pa. Services for El were held in the Lehigh University Chapel on November 26. His home was at 729 Seneca St., Bethlehem.

Born February 10, 1899, in Orange, Mass., the only child of Henry W. and Eva (DeWolf) Cheney, El early formed his interest in books, music and nature. In his boyhood he was an accomplished pianist and contemplated a career in music.

El entered Dartmouth from Orange High School in 1916, where, among his other courses, he studied physics under Professor A. B. Meservey. The latter course soon became his goal, with music as an avocation. In later years he recalled with affection the inspiration he received from Professors Meservey, Gilbert, Proctor and Hull. Although an intensive worker, he still found time for handball, the Camera Club, skiing and the D.O.C. El received his A.B. with depart-

Complete composition, press and pamphlet binding facilities, coupled with the knowledge and skill gained through fifty years of experience, can be put to your use—profitably

THE VERMONT PRINTING COMPANY

Brattleboro, Vermont

mental honors, and later received his M.S. from Brown in 1925 and his Ph.D. from Princeton, as a Coffin Fellow, in 1929.

During his career El held teaching positions at Syracuse, Brown, Middlebury and Gettysburg. From 1934 to 1942 he was a physicist with Consumers' Research, Inc. He was a member of Theta Chi, Sigma Xi, American Physical Society, American Chemical Society, and the American Association for the Advancement of Science. He was the author of *Physics Laboratory Manual* and *Consumers' Test Manual.*

El is survived by his wife, the former Carleton Pratt of New York, whom he married on June 19, 1926; a daughter, Carleton (Mrs. David L. English); a son, Dr. Ward Cheney; and seven grandchildren.

Those who knew El will remember his unassuming manner, disarmingly succinct speech, quiet wit and alert mind. His great loves were his family and a career which had its roots in Dartmouth.

WILLIAM EDWARD TRACY, president of Tracy-Driscoll & Co., Inc., the largest real estate and insurance company in Bristol, Conn., died on December 19, after a long illness. His home was at 44 Broadview St.

A native of Bristol, Bill attended Phillips (Andover) Academy and Fordham University and was graduated from Dartmouth in 1920. During World War I he was a Chief Petty Officer in the Navy.

In addition to his business activities, Bill was active in civic affairs. He was vice-president of Bristol Hospital and for more than 30 years was a director and a member of its executive committee. For a number of years he was chairman of the hospital's finance committee and was head of the building committee which erected the Barnes Memorial Wing in 1940.

Bill was a member of the city's Board of Water Commissioners from 1929 to 1952 and was the first chairman of the Mayor's Parking Commission, forerunner to the present Parking Authority. He was an original director of the North Side Bank & Trust Co. and a director of the Bristol Federal Savings and Loan Association. He also was a member of the Bristol Real Estate Board and the Bristol Association of Insurance Agents. He was a director of the Boys' Club and president of Bristol Sports Promotions, Inc., which operated the Bristol Bees, a semi-professional baseball team in 1947 and 1948.

Bill was a member of St. Joseph's Church, the Fourth Degree Knights of Columbus, the Serra Club, American Legion, Forty and Eight, Chippanee Golf Club and the Town Club.

He is survived by his wife, Mrs. Laura (Lynch) Tracy; two sons, William J. and George E. '56; three brothers, Francis V., Joseph L. and Paul B.; and a sister, Helen B. Tracy, all of Bristol.

1921

While attending the Scottish rites at the Masonic Lodge in Madison, Wis., apparently in the best of health, JAMES FYFE FREDERICKSON of 22 East Gilman Street, Madison, died suddenly October 25 of a heart attack. Self-employed, he was a contractor in carpenter work and maintenance jobbing.

Born in Madison December 11, 1898, the son of Albert David and Fanny (Fyfe) Frederickson, Jim prepared at the Madison Central High School for the University of Wisconsin which he attended for three years before transferring to Dartmouth.

After graduation here with 1921 and a year at Tuck School, Jim reluctantly entered the family business, the Frederickson Lumber Co., Inc., general contractors and manufacturers of building materials, and stayed in it until 1944 when overwork and strain had reduced his weight from a normal 176 to 147. He liquidated the business, and as a maintenance man and millwright went to work for the Ray-O-Vac Battery Co. with which he remained four years. He then decided to become a free-lance contractor and remained one the rest of his life. He also owned a large rental warehouse.

Jim married Irene Francis of Rochester, N. Y., August 29, 1927. They were divorced in 1950. On November 17, 1957 Jim married for the second time Margery Nale. Ill last summer, she suffered a relapse because of the shock and strain of Jim's completely unexpected death, and went to California after the funeral to recuperate.

Jim is survived also by three children: two sons, A. David Frederickson, a mining engineer, of Virginia, Minn., and Robert F. Frederickson, a law student at the University of Wisconsin; and a daughter, Caryl, now Mrs. Paul Askins of Madison. All three children attended the University of Wisconsin.

In 1951 Jim attended the Thirtieth Reunion in Hanover with his sister to whom he was particularly devoted. She died after an operation in 1954. In informing friends about her fatal illness, Jim said that the Reunion meant much to both — to her, a stranger quickly and warmly accepted by the Class, and to him, who had been so long separated from it.

1922

THOMAS HAROLD PINNEY passed away on November 28 at his Manhattan residence, 55 East 72nd Street.

Had was born May 18, 1899 in New London, Conn. He prepared for college at New York Military Academy. At Hanover he was a genuine leader and a highly esteemed member of the campus community. An accomplished musician, he was leader of the college band and conductor of the college orchestra, the Dramatic Association orchestra, and the Mandolin Club. He also effectively represented the College on the debating team. He was a member of Casque and Gauntlet, Psi Upsilon, Delta Sigma Rho, Delta Omicron Gamma, and Round Robin, the senior literary society.

Following graduation from Dartmouth, Had entered Harvard Law School where he received his LL.B. degree in 1925. He was admitted to the Connecticut Bar that year and to the New York Bar the following year. For the past ten years, he was a partner in the New York law firm of Chamberlin, Kafer, Wilds & Jube which he joined in 1929.

He was a member of the Association of the Bar of the City of New York, New York County Lawyers Association, American Bar Association, and the Harvard Law Alumni Association.

Had and Jean MacDonald of Erie, Pa., were married on May 28, 1932. She survives him with their son, Lt. John MacDonald Pinney, USNR, and a granddaughter. Had and his family lived for many years in Greenwich, Conn., and since moving to Manhattan they also had a country home at East Hampton, L. I.

Funeral services were held in St. James Episcopal Church, N. Y., on December 1. The Class was represented by Chick Busher, Jack Dodd, Ed Johnson, Frank and Betty Horan, Killie Kilmarx and Stan Miner.

The Class will miss Had deeply. It extends sincere sympathy to Jean and to Donald and to Had's many friends and legal colleagues.

1923

CHARLES LEGRAND BUNDY passed away on August 27 after a long and lingering illness. His home was at 1273 Glenwood Blvd., Schenectady, N. Y.

After graduating with our class, where he was a member of Phi Delta Theta, Chick received his electrical engineering degree from Cornell in 1926. He worked for Stone and Webster Engineering Corp. in Boston, the New York Telephone Co., and, from 1937, with General Electric Corp. as an electrical engineer. He was a licensed professional engineer.

Chick on August 9, 1930 married Margaret Best, who passed away in 1944. There are two children, Willard LeGrand Bundy, who attends Mt. Union College in Alliance, Ohio, and Mrs. Robert R. Bramhill (Peggy) of Mt. Vernon, N. Y., a graduate of Cornell in 1954.

Chick was very active in the Dartmouth Club and Cornell Club of Schenectady and in Y.M.C.A. activities. He was a member of the First Presbyterian Church.

Chick and daughter Peg were regular attendants of the 1923 winter reunion weekends.

1925

We are sorry to report the sudden death of WILLIAM CHAUNCEY HAWLEY JR. on December 15 at Wilkinsburg, Pa. His home was at 647 Cascade Rd.

Chaunce prepared for Dartmouth at Edgewood High, Pittsburgh, Pa. While at Hanover he was a member of Alpha Chi Sigma and manifested a propensity for music by playing in the Players' Orchestra, Mandolin Club and College Orchestra.

Shortly after graduation he became associated with The Leadite Co. of Philadelphia as a salesman and chemist. Later he became self-employed as a photographer. The latest record on his activity indicates he served Electro Rust-Proofing Corp. of Belleville, N. J., as a sales engineer beginning in 1954.

Chaunce was married to Doris Blanche Linus of Ripley, N. Y. in 1930, but the relationship ended in divorce eleven years later. He is survived by two daughters, Mrs. Milton F. Thompson and Doris Ann ("Penny"); a son, W. C. Hawley III, and two grandchildren, to whom the Class extends its deep sympathy.

Word of the death of PAUL BRUNN on July 21, 1957 has just been received without any details. His home was on Locust Rd., Northport, N. Y.

Paul remained in Hanover only one year and completed his education at Columbia with a B.A. in 1925, M.A. in 1927 and LL.B. in 1930. Our latest record indicates that in 1952 he became a partner in the New York City law firm of Beekman and Bogue, with

whom he became associated originally in 1925.

In 1936 Paul married Dorothea Blakeslee Morrison of Northport, L. I., who survives him, together presumably with two children, Lucia and Paul Dennis, to whom the sympathy of the Class is extended.

1926

With sadness we report the passing of another loyal '26-er, FREDERICK THOMAS SULLIVAN on September 26 at his home, 2033 H St., N.W., Washington, D. C.

Ted was born in Fall River, Mass., in 1902, the son of John and Isabella (Sullivan) Sullivan. He prepared for college at Worcester Academy and Abbott School, Farmington, Me., where he starred in baseball and basketball. At Dartmouth he was active in freshman and varsity track, the Carnival Show, and as a varsity cheerleader. He was a member of Phi Gamma Delta and Kappa Phi Kappa.

After graduation Ted was with the Curtiss Wright Flying Service, Columbus, Ohio, until 1930, and the Hildreth Varnish Co., Brooklyn, N. Y., through 1932. In 1933 he joined the Reconstruction Finance Corp. in Washington, and served that agency as a fiscal accountant till ill health forced his retirement in 1956.

In 1931, in Springfield, Mass., Ted married Maurita A. Paulson, who survives him. Also surviving are two sons: Timothy '54 and Gerald, a senior at Iowa State; and a daughter Kathleen, 14.

Ted's Dartmouth activities in recent years were necessarily limited. But his regular Alumni Fund contributions, even when health and finances had dropped to low ebb, bespoke his unebbing loyalty to Class and College.

1932

FREDERIC PETERSEN GAGE died on December 26 at the Kingsbridge Veterans Hospital after an illness lasting almost two years, part of which was spent at New Rochelle Hospital and for the last year at the Veterans Hospital.

Fred was born January 21, 1910, in East Orange, N. J., but soon moved to New Rochelle, N. Y., which was to be his home for the rest of his life. He graduated from New Rochelle High School where he was busy in many varied activities and entered Dartmouth in the fall of 1928 with the great enthusiasm for the College that was always a part of him.

Following graduation Fred entered Harvard Law School but was forced to leave for financial reasons after completing one year. He obtained a job as a law clerk with a New York law firm and attended Brooklyn Law School at night, graduating with honors in 1936. He became affiliated with a law firm in New Rochelle and soon became a partner of the firm, which in recent years has been known as Kettner, Gage and Kettner. In 1942, Fred was anxious to join one of the services and was commissioned an ensign in the U. S. Coast Guard. He spent most of the war at sea, first on the small Coast Guard Cutter *Kimball* with New York as home port and later on the large cutter *Mojave* out of Boston on the Iceland and Greenland patrols. He eventually became executive officer of the *Mojave* and at the end of the war left the service as a senior Lieutenant.

His war service was the fortunate means through which Fred met Jeanne D. Vant, who was also serving as a Coast Guard officer, a "Spar," in Boston. A few months after their release from service, Fred and Jeanne were married and returned to New Rochelle and his law practice. They have lived in recent years at 15 Beechmont Place with their two adopted children, Dorothea Lillian, 5, and Peterson Vant, 4.

While Fred was a successful lawyer and president of the New Rochelle Bar Association, perhaps his greatest interests were outside his profession. Work for the College, service as Warden and Vestryman of Trinity Episcopal Church, directorships in the YMCA, Visiting Nurse Association and Adoption Service of Westchester, the presidency of the Lions Club and activity in the Republican Party all claimed much of his attention. He still found time for some tennis, gardening and sailing.

Fred was always ready and anxious to serve Dartmouth. Almost always he was an as-

Preparatory School Directory

BREWSTER ACADEMY Founded 1820

A truly fine College Preparatory school beautifully situated on Lake Winnipesaukee. Vocational and Driver Training. Small classes. Testing and Guidance program. A personalized academy in the New England tradition, with outstanding teaching and college preparatory record. Enrollment 275-300 with dormitory accommodations for boys only.

Vincent D. Rogers '24, Principal, Wolfeboro, N. H.

Cardigan Mountain School

For boys in Grades 5-9. Prepares for all secondary schools. Located in the North Country 22 miles from Hanover. Elevation 1200 ft. Land and water sports. Outing Club program. **Summer session.**

Roland W. Burbank '33, Headmaster
Canaan, New Hampshire

1959 SUMMER SCHOOL — June 28 to August 22. Combines a summer camp program and setting with opportunity for serious study, tutoring, remedial reading and mathematics.
Norman C. Wakely — John H. Lucy, Co-directors

HOLDERNESS SCHOOL

Founded 1879. College preparatory program. 130 boys, grades 9-12. Excellent skiing facilities and full extra-curricular program. Railroad and plane service from Boston (120 miles) and New York.

Donald C. Hagerman '35, Headmaster
Box D **Plymouth, N. H.**

KIMBALL UNION ACADEMY

Founded 1813. Boys' School since 1936. 14 miles from Dartmouth. College preparatory. Enrollment — 170.

Frederick E. Carver '27, Headmaster
Box B, Meriden, N. H.

NEW HAMPTON

A NEW HAMPSHIRE SCHOOL FOR BOYS

138th year. 210 boys from eighteen states and eight foreign countries. Experienced faculty. Small classes. Well regulated boarding school life. Modern buildings. 100 miles from Boston. Eight-week summer school.

Excellent college preparatory record at Dartmouth and other colleges.

Frederick Smith, A.M., Headmaster
T. Holmes Moore, Executive Headmaster
BOX 170—NEW HAMPTON, N. H.

Vermont Academy

A preparatory school in southern Vermont. 150 boys from 15 states. Active ski and Outing Club program. 220 miles from New York City and 115 miles from Boston.

Larry Leavitt '25, Headmaster
Box A **Saxtons River, Vermont**

Girls

Carefully supervised college prep and general courses. Grades 7-12. Endowment permits moderate rate.

CHAPEL HILL

For girls. Boarding (5 or 7-day week). Music, art, drama. Typewriting. Social, athletic, creative activities.

Wilfred D. Clark '25, Principal
327 Lexington St., Waltham, Mass.

Stoneleigh-Prospect Hill

For girls. Grades 9-12. College preparatory. 90th year. Art, music, dramatics. Mensendieck system for posture. Skiing, swimming, private riding stable. 150-acre campus. Modern building.

EDWARD E. EMERSON '26
BOX 43-M, Greenfield, Mass.

Boys and Girls

CUSHING ACADEMY

84th year. Sound college-preparatory program with excellent extracurricular program. Boys and girls from 15 states and 3 foreign countries work together under expert adult guidance. Wholesome atmosphere of small New England town 60 miles northwest of Boston.

Ralph O. West, Headmaster
Box 70, Ashburnham, Mass.

LYNDON INSTITUTE
91st year

In the "Northeast Kingdom" of Vermont

An Endowed Private School of 400 students where 30 Boarding Girls and 30 Boarding Boys share the Community life in this Vermont town. Coed. Grades 9-12. Accredited. Sound College Preparatory Program. Founded 1867. Art, Music, Dramatics. Excellent Skiing. All Sports. Catalog. **Robert K. Lewis, Hdm., Box K, Lyndon Institute, Lyndon Center, Vermont.**

sistant class agent and for years had been chairman of the New Rochelle Alumni Interviewing Committee, working with applicants for admission to Dartmouth. While in the Veterans Hospital Fred said that he certainly wanted to be a part of the Capital Funds Drive, where his interest focused on the Hopkins Center, for he'd always been one of E. M. H.'s most ardent admirers. He'll have a part in this, as it was requested that his friends contribute to Dartmouth for the Hopkins Center in lieu of flowers. And, at the funeral, a lovely organ rendition of "Dartmouth Undying" was played at Fred's own request.

His home city of New Rochelle was "a better place to live in" for all of Fred's devoted work in public causes, the New Rochelle City Council formally stated in a resolution of sorrow at his passing. His many friends knew him as a thoughtful, generous, loyal person and a devoted father and loving husband. His classmates and fellow alumni also knew him as an enthusiastic son of the college, whose interest in its affairs was unflagging. All of this host of friends will miss him greatly.

1938

ROBERT FREDERICK COFFIN, who attended the College in the Class of 1938 for two years, died suddenly on September 11 in New Rochelle, N. Y. Bob suffered a heart attack while playing handball and death followed almost immediately.

Born May 28, 1916 in Plainfield, N. J., Bob prepared for college at New Rochelle High School. A lover of athletics, he had excelled there in baseball, football and track.

Bob summered in Newport, Vt., where he developed a deep interest in farming. He left Dartmouth to study agriculture at the Stockbridge School of Agriculture. He served in the Army in World War II and then returned to agricultural work. In 1951 Bob received a B.S. in Agriculture from the University of Vermont, and a Master's degree in Education there in 1952. He received his Ph.D. from Cornell in 1955.

Bob was a member of Psi Upsilon, Phi Kappa Phi, and Alpha Zeta fraternities. He was also a Mason and a member of the Odd Fellows.

He is survived by his wife, the former Dorothy Derick of Orleans, Vt., and four children: Myra Ann, 18, and Robert F. Jr., 17, both by a previous marriage; and John T., 6, and Laura Jane, 4. He is also survived by his brother Richard T. Coffin '36.

1941

RALPH WILLIAM CHESBROUGH died in San Diego, Calif., on January 21, 1958. He was born in Springfield, Mo., January 5, 1920 and prepared for college at Miami, Fla., Senior High School and Vermont Academy. His home was in Cairo, Egypt when he entered college. Ralph left college for several years but returned to receive his degree in 1950, as with the Class of 1941.

He was for a time connected with Narsarssuak Air Base in Greenland, as office manager for a firm of engineers. Later he was government relations officer for Arabian American Oil Co. and then administrative assistant with the War Shipping Administration in Cairo, after which he became U.S. military attaché in Baghdad. The last connection which Ralph was known to have had was as export manager for Albert Albek, Inc., perfume manufacturers in Culver City, Calif.

So far as is known, Ralph never married. He is survived by his mother, Mrs. Ruth Rainier of 2357 Second Ave., San Diego.

W.E. DEFENSE PROJECTS ENGINEERS are often faced with challenging assignments such as systems testing for the SAGE continental air defense network.

ENGINEERS explore defense frontiers at Western Electric

If guided missiles, tropospheric radio defense communications and airborne radar sound like exciting fields to you, a career at Western Electric may be just what you're after.

Defense projects like these are among our most important assignments . . . and engineers are right in the thick of it. There are the Nike and Terrier guided missile systems . . . advanced air, sea and land radar . . . anti-aircraft gun-control equipment . . . the SAGE continental air defense system . . . DEW Line and White Alice in the Arctic. These and other defense jobs offer wide-ranging opportunities for all kinds of engineers.

Western Electric engineers also discover plenty of made-to-order opportunity in our work as manufacturing and supply unit of the Bell System. Here they flourish in such new and growing fields as electronic switching, microwave radio relay, miniaturization. They engineer the installation of telephone central offices, plan the distribution of equipment and supplies . . . and enjoy, with their defense teammates, the rewards that spring from an engineering career with Western Electric.

Western Electric technical fields include mechanical, electrical, chemical, civil and industrial engineering, plus the physical sciences. For more detailed information pick up a copy of "Consider a Career at Western Electric" from your Placement Officer. Or write College Relations, Room 200C, Western Electric Company, 195 Broadway, New York 7, N. Y. And sign up for a Western Electric interview when the Bell System Interviewing Team visits your campus.

TELEPHONES OF THE FUTURE—Making telephone products for the Bell System calls for first-rate technical know-how. Tomorrow's telephone system will demand even more imaginative engineering.

Western Electric

MANUFACTURING AND SUPPLY UNIT OF THE BELL SYSTEM

Principal manufacturing locations at Chicago, Ill.; Kearny, N. J.; Baltimore, Md.; Indianapolis, Ind.; Allentown and Laureldale, Pa.; Burlington, Greensboro and Winston-Salem, N. C.; Buffalo, N. Y.; North Andover, Mass.; Lincoln and Omaha, Neb.; Kansas City, Mo.; Columbus, Ohio; Oklahoma City, Okla.; Teletype Corporation, Chicago, Ill. and Little Rock, Ark. Also Western Electric Distribution Centers in 32 cities and Installation headquarters in 16 cities. General headquarters: 195 Broadway, New York 7, N. Y.

Keller, Casey.

Wednesday, Aug 5th '59

Dear Mr. Murrow,

About ten years ago when my wife Bitsy was pregnant with our first boy, we heard a recording of Casey Murrow shopping for a Christmas calender for his mother. We knew right then the baby's name would be Casey.

We've been meaning to send a picture of our Casey to you for a long time and the article in Look reminded us that it was time to do it.

So here is a picture of Casey Keller*...and with it go our best wishes for a fine year off and our hope that our Casey can some day have the character and integrity of his namesakes father.

Cordially,

Shelly Keller

*P.S Taken at camp Treetops, Lake Placid, N.Y.
... He's a red head.

Keller, Helen

ARCAN RIDGE
WESTPORT, CONN.

April 16, 1959

Dear Mr. Murrow:

It is a marvelous experience such as God makes possible -- the way in which you are helping to fulfill the dream that has given energy and purpose to my life. When Anne Sullivan Macy and I began working for the blind, I hoped that we might be instrumental in kindling inner light for the blind of America, but I did not expect to live to see a movement started for the deliverance of the blind throughout the world, and behold, the miracle is being wrought through your generosity! I cannot thank you as deeply as I feel, but my heart glows and will always glow with the beauty of your joining the Crusade for the blind of the world.

With affectionate appreciation, I am,

Sincerely yours,

Helen Keller

Kelly, Richard

Dear Mr. Murrow:

I heard your program, "The Business of Sex", last night and wish to offer my compliments for an exceptionally well-done bit of reporting. If radio in general offers more intelligent reporting and less of the golden-voiced personalities it will hold up much better against the audience mesmerism of television.

I'm sure the time and money expended on your hour-long programs must be considerable, but you show what can be done in radio-news. I was particulary interested in the Nevada comments supporting prostitution. These same inane fallacies are repeated to me time and again in favor of "opening up."

The anguished flood of mail, phone calls, etc. from your bloody-toed Madison Avenue neighbors may convince someone in CBS that it is to be one of those "never again" ventures. I hope not.

Sincerely,

Richard Kelly

December 18, 1958

Mrs. Charles B. Kendall
1317 W. Holly Street
Phoenix, Arizona

Dear Mrs. Kendall:

I thank you for your letter of November 19 and apologize for the delay in replying. I am afraid there is little to be done except to persuade a Liberal paper to cover your area.

Sincerely yours,

ERM:skh

Kendall, Mrs Chas. B.
Phoenix, Arizona
Nov. 19, 1958

Dear Mr. Murrow,

We Democrats in Arizona need help! You know the results of our recent election, and I feel if the same methods used here by the opposition becomes widespread, we Democrats and yes, our whole American way could be in danger.

Our state has just gone through the most ruthless brain washing in our history. A fine, honorable and fair gentleman, namely, Governor Ernest McFarland has been viciously attacked by a monopolistic press. The only

two newspapers in our city being owned by reactionary Republican Eugene Pulliam, are circulated throughout our state.

With seemingly unlimited funds the opposition bought up the most important time slots on every television station in the state.

The public is being fed only, biased, slanted or even a black out of news.

This monopoly was attempted to be broken by Anna and John Boettiger at the close of World War II. Shortage of newsprint,

and all wire services being taken by the opposition caused failure.

I am enclosing a clipping of an editorial from todays' Arizona Republic, November 19, 1958. Now I know you welcome constructive? criticism, for I feel you are a level headed and fair gentleman; but we are tired of always getting one side of the news.

If some outstanding Liberal paper could be interested in coming in our area, one who could absorb

losses for awhile; I feel eventually it would be a good investment because of the huge growth in our population. In so doing our Democrats would have a fair representation.

Any help you can give our cause, especially before the 1960 Presidential Election will be of great benefit to many.

Very truly yours,

Mrs. Charles B. Kendall
1317 W. Holly St.
Phoenix, Arizona

Fooled Again

The recently announced new Soviet seven-year economic plan has had the greatest possible publicity in the United States. It has especially impressed the so-called "liberal" commentators and political writers. The best known of them, radio and TV personality Ed Murrow, the other day delivered a lengthy and very favorable "analysis" of the plan.

There were many things that were very wrong with Murrow's views on the Soviet plan, but its worst feature was the total acceptance of Soviet statistics and Communist figures as true and factual. Mr. Murrow likes to pretend that he is a well informed observer of foreign affairs. He, therefore, should know that Communist "statistics," including figures of production, information of resources, industrial development and labor, are, in almost all cases, purely propaganda figures, which bear very little resemblance to facts. Soviet Russia has had five-year, six-year, and seven-year plans continuously since 1929. Yet, in spite of the immeasurably rich natural resources of Russia, the Communists have not managed, after 20 years of planning, to better the lot of the average Russian in any appreciable way. On the contrary, the Russian nation today eats less and much worse than it did before World War I. It is true that the Soviets have built very huge and impressive industrial plants, dams, and electric power stations. But this enormous building program has been founded on waste, inefficiency, graft, bureaucracy, and oppression.

The basis of the Soviet economy is slave labor —a fact which Mr. Murrow ignores completely. This is true of Khrushchev's era as it was true of Stalin's. A slave labor economy may have temporary advantages when it comes to building, quickly, enormous public projects such as canals or pyramids. But in the long run, such an economy is bound to collapse. No slaves in history have liked their slavery, and economic and political systems built on slavery and oppression have always come to an inglorious end.

Mr. Murrow also accepts at their face value Khrushchev's assurances about a Communist world-wide "economic offensive." If Khrushchev had plans for military conquest, Mr. Murrow argues, he would have kept them secret. But the Red boss, Murrow goes on, means to conquer the world by economic means. Therefore, he makes his economic plans public. It is indeed hard to beat such Murrovian "logic" for sheer stupidity. The opposite is, of course, true. It is precisely because Khrushchev wants to keep his military plans secret that he loudly broadcasts his so-called "economic" plans. This he does in order to fool the West about his own intention, which is military conquest. Khrushchev also tries to make Western statesmen lose time, money, and energy fighting nonexistent and completely imaginary Communist dangers, such as Communist economic achievements.

Khrushchev, in other words, uses the old "confuse-the-enemy" technique. Ed Murrow and "liberals" like him, who are impressed by this kind of Communist economic propaganda, prove that the Reds are once again succeeding in fooling the West as to Moscow's real aims, objectives, and policy.

Kennedy. Jay.

June 25, 1959

Dear Mrs. Kennedy:

Thank you for your recent letter with its interesting comments.

In regard to your request, unfortunately, I have no control over broadcasting. I have, therefore, passed your letter on to our Director of News, Mr. John Day. I am sure he will give it his immediate attention.

Again, thank you for your nice letter.

Sincerely yours,

Mrs. Jay Kennedy

Ed Morrow Esq. 18.6.59
C.B.S.

Dear Mr. Morrow

As an Australian pianist - singer - broadcaster, now resident some time in London England, and a long time admirer of your B/casts, I am enjoying for the first time this great country of yours.

Yesterday I listened with interest & pleasure to you, in an interview with publicity officials. As I am not yet fair with your stations, I think this was relayed

through an Illinois University Station. You will know.

I listened with great interest to all you had to say, as being neither suffragette nor "long haired frustratt" but just a normal young person whose belief is also - get to know your world neighbours.

I hope to be in U.S.A. until at least the end of August, it would be indeed a pleasure to come into contact with broadcasting here, in same way. For six years I was staff pianist and regular b/caster in all departments of the Australian B/casting Commission since this have B/cast frequently from B.B.C Overseas from London.

Next week I go to California

for possibly a month.

I then return to these beautiful surroundings before returning to New York.

If you can suggest any approach to broadcasting here, it would be good. I do NOT seek engagements as a pianist — my interest is in the spoken word

Many thanks for much stimulating provocative & highly interesting listening

Yours truly

(Miss) Enid Stevenson

COMMITTEE ON
LABOR AND PUBLIC WELFARE

August 30, 1958

Mr. Ed R. Murrow
CBS
485 Madison Ave.
New York, N. Y.

Dear Mr. Murrow:

The Research Division of the Democratic National Committee has requested me to distribute to all key Democrats, party leaders, and public officials the two enclosed speeches. Although these issues -- of national defense and labor reform -- may not at present be crucial in your particular area, these materials are sent in the thought that many Democrats may wish to be prepared on these subjects which will certainly figure in political debates across the nation.

A variety of statements by Republican officials make clear their intention to use the "labor" issue against the Democrats in this campaign. Actually, our party need not be on the defensive. It was the vote of approximately four-fifths of the Republicans in the House of Representatives that killed the bill which I had sponsored, which every Democratic Senator supported, and which more than two-thirds of the House Democrats supported. In the enclosed speech, I attempted to demonstrate the unreasonableness of those who opposed a basically strong bill.

The other enclosed address has been requested by several candidates because it attempts to summarize the lag in our defense preparedness over the last six years of Republican rule, and the future implications this holds for our military and foreign policies. While some Republican Senators objected to such a warning's being sounded on the floor of the Senate, I am convinced that these are facts the public needs to know.

I hope this material will be of assistance to you. I welcome your comments -- and hope you will let me know if there is anything further I can send you.

With every good wish, I am

Sincerely,

John Kennedy

Congressional Record

PROCEEDINGS AND DEBATES OF THE 85th CONGRESS, SECOND SESSION

Who Killed the Kennedy-Ives Labor Reform Bill?

SPEECH

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, August 22, 1958

Mr. KENNEDY. Mr. President, only the Jimmy Hoffas and the Nathan Shefermans can find satisfaction in the failure of this Congress to pass the labor reform bill, generally known as the Kennedy-Ives bill. Honest union members, informed business men, responsible labor leaders, law enforcement officers, and the general public—all of these will suffer as the result of this bill's death in the House of Representatives.

Those who voted against the bill and those who lobbied for its defeat must bear a heavy responsibility during the coming months when racketeering and gangsterism in the labor movement continue unchecked. I cannot believe that the American people will accept some technical or procedural argument offered by way of excuse for the defeat of a bill which would have put Mr. Hoffa and his ilk out of business.

No two experts in labor affairs could probably agree on a draft bill in this controversial and sensitive area. Therefore, it was natural that criticism and controversy should surround it. As the Senator from Arkansas [Mr. McCLELLAN] put it during the debate in the Senate:

> Each Senator, no doubt, feels that if he were privileged to write it he could improve on this measure.

In the same colloquy, he expressed what I believe all of us felt, when he said:

> I say let us take what we know all of us want, and pass the bill, and then move on.

And the Senate did just that, and passed the bill by an 88-to-1 vote.

That this bill displeases extremists is not surprising, for these same extremists have been the ones who have prevented the enactment of any progressive labor legislation since 1947. But this bill passed the Senate precisely because the members of this body demonstrated, in the words of Business Week magazine, how "wise guidance in the public interest can be substituted for concern over wide apart partisan positions."

The Kennedy-Ives bill, as it passed the Senate, was a strong, bipartisan measure. Whatever may be said about what the Congress might do on some other bill at some other time, this bill represented a real opportunity for effective labor reform in this Congress. The failure to enact it only means that Hoffa and the handful of irresponsible and arrogant labor leaders who plague an otherwise clean labor movement will continue to operate.

Of one thing we may be sure: Next year, there will be more scandals, more racketeering, more abuses by the hoodlums who have infiltrated a tiny fringe of

477701—67787

the American labor movement. But we shall lack an effective remedy to stop them; and those who defeated this bill are apparently willing to assume responsibility for tying our hands.

More union funds will be embezzled or otherwise misused next year, and the members and the public will know nothing about it.

More union elections will be rigged next year, and nothing will be done about it.

More exconvicts will serve as union officers; more Nathan Shefferman middlemen will take payoffs; more picket lines will be set up for extortionate purposes; more trusteeships will be used for Jimmy Hoffa-type power plays; more Johnny Dio paper locals will be established to front for racketeers; but we shall be able to do nothing about it.

The results of nearly 2 years of McClellan committee hearings, of several weeks of hearings, discussion, and drafting by the Labor Committee, of long, constructive debates on the Senate floor; all this is to go for naught, because of the short-sighted opposition stemming mostly from one party and one interest group.

PROVISIONS OF THE KENNEDY-IVES BILL

No one who thoughtfully examined the Kennedy-Ives bill could doubt its effectiveness as a labor-reform measure. The key provisions of the bill, as passed by the Senate, included the following:

First. Comprehensive detailed disclosure to members, press, public, and law enforcement agencies of union financial data.

Second. Full reports by union officers on any personal conflict-of-interest transactions.

Third. Criminal sanctions for embezzlement of union funds, false reporting, false entries in books, failure to report, or destruction of union books.

Fourth. Suits by union members for recovery of funds embezzled or misappropriated by union officers.

Fifth. Prohibition of loans by employers or unions to union officers.

Sixth. Secret ballot for the election of all union officers or of the convention delegates who select them.

Seventh. Due notice of all union elections, and real opportunity to nominate opposing candidates.

Eighth. Requirement that union officers be elected by secret ballot every 4 years, by international unions; and every 3 years, by local unions.

Ninth. Prohibition on the use of union funds to support candidacy of any union officer.

Tenth. Prohibition of service as union officers of persons convicted of felony.

Eleventh. Power to Secretary of Labor to institute court action to set aside improper elections, and conduct new elections.

Twelfth. Limit on union trusteeships to 18 months.

Thirteenth. Mandatory annual report to Secretary and union members on every trusteeship, the reasons for its establishment, continuance, and operation.

Fourteenth. Prohibition on counting votes of delegates of trustee bodies unless delegates elected by secret ballot, and on transfer of funds from trusteed local union to international except normal dues and assessments.

Fifteenth. Power to Secretary of Labor to begin a court proceeding to break improper trusteeships.

Sixteenth. Prohibition of picketing for extortion or to secure payoff from employer.

Seventeenth. Prohibition of solicitation or payment of fictitious fees for unloading cargo from interstate carriers.

Eighteenth. Public financial reports of the operations of Shefferman-type middlemen; and a prohibition of channeling bribes and improper influence through such middlemen.

Nineteenth. Elimination of the "no man's land" problem which prevented NLRB action on local labor racketeering,

477701—67787

by directing the NLRB to exercise its full jurisdiction under the Taft-Hartley Act.

A STRONG LABOR REFORM BILL

It will be noted that this bill would have implemented every one of the McClellan Committee's legislative recommendations not yet acted on, inasmuch as the welfare fund protection bill had already been passed.

The McClellan committee legislative recommendations were as follows and I quote from the report:

LEGISLATIVE RECOMMENDATIONS

The United States Senate Select Committee on Improper Activities in the Labor and Management Field recommends that the Congress of the United States give attention to the passage of legislation to curb abuses uncovered in five areas during our first year of hearings.

These recommendations are—

1. Legislation to regulate and control pension, health, and welfare funds;
2. Legislation to regulate and control union funds;
3. Legislation to insure union democracy;
4. Legislation to curb activities of middlemen in labor-management disputes;
5. Legislation to clarify the "no man's land" in labor-management relations.

It must be noted that the committee has explored a number of other areas in labor-management relations and plans to present legislative proposals covering those areas at a future time. For instance, much testimony has been heard during past months on the infiltration of gangsters and racketeers into the labor movement. Additional testimony on this subject will be heard during the coming year and this, along with other subjects of committee interest, such as some phases of organizational picketing on which we have already had some testimony, will provide the basis for further legislative recommendations.

The bill rejected by the House implemented all but the first of these recommendations which was already far advanced in the legislative process. This bill would have accomplished the following:

First. It provided for complete financial disclosure by unions, with broad investigative powers for the Secretary of Labor to insure compliance;

Second. It imposed strict standards of union democracy, including free elections by secret ballot and the regulation of trusteeships;

Third. It curbed labor-management middlemen;

Fourth. It provided an effective solution to the "no man's land" problem.

The bill, as passed by the Senate, was recognized by knowledgeable men on both sides of the aisle as an effective instrument of labor reform. The Senator from Arkansas [Mr. McCLELLAN] said of the bill:

> If enacted, and properly administered, it will drive many unreformed ex-convicts, racketeers, gangsters, and crooked officials out of the union movement and strengthen the position of honest, decent unionism, and its leaders.

Senator Knowland, the distinguished minority leader, indicated that the bill marked "real progress" and said, "In the final analysis, the workers will be the ones who will suffer if Congress does not finally act on legislation of this sort at this session." And the ranking Republican member of our Senate Committee on Labor, the Senator from New Jersey [Mr. SMITH], has termed the bill "one of the important landmarks of this Congress."

TAFT-HARTLEY AMENDMENTS

There have been objections that this bill does not go far enough—that it does not restrict labor's rights in the field of collective bargaining or political activity. But the Senate demonstrated repeatedly that it regarded this as a labor reform bill, designed primarily to carry out the recommendations of the McClellan committee—and that it should not be loaded down with broad new measures in the various areas of industrial relations.

The Taft-Hartley amendments contained in the bill were placed in it at the repeated urging of administration spokesmen. The Secretary of Labor in his appearance before our committee insisted on the inclusion of these amendments as did the ranking minority member of our committee, the Senator from New Jersey [Mr. SMITH] both in committee and on the floor of the Senate.

The following excerpt, for instance, is taken from page 32 of the hearings before our committee:

Senator KENNEDY. I will say to the Secretary, the Secretary knows quite well that I would be delighted to see reforms in the Taft-Hartley law, which are long overdue.

The legislative recommendations of the McClellan committee include five areas: Legislation to regulate control of pension, health, and welfare funds, which, as I have said, we have done something about.

Second, to legislate to regulate control of union funds; and three, legislation to insure union democracy; and four, legislation to curb activities of middlemen in labor-management relations; and five, legislation to clairify the "no man's land" in labor-management relations.

I will say that if it is the desire of any member of the committee to offer amendments on any question, when the subcommittee finally meets to decide on legislation, that, of course, is his privilege.

I am merely hoping to the extent possible that we will attempt to confine ourselves to this immediate challenge.

From our experience since 1947, I am aware of the error of attempting a full-scale revision of the Taft-Hartley Act which, I believe, ought to take place.

Now, it may be possible, if the subcommittee could reach a consensus, we could do something about matters like non-Communist affidavits, and the right of economic strikers, and the problem of the building trades, and matters about which I think there is quite general agreement.

However, I am anxious that we do not get into too broad a field, because the result will be that nothing will be done.

Secretary MITCHELL. Certainly, in my answers to questions, I will abide by the chairman's ruling.

Senator KENNEDY. It is not a ruling. It is just an expression of hope.

Secretary MITCHELL. I would like to say it is the reason why I thought it was to the interest of all concerned to unfold a complete labor-management program, in my opinion this program should be approached in the broadest way.

All of the recommendations we have made, we think, are needed reforms.

And again, on page 278, the Senator from New Jersey [Mr. SMITH] had this to say:

I do want to emphasize the importance of giving serious consideration to the entire program contained in S. 3097, S. 3098, and S. 3099 which I introduced for the administration. * * *

For this reason I agree with the distinguished chairman, Mr. KENNEDY, that in the time available, it is impossible to write a major revision of the Taft-Hartley Act, especially if consideration is to be given to the recommendations of the McClellan committee dealing with the urgent problems of racketeering and union democracy, and such testimony as we received from Senator KNOWLAND yesterday, and Senator MCCLELLAN yesterday in their splendid presentation before this committee.

However, although the administration's proposals do not contemplate a major revision of Taft-Hartley, some of them are directed at specific, long-standing inequities and deficiencies, the correction of which are of immediate urgency.

This being so, I hope that it will be possible for us to deal with these proposals at this time.

The only major recommendations of the administration not included in the bill related to organizational picketing and secondary boycotts. But the Senator from Arkansas [Mr. MCCLELLAN] has clearly indicated that the question of secondary boycotts and picketing would be the subject of future investiga-

tions by the committee, and consequently, action on these two specific areas was deferred. I refer the Members of the Senate to page 10259 of the CONGRESSIONAL RECORD where this whole matter was discussed, and I quote from Senator MCCLELLAN'S speech on that page:

> Our committee has only begun to investigate that particular area. We have received some testimony regarding it, and I have repeatedly stated that the secondary boycott problem must be dealt with.
>
> But it is my theory that if we are to have good legislation, we must give it some care and thought. That is all I am asking for.
>
> If the Senate is now to try to legislate at this session, by means of this bill, in the entire labor and management field, then the select committee should be discharged, because then there would be nothing left for it to do.
>
> I want to have good legislation enacted, and I want the Senate to go into this field. But I repeat that I want these proposals properly investigated and considered, rather than to take hasty action and get bad legislation enacted.

OTHER CRITICISMS

Exaggerated criticism came from some quarters about the provisions of the bill requiring reports from employers concerning deals with labor-management middlemen. This provision of the bill prohibited nothing; it merely required information to be reported from employers concerning dealings with what the McClellan committee report called shadowy figures. Neither did this provision in any way interfere with normal employer-employee relations, nor was it ever intended to do so.

Another provision of the bill, clearly designed to prohibit bribes by employers to prevent unionization, was requested by National Labor Relations Board representatives when they appeared before the McClellan committee. This unambiguous antibribery section certainly did not preclude normal wage or other payments as was charged by some.

477701—67787

KENNEDY-IVES STRONGEST AVAILABLE BILL

The hard facts of the matter are that the Kennedy-Ives bill was not only the strongest bill which could pass the Congress—and the only bill which could be enacted at this Congress—it was also the strongest bill available. In most key areas it was much stronger than the proposals of the administration. Permit me to list some of them:

First. The administration proposals contained no effective regulation of trusteeships. This bill set strict standards and provided means by which union members could protect themselves against arbitrary imposition of trusteeships by international unions.

Second. The administration's bill contained weak and ineffective provisions to protect union members' voting providing only a report from a union that it follows its own rules for elections. The Senate-passed bill, on the other hand, would have required secret periodic elections of all important union officers. It went further and provided machinery to upset improperly held elections and established a method by which new elections could be held.

Third. The administration's bill merely reenacted present law dealing with union financial reports while the Senate-passed bill contained a comprehensive reporting requirement including reports by union officers of conflicts of interest.

Fourth. The administration bill contained a very limited provision requiring employers to report only payments to any union officer or employee. This is already covered by section 302 of Taft-Hartley. The Senate-passed bill, on the other hand, contained a strong, detailed provision requiring employers and middlemen to report transactions and arrangements as well as payments and expenditures for activities intended to influence or affect employees in the exercise of rights guaranteed by the Labor Act.

Fifth. The Senate-passed bill contained a strong specific provision against "shakedown picketing" in general and against unlawful exactions from interstate truckers. These safeguards were not specifically covered in the administration bill.

Sixth. The Senate-passed bill specifically prevented convicted criminals from holding union office. This subject is not covered by the administration bill.

Seventh. The Senate-passed bill contained a specific prohibition against using union funds to influence union elections. The administration bill was silent on this subject.

Eighth. The Senate-passed bill contained specific provisions making it a criminal offense to refuse to submit to the Secretary of Labor records, and to refuse to permit the Secretary of Labor to enter and inspect books and accounts. The administration bill would have required the Secretary to resort to protracted court proceedings for this purpose.

Ninth. The Senate-passed bill contained strong criminal penalties against false entries in union books and against destruction of records. The administration bill was either silent or contained much weaker provisions dealing with this subject.

Tenth. The Senate-passed bill contained provisions designed to encourage unions to enforce strict codes of ethical practices binding upon affiliates and members. The administration bill was silent on the subject.

Eleventh. The Senate-passed bill contained a strong provision directing the Labor Board to exercise its jurisdiction in situations warranting such action and presently not covered by reason of the Board's refusal to exercise its statutory jurisdiction. The administration bill would have perpetuated the present Board-created "no man's land" by ceding jurisdiction to States, 36 of which have no State labor relations laws. This would mean applying greatly dissimilar State labor laws ranging from New York's prolabor, closed shop law to restrictive right-to-work statutes on the books in several States. More importantly it would have left thousands of employers and employees in such major industrial States as California and Illinois without the protection of a uniform national labor law.

THE ROLE OF THE REPUBLICANS

Mr. President, neither Senator IVES nor I have ever sought to make this labor reform measure a partisan political issue. We knew that there was too much at stake. I have cited these comparisons with the administration bill to demonstrate that the bill rejected by the House yesterday was a strong and effective measure.

Until this week, it was never a party measure. The bill had a bipartisan origin and sponsorship, and included the recommendations of the President as well as those of the bipartisan McMcClellan committee. It was reported by the Senate Labor Committee with only one dissenting vote. It passed the Senate with only one dissenting vote. It received the endorsement of those members on both sides of the aisle who have taken a special interest in labor affairs.

But now partisanship has killed the labor-reform bill. Two-thirds of the Members were required to pass the bill in the other body. More than two-thirds of the Democrats supported the bill. More than three-fourths of the Republicans opposed it.

This is a fantastic performance. The Republicans have long assailed the Democratic Party for its supposed labor ties. They have long cried out for labor reform. They have long assailed the Democratic congressional leadership for not passing a bill to implement the findings of the McClellan committee. Now, finally given an opportunity to vote for

labor reform—for a bill that would have crippled the free-wheeling operations of Mr. Hoffa and his ilk—they chose to defeat the bill and preserve the issue.

I have already commented on the false propaganda campaign against this bill, initiated by the NAM, Retail Federation, and United States Chamber of Commerce. Their success in planting fear and confusion on the Republican side—regarding a bill thoroughly and carefully considered here before it passed 88 to 1—has now been demonstrated.

But none of this would have been possible had it not been for the sabotage of the bill effectively worked by the official Republican spokesman on labor affairs, Secretary of Labor James Mitchell.

Mr. Mitchell has talked long and piously about the need for labor reform. He has sought to give the credit for action in carrying out the McClellan committee recommendations to the Republican administration. He has sought to place the blame for inaction upon the Democratic congressional leadership. But the facts of the matter are that the chief stumbling block to labor reform legislation in this Congress has been Secretary Mitchell.

At no time has he lifted one finger in favor of this bill. At no time has he urged his party members in either house to vote for the bill. He first attempted to sabotage the bill from Geneva, calling it "weak and ineffective," after it had been reported out of committee by a nearly unanimous vote. He has continued these negative and misleading comments up to this very week. Finally, at the crucial moment in the House debate, just before the vote on the measure, he authorized a statement on the floor of the other body calling the bill a "bad bill". The inevitable result of his intervention followed: 79 percent of the Republican Members voted against the bill.

The reason is plain: Mr. Mitchell did not want a labor reform bill. His contradictory public statements about the legislation were designed to kill the only bill that could pass, appease those anti-labor elements in his party that wanted a more restrictive bill, and maintain a synthetic political issue. For Mr. Mitchell's true attitude on labor reform was disclosed at an academic seminar some months ago. The opposition to labor reform legislation which he expressed at that meeting has since been reported in the press, and I have independently checked these quotations and found them to be accurate. At that meeting Mr. Mitchell opposed democracy in labor unions, stating it could lead to "anarchy." He opposed receiving authority to disclose union financial reports, saying he would "prefer to defer this." He opposed effective labor reform legislation, stating that he did "not think anybody is going to be able to write and pass legislation that will correct the evils that the McClellan committee has uncovered. My job is to quiet the hysteria so we do not get the kind of legislation that would be dangerous to the American labor movement. Maybe the right way to put it is: Feed a little innocuous legislation to the lions, and this may give us the time to put the thing in the right perspective."

The President is reported as having stated yesterday that the bill had four shortcomings. However, Mr. President, examination of the record indicates that the President has been inadequately briefed.

First, contrary to the President's contention the bill does contain very adequate power to enforce the standards imposed in it. Under the bill, the Secretary is authorized to make investigations, enter and inspect records and is specifically directed to compile the reports required by the bill when any person responsible for making a report neglects to do so. The bill also contains stiff criminal penalties which if properly

administered will compel adherence to standards.

Second, contrary to the President's statement the bill does deal with shakedown picketing in section 603. The problems of secondary boycotts I have already discussed.

Third, the President complains about the Taft-Hartley amendments in the bill. The fact of the matter is that the Taft-Hartley amendments contained in this bill, as I have already pointed out, are all based on recommendations in the President's own labor message of last January, or have been recommended in the past by prominent Republican labor spokesmen. That message called for restoring the right of economic strikers to vote—so did this bill. It called for prehire contracts in the construction industry—so did this bill and so on.

Fourth, the President mentions the no-man's-land problem. The solution proposed by the administration was at first favored but later rejected by our committee, for it would have turned over to the States jurisdiction in interstate labor matters where no labor law exists. Thousands of workers and employees, under the administration proposal, would have been left without the protection of a uniform national labor law.

It is unfortunate that misleading charges and analysis which ignored the many sections on which there was general agreement, has killed a bipartisan bill desperately needed by the American working people and public, regardless of party. I can only say that constructive labor reform legislation will be brought forward again next year; and I can only hope that it will pass the Congress in 1959 with the same constructive spirit that enabled it to pass the Senate by 88 to 1 this year.

Remarks of Senator John F. Kennedy (Dem.-Mass.) "The Choice in Asia-Democratic Development in India"

For Release: Upon Delivery on the Senate floor, Tuesday Afternoon, March 25, 1958

I am sending you a copy of a speech on United States policy toward India which I intend to deliver on the floor of the Senate this coming Tuesday, March 25. This speech will be accompanied by a resolution which Senator Cooper of Kentucky and I are introducing.

Senator Cooper and I are convinced that India affords the United States an unparalleled opportunity to make a decisive contribution to the future pattern of Asia. Her size, her influence and example throughout the uncommitted world, the critical contrasts being made between the economic development of India and China all serve to make India a vital test for Western statesmanship. The path which India--and with her other less developed nations--takes will be determined in large measure by actions which we and other free world partners take now--this year and during the next few years. The steps we outline can serve to reinforce the individual assistance programs of many nations and could later be adopted to other underdeveloped states with clearly defined programs of economic growth.

With every good wish,

Sincerely yours,

John F. Kennedy

THE CHOICE IN ASIA -- DEMOCRATIC DEVELOPMENT IN INDIA

Mr. President:

At no time since the War has American and Western policy been so gripped by a sense of paralysis, by a waning of hope, by the loss of its compass points. More and more the thoughts of those abroad -- and of Americans themselves -- have been riveted on Russia's capabilities, on Russia's educational system and educational achievements, on Russia's new diplomatic and economic initiatives, on Russia's seemingly greater flexibility and power of maneuver. Less and less have we and our allies been concerned with our own capacities, our own positive objectives, and our own ability to reach new goals consonant with our own values and traditions.

The evidence mounts daily of dissatisfaction with the rigidity of thinking and approach which characterizes not alone the makers and spokesmen for our foreign policy but also many of its critics in and out of Congress. The blunt fact is that the uneasiness which has stirred even our closest friends is directed not against a President or Secretary of State or Party. In very large measure it attaches to the whole tone and thrust of our national effort in foreign policy. Indeed, we have come increasingly to doubt ourselves, to question the impact of a policy whose substance seems so very largely military, to scrutinize actions whose origins very often were in reflex to Soviet moves and transitory crises rather than rooted in a settled policy of our own.

There is no special merit in newness or change as such. Indeed, there are compelling reasons why, in the absence of realistic alternatives, the United States should not change course merely in response to foreign or even internal criticism. If critics cannot provide some secure new guidelines, their pleas do not deserve acceptance. There are also, unhappily, situations in the world which cannot for the moment be much alleviated by the United States -- no matter how good its intentions or how great its military or economic commitments. There are clearly certain fixed and harsh facts in the world power balance which the Western alliance can influence only slowly or slightly -- and then only after hard work, patience and sacrifice. But if there are established continuities and commitments, which we must constantly invigorate through our alliances in this Hemisphere and Europe, there are also new perils and new chances which are altering the pattern of world events and world power. There are -- especially in the underdeveloped world -- new dimensions in the challenge which we face. There remain opportunities for intelligent and creative action.

As members of the opposition we have a special obligation to maintain the critical ferment which makes such new departures possible, which enlarges the horizons of our public thinking, which establishes a responsible basis for new action.

In recent weeks there have been a number of Democrats who have tried conscientiously to perform this function. The distinguished Majority Leader (Mr. Johnson) has given us a program of action in the field of weapons and missiles which measures up to the peril we face. The distinguished junior Senator from Arkansas (Mr. Fulbright) has set in focus the relations between our educational effort and our international leadership. The distinguished junior Senator from Minnesota (Mr. Humphrey) has explored searchingly the possible ways by which meaningful disarmament negotiations might be resumed. The distinguished senior Senator from Illinois (Mr. Douglas) has posed the new economic and political equations in our international trade policy created by the Common Market and the Free Trade Area in Europe. The distinguished junior Senator from Montana (Mr. Mansfield) has examined with care the continuing crisis in North Africa and the steps which might be taken by the United States to help resolve it.

Outside of the Senate Mr. George Kennan has performed an important critical service by loosening up the terms of discussion about our Western and Central European policies and by closely analyzing the military assumptions upon which so much of our international policy is predicated. There are few of us who would agree with all, and some who would agree with only a little, of the analysis and prescription which his lectures contained. But I feel, Mr. President, that we are better off for being able to test our assumptions against a carefully formulated set of alternatives. It has been of more than incidental value for the world to know that there is a wider constellation of thought within our own society and that we are wrestling with many of the same issues which agitate thinking in Europe, Asia and Africa.

Our sense of drift, our gnawing dissatisfaction, our seemingly hopeless predicament in reaching but the fringes of a great crisis is nowhere more evident than in our search for polcies adapted effectively and concretely to the new and generally uncommitted nations which run from Casablanca to the Celebes. Over the past few years we have begun to appreciate that the tested formulae we have applied to events in Western Europe and NATO have only limited application to the broad medley of changes occurring in the uncommitted world. Though we have learned that we must come to terms with the new nationalisms, we have tended to interpret their meanings too much against the backdrop of our own historic experience on this continent and in Europe.

Easy as it is to proclaim a position of "anti-colonialism" and "self-determination", many sympathetic observers in the West have not fully realized that some of the new states have set their courses in an environment empty of positive democratic or liberal aim; that their attainment of political independence was but a prologue to the harsh realities of political and economic growth.

We have certainly begun to learn that a purely military response to the tides in the Middle East and Asia is an illusory breakwater. For military pacts and arms shipments, though sometimes a necessary instrument of national policy, are themselves new divisive forces in those areas shot through with national and regional rivalries and often lacking historic boundaries and allegiances. We are beginning to see, too, the special attraction and emotional appeal which the Soviet Union has in the fluidpattern of events in the uncommitted world, to peoples full of social resentment and impatient for rapid social betterment and economic progress. Communism to them is the alternative, with the glamour of novelty, of breaking fresh ground, of seeming to offer a disciplined, coherent and irresistible answer to the overwhelming problems of economic mobilization and take-off. Indeed, it has been one of Marxism's cruelest ironies -- not lost upon the Russians themselves -- that it has gained special force not in advanced industrial societies, but in those confused, transitional regions which have not yet created effective modern economic or political systems.

The outlook in many countries is not hopeful. Some of these countries provide barren soil for any real economic progress now to take root -- they cannot productively absorb investment capital, they do not possess the skills or plans of social outlook which derive genuine benefit from economic assistance, their rapid gains in population outpace any attempted increase in living standards. There are, of course, exceptions -- countries such as Tunisia, Ghana, Pakistan with whom we hope to have beneficial economic relationships. And we dare not give any up as lost.

THE CASE OF INDIA

But one country in particular -- India -- has successfully pointed the way to progressive economic development; it has achieved a steady rate of growth, established the firm beginning of an economic base, maintained an economy in which the private sector plays a large and expanding role, and avoided an excess of governmental regimentation and controls. In India democracy has prevailed in the face of heavy obstacles. The national and per capita incomes have risen despite a continuing rise in population, and education has spread. Two national elections have been held on the basis of universal suffrage. The parliamentary framework is no mirage. It is sustained by capable political leadership and a first-rate civil service. A spirit of democratic compromise has permeated the political system.

In 1956 India completed its first Five Year Plan. During that time national income rose by nearly 18%, about 5% beyond target. Quite apart from its intrinsic achievements, this Plan, with its emphasis on agriculture, helped to generate a mood of national confidence, which began to reach back into the villages where most Indians live. It diverted energies away from colonial grievances and into the task of national self-development on a truly national basis. Moreover, the Plan was favored by good harvests and generally benign weather. During the period of this Plan, the United States aided India with about $300 million in addition to the special wheat loan of $190 million and World Bank loans aggregating about $30 million. Few assistance loans which we have made anywhere have been better used for real economic development.

The granting of independence to India preceded by only a short time the coming to powere in China of the Communist regime. These have been the two cardinal events in postwar Asia. China and India both began their First Five Year Plans at roughly the same time. Each country began with an economy in which almost 85% of the population was rural. Each country possesses a high resource potential and a relatively low ratio of agricultural cultivation per acre. Each system was actually in danger of running critically close to the minimum level of human well-being; in 1950 the per capital income in each country was below $50 -- lower than 20 years before. India had an advantage in having a larger pool of trained and skilled persons, a somewhat better transportation network, and a better ability to mobilize internal investment. But like China she had not developed extractive processes for her rich resources. She needed to import much of her machinery and she suffered from poor food yields as well. And India after 1948 had massive problems of population redistribution and economic dislocations as a result of the partition.

Yet India was able to create an environment for economic development. Without imposing the totalitarian direction that China required, India was able to take real strides forward, economically and politically.

A recent writer has overstated the case very little when she wrote:

> "India is encompassing in a decade the linguistic battles which tore Austria-Hungary to pieces, the religious reformation which led to the massacre of St. Bartholomew's Day, the political revolution which led to the fall of the Bastille, the economic revolution which resulted in the Red Star flying over the Kremlin."

India's Second Five Year Plan is now near the end of its second year. In contrast to the First Plan it stands in great peril. It may even collapse. India has just experienced a very poor rice and grain harvest.

In part this deepening crisis is the handmaiden of success -- the fact that the Indian economy is expanding, that the Government has sought not to impose a rigid series of controls, that it has permitted a considerable sector of private enterprise. This plan, moreover, is ambitious -- amost two and a half times as large as the First Plan. It hopes to carry India across the most difficult threshhold of economic growth -- the establishment of capital-generative basic industries such as steel. It seeks to raise national income by about 5% annually or 3% on a per capital basis. This could serve to accelerate development at a rate permitting India to double national income in real terms in the next 12 years. If successful, it could vigorously mobilize India's rich resources in hydro power, iron ore, manganese, coal, bauxite.

The essential features of the plan include four steel mills (one of which is well advanced), which absorb a large fraction of investment and which would expand crude steel ouput to 4,500,000 tons; railway and transport improvements costing over $2\frac{1}{2}$ billion, machine moulding shops and a step-up in hydro-electric and coal output, as well as critical but less expensive plans for agriculture, irrigation, service industries, housing and education.

Clearly the Plan-developing at a time of poor harvests and growing unemployment -- which depends so vitally upon the importation of machinery from abroad -- is contingent upon international credit. Yet this is not a time when there is much international venture capital, private or public, and the price of such funds is high. The World Bank's interest rate is $5\frac{1}{2}$%. The interest rate announced by the International Development Fund is almost equally high, while some short-term capital rate have run as high as 13%.

It is easy to dismiss India's needs with the assertion that she has launched a pretentious and impossibly large scheme calling for a scale of effort and cumulative capital infusion wholly beyond her capacity. Yet is this so? Hardly, when we consider that the Plan has a level of investment of less than $7 per year per head and when we lay it beside the contemporary effort at totalitarian planning being made by China. If the plan succeeds, India's rate of investment and savings will still be less than 10% of national income, compared with 20% in Russia, 15% in pre-war Japan and 12% in China. India, a country with a population twice that of all Western Europe, will still only have an investment capacity equal to that of Sweden with its population of 7 million. The Second Plan investment per year to only equal to the total absorbed last year by the American Telephone and Telegraph Company.

India, moreover, has taken stern measures of economic self-discipline. The current economic program of the Indian Government can properly be characterized as austere. The level of taxes is high, especially after the recent addition of wealth and expenditure taxes; stiff import controls and licensing have been imposed to ease the drain on India's foreign exchange reserves. Foreign travel hss been almost prohibited. Though few persons have an income level that contributes much taxation in a nation whose per capita income is under $60, persons of measurable income are taxed about as heavily as anywhere else in the world. In fact, the real question is whether these austerity measures may not soon reach the point of becoming self-defeating -- by drying up too much private capital, debilitating the previously buoyant private sector by the rigidity of import controls, or sapping the incentives on which much of the Plan was predicated.

Unfortunately a serious foreign exchange crisis has forced India to pare its Plan to the core. Her foreign reserves have been more than halved in the past year. Import restrictions on consumer goods have been tightened and many expenditures under the Plan curtailed, extended in time, or cancelled. Office and industrial buildings, communications facilities, housing and health centers have been the victims of the cutback. But these measures only begin to close the gap. The heavy expenditures lie in the heart of the Plan -- steel, transport, irrigation, power, tool plants.

Can the Indian Government cut more deeply into the Plan without deflating all its vital energies and breaking the springs of its momentum? Informed judgement tells us that it cannot, for a genuine program of economic development is a seamless web which cannot be pulled apart or rewoven from cheaper materials. The Indian economy has reached a level of complexity and maturity in which the various elements of the Plan are intermeshed. Steel and coal and transport and machinery are part of a single complex and all must grow together. Extractive industries cannot grow unless the resources are accessible; almost all industries depend on an economical energy and machine base; education and housing are the muscle for a developmental effort. Without them there will be a husk without a kernel.

In short, further serious cuts or extended stretchouts in the Plan would not "save" money. They would only veil and compound even greater costs in the future -- or decree the eventual death sentence of the Plan and India's democratic experiment in Asia.

This is not to say that there are not some possible cuts and postponements, some "frills", but it is equally possible that for the maximum effect there should be a somewhat greater infusion of investment into the private and overhead sector of the Plan and into rural development, which tend to create the sort of enterprises which are especially useful in yielding high employment and in breaking down the barriers between the rural and urban economies.

If the Second Plan collapses, so may democratic India and the democratic hope in all of Asia setting in motion forces which would erode the broad security interests of the United States and its allies. However sharply one may reject the concept of American ideals impelling us to help others in need, however blind one may be to the dependence of our own economic well-being upon our closing the enormous prosperity gap between ourselves and "have-not" nations, no thoughtful citizen can fail to see our stake in the survival of free government in India. India stands as the only effective competitor to China for the faith and following of the millions of uncommitted and restless peoples. Should India fall prey to internal disorder or disillusionment among either its masses or leaders and become absorbed in the Communist system, the Free World would suffer an incalculable blow.

It is absolutely imperative that the Western nations and India keep their gaze on and summon their efforts to the achievement to the broad goals and to the type of overall scheme envisaged originally in the Second Plan. Continued slippage and a mood of "let-drift" will only leave India with a dismal economic performance and a climate of blighted expectations, the outcome of which has perhaps already been foreshadowed in the Indian state of Kerala, where educated but despairing citizens freely elected a Communist government.

Though the Indian Government has been consistently reluctant to ask for outside help and has tended to overestimate its internal capital resources, neither her govennment nor ours can evade the fact that the Second Five Year Plan is mightily dependent on outside capital. Though India has an excellent record in servicing foreign investment and capital repatriation, its newly acquired sence of nationhood and pride of achievement have made her naturally reluctant to acknowledge the full measure of its needs if the essential integrity and desired balance of the Plan is to be maintained.

It is clear that the Indian planners were somewhat optimistic about the "built-in deficit" and the investment necessary for bringing the Plan to successfull fulfillment. It is also apparent that in the face of the serious reverses the Government of India has preferred to cover its target, rather than to appeal to other nations for drastic increases in the levels of essential assistance. This series of cutbacks and compromises has been such as to make it impossible to paint the canvas of Indian requirements with any precision or confidence. We are all aware that India is in a period of economic crisis, but we clack a clear panorama of need. When the Indian Finance Minister visited Washington early in the fall, a loan figure of about $500 - $600 million was informally discussed. The Administration has announced an Indian program amounting to $225 million, but we do not know now whether this is intended for the life of the Plan or as primarily a program for the coming year. There is continued report of more cuts in the "core" Plan, but they have not been spelled out explicitly. Is it not time that India and its foreign friends reach an understanding about the real scope of need? If we cannot take this central problem from under the shroud of uncertainty, there is a great danger that reliance will be placed on purely stop-gap, patchwork remedies, on spasmodic pain relievers, and on superficial therapies which will satisfy neither India nor potential lenders. It is far better if a frank dialogue exists between the United States and India, both in terms of generating support and securing a level of assistance which rests on more than false expectations and cloudy hopes. We need to know not only of India's plight but we must also have from her a searching and candid presentation of needs and plans. I repeat: India has undertaken a Plan which meets the minimum requirements for real economic progress the United States has a vital stake in India's economic future. How can we merge these two overriding considerations?

A PROGRAM FOR ACTION

The situation in India has many marked parallels with the problems of European recovery ten years ago. Like that of postwar Europe, the Indian economy has reached a crucial and precarious point of success or failure. Secretary Marshall in 1947 urged the European countries to make a reckoning of their primary requirements. This was done through the O.E.E.C. and confirmed by such studies as the Harriman Report and the surveys of the Herter Committee. After such a review and candid presentation of needs, it was possible for Congress to commit itself to the Marshall program of European recovery. There is a similar need for India today. The necessity for American action is so apparent that the real question now, I would hope, is not whether we respond but how. It is not solely a question of amounts; much depends on the form in which aid is given and to what purpose.

At the present time the United States is furnishing India about $70 million in hard currency assistance, most of it on a loan basis. About $60 million is for economic development purposes--such as machinery and steel plates--and the remainder in technical assistance. India is also receiving $360 million worth of surplus agricultural commodities--largely grain--over a three year period, with a portion of the local currencies resulting from the sale of these commodities loaned back to India for economic development purposes. Most of the deliveries under this agreement have already arrived. Although the total is thus already larger than we were providing under the First Plan, it falls short of her requirements--even after the assistance likely to come from other nations and the World Bank.

In looking to the success of the Plan, I would suggest a three-pronged series of actions:

I. Immediate Legislation and Administrative Action

Our starting point must be the immediate and emergency needs of the Indian Government and the proposals being made by the Administration this year. In my judgment they provide a useful--but in themselves inadequate--first step. I recognize that their inadequacy stems in part from a Congressional failure to activate the International Development Fund in the manner conceived by its sponsors last year and by the unresponsiveness shown by Congress to the foreign aid program last year. But this Congressional numbness was caused in its turn by cumulative evidence that our foreign assistance programs were losing direction, were oscillating between several guideposts, were not reaching visible goals and measurable results.

The Indian requirements provide us with a striking opportunity to make a purposeful contribution, the impact of which may eventually benefit not India alone, but other countries such as Pakistan which have a capacity to absorb investment for economic development.

I would suggest therefore that we explore first the ways in which the agreements already concluded by the Administration can be reinforced. My colleague across the aisle, the distinguished Senator from Kentucky and former ambassador to New Delhi, has already given us some pointers in his two speeches on the floor of January 16 and January 27. Perhaps I can elaborate his recommendations and add to them.

1. There is no reason why the balance of the 1951 wheat loan, about $170 million cannot be converted so that it is repayable in local currency, in line with the provisions later made under Public Law 480. This would help to improve India's credit position.

2. The loan of $125 million which has been negotiated through the Export-Import Bank could be supplemented. But for underdeveloped countries the Export-Import Bank policy is restrictive and rigid. Its loans are of the most expensive sort, as it has been administered on a "Buy America" basis--as a result of its ambiguous legislative history rather than because of express declaration in law. This means that the Bank encourages the recipients to buy items they most need--e.g. locomotives--in markets where prices are highest. If India could spend at least a part of the dollars in countries of Western Europe, it would stretch this form of assistance by perhaps 20 percent and improve the climate of our international trade relations as well. This shift, of course, would not alter the truth that the dollars loaned would ultimately be spent in the United States--though indirectly.

Another difficulty in Export-Import Loans is that it generally requires 12-15 months to set them fully in motion and specifically to commit the money. It would be a great help to India if this time interval could be shortened so that the effects of the Loan could be felt by the summer of this year.

3. It is unfortunate that the first year's appropriation gave the International Development Fund a capital base of only $300 million. This low figure makes it necessary to consider so many other expedients for countries with legitimate needs. I would hope that Congress at the very least would respond to the request which the President has made for a further appropriation to the revolving fund of $625 million. This is the very minimum figure which will make this Fund a flexible and effective tool. It also gives us and recipient nations strong incentive for better planning and for a more rational evaluation of the political and psychological effects of aid. It may discourage the year-by-year, project-by-project appropriations which cannot be spent effectively. In my estimation the interest rates established for the Fund are needlessly high and could be somewhat reduced to ease the servicing and cost of these loans. Moreover, we must make sure that the funds loaned are not tied only to direct dollar purchases. If Congress can carry out--or improve--the President's recommendations for the Loan Fund, we shall be much better equipped to serve the developmental needs of India as well as other nations.

4. There is a special need in increasing and making as flexible as possible the loans and grants for agricultural goods and foodstuffs. The Administration is still negotiating with India on these matters, and Congress is actively considering a number of proposals which will significantly increase the amount authorized for disposal under Public Law 480.

Certainly the greatest possible emphasis on long-term loans rather than short-term credit is desirable in this area. Since P.L. 480 allows some local currency loans, it would be worthwhile also to explore again the possibility of the United States using such currency receipts for the purchase of goods in third countries under aid programs to the latter. Also we can gradually develop some off-shore purchase programs in Asia and Africa. We have learned that P.L. 480 can produce working capital and that perhaps 25% of developmental assistance in some countries can take this form.

The agricultural crisis in India is paramount. Not only did India suffer a grain harvest debacle in the monsoons of this past fall, a loss almost equivalent to the total U.S. program newly devised for India. But the elimination of the food crisis is also essential to the control of price inflation, to the development of an agricultural tax base in India, to allowing the Indians to resolve their fundamental economic problems of resource exploitation, employment, and capital mobilization. This is peculiarly an area where the United States can help imaginatively and effectively, if we carry the potential inherent in Public Law 480 into fuller execution. We can further convert our great economic dilemma of agricultural surpluses and waste into a

capital asset for the poorer nations.

5. The United States should make every effort to satisfy the joint Indian-Japanese request for about $50 million to develop Indian iron ore supplies for the Japanese steel industry. Whether this sum is drawn from the President's Special Fund or some other source, it would be a most promising investment in Asian development. It would diffuse benefits and further improve the growingly cordial relationships between India and Japan. Japan, the other great free nation of Asia, is slowly establishing real trade possibilities with several countries in Southeast Asia, and it can help India in its Five Year Plan in a number of significant ways.

II. American Action Over the Life of the Plan

It is important that the United States view the Indian Five Year Plan in its totality and in its true time dimensions. Our assistance, as I have suggested, should be geared to the fulfillment of the large goals, not the patching of holes and filling of small gaps. We must stress the continuities, the full cycle, the whole operations. This is in our own self-interest by reducing the final cost, by defining the destination, by giving us a standard for measuring performance. It is to India's interest by allowing her to gather momentum to maintain good morale, to set the example of achievement to other nations, to relieve the perpetual suspense created by annual reappraisals and short-term solutions.

In the fall of 1947 the Congress passed an emergency-type program for the start of the Marshall Plan. We shall have to do the same for India this year. But simultaneously in 1947 the Congress set to work on considering and passing an expression of commitment to a European recovery program and providing a distinguished select committee which could study intensively the needs of the several European countries. We should again follow the example. Either Congress can again authorize a select committee or it can send subcommittees of the Foreign Relations and Appropriations Committees to India. At the same time the Congress should act upon a resolution expressing American interest in the success of the Five Year Plan and a willingness to commit itself to aiding its achievement.

Mr. President, on behalf of Senator Cooper and myself, I place before the Senate such a resolution, on which I hope both the Senate and House committees can soon hold hearings.

III. Multilateral Action in Support of Indian Economic Development

Though the United States must make the largest contribution in leadership and in direct assistance, the Indian Five Year Plan can, in closing a payments gap over the life of the Plan of as much as $3 billion, find support in many other countries.

I have already mentioned the case of Japan in connection with the joint India-Japan request, and there are further opportunities in converting the Indian advantage in coking coal into a pig iron advantage for Japan. But there is an even greater reservoir of interest and support within the Atlantic community. Germany has just recently made a new contribution of $140 million toward one of the steel mills and is contemplating more forms of assistance which are well within its capacities. France has extended a small line of credit despite its own economic difficulties. It is possible that the Italians may build a rail spur and some port facilities in return for a supply of coal. Canada, a country which enjoys great respect and confidence among the Indian people, is considering further agricultural surplus assistance and some other proposals beyond about $50 million already arranged. Great Britain, despite its payments difficulties, has already committed $45 million, while many other NATO countries are actively considering ways and means of helping.

There have also been a number of important private investments which contribute toward the Plan. With American leadership it is certain that many other countries, as well as the International Bank, which is already underwriting some of the cost of the private steel mill and of rail expansion, will materially bolster their economic effort. And it may well be possible for several Latin and Central American countries, who themselves have only recently gone through their own period of economic takeoff, to extend some small assistance, technical and economic.

The will to help is evident; it exists within the Atlantic community, within the Colombo Plan membership, in Japan, and among several smaller free nations of the world. How can we best prod and join these disparate intentions and programs so that they mutually reinforce each other and produce the impact required in the common interest?

Many of us have long urged multilateral assistance and joint effort, but we have had difficulty of finding the proper framework and cause. At the recent meetings of the Atlantic Alliance this issue barely reached the surface of discussion, yet all countries present revealed a receptivity to such a notion. Governor Stevenson, in particular, during his consultant period and since, has underscored the desirability of setting in motion such a joint effort. Here, it seems to me, the opportunity has arrived and the situation is ripe for such a step.

I would urge that a subcommittee of the OEEC be at once designated to go to India and to recommend plans by which long-term assistance could be given by all member nations through an international consortium. Not only will this permit the various nations better to mesh their programs; but it will also make easier a proper merger and balance between foreign government and private investment in India.

Such an OEEC body could draw on the best business and economic minds of the Atlantic world and could inspire the latent will to action which exists in countries such as Sweden, the Netherlands, Italy, Canada, Germany and elsewhere. It could do much to change the whole psychological relationship between India and the Western partners. We know that there exists in India a real fund of friendship for the West and an absorbing interest in our techniques. From our own country almost all official and private visitors have experienced an intense and friendly reception, even when they have spoken frankly with their hosts. Great Britain is still--or more than ever--a country with whom the Indians feel a close affinity, as Prime Minister Macmillan has recently observed personally. The work of our private foundations and scholars in India has won wide respect in India. An OEEC committee, if it could include among its members persons of broad experience such as John McCloy of the U.S., Sir Oliver Franks of Great Britain, Professor Tinbergen of Holland, Albert Kervin of Belgium, or Erland Waldenstrom of Sweden, could give a powerful impetus to such an international consortium.

By its example, such a committee could furnish a model for other later efforts--perhaps in Pakistan--and it could consider improvements in foreign assistance such as simplification in the handling of counterpart funds and local currencies which would have broader application. It could perform a most valuable service in recommending ways in which other countries and the U.S. could in combination turn their food surpluses to productive use. This is especially important for the United States and Canada, both of which could well integrate their efforts outside of existing trade markets. The export of surplus crops has been a very damaging factor in United States-Canadian relations, yet there are clearly joint alternatives which allow agricultural shipments for constructive purposes which carry neither the evils of dumping nor the hardships of sale.

I feel confident, Mr. President, that if the United States raises its sights in this year's program for India and acts as the catalyst for a multilateral approach to India over the longer cycle, then most foreign creditors will double their contributions, while some other countries will do something where they are now doing nothing.

Mr. President, I offer these suggestions in the hope that they may furnish some guides by which we can break the paralysis of which I spoke, by which we can give confidence among both parties and to the public at large that there are constructive alternatives in American foreign policy, that we are not chained in futility.

CRITICISMS OF SPECIAL ACTION FOR INDIA

1. Private Investment

The first view is that India's economic future must rest with private investment--that this is the only durable basis of economic growth. Certainly, India can expect and is receiving a good measure of private investment. The World Bank has repeatedly shown confidence in the private sector of the Indian economy. The Standard Oil Company has built a refinery; Krupp of Germany was instrumental in beginning the construction of the Rourkela steel mill; and private investment has financed the Tata steel plant. And there is little question that dollar for dollar private capital is both the most durable and resilient form of assistance. Through our own action in improving the International Investment Guaranty Program, in providing tax incentives, and in negotiating tax conventions, we could spur international private investment somewhat. And the Indian Government could also take some measures which would build up private investment.

But, even under the best conditions, private investment cannot cover the gap. The fact of private capital depletion and starvation remains, and there is an overabundance of private capital outlets. The United States channeled over $3 billion into private foreign investment last year, but less than 10% of this flowed into underdeveloped states. Well over three-quarters is attributable to investment in Canada, in Latin America, and Middle East oil.

There is every reason to believe that future private investment in India will expand with the rise of Government assistance and that Government assistance now will expand rather than confine such private opportunities. Mr. G. D. Birla and Mr. J. R. D. Tata, perhaps the foremost exponents of private enterprise along western lines in India, have made it perfectly clear that the success of India's Five Year Plan is essential if there is to be a sizeable increase in private investment and a good business climate.

There are certain types of investment in underdeveloped countries--education, health, transport, fuel, and power--which private capital cannot underwrite. Yet, they are essential to the creation of a setting in which efficient and profitable private operations can grow. What is certain, however, is that in future years there can be an increase in joint public-private capital ventures and in partnerships between local and foreign private capital.

2. Pakistan

A second objection which deserves serious attention and frank comment is that our special and valued treaty relationships and military pacts with Pakistan do not make possible such an international effort for India. I myself have for some time investigated the possibility of devising a program which would jointly serve the needs of India and Pakistan.

I have regretfully concluded that the current political cleavages between India and Pakistan do not allow such a program. My hope, however, is that the kind of program I have suggested may help to create the climate in which, for example, the staff work already done by Indian and Pakistani engineers on the Indus River could be brought to fruition. At the moment Pakistan is more nearly receiving the amount of aid which she can effectively absorb. Needless to say, we look forward to the time that her plans and economic momentum allow her to use even more. The choice is not one between India and Pakistan. Our responsibility is to aid each in its basic development programs. I hope the time is not far distant that these types of multilateral efforts can be adopted to the economic growth of Pakistan.

3. International Assistance

A further objection which might be raised is that Indian development should be part of a wholly international effort through the United Nations or through the type of Development Association which was recommended in the very illuminating address made by the distinguished Junior Senator from Oklahoma (Mr. Monroney) three weeks ago.

I share entirely the Senator from Oklahoma's feeling that we must break the rigidity in our assistance policies and that we must find ways of enlarging the developmental efforts of all the world. The Senator from Oklahoma has made a notable contribution in this policy search.

The recommendations which I have outlined for India do, however, diverge in a few important respects. In my judgment the International Development Association which he outlines, and which would probably have to grow out of a long series of international gatherings and negotiations, is not likely to meet the type of immediate problem which we have in India. The initial scale of financing which the Senator of Oklahoma envisages for the Development Association is smaller than the necessary range of Western efforts in the underdeveloped world and for coming to terms with the Soviet challenge. Though local currencies and other counterpart funds may be put to use eventually in underdeveloped countries, they cannot by and large be counted on now for development outside individual national boundaries. To use Indian rupees abroad today would only be cutting down on Indian development. There is every need for collaboration but underindustrialized countries cannot help each other significantly at the present time.

There is, as the Senator stressed, great virtue in developing within the free world an international gathering of recipients and creditors to consider certain joint problems. This could take place within the OEEC or the World Bank, but the essential job of coordination today is coordination between all creditors and individual developing countries. An International Development Association does not solve the coordination problem which exists within this country, because the United States, as other countries, must mesh a series of programs - the International Development Fund, Public Law 480, The International Bank, and joint private-public ventures. There are a variety of tools - trading credits, private loans, public loans, etc. - which cannot now all be thrown into a single package. Different mixes are clearly desirable for different countries and regions. Each country has a unique complex of problems, and it is best now if we develop international consortia on which potential creditor nations bring to bear the full armory of their loan and technical assistance instruments around the development program of the recipient country in question.

Moreover, if we are going to internationalize most of our economic assistance program in association with our allies, there are likely to be serious impediments as neither foreign parliaments nor the Congress are willing to surrender basic

controls of the purse strings. And, for the moment, there is no necessity to intermingle funds in order to get effective jobs done in various parts of the world.

4. The Budget and the Recession

It may be argued that any proposal of this nature faces an impossible hurdle as a result of this year's Budget, and the economic recession. The impression has been conveyed to some people that foreign aid can only be viewed as an alternative to programs of housing, education, urban redevelopment, and irrigation. It has been urged, for example, that we should stop building irrigation projects abroad and shift to building them at home.

The truth is that we can more easily afford an expanded foreign aid program this year than in the past few years. And our national interest, especially in the light of the shrinking markets in the United States for foreign goods and materials, requires it even more. A vigorous design of national recovery, if launched without delay, should include expanded programs for missiles, school building and education, urban redevelopment, conservation, and foreign aid.

Unemployment is an agonizing waste of resources. Looked at in another way, this tragic waste provides an opportunity to get things done that have to be done. There is no need to "make work" in this recession; there is more than enough to be done in the public interest. Our economy affords no excuse for a series of "second best" years. There is no conflict between domestic needs and foreign security needs. And at no time would cuts in foreign aid--conceived as economies at home--mean such a drastic loss of ground abroad.

It is often the very people who minimize the damage done by weaknesses in our domestic economy who are also minimizing the capacity for growth which our economy possesses.

At the moment there are approximately 5 million unemployed and several million more underemployed. Each full-time worker in our economy produces about $6000 toward the national gross product. If 3 million of the currently unemployed could go back to work in the next year--and they certainly should--they will add about $18 billion to the Gross National Product per year. But there is greater potential than that. We have been levelling off in our economy for over a year. If we were back on the normal growth curve, we would be producing about $25 billion more than we are now. A year from now, due to the rise in the working force and productivity increases, we could be $12 billion higher than that. There is more than adequate margin in our economy, plenty of capacity to grow, and abundant opportunity to make the kind of foreign assistance effort which the times demand. This is possible if we recover our balance in both domestic and foreign policy.

Mr. President, we must remember that foreign aid serves to invigorate our international trade relations. There is no question but that foreign assistance now will mean trade later. There are in our nation innumerable industries which are the healthier for having expanded export markets. A very large portion of the money we loan abroad finds its way back directly or indirectly to American industries. This is not a foreign "giveaway". The Indian loan opportunity is one which has a high return to India and its creditors alike. However specious past arguments about the proverbial "ratehole", in this instance we have clear objectives within clear reach and with visible benefits which would be to the interest of all segments of our national life.

5. Soviet Assistance to India

The final matter that deserves comment is the range of Soviet assistance in India. We now all know that economic warfare and ruble diplomacy are the distinctive tools-in-trade of the Krushchev regime. The USSR made no contributions toward the First Indian Five Year plan, nor did it provide wheat during the crisis of 1951. Beginning in 1953, however, Russia began to send specialists and technicians to India and negotiated the agreement for the Bhilai steel mill, toward which it gave a 12 year loan at 2% worth $140 million; recently another low interest loan of $126 million was added. The other big projects which are Soviet-financed are a steel machinery plant with $56 million credit, a large thermal power plant of $32 million, the development of the Korba coal field of $16 million, and an optical glass factory. Various forms of technical assistance and expert studies are also being provided by the Russians, the most important being a large group of 175 seismic and gravity-cum-magnetic experts and another group which is developing a pharmaceutical industry using Indian raw materials. There is also a growing flow of Indians to Russia for technical training and education. This illustrates dramatically that one of Russia's most powerful new weapons is its ability to export that precious commodity--knowledge.

But these developments must be seen in their proper light. Western assistance and trade is much more widely diffused; it is much more likely to reach and touch the lives of ordinary Indians--especially through food and agricultural assistance. In fact, Soviet assistance is largely confined to inflexible "prestige" projects which contribute far less directly to the human condition of Indians. The Russians cannot parallel the contribution being made or likely to be made by Western countries. Of course, the Russian programs have useful lessons for us: the danger of neglecting technical assistance and cultural and educational exchange--no substitute for development assistance but a psychologically and practically powerful form of help; and the need for the United States to identify itself as closely as possible with Indian economic goals.

India, in fact, seems to offer an extraordinary opportunity to match systems with the Soviet Union on favorable terms, to show our true concern for economic development, and to push India well ahead in its competition with the Chinese economy, which is also experiencing serious trouble, especially in the agricultural sector of its Second Plan.

Nor let us, Mr. President, become confused by all the talk about "competition" with the Russians in foreign assistance. Our policies cannot be merely a series of reflex actions dictated by Russian moves and offers. To make foreign aid the vehicle of a popularity contest or a cut-price proposition is senselessly self-defeating. The fact is that we cannot compete with the Russians in barter arrangements, interest rates, and the like.

It is on the ultimate frustration of underdeveloped nations that the Russians count for their success, and nothing would serve their interests better than to draw us into a trade race and numbers game. We must continue to concentrate on projects and programs which can succeed. That is our big asset: that we want recipient countries to succeed while the Russians do not. We have no other grounds for acting. We might recall the words of Robert Cobden, spoken over

a century ago:

> "I need not tell you that the only way in which the soul of a great nation can be stirred is by appealing to its sympathies with a true principle in its unalloyed simplicity".

CONCLUSION

Mr. President, let us recall again the profile of the Asian continent ..... India with its nearly 400 million souls and China, a country in the neighborhood of 600 million. India contains nearly 40% of all the free peoples of the uncommitted world. Let us not be confused by talk of Indian neutrality. Let us remember that our nation also during the period of its formative growth adopted a policy of non-involvement in the great international controversies of the 19th century. Nothing serves the ultimate interests of all of the West better than the opportunity for the emergent uncommitted nations of the world to absorb the primary energies now in programs of real economic improvement.

This is the only basis on which Asian and African nations can find the political balance and social stability which provide the true defense against Communist penetration. Our friendships should not be equated with military alliances or "voting the Western ticket". To do so only drives these countries closer to totalitarianism or polarizes the world in such a way as to increase rather than diminish the chances for local war.

The Russians are trying to repeat in other parts of Asia and Africa their takeover of China. They are counting on the Indian disenchantment with the inadequacy of Western assistance and democratic methods of planning and economic life.

In considering the economic future of India we shall do well to recall that India has passed the point of economic takeoff and is launched upon an effort which will by the end of the century make her one of the big powers of the world with a population of just under one billion and capable of harnessing all the resources of modern science, technology and destruction. No greater challenge exists in the future than the peaceful organization of a world society which includes not only the wealthy industrial states of America, Western Europe, and Russia, but also powerful new industrial states in Asia, Latin America, Africa and the Middle East. How these states emerge from their period of economic transition will not only color but quite likely cast the historic setting of the next generation. This question was recently set in these words by Professor W. W. Rostow before the Senate Foreign Relations Committee:

> "Shall these new powerful states emerge to maturity from a totalitarian setting, their outlook dominated by bitter memories of colonialism and by memories of painful transition made without help, while the rich West sat by, concerned only with the problems of defense? Or shall these states emerge from a democratic setting, built on human values, shared with the West, and on memories of shared adventure in the decisive periods of transition?"

The answer to this question will not be long in the making if we do not act now and over the next few years, for India, the most important of all the uncommitted states, has entered its formative period. A successful Indian program is important at least as much for the example it can set for the economic future of other underdeveloped countries as for its own sake. The United States, Western Europe, and Japan have it in their power to make a demonstration that the democratic process is a persuasive method of creation, not frustration.

India stands out as the country in this non-communist zone which most believes in the importance of breaking stagnation and acquiring habits of growth. India, like the United States, is engaged in a struggle of coexistence -- in its case with China which is also pursuing a planning effort being put under critical comparison all over the world. India, for better or worse, is a world power with a world audience. Its democratic future is delicately and dangerously poised; it would be catastrophic if its leadership were now humiliated in its quest for Western assistance when its cause is good.

There is no visible political glory for either partyin coming to the aid of India, particularly at a time of high taxes and pressing defense needs. The task of "selling" such a program to the American people is far more difficult than that of a decade ago -- for we were more familiar with the people and problems of Europe, our ties were closer, their economies were more directly aligned with our own and held more certain promise of success. But the need -- and the danger -- are as great now as then. India today represents as great a hope, as commanding a challenge as Western Europe did in 1947 -- and our people are still, I am confident, equal to the effort.

I realize that it is difficult to give resonance to such words and proposals in the mood which has governed the approach to foreign aid and economic policy in both parties during the past sessions of Congress. But this mood has in part been induced by the persistent counsels of caution, by the lack of vision and purposefulness with which we have approached the problems of the underdeveloped world. If we are to break the aimless drifts and deadlocks in policy, if we are to regain the initiative in world affairs, if we are to arouse the decent emotions of Americans, it is time again that we seek projects with the power of stirring and rallying our hopes and energies. Once again our national interest and creative magnanimity can merge in the service of freedom.

February 20, 1959

Miss Janet Kern
The Chicago American
Chicago, Illinois

Dear Janet:

Your memory does not excel your beauty.

One paragraph delighted me - the one which says: "Murrow suddenly took himself off to Israel - where little was newsworthy at the moment.....". It so happened a small war was in progress, having to do with a place called Suez. Remember? Bulganin was threatening long-range rockets at London, Paris and Tel-Aviv. Very dull period altogether.

Hope to see you soon, in more tranquil times.

Sincerely yours,

KRM:skh

ALBERTA, VIRGINIA

August 5, 1959

Mr. Edward R. Murrow
Pawling, New York

Dear Mr. Murrow:

With some misgivings, I am following an impulse today. It is one I have had for quite sometime. I hesitated in the past because of your busy schedule. Now that you are taking a year for reflection, through reading and listening, I find myself writing to you, in the hope that perhaps you will keep an open mind until you are acquainted with the facts. I further hope you will through my efforts here want to be acquainted with the facts surrounding a sensational development in the constant struggle man wages against ignorance.

I am a small town dentist and I am fortunate enough to be residing in a small community peopled with some very wonderful folks. These folks get their livlihood from the soil. It is remarkable the way these people have sought education. This town has a population of 450 and the ratio of teachers is, I believe, unusual. These folks are, in general, the best one could have as neighbors. They are simple, down-to-earth and a generous sprinkling of characters gives color to the community. I tell you this to point out the advantages I have in this type of life. However, something bigger than any human being is altering my life. Through my efforts I have brought this thing to pass. It is something wonderful and pleasantly desirable, and has never been experienced by man in the history of the world. I predicted this would come to pass as early as 1945. I will not reveal its nature here as I want to keep it confidential until I feel the time is ripe for releasing the word of my success. Further, you would not believe me unless you saw it personally.

I fully realize that a man of your profession must at times become cynical, and yet, I believe that such a man knows full well that it is the individual who makes contributions to man's knowledge. I believe you are that type of man. It is my desire to take my time to call at your home, at your invitation, and confront you with the facts. All you will be gambling is a few minutes of your time on your doorstep. Why do I confront you with this matter? I am fearful that unless this matter is carefully and forcefully presented, it may be denied to man for precious years to come, and I am interested in the present as well as the future of man. Let me point out here that I am not a student of politics or religion, nor am I living in a world of fantasy. I am, in fact, a man who possesses the truth about a perplexing problem of man.

I further hope this communication is not contructed so as to lead you to believe that it is the work of a crackpot and should be ignored. I feel most strongly that you would be delighted and thrilled with this knowledge, as I have been.

January 6, 1958

Dear Ed:

The last time we had a talk I ended up on OMNIBUS, a highly educational experience. I fled that for Collier's, with results known to the world.

The fact is I have never lost the itch to participate in the young marriage of journalism and TV. Each, I know, has gone home to mother on occasion. But I have faith in the union and respect for the difficulties. Even some experience of my own.

I don't like to pester you, but since I've been doing it for ten years now, you will have to concede it's no passing idea of mine. I'm willing to work at it the hard way, if necessary.

To refresh your memory, I was an assistant to Lester Markel at the Times when Bob Saudek hired me for Omnibus with an assist from you. I worked up the Collier's-ABC special Election Night feauture in 1956 (CBS would have done a better job with it, but couldn't schedule it in). Since Collier's collapsed I have been doing public opinion research for Lou Harris.

I'd like to hear from you if you have an idea for me.

Best regards,

Penn Kimball

1958 · ANNUAL REPORT

393

ALUMNAE ADVISORY CENTER, INC.

1958 Annual Report

To the universe, 1958 was the year of reaching for the moon, while disturbances rose and subsided in various parts of the world, and jet flights to Europe were started for the public. To New York, it was the year the recession eased off, and the two candidates for Governor served as brilliant inspiration to young careerists by being hardworking in spite of their wealth. To women, it was a year that put them more clearly in the limelight as actual or potential wage earners.

On the employment front, the waning recession was a controversial subject. Jobs did not pick up as fast as business did, and it was the difficult task of the Alumnae Advisory Center to try to reconcile to applicants the encouraging front page figures with their own unemployment. Layoffs in both stable and unstable industries continued far into the year, along with cheerful reports of better times. Very real were: the $150-a-week TV production assistant unemployed because of a budget cut, the publishing executive laid off after thirteen years, the electronics specialist terminated because of a retrenchment.

The Alumnae Advisory Center, as an office devoted to helping college women begin or develop their professional lives in New York, was conscious of the need to interpret this market to its applicants and employers - to point out to the one that although production was on the increase, many training programs had been reduced or eliminated, and job prerequisites were stiffer - and to the other, that even though jobs were less easy to get, so were women applicants because they were holding out for their own job preferences in spite of the times.

Typical still were those who were job hunting through wish rather than necessity. The notion continued to prevail that the way to get ahead was to resign and start all over, even though many alumnae found it harder to convince employers that they really would stay this time or that a European trip would not interrupt their job again.

Typical too were those alumnae who wisely were trying to broaden their horizons and make greater use of their talents or fuller use of their time and minds. These turned to the Center for help in planning their re-entry into the job world, or for suggestions on training, drawing up résumés, developing lists. One, a film expert with many years of experience wanted to set up a distribution service; another, a simultaneous translator sought to increase her assignments; another, a busy volunteer, wanted to start her own business.

Altogether, 930 applicants registered; 1,476 jobs were received by the subsidiary Alumnae Placement Agency Inc; and 92 placements were made.

An employment milestone was reached during the year when New York State passed a law prohibiting employers from rejecting job applicants because of age. Early reports proclaimed the general success of this legislation, and the Center hailed it as a further extension of its own constant efforts in this direction. Again, as in every year since its founding, one quarter of the AAC placements were of older alumnae.

Attention was drawn to women and jobs by the report of the Arden House Conference on the effect on home and family when married women go to work. There were still arguments on both sides - those who claim that when woman's place is not in the home, the family suffers; and those who feel that the wife's job benefits the rest of the family also.

But there was no pat answer for those who had no choice, either through widowhood, divorce, or the need for more money than the husband, in these expensive days, can bring in. Whatever the opinions might be, the report left little doubt that working women are here to stay, for it noted that since 1900 the number of women in jobs has quadrupled, while the whole labor force has grown only two and a half times.

One of the pilots of this conference, Dr. Eli Ginzberg, was the keynote speaker at the Alumnae Advisory Center's third biennial forum in March. Colleges, employers, and alumnae met to hear him present the case for and against women at work, and afterwards to discuss their own experiences - describing specific ways in which college graduates are being employed in full-time and part-time professional capacities.

Although the Center specializes in college women and New York, it reaches beyond this area through its publications. This year more orders than ever before - 12,292, or 12% above last year - came in for reprints of Mademoiselle's college and career articles which the Center distributes. The Center itself published its fourth booklet, "How To Look For A Job In New York".

Support for the AAC comes from several sources: dues, contributions, and the sale of publications. This year income from college memberships remained the same; Associate Memberships increased by 54% (with 8% of the Associate Members of the preceding year renewing their dues as a contribution); income from individual, business, and foundation donations stayed constant; and revenue from publications rose by 16%. The subsidiary Alumnae Placement Agency, Inc. is supported by its own placement fees.

As a membership association, the Center gives its fullest attention to Member Colleges and their alumnae. Two years ago, because of the increasing demand made on it by alumnae from other colleges, Associate Memberships were established to enable these applicants also to register. Now with the success of this step, the Center has been moving toward an expansion of its roster of colleges, and at the end of 1958, plans were formulated for inviting additional colleges to join.

With more students going to college today, with industrial developments bringing a need for more highly trained executives, with more women entering the labor market and needing to learn how to meet it, the Alumnae Advisory Center faces far-reaching challenges in 1959.

King, Daniel

January 20, 1958

Dear Mr. King:

Many thanks for sending me your material entitled, "On The State of the Union."

I read it with a great deal of interest, and I appreciate the time and trouble you took in sending it to me.

Sincerely yours,

Mr. Daniel King

ON THE STATE OF THE UNION

Your attention is solicited to a working man's views on the "state of the union".

The State of the Union varies from year to year not so much in basic issues as in scope and approach. THIS year's message bears the scrutiny of us all, as it SHOULD EVERY year.

"DEFENSE REORGANIZATION" - Some is obviously necessary, but it should be extended to include other branches of the executive, particularly the State Dept. and all intelligence agencies excluding the F.B.I.

The J C S system, so long as we maintain separate armed forces, seems to be the best method of maintaining proper balance. A Chief of JCS with veto powers sounds unthinkable, for so long as the services maintain separate identity there will continue to exist, intense espirit de corps and inter-service rivalry. The latter must be curbed immediately as it has to a great extent ham-strung our national security through an abominable waste of brains, time, money, man-power and material.

The armed services should be further integrated from JCS right down to the tactical level of combat teams. I doubt that misslery could be practically made a separate armed service, however it should be the direct responsibility of the President upon advice from Secretary of Defense, Joint Chiefs of Staff and (herein proposed) secretary of Research and Development, to see that the results of our efforts in this field be in the very best interests of National AND World Security.

"ACCELERATED DEFENSE EFFORT" How accelerated can three separate defense efforts get? I firmly believe that if we can accomplish measures suggested above and below that our defense system will thereby be lubricated, to such a great extent that it will be possible to derive the required degree of national security at a nominal if any, increase in the burden now shouldered by the taxpayers. THIS WOULD INDEED BE A SET-BACK TO THE RUSSIANS, FOR THEIR COLD-WAR TACTICS SEEM DESIGNED, SO FAR QUITE SUCCESSFULLY, TO KEEP US IN A CONSTANT STATE OF POLITICAL, DIPLOMATIC, ECONOMIC AND PSYCHOLOGICAL UPHEVAL.

This situation viewed in the affirmative might well reveal that Russia is straining to out-do us in every department and in so doing is using every resource under duress to extract their overall ambitions from a hard-pressed economy and a suppressed citizenry. I don't believe their economy or their people under state controlled enterprise, are any more capable of withstanding these pressures than are we or our free enterprise system. Probably less so. There are signs to be read: They are even providing their scientific giants with villas, cadillacs, vodka, unheard-of salaries and other privileges which smack of "decadent capitalism".

"MUTUAL SECURITY & FOREIGN AID" A most important part of our over-all policy, as it has been for the past 13 years. Sputnik however, does not in itself increase the need, but merely emphasizes it. The need has been there all along.

"CO-OPERATE WITH OUR ALLIES IN THE FIELDS OF SCIENCE" Why not? THEY ARE OUR allies as well as our being theirs.

"EDUCATION AND RESEARCH" Perhaps to meet the hue and cry for more scientific brains, we should employ the European standard of education: Introduction of science, mathematics & languages to our children at an earlier age than is now customary in our educational system. It must be remembered however, that the social sciences and cultural fields must not be lost sight of in our headlong pursuit of technological heights, for if we do so the rest does not matter. Western culture is as much to be cherished as is freedom. Accordingly I might add that the teachers and professors who mould the minds of our children should be rewarded as adequately as the scientists who create our ever more destructive weapons.

PERHAPS IN THIS AGE A CABINET POST SHOULD BE CREATED WITH FULL RESPONSIBILITY FOR AND AUTHORITY AND ACCESS TO, ALL SCIENTIFIC RESEARCH & DEVELOPMENT IN OUR GOVERNMENT, OUR UNIVERSITIES, INDUSTRY AND PRIVATELY ENDOWED RESEARCH INSTITUTIONS, WITH REPRESENTATIVES FROM EACH GROUP AS UNDERSECRETARIES.

"SPENDING AND SAVING" Let us try to spend more for creation and less for destruction.

"WORKS OF PEACE" How impressed are we when Khrushchev makes blissful or frightful utterances? Ordinarily we are completely unimpressed with the former & over-impressed with the latter. I therefore wonder how impressed have been the peoples of the world with the words of our leaders in recent years. Peace must be vigorously sought, not just talked about. It often requires a firm stand and it is of utter necessity to venture out into the world in search of it.

The President's treatment of the above eight points is to me a great disappointment, again lacking the boldness and imagination. I wish to offer the following reflections which were either ignored or sadly under emphasized, having to do with foreign policy, psychology and philosophy.

Regarding foreign policy we are ever on the defensive; at least one step behind; out of touch much less step with our allies and most important of all DO NOT HAVE A FOREIGN POLICY OF ANY LENGTH IN RANGE. What we need is a concrete program of boldness, imagination and foresight. As things are today we just sit back awaiting the next crisis hoping we'll be able to cope with it. This keeps us constantly and totally off balance. IT IS AS MANDATORY THAT WE GAIN INITIATIVE IN DIPLOMACY AS IT IS THAT WE GAIN GROUND RAPIDLY IN THE TECHNOLOGY OF ARMAMENTS.

To attain this most important goal we must deal with such matters in an entirely different light; that is to rely more upon Yankee ingenuity and less upon Yankee dollars, important as the latter may be. It is a matter of approach and emphasis.

The Russians are OUT-SELLING US - Can you imagine COMMUNISM out-selling the great American Huckster? When it comes to making or flourishing a buck we are famous the world over, but in selling Democracy itself we fall flat on our faces.

Khrushchev & what is left of his entourage have been out in the "grass-roots", whistle-stopping on a planned basis. They have been SELLING themselves as well as communism the past few years and judging from results doing a better than average job. WHY THEN cannot our leaders and diplomats go out to meet the people of the world on a planned personal basis instead of at "summit meetings" and cocktail parties, with the VIPs. What was and has been good enough for Mohammed and Khrushchev should certainly be good

enough for Uncle Sam.

In so doing we should have every advantage, for who would refuse to listen to democracy, had he not already been coerced into the influence of communism.

Looking at the situation we face today, let us go back - not too far - to refresh our memories. Since 1945 there have been many crises which, like it or not, have been our concern.Perhaps each has been dimmed in our memory by the succeeding one but do you remember?: Communist domination of China & eastern Europe, Berlin Blockade, Trieste, rise & decline of communism in Italy, Korean war, Guatemalan revolution, Formosan crisis, Hungarian Revolution, Egyptian-Israeli war, French North African provincial war and others?

As each of these was of equal concern to east & west in terms of spheres of influence and/or opportunism, they all posessed the like potentiality of becoming a powder keg upon which the entire world sat.

This perpetual-crisis situation is much to the Kremlin's liking & very possibly of their making, for they know the normal democratic reactions to such situations - New governments, great debates, investigations, just plain domestic politics, and splits in alliances, all very time consuming and long drawn-out proceedures. They drain every bit of advantage from these and then top it off by either stepping openly or deviously into political vacuums if not offering "magnanimously" to be the great peace-makers. This failing, they speak of disarmament talks and summit meetings which haven't proven any good faith on their part in the past fifteen years. From all of these they derive time, prestige or other advantage, none of which they deserve nor should they be permitted to have.

Russia doesn't want a nuclear/missile war any more than we do, but with the combination of their political tactics & their military potential, they have everything to gain & nothing to lose by being aggressive, so long as we don't call their hand. They are smart enough however to realize as well as we, that in an all-out war today mass-destruction would be rained upon ALL involved. None-the-less, they'll keep nipping at our heels at every opportunity.

With war-making capabilities what the layman knows them to be today, there seems to be <u>far greater</u> possibility of future Koreas than what we fear most - a nuclear/missile disaster.

Are our intelligence agencies aware of Russian capabilities & intents which imperil us any more gravely today than at any other time within the past 5 or 10 years? If so, we should be so informed or at least better informed. If not, why the sudden hysteria over Russian Sputniks & ICBMs? It seems that today, the implications of satelites & ICBMs notwithstanding, east and west possess considerable old-fashioned weapons with which to devastate one another. These run the gamut from nuclear devices to bullets, bayonets and molotov cocktails; and here's one you have probably all but forgotten in all the excitement: -- Poison gas. How lethal can we or they get? Knife, bomb or gas - all produce the same result. Granted the difference is quantitative, however consider this. Poison gas hasn't been used since 1917 and nuclear weapons not since 1945 - WHY? There have as you may recall, been several wars and police actions since 1917.

Now looking back on the crises of the past 12 years and even to 1917, what does the year of Sputnik really signify? This Russian achievement has been greatly over-emphasized by the east as well as the west; once again to their maximum advantage and to our greatest detriment. It has been magnified

to such proportions that in the ensuing confusion, our every governmental consideration is entertained in its light or shadow. Herein lies the fallacy of our national philosophy. Whereas prior to 1940 we buried our heads in the sands of isolationism, we have now accomplished a complete turnabout, putting our faith in and deriving a false sense of security from such products of our heretofore peerless industrial might, atomic bombs, strategic air commands, atomic & rocket propulsion. There must be a course of realistic moderation consonant to world security.

For once, Uncle Sam isn't top banana in a given field, but all is not really lost. This Russian advantage should serve as a challenge; stimulate stern re-appraisal WITHOUT AGONY. WE ARE NOT ON THE BRINK OF DISASTER. We are in the dawn of a new age which belongs not to Russia but the world.

It is a world of rapid technological and social changes, so we may as well buckle down and get used to the idea. (I'm certain that had our government immediately congratulated Russia on the satelite, for once they would have been at a loss for words, which is not characteristic of the Red propaganda mill.)

It behooves us to place our sociological approach to foreign affairs and policy on a basis of equal importance and emphasis with our military and scientific considerations thereof.

Democracy cannot be sold - gun in hand. It can only be projected by personal contact with the peoples of the world. Not just among the leaders of state, but by many of us from the President right down the line. Not just by means of speeches and statements of policy, but by getting out into the grass-roots of the world to personally meet and talk with all the peoples, just as though an election were involved. There are private citizens engaged in such activities today, whose work is perhaps the very best effort of our foreign policy, however theirs is not nearly enough. We are after all engaged in a struggle for the MINDS of MEN. There are literally millions more people on the earth who must somehow be convinced that we are truly and sincerely interested in learning about them, their way of living and their problems; that we seek to become acquainted, earn their friendship and confidence, be of PERSONAL assistance if they so desire.

Efforts and resources spent in this direction with re-evaluated emphasis will in the long run render much greater service to mankind than unnecessary additional billions in armament. We dare not delay for here too the Russians have the jump on us.

Now then, what were our most pressing problems "way back" in September 1957? (The "Good Ole Days" - pre-Sputnik)

Defense & Security
Foreign Relations
National Economy
Our educational system
Housecleaning Labor
Civil Rights

You might say then, that things are basically the same as they were five months ago. Sure we have problems, but then who doesn't? I'd even bet Nikita Khrushchev has some. The first thing we must do is over-come this false-crisis-hysteria and settle down to work out our difficulties with imaginative thinking and calm confidence. The key-note for this atmosphere is forth-coming from Congress and above all from the President, but let us not forget that WE too must do our share - make ourselves heard.

Daniel King

King, John L.

December 4, 1958

Dear John:

As you can guess, there is nothing I should like more than to make a visit to the Trade Fair in April. But I must still say 'no', and the lure of my home state makes the decision more painful than usual. I am tied to New York and Washington these days and there is nothing I can do about it.

Sincerely yours,

ERM:skh

New York 22, New York

Dear Ed:

I have a copy of a letter dated November 12, 1958, addressed to you and signed by Cornelius J. Byrne, President of the Trade Fair, inviting you to address the opening night banquet of the Trade Fair, April 24, 1959.

Mr. Byrne asked both Saul and me to write to you urging that you attend. Naturally, we are very hopeful that it will be possible for you to make this meeting. We realize how busy you are but since Washington is your home state and since you have not seen our new Channel 7 setup, we do hope that you can arrange the time.

You will find that the Trade Fair is a well established institution, one of which we are very proud. It might be possible for you to originate one of your programs over KIRO. In any event, we would do our very best to make your stay a pleasant one and we are sure that you will put forth every effort to attend.

With kindest personal regards.

Sincerely yours,

John

Dear Mr. Murrow,

It occurs to me that, because Miss Han Suyin is spending most of this summer travelling, you may perhaps not know to what address the cheque for her second 'Small World' appearance should be sent. May I tell you then that at your convenience it should go to her c/o Dr. Francis Pan, 205/207, Gloucester Building, Hongkong.

I am myself so much looking forward to the next 'Small World' series, it was quite one of the outstanding TV items over here last winter.

Yours sincerely,

Melina Russell King

Kerrigan, Harry L

October 28, 1958

Dear Harry:

I am glad to hear that you got in touch with William Plowden. As you say, he is a nice young man.

I am afraid that a seven day a week schedule precludes any possibility of accepting speaking engagements. Much as I would like to make a trip out to California, I see no chance of it for quite some time.

Very truly yours,

ERM:skh

Faculty Club
University of California
Berkeley 4, California

October 7,1958

Dear Ed,

As you suggested I got in touch with William Plowden. A nice chap. We had him in for dinner, and I have introduced him to a number of people who may be of help to him. Incidentally I ran across him yesterday on the campus at a lecture by Alan Barth of the editorial staff of the Washington Post. Alan will be at the University during the entire 1958-59 academic year. Most of his time will be devoted to writing a book,but he will lead a graduate seminar on civil liberties. His address yesterday was titled "The Utility of Freedom". Scotty Reston speaks here next week. If you would be interested I'll suggest to the faculty committee that you be secured on some mutually satisfactory date.

Sincerely yours,

Harry W. Kingman

March 12,1958

Dear Ed Murrow:

I write to express the hope that you'll postpone running for the U.S.Senate for maybe a decade or two. I am sure you have far more freedom now,and much greater influence, than would be the case if you were down here.

It was pleasant to run across you for a moment recently when you were recording the utterances and grimaces of some of the lower vertebrates of the Senate.

If I see you sometime in New York as you suggested I hope to have you meet my wife. Speaking objectively,of course, I agree with the numerous people who consider her one of the top women of the land.

Enclosed is a revised copy of our lobbying prospectus. Financed by means of the sale of a Monterey lot and a matured endowment policy we are in our second year on the "Hill". Its exhilarating work,and we are gaining a heart-warming number of friends.

Since I have always been something of a hero-worshiper I have written you occasionally in recent years. I have hoped you wouldn't feel constrained to acknowledge these notes,for surely you have little time for that.

With best wishes.

Sincerely yours,

Harry L. Kingman

THOUGHTS ON FRENCH FOREIGN POLICY

By

Maurice Couve de Murville
Minister of Foreign Affairs
Republic of France

American Society of the French Legion of Honor

INCORPORATED, STATE OF NEW YORK, 1924

The objects and purpose of the Society as stated in the Certificate of Incorporation filed with the Secretary of State, are:

(a) To provide a social and fraternal medium by which members of the French Order of the Legion of Honor who are resident in the United States may co-operate in taking such action from time to time as shall seem to them likely to promote and uphold the traditions, prestige and standards of said Order.

(b) To promote appreciation in the United States of French culture and literature, and in France of American culture and literature, and generally to do everything tending to strengthen the traditional friendship and good will existing between the peoples of the United States and France.

Any citizen or resident of the United States who shall have been decorated by the French Government with the National Order of the Legion of Honor may become a member as provided in the By-Laws.

THOUGHTS ON FRENCH FOREIGN POLICY

In recent years France has suffered from internal difficulties, but there has been a marked continuity in the development of her foreign policy. In tracing the main lines of action, it is necessary to begin with a consideration of a number of constant factors.

France belongs to several distinct spheres of interest. Both geography and history establish her as part of Western Europe. By the standards of the humanistic civilization which she shares with other democracies, she is a part of the larger group which is known as the Atlantic World. On the continent of Africa she has interests and major responsibilities, both in the matter of foreign policy and with the Community defined by the new Constitution. And finally, in view of the special friendly relations she maintains with a number of countries that have felt her influence, and in view of all she contributes to the main channels of trade and cultural and technical exchanges, France is a power with worldwide interests.

In these various spheres, France participates actively in the leading organizations which have been created for the purpose of providing close cooperation among the member

nations in each group. Examples of these are the North Atlantic Treaty Organization, SEATO, the Organization for European Economic Cooperation, the Western European Union, the Common Market and Euratom. With her long tradition of assuming international responsibilities, France, as a part of these organizations, follows a political course whose aim is to balance the two main concerns of safeguarding her own essential national interests and attaining the objectives common to all members of the various organizations. This is the case, for example, in matters which concern the functioning of the Atlantic Alliance and the perspectives of European economic cooperation.

After nearly ten years of existence the Atlantic Alliance remains the framework within which expression is given to the determination of the free world to prevent and, should the need arise, to meet aggression. During the period of its history, NATO has given proof of its vitality, as well as of certain weaknesses. Development in technical matters, particularly in connection with atomic weapons of various types which can be integrated into the strategy of the Alliance, has very considerably increased the inequality among the member countries, since some possess these weapons and others do not. That is why, in the absence of an agreement on general disarmament, France wishes to acquire the means which will permit her to make a full contribution to the Alliance. In political matters, experience has also proved that, when an important question comes up outside the limited field covered by the Treaty, the procedure of consultation in force does not rule out actions which may directly affect the security of each of the member countries. Those nations which have responsibilities of their own outside Europe must then concern themselves with meeting them in a manner in accordance with the interests of the entire Alliance.

In the field of European economic cooperation, 1958 has been notable both for the coming into force of the Treaty of Rome and for the opening of negotiations within the OEEC to find a means of safeguarding the interests of the nonparticipating European countries. Certain difficulties have developed in this regard, which have not yet been entirely solved. These difficulties could have been foreseen since the problem is to reconcile the unwillingness of certain countries to accept the obligations and possible risks implicit in the Treaties of Rome with the importance of avoiding any creation in Western Europe of different zones.

This is a very brief outline of the problem that the Six must solve together. France views it as a matter of priorities, believing that the first need is the maintenance of the integrity of the Treaty of Rome. Second, France wishes, for political reasons, to cooperate fully in the search for any formula that will weaken the effect of the Common Market on the economy of outside countries. The third point in French policy is the feeling that in any such negotiation, where the various needs seem at first sight contradictory, each question coming up for debate must be examined on its own individual merits and not in terms of abstract generalities.

Outside the framework of the various organizations mentioned above, the foreign policy of France has been well defined on the international problems which are of general concern: notably, the situation in the Middle East and the problems of disarmament and of security.

The situation in the Middle East seems at the moment to have become somewhat less critical, but it has not yet been stabilized. The essential principle to be followed, it would seem, is to allow the Governments and peoples of this area freedom of choice as to their future course without any for-

eign intervention. However, to affirm this principle would be to risk the unattainable so long as agreements are lacking on the maintenance of the territorial *statu quo* and on the noninterference, direct or indirect, by powers which are outside the area but which are, at the same time, interested in the development of the various countries which comprise it. France made every effort to make this principle prevail several months ago at the time of the events in Lebanon and Jordan, and remains convinced that one day in the future the problem will have to be squarely faced if there is to be any lasting settlement in this region. It is evident, furthermore, that the peaceful development and the genuine independence of the countries of the Middle East are, to a great extent, linked to their economic expansion. But there again the initiative must come from the countries themselves, since foreign aid cannot, looked at from the long-term point of view, provide a real stability if it appears to be a disguised form of political interference.

As for disarmament and security, these are difficult problems whose technical factors cannot be isolated from the political context. In recent months the trend has been toward the search for limited agreements on certain specific points, such as the banning of nuclear tests and the prevention of surprise attacks. This approach has its merits in that it allows direct confrontation of views and gives us hope for the future, but it also has the serious disadvantage of dissociating the problems from each other and causing us to lose sight of the over-all view.

The present diplomatic policies of the Soviet Union are aimed at the preservation of the European *status quo* and the nuclear *status quo*. Are such aims consonant with the development of genuine security for Europe and the world?

France does not think so. But in spite of reservations, France, wishing to explore all possible methods for controlling preparations for future aggression, is participating actively in the technical conference at Geneva called to consider ways of preventing surprise attacks. She is not participating, however, in the projected political conference on the prevention of further nuclear tests, but her attitude on this matter is already very well known. The halting of such tests is not in itself a step towards disarmament. It is, in fact, the opposite, unless other agreements simultaneously entered into provide for the cessation of manufacturing and the reconversion of stockpiles, and unless such agreements are tied to a system of strict controls intended to carry out the successive stages in the arrangements. Without such an over-all plan of action the nuclear powers will be free to continue the fabrication of the weapons of mass destruction they have already perfected and nothing will check the growing stockpiles in their arsenals. As a result, the imbalance between the means available for use by some powers and the risks common to all could only be accentuated and political ill feelings increased. Public opinion in various countries would confuse the silence on the proving grounds with security, and the true problems of disarmament would thus be lost sight of and nothing effective would have been even started.

France played a large part in drawing up the Western plan of August 27, 1957, which reflected all these concerns. She remains loyal to the concept of the "package deal" proposed at that time, which not only dealt with all phases of nuclear disarmament, but also with what is known as "conventional" disarmament. France is keenly interested in a global agreement of that type, but so long as such an accord is not reached, she cannot give up her freedom of action.

These matters do not comprise a full picture of all the aspects of French foreign policy. It is nevertheless possible to draw certain general conclusions from them.

France, whose rising birth rate dates from the period directly after World War II, is now assured of a political stability which was for some time lacking. The modernization of her industrial equipment and the anticipated potentialities of the new sources of energy which are beginning to be developed represent, for France, major assets for the years to come. Thus she is in a position to contribute more to the alliances and the organizations of which she is a member and, at the same time, the means at her disposal for assuming her international responsibilities become more clearly evident.

French policy is entirely directed towards the maintenance of peace. In the present international situation the pursuit of this objective is impeded by certain factors making for tension which must be realistically weighed if serious consequences are to be avoided. The rivalry of ideologies, the effect of modern methods of propaganda on the state of public opinion in the various countries, the assertion of genuine nationalisms, the legitimate ambition of underdeveloped countries to raise their standard of living rapidly—all these constitute so many forces which sometimes operate independently but more often have combined effects. With a situation as complex as that we face at the present time, patience and, above all, clear thinking are essential if a distinction between the fundamental and the ephemeral is to be made and if illusions are to be avoided. And that is why France, whether the matter at issue be of a local or general nature, feels a particular concern to promote, to the utmost of her ability, concrete solutions firmly based on a realistic appraisal of the facts.

MAURICE COUVE DE MURVILLE
Minister of Foreign Affairs.

Kirkpatrick, Adm. CC
(COPY)

February 12, 1959

Dear Admiral Kirkpatrick:

Very many thanks for your kind letter of January 27th. I have received the invitation from Vice Admiral Stuart Ingersoll to attend the symposium at the Naval War College and to be moderator for the panel discussion to be held on Thursday, March 12th on the subject, "American Communications System."

It is with the utmost regret that I have been obliged to decline the invitation, since my radio and television schedule makes it impossible for me to leave New York at that time.

Sincerely yours,

C. C. Kirkpatrick
Rear Admiral, U. S. Navy

Dear Admiral Kirkpatrick:

Very many thanks for your nice letter of January 27 and your kind comments concerning the address I delivered to the Radio and Television News Directors Association last October.

I am greatly encouraged by your remarks concerning the talk, and the fact that you felt it worthy of distribution to all active duty flag officers of the Navy, and general officers of the Marine Corps.

Many thanks again.

Sincerely yours,

C. C. Kirkpatrick
Rear Admiral, U. S. Navy

New York 22, New York

Dear Mr. Murrow:

A copy of the talk you delivered to the Radio and Television News Directors' Association in October has recently come to my attention.

It was encouraging to read the challenging and provocative case you presented on the role the broadcasting industry should play in awakening the American public to the dangers facing the free world. I'm sure your remarks were also sincerely appreciated by those of us in the military who are necessarily a little more conversant with these dangers than the average citizen.

Realizing the tremendous potential force for enlightening the American public that is latent in the broadcasting industry, I sincerely hope that a way is found to present more of these informative programs, which could be such a great service to the people of America.

If we in the Navy can be of assistance in this endeavor, please let us help in any way possible. A copy of your talk is being forwarded to all active duty flag officers of the Navy, and general officers of the Marine Corps.

Sincerely yours,

C. C. KIRKPATRICK

New York, New York

Dear Mr. Murrow:

As a practicing professional in the field of public relations you will be interested to learn that the Navy War College's Command and Staff curriculum will include a symposium on public relations for the first time this spring.

I am proud of this latest emphasis on PR by our Navy. These officers are generally slated for a command or responsible staff assignment upon completion of their course at the War College. Thus we particularly want to impress them with the importance of public relations as a command responsibility.

As the Navy's professionals in this field, the War College has quite naturally turned to us to set up the course. We believe that to really indoctrinate these officers as they should be, we must bring in outstanding personalities in the field of public relations such as yourself. As you can see by the attached program, which we have sent to the War College, we are hoping you will be able to moderate a panel on the "American Communications System." By this means we hope to show how skilled Navy PIOs can increase the audience on what the Navy has to say by the proper presentation of their material to the various kinds of media.

This, of course, is not an invitation. However, you will shortly receive a personal invitation from Vice Admiral Stuart Ingersoll, USN, President of the Naval War College, to participate in our inaugural public relations course.

We hope you can get out of this something of value to yourself. We know that, if your time permits, you can really help us convince these officers that their public relations is indispensable to our nuclear-age Navy.

Sincerely yours,

C. C. KIRKPATRICK
Rear Admiral, U.S. Navy
Chief of Information

Enclosure:
(1) Schedule

Annex A to Directive for Public Relations Study

Schedule

Thursday, 12 March 1959

Morning
8:30 - 10:30 Reading of assigned bibliography

11:00 - Lecture, Sims Auditorium
"Let the Public Not be Damned"
Mr. George Hammond, President Carl Byoir and Associates, Inc.

Afternoon
2:00 - 4:00 Panel Discussion, Sims Auditorium
"The American Communications System"
Mr. Edward R. Murrow - (Moderator), News Analyst CBS
Mr. Erwin D. Canham, Editor, Christian Science Monitor
Mr. R. T. Clough, Promotional Director, Reader's Digest
Mr. John Charles Daly, Vice President in charge of sports, news, special events and public affairs, ABC

Friday, 13 March 1959

Morning
9:00 - Informal presentation & discussion, Sims Auditorium
"What will you, as a Commanding Officer, be confronted with in regard to informing the public"
RADM C. C. Kirkpatrick, Chief of Information

11:00 - 12:00 Informal presentation & discussion, Sims Auditorium
"The Difference Between Techniques of Command and Persuasion"
Mr. Albert Shepard, Executive Vice President, Institute for Motivational Research

Afternoon
2:00 - 4:15 Seminars, Sims Hall
(8 groups of 15 students, each with a professional Navy PIO officer and a civilian public relations professional. Groups to be given typical PR situations. They will make an estimate of the situation, explore courses of action and reach a decision. The two professional PR will make a short evaluation of solutions at end of period.)

Dear Mr. Murrow:

Lieutenant Commander Paul Trahan has told me of his recent conversation with Mr. Palmer Williams concerning the possibility of having you narrate a short motion picture we are making of the Nautilus' voyage under the North Pole.

I would appreciate it very much if you could find the time to do this narration for us. We feel that the film is going to be a very fine one, both for in-service and public service use. After experiencing the tremendous impact of "Revolution in the Navy", I find it hard to imagine a nuclear submarine story narrated by anyone else.

Williams

Sincerely yours,

C. C. Kirkpatrick

Dear Ed:

I have just heard the unexpurgated version of your narration for OPERATION SUNSHINE and now feel that the success of our film is assured.

Your comments about small type did not fall on deaf ears - hence, the big type to express a big THANK YOU! My officers returned to Washington much impressed with the cooperation you and your associates extended to them, and tickled pink with the gracious way in which you received them.

Again, thank you.

Sincerely yours,

Kirk

MONDAY, OCTOBER 6, 1958

NO. 981-58

LI 5-6700 Ext.76161

ADDRESS BY
ADMIRAL ARLEIGH BURKE, USN, CHIEF OF NAVAL OPERATIONS
BEFORE THE FIRST CLASSMEN, U.S. NAVAL ACADEMY
ANNAPOLIS, MARYLAND
MONDAY, OCTOBER 6, 1958 -- 6:30 P.M. (EDT)

Admiral Melson, members of the faculty, Midshipmen of the First Class.

It is always an exhilerating experience for me to talk to Midshipmen here at the Naval Academy. Today it is a particular pleasure because I have an opportunity to talk about one of the most important subjects you will ever study, the subject of leadership.

It is the one course that will never end for you as long as you associate with men. It is a lifelong course in which you will constantly learn something new.

I'd like to take you back for a moment to a night sixteen years ago, in the Fall of 1942, to the Battle of Guadalcanal.

It was there that a few hard-pressed American warships brought the tide of the Japanese southward advance to a halt. One of those American warships was the destroyer O'BANNON which was in the thick of the battle when suddenly out of the night loomed a tremendous hull, topped by a Japanese pagoda mast. It was the Japanese battleship HIYEI.

Against all odds, the O'BANNON launched a torpedo attack, and stopped the HIYEI which went to the bottom later that night.

Hard on the heels of this encounter, the O'BANNON found herself engaged with the Japanese cruiser TENYRU. Again with heavy odds against her, O'BANNON attacked, and TENYRU joined the HIYEI.

That night O'BANNON became a wounded veteran, but she lived up to the finest traditions of the naval service, and did honor to the Marine Lieutenant whose name she bore.

MORE

Superb leadership was demonstrated that night. The officers and men of the O'BANNON displayed the kind of inspired performance that is the very essence of naval tradition.

For the O'BANNON, that night was the big pay-off. This is what we in the military professions always look for, the big pay-off, the great event, the magnificent moment when heroes are born.

Individual heroism in battle is one thing. It may be the result of any number of factors of psychology and situation. But leadership is something else.

The big pay-off in leadership is not the result of a sudden combination of circumstances at a particular place and time.

The pay-off in battle is the result of hard work and hard thought, for hours, for days, weeks, and years of training and planning. Great leadership is developed over a span of years. It is the result of the daily collection of a lot of little experiences, little lessons, learned and absorbed and tested, day after day, long before the battle begins.

The USS O'BANNON, under Captain Wilkinson, performed what amounted to miracles in battle that night sixteen years ago at Guadalcanal. Captain Wilkinson was an inspired leader, he was a man of great courage, devoted to duty, and possessed of a thorough professional knowledge.

These traits, and indeed many others, are among the fine human qualities which we always associate with good naval leadership. Such manly virtues as fidelity, integrity, honor, courage, and stamina, are the foundations of a man's character.

But leadership is not alone a question of what a man is. It is also reflected in what a man does. And it is reflected not only in what he does in the heat of battle, but also what he's been doing for years before he went into battle.

In wartime, when the issues are clear, when men can see the dangers, leadership does not have to overcome the inertia of complacency and smug self-satisfaction. In war the objective is victory, and men are moved to heroic exploits of self-sacrifice and herculean tasks in support of the cause.

In times such as we are living in today, however, the exercise of leadership is much more demanding, because many people do not see any issues. They see no problem.

We know our enemy is Communism, but the threat seems far away. Many people do not see the insidious dangers, the long range threat to our way of life, with the encroachments of Communism in faraway lands, and by the attempts of the Chinese Communists right now to take CHINMEN by force.

As a nation we have talked long and eloquently about freedom, about human liberty, and about our opposition to Communist expansion which would deny to mankind these basic human rights.

MORE

In our advocacy of freedom, and national independence, the United States has been a leader. But a real leader, a leader who will be respected and followed by others, whether it be a nation or an individual, is one who is willing to act in accordance with what he believes.

This is the principle underlying our action in Lebanon when the Chamoun government appealed to the United States for help. It is the principle underlying our support of the Government of the Republic of China right now, in the TAIWAN Straits.

There are people today at home and abroad who advise us to abandon our Chinese nationalist friends and leave them to stand alone against the overwhelming force of the Communists. But for us to do so would be to bow in abject submission to the Communist use of force.

It would then be only a matter of time before the Communists would again test our will and determination, on issues in different places, and from a position of ever growing Communist strength.

To appease their desire for the offshore islands now would only whet their appetite for a bigger bite of real estate later, for the Communist objective of eventual world domination is well known.

Unquestionably there are risks in the TAIWAN Straits right now. But it has not been in the character of our nation to retreat in the face of force.

The character of our nation, and its position in world affairs, is determined not alone by what we are, or what we say, but more by what we do.

And so it is with individual men. Communism is not the only enemy of free men. Our enemies are also indifference, indolence, ignorance, greed, and the philosophy of don't brush it off on me.

These are the frailties of human nature with which we must always contend. The demand upon leadership is to overcome the inertia of the philosophy that things are good enough now, let's leave well enough alone, or let George do it.

From out of the storehouse of his knowledge and experience, a leader must visualize something better. He must recognize that there is always a better way, a faster way, a more efficient way of doing things. He must recognize the constant need for improvement.

The need may be simply to make a gun crew more efficient, or the general mess better, or it may be just the need for a more efficient way of filing papers. But a leader cannot stop merely with the discovery of a need. We have plenty of people who can go that far.

One of the easiest things to do in the world is to criticize. Also, the cheapest commodity in the world is free advice. The real leader is not the man who is only smart enough to find out what's wrong with something. Instead, it is the man who is willing to step out and do something about it. - 3 -

MORE

In order for a man to be a leader in anything, whether it be in the naval service or elsewhere, he must be a man of action. He must participate in the affairs of men. He must venture forth and do things in accordance with his beliefs.

But even this is not enough. You don't get an "E" just for effort. A man must, in the final analysis, produce results -- results which contribute to his cause, which make his outfit better, which take his unit further along toward the goals which have been set either by himself, or by his own leaders. It is the result which counts, not the r.p.m of spinning wheels.

The good leader is the man who feels a profound sense of personal responsibility for his organization, for his shipmates, for his fellow citizens, and for all mankind. He is one who tends to feel, whether rightly or wrongly, that if he does nothing about a problem, nothing will be done.

If each officer and petty officer in the Navy felt this way, each within his own sphere of authority and ability, there is no end of the world of improvement we could effect in the Navy without the expenditure of another dollar, or the processing of another paper.

We have to look at the Navy always with an appraising eye, be quick to spot deficiencies. But it is not the mere critic who makes progress. It is the man who does things who makes progress. The real service is rendered not by the critic who stands on the sidelines, but by the man who performs.

We often hear it said that if only the Navy would do this or that, or if they would do this or that, things would be better.

But who is the Navy? Who is this nebulous they that some people speak of?

The Navy is you, and me, and all naval officers and bluejackets wherever they may be. It's your Navy. The Navy is you, and you are the Navy.

It is you, individually and collectively, who will make the Navy what it is, not by what you say, but by what you do, and how you act and react, day after day, for all the years you are naval officers.

For you are proprietors, not employees of the Navy. If the Navy is to make progress, if it is to get better, the people who are the Navy have to be better, and they have to do better. This means setting a faster pace, setting a higher standard for men to shoot for.

The lazy and lax officer, the perennial griper, will have lax, lazy, and complaining followers. And all his honesty, integrity, and fidelity will go for naught, because nothing good will get done.

The outstanding leader is the man who is willing to set new records, establish new marks, and reach new heights in efficiency and effectiveness, because he knows that this is the way of progress. There is no progress otherwise, and progress is a leader's most important responsibility.

MORE

The man who leads is the man who succeeds. People will follow the successful man because he is the one who can show the way; he can show how to get things done. He has earned their confidence by his own deeds.

It is not necessary to do a big job every time. What is important is that a man do a good job, a better job than has ever been done before. And a good job has nothing to do with size.

The requirements for doing a good job are the same whatever it may be, large or small. It requires knowing your stuff, putting your mind to it, and giving it the best effort you have. Every job a man does is a test of his own standards, and the way he does it is a reflection of his character.

But there is another facet of leadership which is vital, especially in the Navy. The man who ventures forth to uphold his ideals, to do something constructive about his beliefs on how things should be done, must also realize that effective action in any large organization must be the joint action of many men.

This means cooperation, a greatly overworked word. It means learning how to work effectively within an organization.

Leaders are always advocates, strong believers. It is good to have pride in being a naval aviator, for example, or a submariner, or a destroyerman, an engineer, a Marine, or a missile expert. Without this pride there would be little effort to advance.

But the stamp of the real naval professional comes in an officer's knowledge of the Navy as a whole, and in understanding its concepts, purposes, and problems throughout the range of its seagoing responsibilities.

This is particularly important in the Navy of all services, because the Navy is so diversified. It has ships, guns, airplanes, engineers, and landing forces. It is on the move all the time.

For this reason, naval forces must operate always as a team.

It is in this team effort that the finest qualities of leadership have their greatest opportunity to show through. But also this is where it is most difficult to achieve.

You have to learn how to convince others of your viewpoint, how to strike a responsive chord in the hearts of other men, and at the same time have the ability to see your own job in its proper perspective in relation to the whole Navy.

Once in a while people get a little mixed up between the concept of cooperation, and the question of popularity. And in doing this, they often place a greater value on popularity than they do respect.

There is no question but that most people want to be liked. There is nothing wrong with this, as long as we do not sacrifice our own principles just to curry someone's favor. -5- MORE

Popularity can be won, and it's not a hard contest at that. But respect can only be earned. This is not easy to do.

In learning to work as a member of a team, it is not necessary for a man to lose his individuality. It is in fact the very desire of men to excel, to be outstanding in naval service, that the highest qualities of individualism are manifested.

The spirit of good, hard, and clean competition in the Navy is always important. It is a positive factor in Navy life, not a negative thing which perniciously tears down the functions or performance of others.

The man who can compete successfully is the man who constantly seeks greater responsibility, constantly goes after the challenging jobs, the tough jobs. And this starts the moment a man takes his first commission.

It does a man little good to wait until he is on the threshold of being considered for the next higher rank before he asks for the chance to prove himself. By that time it's too late.

The true leader is the man who has the real genuine desire to be boss, to be number one, even in the lowest echelon, or in the smallest operating unit. He is the man who has the confidence in himself to take the challenge simply because he knows in his heart that when he is skipper he will make his ship the best in the fleet. He is also a man who has the guts to accept the blame, and the grace to share the glory in whatever the results might be.

And because he is not the skipper when he begins to think this way, the potential leader must master the art of followership, the ability to work within the command, or within the ship, or the organization to make it better in every way he can with the brains and energy and authority he holds at the moment.

This is good followership, and here is where you find the seeds of good leadership. For not only is the good leader willing to look around and see what needs being done in support of his organization, he also is willing to help others do their jobs better, all for the good of the Navy.

He demonstrates his loyalty upwards by exuding confidence in his leaders and supporting them. He demonstrates his loyalty among his peers by sharing his knowledge and experience and efforts. And he demonstrates his loyalty downward by giving credit where it is due, swiftly and publicly. This is one of the noblest acts of leadership.

In giving such credit to those under him, a leader automatically credits himself. He is implying that it was under his leadership that the best in a subordinate was able to come through.

These are the things men do consistently, throughout their naval careers, as they develop their leadership qualities.

MORE

The sea is a challenge to all men alike, regardless of nationality, of political belief, or background. The elements at sea treat all men alike. All men are equal before the natural forces at sea.

The captain of a ship shares all dangers equally with his officers and crew, and for this reason it takes a special kind of leadership to be effective at sea. It takes men who are young in spirit, robust, and vigorous. There is nothing to rely on but what you yourself came prepared to do when you set out from shore.

This is why so much emphasis is placed on individual self-reliance in men, and self-sufficiency of ships. It takes strong men to go to sea in the first place, men with stout hearts and minds of their own. To lead such men takes special leadership.

In this, Navy men represent the best in American character. In this you will find the challenge of leadership greater than anywhere else, because while you will wear the badge of authority as officers, nothing will speak louder in your behalf than your own performance. What you do in all kinds of circumstances will be the final test of your courage, your integrity and your honor. No matter what may be your fortunes for the future, whether for good or bad, you will find that there has been no greater satisfaction than the knowledge that you have upheld, and added to, by your own actions, the finest traditions of your country and your Naval service.

Adm. Burke Hits Any Pressure on Chiang to Retreat

Official U. S. Navy photo

Adm. Arleigh A. Burke

Says Isles Can Hold 'Forever'

Would Stay Until Reds Cease Fire

Text of interview with Adm. Burke—Page 14.

Herald Tribune Special

By Robert J. Donovan

WASHINGTON, Oct. 4.—Adm. Arleigh A. Burke, Chief of Naval Operations and a member of the Joint Chiefs of Staff, took the unusual step today of publicly opposing any American pressure on Nationalist China to abandon the offshore islands.

Adm. Burke told the New York Herald Tribune in an interview that, though he was not opposed to negotiation to end the crisis in the Formosa Strait, he was afraid that too much may be conceded to Communist China.

Can Hold Out

Until the Communists cease firing, Adm. Burke declared, the present stand at Quemoy should continue. The island, he insisted, can hold out for "ten years—forever." He said:

"Some of us don't want to face this tough problem. Too many don't want to stand up, and that is what is worrying me."

The man who is one of President Eisenhower's principal military advisers disputed the argument of those Administration critics who believe that in the Quemoy and Matsu islands the United States has chosen the wrong line on which to stand against further Communist advance in the western Pacific. He asserted:

"There is never a right line. There is never a convenient place to fight a war when the other man starts it . . . There never will be a right line. Where is the right line?"

"Thirty-one-knot Burke"—he got the nickname for driving his destroyer squadron at high speed in combat in the Pacific in World War II—spoke from his desk in the Pentagon, pausing now and then to fill his pipe from tobacco in a jar decorated with a picture of Adm. George Dewey's flagship Olympia.

Troubled by Pressure

He was greatly troubled—and admitted it—by the pressure at home and abroad for negotiation with Red China over the offshore islands and even more by the question of whether Americans are willing to stand up and fight for their rights and their honor if necessary.

And his apprehension was not limited to the situation in the Formosa Strait. Looking ahead to the forthcoming conferences with the Soviet Union on suspension of nuclear tests and

Navy advisers disputed the argument of those Administration critics who believe that in the Quemoy and Matsu islands the United States has chosen the wrong line on which to stand against further Communist advance in the western Pacific. He asserted:

"There is never a right line. There is never a convenient place to fight a war when the other man starts it . . . There never will be a right line. Where is the right line?"

"Thirty-one-knot Burke"—he got the nickname for driving his destroyer squadron at high speed in combat in the Pacific in World War II—spoke from his desk in the Pentagon, pausing now and then to fill his pipe from tobacco in a jar decorated with a picture of Adm. George Dewey's flagship Olympia.

Troubled by Pressure

He was greatly troubled—and admitted it—by the pressure at home and abroad for negotiation with Red China over the offshore islands and even more by the question of whether Americans are willing to stand up and fight for their rights and their honor if necessary.

And his apprehension was not limited to the situation in the Formosa Strait. Looking ahead to the forthcoming conferences with the Soviet Union on suspension of nuclear tests and prevention against surprise attack, he voiced his fear that "we are going to have public pressure to give." He said:

"You don't build up your future by giving. (By that means) you give them (the Communists) something, whatever it is they want. We will end up with having less power, less capability. We will lose somehow and our prestige will go down."

Adm. Burke's entire statement gives a remarkable insight into the thinking in the highest military circles in the United States in this time of crisis. It may well have been impelled by the widespread assumption, following this week's press conferences of Secretary of State John Foster Dulles and the President, that United States policy with respect to the offshore islands is changing.

What Adm. Burke said is likely to be controversial. It certainly clashes with the views of many in and out of the government. Nevertheless the entire text of his interview was cleared for publication in the Herald Tribune by the White House, the State Department and the Department of Defense.

Adm. Burke's theme was that the offshore islands are not important geographically but that they must not be yielded under fire.

"President Chiang," he said, "can't give up those islands—and we can't ask him to give them up—without giving up one of the most important things in the world to him and to us—prestige. . . . (The Communists) think they have the power to force an issue."

Reduction Possible

The man who is primarily responsible for the Navy's first-line-of-defense operations in the Pacific said he did not favor total evacuation of the islands by Nationalist forces. He insisted that it was entirely up to Chiang to say to what extent, if any, the garrison should be reduced.

Yet while he did not say so, one got the impression that Adm. Burke would favor some reduction and would not mind some private urging to this effect by the United States, just so long as it did not appear as public pressure on Chiang. It is arguable, the admiral said, that Chiang may be over-committed in the islands.

Adm. Burke said that Chiang should be allowed to do as he wishes with his forces, "just so long as he doesn't attack the mainland."

Adm. Burke predicted that the Communists will agree to a cease-fire only "when we prove to them that the shelling does no good—and it is costing money."

"They have," he ventured, "nothing to gain by negotiation—except Taiwan (Formosa)."

In closing he said:

"Should the Communists cleverly maneuver us into a position where we are willing to sacrifice our liberty—or somebody else's liberty—then they gain their big victory. They will have then sapped our moral strength."

Text of Interview With Adm. Burke

From the Herald Tribune Bureau

WASHINGTON, Oct. 4.—The following is the complete text of the interview with Adm. Arleigh A. Burke, Chief of Naval Operations, by Robert J. Donovan, chief of the New York Herald Tribune Washington Bureau:

MR. DONOVAN: Admiral Burke, would you give me the benefit of your thinking as an individual on the importance of the offshore islands?

ADM. BURKE: First, these offshore islands by themselves geographically, are not very important. They are only as important as the Communists wish to make them. As Mr. Dulles has stated, the islands have always been occupied by the Republic of China and they form an integral part of the Republic of China. The U.S. owns islands off Maine and we aren't going to give up those islands just because they are close to Canada. They are our islands. It doesn't matter how we feel about giving up the offshore islands. It is the way President Chiang Kai-shek feels about it.

Can 'Advise' Allies, But Can't Control

We have allies in a free world because we let them run their own business and in return we get their support. We can advise, but we can't control.

The Communists started the attack. They put pressure on. They are the ones that started the attack — Chiang didn't. They're the ones that laid down the artillery barrages and started killing people — Chiang didn't.

President Chiang can't give up those islands—and we can't ask him to give them up—without giving up one of the most important things in the world to him and to us—prestige, standing up under fire for principles, little things, intangible things—not tangible things but intangible things. If we retreat under fire and retreat under pressure, where does that leave us in the eyes of the rest of the world—and our own eyes? If you are forced into doing something under pressure by an enemy or by an antagonist, where does that leave you? It leaves you succumbing to pressure. It leaves you retreating under force and that is not good for your own soul and it is not good for your allies. It is not good for the things for which the United States stands. We have never subscribed to this attitude before in this country.

Pressure on Chiang By U. S. Opposed

MR. DONOVAN: What would you have us do out there?

ADM. BURKE: Exactly what we are doing—help Chiang. He can hold the islands. But we shouldn't force him to give up the islands or try to force him to give up the islands.

MR. DONOVAN: Well, how long can this blockade endure?

ADM. BURKE: Ten years—forever.

MR. DONOVAN: Will the lid stay on for ten years, say if the tension kept building up?

ADM. BURKE: We don't know. Now, suppose we do retreat. Suppose we do knuckle under, under force, we slide back a little bit. That is what the Communists are looking for. They are hoping we'll back down. They don't care about these islands from a geographical point of view. They are unimportant to them. They have lived with them for years and there has been no harm done. Now they think they have the power to force an issue. They are trying to exercise that power. They are going to make people realize they have power.

Would Not Favor Nationalist Pull-Out

MR. DONOVAN: What will happen to those islands if Chiang reduces his garrisons?

ADM. BURKE: That, again, is his business. You could argue that he has over-committed his forces.

MR. DONOVAN: Would you favor seeing him evacuate all his forces from these islands?

ADM. BURKE: No.

MR. DONOVAN: Some of them?

ADM. BURKE: Perhaps, but that is his business. The principle is not for him to be forced—or for any other free nation to be forced—to take a position under pressure which they consider disadvantageous to them.

MR. DONOVAN: It looks to me though, that the pressure right now is coming from both directions.

ADM. BURKE: You mean from the Communists and ourselves?

MR. DONOVAN: Yes, sir.

ADM. BURKE: That is what worries me. That brings up the main part of this problem, which is not really the offshore islands. I am afraid that too many people in the U. S. aren't willing to face these problems. After the problem of the offshore islands is settled, I am afraid there is going to be trouble breaking out in other parts of the world and perhaps we aren't going to want to face those problems either. They may be in a far distant part of the world—Burma, Laos, Indonesia, Viet Nam, maybe Taiwan (Formosa) itself, maybe the Philippines, it may be in Africa or the Middle East.

Draws the Line On Mainland Blow

MR. DONOVAN: I take it then that you feel that the United States positively should not put pressure on Chiang to reduce the forces on those islands. That we should allow him to do what he wants to do about his forces on those islands.

ADM. BURKE: Just so long as he doesn't attack the mainland.

MR. DONOVAN: And you believe that this could go on indefinitely, as it is now, and that in the end the Reds would be forced to back down?

ADM. BURKE: Yes!

MR. DONOVAN: The great criticism of the American stand here, is that we have picked the wrong line to stand on in Quemoy and Matsu. What is the answer to that?

ADM. BURKE: There is never a right line! There is never a convenient place to fight a war when the other man starts it.

Holds Enemy Chooses Point of Conflict

MR. DONOVAN: But there are places that are more convenient than others, aren't there?

ADM. BURKE: No. The enemy starts it in the most inconvenient place, i.e., in the most inconvenient place to us. Would we have told Chiang to abandon those islands before the Communists started shelling them? That was the only other out. Now, Laos is in a very difficult spot. Should we abandon Laos and say it is an inconvenient area so you (Red China) can move in on it? Burma is adjacent to the Communists. Should we tell Burma, "Your freedom is of no importance to us, we can't help you?"

MR. DONOVAN: The trend now seems to be to negotiate a settlement, does it not — for those offshore islands?

ADM. BURKE: That is what I am afraid of, if it goes too far. That is the trend. I don't mind negotiation. I think negotiation has great value and you always have to be ready to negotiate but if you are negotiating to give up the islands under pressure you can't gain.

Freedom of Region Seen Vital to U. S.

MR. DONOVAN: What to you is the ideal solution of this, for American interests?

ADM. BURKE: Other than the basic one of the security of the United States, it is in the American interest that Japan, Taiwan, the Philippines, Indonesia, Viet Nam and all the other nations in that area stay free and oriented toward freedom—toward liberty, that is important. Another reason is that every nation—every free nation in that area—should have confidence that it will be supported if it fights for its freedom. Otherwise, it must succumb because no one of those nations has the power by itself to resist. This is fundamental to our own security—to our own interests. This is a basic reason why Taiwan should remain free. The offshore islands are, to the government of the Republic of China, an important part of their nation. It is their land and we should not do things to cause Chiang or the government of the Republic of China to give up.

MR. DONOVAN: Of what?

ADM. BURKE: Of anything. Of continued existence. In other words you have to support people in what they believe. It is not always exactly the way we believe.

Ideal Solution: Stop the Fighting

MR. DONOVAN: If we get into negotiation—what is the ideal solution?

ADM. BURKE: To stop the fighting. The Communists started the fighting. They can stop it, voluntarily, anytime they want to.

MR. DONOVAN: If I understand, the point you are making, is that you fear that because of public opinion or whatever, we are going to put pressure on Chiang to get out of those islands under pressure

7 of 7

From previous page

—is that your fear?

ADM. BURKE: No. My fear is deeper than that. I say, this is a symptom. My fear is that perhaps too many people in the United States are not willing—probably because they don't understand the problem—are not willing to stand up for principles; are no longer willing to fight for intangibles. Now, this leads up to a more important thing. We are about to hold negotiations with the Russians.

MR. DONOVAN: In Geneva.

ADM. BURKE: In Geneva, on two things. On prevention of surprise attack and on cessation of nuclear weapons testing. Now those could be the biggest negotiations that we have ever conducted. Particularly, the prevention of surprise attack.

The Communists will reach an agreement under two conditions. They will reach an agreement if they are getting hurt. If they are being hurt, like they were in the beginning of the Korean negotiations when their invasion forces were being repulsed, they were willing to negotiate. As soon as we took the military pressure off, they stopped negotiating and it lasted for years. They will negotiate if they are being hurt, either militarily, economically, or some other way.

Second, they will negotiate if they can gain by negotiation the things that they don't have to get some other way. And they will negotiate on no other basis because there is no pressure on them. So you can talk, but you can't reach an agreement unless you give.

So what I am afraid of is that when we go into these conferences that we are going to have public pressure to give. You don't build up our future by giving—you give them something, whatever it is they want. We will end up with having less power, less capability. We will lose, somehow, and our prestige will go down—which is unimportant in itself, as prestige.

But it is important in the way it influences other nations. Other nations are going to say, "If the United States cannot negotiate, cannot win in these negotiations, and the United States is so fearful that they feel that they must buy their way out of this thing, then this is only the beginning, because the next time they are going to buy their way out again. We had better not associate ourselves with them. They aren't going to help us. We had better get onto the winning side."

This is particularly true of those nations which are neutral. As sure as I am sitting here, unless we are very careful, that could happen within six to ten months.

Fears Attitude On Value of Isles

MR. DONOVAN: You are specifically including that in these Geneva talks?

ADM. BURKE: Sure. That is exactly what I mean. I base my fear of the attitude of our people toward the offshore islands. I can see why people would say the islands are no good. "They are a long way off and they are not important to us and let's give them up, under pressure."

MR. DONOVAN: How is this pressure going to be taken off these offshore islands?

ADM. BURKE: When it becomes useless for the Chinese Communists to keep the pressure on. It is useless for them to keep the pressure on now. It costs them money. When they find that an opponent will stand, the pressure will gradually dwindle away—die out.

MR. DONOVAN: You think we ought to keep making the same stand that we are making out there?

ADM. BURKE: Sure. I think it is good. I think they will attack some other place if we give these things up.

MR. DONOVAN: To paraphrase, you would have us stand right up to them on these islands, just the way it is. Keep supplying these islands. Keep that blockade broken.

Says Reds Must Learn U. S. Won't Retreat

ADM. BURKE: Until they take the pressure off. Until they learn we don't retreat under fire.

MR. DONOVAN: Of course, our position is that we are not going to and yet you seem to see a change in that position.

ADM. BURKE: I see tremendous pressures throughout the press. An attitude that these islands are not important. That it is not important to us for us to retreat under fire—under pressure.

MR. DONOVAN: Do you think President Eisenhower and Mr. Dulles have been misinterpreted?

ADM. BURKE: Yes, I think so. I am not sure, of course. I think their statements were exaggerated and probably misinterpreted.

Pressure on Reds Called Essential

MR. DONOVAN: Would you repeat just once again what we might do to negotiate a settlement?

ADM. BURKE: You can never get a settlement by negotiation unless you give or unless you can exert pressure on the Chinese Communists. They just aren't going to do it. I sat across from them for six months in Korea—and you just aren't going to do it.

MR. DONOVAN: Well, can we get a cease-fire out there?

ADM. BURKE: You can only get a cease-fire when the Communists are willing to cease fire. What advantage is it to them? We will get a cease-fire when we prove to them that their shelling does no good and it is costing them money. Then they will stop.

Declares Many Won't Face 'Tough Problem'

MR. DONOVAN: Yet there is no question in the world, I would gather, that American public opinion is going the other way on this thing.

ADM. BURKE: Exactly. Because some of us don't want to face this tough problem. Too many don't want to stand up and that is what is worrying me.

MR. DONOVAN: The feeling is that we are not taking a stand on the right line out there, of course you spoke of that.

ADM. BURKE: There will never be a right line. Where is the right line?

MR. DONOVAN: Well, I think Formosa and the Pescadores would be considered the right line by many critics of our stand at Quemby.

ADM. BURKE: You think that now—but when the Korean War started remember what was said?—"The wrong war, in the wrong place, at the wrong time."

MR. DONOVAN: Of course, I don't happen to think that way—I think the Korean War did accomplish something.

Adm. Burke: I do, too. But that was what was said at the time and it wasn't true.

Says Reds Select Own 'Situations'

MR. DONOVAN: It wasn't a lost cause at all.

ADM. BURKE: We are never going to be faced with a situation in which it is all black or all white. The Communists would really be stupid if they faced us with a situation where we would have to fight. They will choose situations where we have a choice—to stand for principle — or intangible things—like honor or the freedom of a small nation far away—or back down—give — retreat — under pressure when we know we are morally right. Our morality—our integrity—our willingness to fight for freedom—for liberty—is our strength.

Should the Communists cleverly maneuver us into a position where we are willing to sacrifice our liberty—or somebody else's liberty—then they gain their big victory. They will have then sapped our moral strength. Fortunately—I think we still have the principles—and the willingness to fight for those principles we have always had.

Declares Weakness Brings On More

MR. DONOVAN: It will always be not a clear-cut choice?

ADM. BURKE: Yes. You let one doubtful area go, then the next area becomes a little more doubtful and you become a little weaker. A little weaker in your own spirit, which is more important than losing areas or even people.

You lose your own willingness to do something about it. These are the intangible things we are talking about and, therefore, very difficult to explain. Nearly all the important things in life are intangible. The really important things are intangible—there is religion, there is your God, your happiness, your honor, your reputation, they are all intangible. We go to war always over intangibles, not tangible things. That is the trouble here. We are trying to explain the thing in a tangible context and it is not explainable that way.

Summary of Statement for the Record

NOT FOR PUBLICATION UNTIL RELEASED
BY THE SENATE ARMED SERVICES COMMITTEE

STATEMENT OF THE CHIEF OF NAVAL OPERATIONS,
ADMIRAL ARLEIGH BURKE, U.S. NAVY, BEFORE
THE SENATE ARMED SERVICES COMMITTEE,
REGARDING THE MILITARY POSTURE OF THE
UNITED STATES NAVY

INTRODUCTION

Mr. Chairman and Members of the Committee:

I appreciate this opportunity to discuss with you the military posture of the United States Navy.

World tensions have continued over the past year. Situations potentially serious to free world security have occurred in several areas remote from the United States, but the deployed strength of the Navy and Marine Corps was quickly applied to support national policy in these locations. It was the force on the spot which could be applied immediately. Also, other units of the Armed Forces were moved in to the areas to help strengthen the United States position. This quick reaction by United States Forces may have prevented open hostilities.

THE THREAT

These Things We Know

International Communism has the avowed goal of a Moscow-dominated, communist controlled world.

Soviet leaders repeatedly and confidently state their expectations of destroying or absorbing all non-Communist countries.

The Communists have made great strides in science, industry and education. Their long-range planning, rigorous training and dedication to hard work have impressed competent United States observers.

Their armed forces have weapons and capabilities which are applicable throughout the whole spectrum of war.

The Soviet Army is large, well-trained and equipped with modern weapons.

The Russian Navy is second only to ours in size. Most of their ships have been built since World War II. Of greatest concern to the Navy is their submarine force numbering about 450.

The Russians are capable of building nuclear powered submarines. We do not know that they have done so.

They could have built a large force of heavy bombers. They have not done so.

They have ballistic missiles in various stages of development.

The Soviet economy is growing rapidly. It is characterized by tight government control, self-sufficiency of raw-materials, increasing output of strategic commodities, adequate manpower and large scale military production.

Since World War II there have been 18 limited wars and the Communists have been involved in most of them.

Moscow-dominated Communism will continue to use political, economic, psychological, military and covert elements of Soviet Bloc power to achieve its aims.

Attempts will be made to weaken Free World alliances, cause withdrawal of the United States from overseas bases, force disarmament agreement on Russian terms, and generally undermine the Free World's will to resist Communism penetration.

Under conditions of nuclear parity, Russia and the United States have reached a state of mutual intimidation. Each knows that the other has the capability of inflicting unacceptable damage upon the other. So long as the United States maintains effective retaliatory capability, general war is a finite but remote possibility.

We can expect that limited wars will be instigated by or exploited by the Soviets to further the policy of constant probing and pressure which characterizes their expansionist efforts. Non-Soviet forces will be used if possible.

Communist objectives are inflexible, but their tactics have great flexibility.

STRATEGIC ASPECTS

Military Posture

General nuclear war still remains a possibility. Therefore, the United States must be capable of inflicting heavy, unacceptable damage to the USSR should the Soviets ever undertake the desperate suicidal act of starting such a war.

The pattern of world events has shown that we need to maintain the military strength which can be applied quickly and with precision and discrimination - or even restraint - to attain limited political and military objectives, and to counter the Communist moves. This strength must be adequate for the conduct of simultaneous operations in several areas of the world - wherever the Communist probe. It must meet needs similar to those which we faced during the past year.

One of the most difficult problems confronting the Joint Chiefs of Staff and the Services is where to strike the balance between those forces capable only of mass destruction and those forces usable for limited actions also. We are constantly studying the proper balance - for United States forces must be prepared to counter the full spectrum of war - from little wars to big wars. We must have adequate retaliatory forces, but it is not desirable - and it is expensive - to have more than enough retaliatory forces to insure our enemy's destruction. Retaliatory forces are our insurance against general nuclear war, but we can not afford to over-insure.

There is also the problem of what the mix of mass destruction weapons systems should be. All of these systems are very expensive.

We should have more than one weapon system of mass destruction so as to insure success should the enemy develop a breakthrough on the defense against one system.

Future Demands on the Navy

There will continue to be a requirement for military forces which can project United States power overseas quickly and in graduated degree. The deployed attack carrier task force with modern aircraft - teamed with a Marine Landing Force - is the logical ready military force to counter the threats of limited war in many areas of the world. There is a pressing need to modernize this capability.

We need to improve our capability to combat submarines. Since World War II the submarine has progressed faster than the ASW capability to combat it.

The Navy is a substantial contributor to the deterrent forces of the United States. This contribution will increase as POLARIS comes into operation.

The effectiveness of overseas bases is being reduced. The burden of sustaining military power and assisting in the preservation of peace in remote areas is shifting more and more to the Navy.

STATUS OF THE NAVY

Active Forces

The Navy will be reduced, by the end of FY 1960, to 864 ships and 7200 operating aircraft. The warships of the fleet will include 14 attack carriers, 14 cruisers, 238 destroyer types, and 113 submarines.

In FY 59 personnel strength of the Navy was reduced from 645,000 to 630,000. During FY 1960 we will maintain a 630,000 strength.

Ships will be continued at their low manning levels which will require dedicated maximum effort from all personnel.

Material Condition of the Fleet

Our most pressing problem in immediate readiness is the material condition of the fleet. 81% of our active fleet is of World War II construction. These ships have been operated at a fast pace for many years. They are wearing out.

We have started a modernization and rehabilitation program designed to extend the useful life of some of these ships - particularly the ASW ships - 5 to 8 years.

Block Obsolescence of the Fleet

The average useful life of naval ships is about 20 years. Our World War II ships will therefore become largely obsolescent between 1961 and 1965.

Through 1959 we have averaged only about 20 new ships per year. A modern fleet of 864 ships requires 43 new ships per year.

We are stretching out our block obsolescence period by our fleet rehabilitation and modernization program, but we must also increase our rate of shipbuilding.

Shipbuilding and Conversion

We have a two year shipbuilding program under which we plan to ask for a carrier every other year. On alternate years we ask for larger numbers of smaller ships.

This year we are requesting 18 new ships, and are modernizing 13 others.

We have made considerable progress in nuclear propulsion. Actual performance indicates that nuclear submarines are safe and reliable, and have a very great cruising range, even at high speed. 33 nuclear powered submarines are under construction, have been authorized, or are in operation. Nuclear power is being installed in an aircraft carrier, a cruiser, and a guided missile frigate - now building. The Navy has requested that the Atomic Energy Commission develop a nuclear power plant for a destroyer.

The quality of our shipbuilding program is high, but the number of new ships is not great enough to meet the replacement problem.

Need For An Attack Carrier This Year

Carriers are no exception to the rest of the aging fleet. The carrier authorized in FY 60 will be commissioned about 1964. By that time our World War II carriers will be 20 years old, and this is old for any ship, man-of-war or merchantman.

Even now we have difficulty with Essex Class carriers because of their age and small size. Their machinery is wearing out and their flight decks are weakened by the terrific beatings given to them by the heavy, fast, present day aircraft for which they were not designed. Some of the new higher performance aircraft can be catapulted off - but can't land. There are nine ESSEX carriers on active duty as attack carriers in the fleet today.

These old carriers cannot be made to operate as attack carriers much beyond 1966.

We have done all we can to modernize the ESSEX class carriers, but we can't give them youth--or size.

We will continue to need carriers in the future for limited war just as has been repeatedly demonstrated in the past few years, and the need will be urgent, just as it has been in the past.

Missiles have not, and will not in the foreseeable future, replace manned aircraft in limited wars. It takes manned aircraft with a thinking pilot rather than a pre-set robot mechanism, to see the target and then to make a decision on the spot as to the exact degree of force and the exact area to which it should be applied in order to control the local situation. It takes the versatility of manned aircraft to use the wide variety of conventional weapons, rockets, bombs and missiles, necessary to be able to do the many difficult tasks which must be done, and in addition to have the capability of destroying large targets with nuclear weapons.

The Communists have demonstrated often enough in the past their intention to supply first rate modern equipment to their satellites. Attack carriers must be able to operate the high performance aircraft, both fighters and attack aircraft, necessary to match the enemy threat. This means large carriers with heavy launching equipment, i.e., steam or internal combustion catapults. It means heavy arresting gear with the big arresting engines which are required to stop our present day heavy fast jet aircraft without damage. The carrier must carry the extra jet fuel required these days, and must have the space necessary for overhaul and maintenance of aircraft, engines, missiles and electronic equipment, all of which require much added space and special equipment.

One of the critical elements determining the size of a carrier is the length of the landing runway. The ESSEX has a landing runway length of 518 feet. The FORRESTAL's landing runway length is about 720 feet. This 200 feet additional

runway is important. Aircraft can approach at a shallower glide angle. They can make softer landings and reduce the wear and tear on aircraft. More margin is provided for pilot error and deck movement. There is more distance in which to absorb the kinetic energy of our new, heavy, fast-landing aircraft.

In the Essex type our experience shows 44 major landing accidents per 10,000 landings. For the Forrestal type the accident rate is half this rate.

We are now operating 14 attack carriers. Under normal circumstances 4 to 6 of these attack carriers are deployed overseas in the Mediterranean or in the Far East. In times of stress, the numbers deployed are about doubled.

We have in operation, under conversion, built, or building, 3 Midway, 6 Forrestal, and 1 Enterprise class carriers. By 1965 our ESSEX class carriers will be over-age. The need for the attack carrier we are requesting this year will be urgent.

We would have liked nuclear power in this carrier, but the cost is considerably greater, roughly $120 million. There are military advantages to nuclear power for a carrier. The increased range at high speed, the extra space for jet fuel and aircraft, and the freedom from funnel structure which would have given us better flight deck characteristics are all valuable military advantages, but they're not critical. Building a new attack carrier <u>is</u> critical.

<u>The Polaris Program</u>

The Navy's Fleet Ballistic Missile weapons system (POLARIS) will be a major contribution to our national deterrent force.

The soundness of the basic concept and the initial deliberate approach have enabled the Navy to accelerate and augment the original program so that there will be an initial capability in 1960 instead of 1963.

The first 5 FBM submarines authorized for which money was appropriated by Congress are under construction. Congress appropriated funds for 4 additional FBM submarines in the FY 1959 budget for a total of 9, plus additional funds to lend assurance to the achievement of an effective early operational capability of the missile. In December 1958, funds for one of these submarines were released for obligation in FY 1959, and the remaining 3 submarines are expected to be released for construction commencing in FY 1960.

Excellent progress has been made in the POLARIS missile development program. Twenty-one preliminary test vehicles have been unqualified successes. The first three full scale flight test vehicles encountered difficulties. The first missile was satisfactorily launched but failed to follow a safe flight path out to sea and was destroyed. The flight was long enough to prove that stability control and power plant performance were according to design The second vehicle was unsuccessful due to premature actuation of the destruct device and required certain minor re-designs of this device which is carried only in test missiles. The results of the third and fourth flight tests are still under analysis. No serious obstacle to success is known.

The support program for POLARIS has made good progress.

Naval Aviation

During 1958 the capability of the carrier striking force in the support of national policy was again demonstrated. The striking power of the deployed SIXTH and SEVENTH fleets, together with the Marine Landing Forces, was employed as a deterrent to aggression and as concrete evidence to friendly nations of the intentions of the United States, and of its capabilities to honor treaty commitments.

During 1958 the fleet flew continuous anti-submarine barrier patrols and thousands of square miles of ocean around the world were put under surveillance by anti-submarine aircraft.

In continental air defense, Naval Air Early Warning squadrons provided continuous coverage in the seaward extensions of the Air Early Warning lines both in the Atlantic and the Pacific.

Control of the air over the fleet and over a beach head requires fighter aircraft comparable to the best land based aircraft. Our present excellent fighters will be joined in the early sixties by improved types, with emphasis placed on all-weather capability.

Attack aircraft are capable of delivering conventional or nuclear weapons, as the situation requires. An attack aircraft with improved range, endurance and all-weather delivery capability will also join the fleet in the early sixties

New ASW planes and helicipters with improved equipment and performance will provide added protection against submarines.

The Navy's aircraft inventory is aging rapidly. We are prolonging the effective service life of older aircraft to the maximum by selective modernization. Despite this, our operating levels are steadily declining. Procurement of new aircraft in the past two years has been approxomately one-third the number required to balance annual losses. FY 60 procurement will not appreciably alter this ratio.

Guided Missiles

Missiles are replacing or augmenting conventional weapons in many major combat systems, but conventional weapons are still needed. Our problem is to phase in the newer weapons at the proper rate and in proper proportion.

Our most urgent requirement is for surface-to-air missiles for ships, and air-to-air missiles for carrier aircraft. The FY 1960 budget will provide an additional increment of Talos, Terrier, and Tartar surface-to-air missiles, and the new Sparrow III air-to-air missile. Sparrow III is the only air-to-air missile capable of attacking air targets head-on in all-weather conditions.

We have new missiles coming out of R&D and this budget will provide necessary quantities for evaluation. These include Corvus, Eagle, Subroc and an improved Sidewinder.

It was necessary this year to cut back Regulus II, even though this was the best air-breathing missile in existence.

Regulus II was designed to be a long range, supersonic, surface-to-surface missile. The decision to cancel it was a hard one. However, in order to maintain a proper balance in the missile and shipbuilding programs, and in view of the excellent progress being made in the POLARIS missile, the decision was made to terminate the program promptly. We will retain our Regulus I capability.

Status of Research and Development Program

ASW research is particularly important. We are working on new methods to localize and detect submarines in any type of ocean conditions at ranges beyond enemy submarine attack capability, and beyond enemy submarine detection capability if possible. We are making progress in this area and have several new methods and techniques undertrial.

We need to be able to identify submarines after they are detected and then to be able to destroy these submarines at long ranges, and at least beyond their own attack ranges against our ships. We have several methods of

accomplishing this using aircraft and helicopter borne weapons and we are working on other promising methods.

Our oceanographic research program has been greatly enlarged over the past three years. In particular, we have three oceanographic survey ships entering active operation in Fiscal Year 1959. In the Fiscal Year 1960 program, we are including an experimental ship from which a great deal of fundamental information concerning sound propagation in water from a surface ship platform will be derived, and an oceanographic research ship which will conduct oceanographic research for application to naval warfare.

Status of Shore Establishment

Successive reductions in the shore establishment have been made since the end of Korea, and this trend will continue as the number of fleet units and personnel strengths are reduced.

In the past the Navy has made many horizontal cuts in activities in contrast to vertical cuts, in order to continue minimal support from these activities. It is no longer possible to achieve significant savings in funds or personnel in this manner. Vertical cuts in most cases have to be made in which an entire activity is cut out.

Commencing in this calendar year the Navy will close or reduce 31 activities. Additional reductions may be required as the Navy examines its shore establishment in relation to its other requirements.

In military construction, in order to maintain a proper balance of all our requirements, we have cut our FY 1960 funds considerably below those of FY 1959, and will use this money for our most urgent new requirements.

Summary of Progress and Capabilities

The Navy maintains two carrier striking fleets deployed, the 6th and 7th, and two in home waters, the 1st and 2nd. Each is capable of exerting heavy offensive power ranging from demonstrations of force to conventional or nuclear strikes. Each can move rapidly, promptly, and at will - wherever the sea extends. Each is capable of supporting itself logistically.

Our surface striking forces are capable of rendering surface and air defense support to our fleets and in addition are capable of independent operation in any area within the limits of their air defense capability. They are capable of providing naval gunfire support for amphibious landings. Four cruisers are capable of carrying and launching Regulus I.

Our submarine striking force has a primary mission of ASW but is also capable of attacking enemy surface forces and eliminating enemy shipping. POLARIS will give us the nucleus of a mobile, invulnerable deterrent force able to retaliate from many directions - either instantly or deliberately with discrimination.

Our amphibious striking force is capable of providing sea lift for austere elements of 1-1/2 Marine Divisions and 1-1/2 Marine Air Wings. These comprise teams which are loaded for over-the-beach assault. Each fleet will have one helicopter carrier capable of providing one Battalion Landing Team with vertical envelopment capability.

Lift for larger forces can be provided by using MSTS shipping, chartering necessary merchant shipping, and activating reserve fleet ships. This shipping can be provided by the time troops and supplies can be ready for loading.

Status of ASW Capability

The Navy is particularly conscious of its ASW responsibilities. Our ASW capability is the sum of our abilities in many fields. It depends upon how well we are able to predict or anticipate submarine intentions, to search for and detect submarines, and finally to destroy them.

We have formed specialized ASW forces, Hunter-Killer groups which work, train, and operate together for long periods in order to achieve maximum efficiency and to develop new concepts and tactics.

We have a long way to go, but we are working hard and are making good progress in all phases of our ASW program.

CONCLUSION

Today we have the strength to control the seas. We must maintain this strength in order to meet our present and future responsibilities.

During the last year our strength was tested by the crises in Lebanon and Taiwan, which required unscheduled and prolonged operations resulting in above-normal wear and deterioration.

Our responsibilities are increasing, and the tasks we will probably face in the coming year will be equally as heavy as in FY 59. To meet them we must provide proper support for Research and Development maintenance, for our major procurement programs, and particularly for the earliest operational capability of the Fleet Ballistic Missile program.

With these responsibilities in mind, the Navy is determined by dedicated hard work and maximum operating efficiency to continue to maintain effective ready fleets deployed as necessary to assist in deterring general war, to deal with limited and cold war, and to make the most of every opportunity afforded us by the United States control of the seas.

POLARIS PROGRAM

Brief History of Program

By 1955, technological advances, particularly in the fields of inertial guidance systems and thermo-nuclear systems, made the development of an intermediate range ballistic missile feasible and economically practicable. In September 1955, the President approved a decision to develop a 1500 mile ballistic missile system with a nuclear warhead. Both land and sea basing were to be considered. In November, 1955, the Secretary of Defense directed the Army and Navy to proceed on an IREM program with the dual objective of achieving an early shipboard capability and also providing a land based alternate to the Air Force IREM program. Top priority was assigned, and a specialized management structure (Joint Army-Navy Ballistic Missile Committee) was authorized and directed to carry out the program with maximum urgency. This became the joint Army-Navy Jupiter program.

Within the Navy a Special Projects Office was created as an adjunct to the Bureau of Ordnance to handle the technical problems associated with the ship-launched system.

On 28 November 1955 the Navy stated that its long range objective was the development of solid propellant motors for use in ship-launched ballistic missiles. Within this plan the Navy proposed to develop a solid propellant motor which could be substituted for the liquid ones pointed toward surface ship and eventual submarine use. The Navy pointed out that this development should be initiated immediately to alleviate the serious hazards and the difficult logistic, handling, storage aboard ship, and design problems associated with liquid fuels used in the Jupiter. It was further pointed out that

development of a solid propellant missile appeared to be feasible, and that the solid propellant development was an integral part of the submarine program.

On 20 March 1956 the OSD Ballistic Missile Committee approved the Navy's parallel solid propellant program for component development to determine weapon system feasibility.

In March 1956, the JAN-BMC authorized a navigation development program (Mariner #1), a weapon system test and development program (Mariner #2), a FBM ship for Fleet Evaluation (Mariner #3, since cancelled), a FBM surface combatant development program, and a FBM submarine development program.

On 8 December 1956 the SECDEF authorized the Navy to terminate participation in the liquid JUPITER program and to proceed with the development of POLARIS. The JAN-BMC was dissolved and the SECNAV formed a Navy Ballistics Missile Committee (Nav-BMC) to direct the program at highest priority. The Special Projects Office, previously charged with development of the seagoing application of Jupiter, was given the added responsibility for development of the entire FBM system including the POLARIS missile.

In January 1957 SP organized a POLARIS - Submarine Special Steering Group which led to the establishment of the optimum FBM Submarine dimensions for the POLARIS - submarine system. CNO issued the operational requirement for the POLARIS - submarines weapons system establishing interim and optimum goals.

In December 1957 SECDEF authorized an acceleration of the POLARIS program to achieve completion of the first POLARIS - submarine weapon system in 1960.

In January 1958, the Navy proposed that the program be further accelerated and augmented, calling for a 9 - SSB(N) capability by the end of 1961.

GENERAL DESCRIPTION

POLARIS is a two stage solid propellant missile designed to be launched from submarines either surfaced or submerged. Launching can also be effected from surface ships or from ashore. The missile will be ejected from its launching tube by inert gases. The force of ejection will propel the missile above water where the missile motor will power the missile.

After launch and during powered flight the missile will be guided by and then will follow a ballistic trajectory to a range up to about 1500 miles.

The primary means of launching POLARIS is from Fleet Ballistic Missile (FBM) submarines designed specially for this purpose and capable of carrying POLARIS missiles. Submarine personnel can check and prepare missiles for firing from within the submarine while submerged. Solid type propellant system and the fire control equipment design will permit missiles to be launched at a high rate and on short notice. Accuracy is expected to be very good.

MISSILE DESCRIPTION

The POLARIS missile is a two stage, solid propellant missile assembled by the Lockheed Aircraft Corporation of Palo Alto, California.

Launching from submarines either surfaced or submerged is accomplished by ejection from vertical position in launching tubes by inert gases. The force

of ejection will propel the missile to a position above the water at which time the missile motor will ignite and the missile will continue on its own power until thrust terminates.

After arrival at the correct speed and at the correct point in space from which ballistic trajectory will bring it to desired detonation point, second stage motor thrust is terminated, missile continues along planned target.

POLARIS SUBMARINE DESCRIPTION

POLARIS submarines are nuclear powered and are capable of carrying several missiles in vertical launching tubes. The first submarines will be about 380 feet long, about 30 feet in beam, and will displace about 5400 tons light and about 6700 tons submerged. The regular crew will consist of about 10 officers and 90 enlisted men.

SUPPORT PROGRAMS DESCRIPTION

The seapons system Development and Improvement Program has so far demonstrated the feasibility of missile ejection by inert gases. An underwater launcher known as POP-UP has confirmed the feasibility of underwater launches.

Additional ship motion studies, shock and vibration studies, and safety and damage studies will be made. Continued research in submarine fire control, navigation, and launching and handling equipment is being conducted.

Development and Test facilities. The OBSERVATION ISLAND is a Mariner type merchant ship converted to provide a surface ship for test and evaluation of the FBM weapon system. The COMPASS ISLAND is a converted merchant ship designed to provide for testing and evaluating the FBM submarine navigation equipment. Excellent preliminary results have been obtained in the fields of ship inertial navigation.

FBM Tender Program will provide for 1 tender conversion to be started in FY '59 and one new construction tender in FY 1960. Further new construction tenders will be requested in future years according to the SSB(N) authorization in a ratio of one tender for each 6 to 9 SSB(N).

Missile assembly facilities to provide fleet facilities for receiving, assembly, check-out, stowage, and handling of tactical missiles will be completed at Charleston, S. C. by 1960.

Training Program. Submarine training, nuclear power training, and special FBM training have been expanded to meet our needs. All personnel must receive training required for nuclear submarine operation and in addition must be trained for special navigation, fire control, and other skills required for SSB(N) operations.

PRESENT DEVELOPMENT STATUS

Over-all development is progressing satisfactorily and on schedule with every assurance of having the first submarine and all its missiles, crew, and equipment ready as scheduled.

The Missile has progressed satisfactorily. On 13 September 1958, a captive test of the first stage and on 31 October a captive test of the second stage were completed satisfactorily. On 24 Sept 1958 a test vehicle was launched but the vehicle failed to follow a safe program and was destroyed after 27 seconds, but stability control and power plant thrust were according to design. A second vehicle was unsuccessful because of failure of devices carried only in test missiles and which now require certain minor re-designs. The third and fourth test vehicles have shown continuing improvement.

Launching has been proven to be possible through the sea. A ship motion simulator is ready for use with live missiles.

Submarines are progressing on schedule.

Support programs are progressing on schedule.

The COMPASS ISLAND has demonstrated the ability of the FBM submarine navigation systems to position a ship accurately. A Ships Inertial Navigation System (SINS) has been proven.

Missile test and support facilities at Cape Canaveral, New London and at Charleston, S.C., are under construction and on schedule and required personnel are under training.

FUTURE DEVELOPMENT PROGRAM

After the successful operational use of the first service missile with the first submarine, effort will continue to improve all components of the system.

The Missile is expected to be lightened if feasible and also receive an improved guidance system. Range will be extended.

PRESENT PROGRAM

On the submarine side, characteristics of the first FBM submarine have been established and construction of the first five has been initiated. In August 1958 funds were released to purchase long lead time items for an additional 4 FBM submarines. On 16 December authorization was granted to proceed with the construction of one of these four, and to convert a submarine tender. Authority to start construction of the remaining three submarines for which funds have been appropriated is expected in July of 1959. This will bring the total to 9 FBM submarines under construction. The FY 1960 budget includes funds for planning and necessary procurement of long lead time items for

construction of another 3 submarines planned for inclusion in the FY 1961 budget.

In the FY 1960 budget the Secretary of Defense has requested $611,568,000 of new obligational authority for POLARIS. This amount will provide for completion of funding for one new construction tender, advance procurement for 3 FBM submarines to be included in the FY 1961 Shipbuilding Program; missiles; continued missile development, research for command communications system, operation of test ships, operation and construction of support facilities, and training of personnel.

The first FBM submarine is scheduled to be operating by 1960. Four additional FBM submarines are expected to be ready for sea by April 1961. If 3 are authorized in FY 1961, they will be ready for sea in 1963.

FUTURE PROGRAM

The exact number of FBM submarines needed is still under intensive study.

In addition to the 9 new appropriated for, it had been planned to ask for 6 additional authorizations in FY 60 and for 12 authorizations in FY 61.

ACCELERATION POSSIBILITIES

Our present program is accelerated within available funds in order to provide an emergency capability as soon as practicable. Present appropriated funds plus FY 1960 budget support are needed to meet this schedule.

No further acceleration is possible within funds now appropriated or requested and with present manpower and material limitations. Further acceleration could be accomplished, but only with considerably greater expense per unit because of the need to use expediting measures such as

extra shift manpower. Maximum acceleration would require the appropriation of additional funds, lifting of manpower ceilings, waiving of competitive bidding, and diverting of material from non-FBM submarines.

If these requirements could be met in January, 1959, the 15th FBM submarine could be ready for sea about March 1963 with subsequent submarines following at a rate of one per month. A later start on such a program would result in correspondingly later completion dates.

COST OF PROGRAM

Each FBM submarine costs about $100 million. If the number of missiles purchased is increased the cost will be reduced.

EMPLOYMENT CONCEPT

FBM submarines will be organized into squadrons of about 9 boats. Each squadron will have a tender. Submarines will be assigned to those unified commanders exercising command of major naval forces and will be integrated into the existing Fleet organization.

Assignment of submarines will be dependent on strategic requirements at time of delivery of ships. Submarines will be home ported in CONUS and will operate from tenders.

ADVANTAGES

FBM nuclear powered submarines will be hard for the enemy to find - to track - or to destroy. They will be able to navigate accurately, and will be capable of constant movement in the large sea areas surrounding our potential enemies. They will be capable of inevitable retaliation regardless of enemy action because of their unknown locations. They will always be on station and will always be ready. They will not draw enemy counterfire to

our coasts and they will continue to exist after any enemy surprise attack. If such an enemy surprise attack is delivered, POLARIS can be used to deliver an instant attack on pre-determined targets, or a deliberate controlled retaliatory attack based on more deliberate decision by our political leaders. In the coming years this ability will increase in importance. When both sides have quantities of ballistic missiles, there may be periods of tension in which there are some indications that missiles might be launched by the enemy but these indications are not positive. Our political leaders will then be in a quandary as to whether or not to launch missiles before they are sure the enemy has launched its attack. If they wait, our ballistic missiles in known locations may be destroyed. If they launch on false information, we will have started a devastating war. Since Polaris submarines are less subject to destruction by surprise attack, our retaliatory capability will be assured, and there will be an alternative to the choice of an early launch or destruction of our retaliatory capability.

The numbers and characteristics of enemy ICBM's will not affect the survivability of POLARIS submarines which will remain high. It is not necessary to re-harden, re-disperse, or to add more defensive systems to maintain its survivability in the face of increasing enemy ICBM capability.

This weapon system will supplement other weapon systems in our retaliatory arsenal.

It can be expected to be less vulnerable to countermeasures than any weapon system now forseeable.

It poses an insoluble intelligence problem to the enemy since every unidentified submarine is a potential FBM launcher.

It will always be under United States control.

There are ample launching areas in the ocean areas and in areas normally controlled by friendly powers.

FBM missiles can be delivered from a variety of directions - which complicates defense.

Gives maximum return on investment of any retaliatory system.

SHORTCOMINGS

POLARIS will have some shortcomings. The capital investment cost of the first FBM nuclear powered submarines initially is high as in all ballistic missile systems. This investment, however, provides maximum long term return because of FBM submarine invulnerability and long life. The system is useful only in deterring general nuclear war and in retaliating if that deterrence fails. Thus it does not contribute to the many other heavy tasks necessary in cold and limited war.

We are working to decrease these shortcomings. Additional research and development should assure us of ranges beyond 1500 miles. Improvements in the navigation system will give us greater accuracy. Nuclear submarine building and operating costs should come down with further research.

EFFECT ON OTHER PROGRAMS

Our FY 1960 budget requested $611, 568 million dollars for POLARIS. This amount of money represents a substantial portion of our budget, and the Navy has other important responsibilities. We must maintain carrier striking forces, amphibious forces, and ASW forces for use in general, limited and cold wars. These programs are also expensive and are capabilities which only the Navy has. The Navy will have increasing responsibilities in limited and cold war. We need a new carrier, new ASW ships, and new aircraft.

Substantial funds for overhaul, maintenance and operation of our over-age ships are required because our operations have been heavy and continuous and will continue to be so.

Every year we in the Navy examine our shipbuilding program with great care. Our shipbuilding program gets a more severe examination and review than probably any other program.

The very nature of our shipbuilding program, the history of past shipbuilding appropriations and the urgent need for new ships of all types require that we have the very best shipbuilding program that can be devised each year. It must include a balance of all ships including POLARIS type submarines. The future of our Navy and the determination of the nature of its capabilities is dependent on the types of ships we start to build now.

The great majority of our ships were built during World War II. These ships were built under wartime emergency building procedures with war time materials. They are old and are wearing out fast. Their upkeep is expensive and continuous. We are operating them at near war time tempo and they will not operate much longer. We need to replace them with new ships and the replacement program must be increased.

There are several reasons for this situation.

At the end of World War II our ships were new. Hence our ships did not then need replacement, as there was no shipbuilding program for several years.

Many new developments in naval equipment and naval weapons were designed and successfully tested, such as missiles, nuclear power, high speed - high performance aircraft, nuclear weapons, improved sonars. They all cost money, much money, and so it was most difficult to obtain funds for

ships when the need for these new appealing devices was so very great. This was compounded because the need for new ships was not immediate. Procurement of new ships could be put off without endangering the immediate readiness of the Navy, and there were other needs which were immediate.

New ships cost much more than the ships they replace. This is so because the cost of labor and material has steadily increased since World War II and because new devices, which give much greater performance than the old devices, are more complex and consequently more expensive than previous ones. And finally, it is most difficult to change the pattern of appropriations, once a pattern has been established. There is always a tendency for reviewing authorities, including both executive and legislative agencies, to continue the percentages previously established for each service, for each appropriation, and for each program. Especially is this true for non-spectacular programs regardless of how essential they may be. This is understandable but it has hampered getting new ships authorized or built during the past several years.

Our old ship situation is getting critical. We have had the problem studied by non-naval authorities. The implementation of their recommendation for extending the life and utility of some of our older ships by complete overhauls and modernizations would ease the situation temporarily, but only an increased building program will cure it. This program will in itself be expensive.

JUSTIFICATION FOR LEVEL OF FY 60 PROGRAM

The Navy has many responsibilities - which include a responsibility to the United States to provide a POLARIS retaliatory capability to supplement

other deterrent capability - but the Navy also has a requirement to provide ships, aircraft, and missiles which can enable it to carry out its other primary responsibilities which only the Navy can do.

The Navy's budget has been made up with all the Navy's requirements to mind. It is a tight budget. There are no weak spots in it. We believe this budget gives us the best possible balance between our POLARIS program - which is of the utmost importance - and our other programs which are also very important.

Dear Mr. Murrow:

Many thanks for a most stimulating discussion period last Thursday at lunch. It was most enjoyable.

I would like to take you up on the offer to continue this discussion some evening here in Washington. Please let me know when you will be in town. I would certainly enjoy getting together with you again.

Sincerely yours,

C. C. Kirkpatrick

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, N.Y.

Dear Mr. Murrow,

We enjoyed very much your part in the recent conference of the Institute of International Education in Washington. In earlier years, I believe, you were actively interested in the work of International Student Service. World University has now become the linear descendant of I.S.S. and we covet your continued interest. One painless way of doing this is to accept this very cordial invitation to give your name as a member of the Board of Sponsors of World University Service.

At a recent meeting of our Board we were authorized to extend to you this urgent invitation. In accepting you will lend support to our work and your name will appear along with other sponsors on the letterhead of the organization.

The enclosed pamphlet is used widely in interpreting the work of World University Service to students and members of the faculty in nearly 1000 colleges.

It has not been our custom in the past to convene the Board for plenary sessions nor do we contemplate doing so now. Advice and guidance are sometimes sought by mail. The fact that you affirm in this way your confidence in and concern for the work being done adds to the strength of our cause.

We hope you will consent to serve as a sponsor. A card is enclosed for your convenience in replying.

Continued success to you in your wonderful work.

Very sincerely yours,

W. J. Kitchen

W. J. Kitchen

from: Mr. Klinger

December 10, 1958

SMALL WORLD

This will supplement my memorandum of October 28 with respect to syndication of this series.

Mr. Murrow is of the firm opinion that any effort to obtain from the internationally known personalities who appear on each program authorization to reuse that program, whether on the network, or in syndication, or in non-theatrical release, would be seriously detrimental to the initial production. He has therefore advised me that he is unalterably opposed to any such effort unless he is over-ruled by management.

Consequently, as of now, we do not have documents signed by any of the participants which evidence our rights either to the initial use or to a reuse. Instead, they each receive a check with a personal letter of appreciation. I am told, however, that they are advised informally by Mr. Murrow, during the recording of the program, that it will be broadcast once on our network and also possibly once in England.

Kleegman, Soph

June 11, 1959

Dear Dr. Kleegman:

Many thanks for your nice letter of June 1st.

Your kind comments about SEE IT NOW are indeed appreciated. Unfortunately, as you know, it is no longer on the air.

I shall soon be leaving on my year's sabbatical from CBS, and, I hope to return to CBS next year with a program worthy enough to warrant your continued attention.

Again, thank you for your very nice letter.

Sincerely yours,

Dr. Sophia J. Kleegman
59 East 54th Street
New York 22, New York

SOPHIA J. KLEEGMAN, M. D.

TELEPHONE PLAZA 3-8839

June 1, 1959

Dear Mr. Murrow,

After having read your article calling on TV to meet its obligations, I can hardly believe that your withdrawing from active participation now is wholly voluntary. You must be aware of the irreplaceable influence you exert in keeping the public informed and alerted to our country's peril.

Progress is so painfully microscopic in its rate. Progressive thinking and action of a people occurs at the slowest rate of all. It is, therefore, all the more remarkable in reviewing the history of your programs, notably "See It Now", to realize how powerfully these programs have influenced the active response of the public. The most important aspect of all your programs is that propaganda is <u>not</u> your tool. Diverse views are presented by the leaders of each. Murrow and Friendly do not say, "This is what I believe, this is good, all else is bad." Each belief is presented by its protagonist. The viewer is thus made to do his own thinking and through his own feelings come to his decisions, and thereby is often aroused to take some positive action. Where others cautiously avoided controversial issues, "See It Now" plunged into the most "dangerous" controversies, allowing each leader to present his own side, and his own soul or lack of it. Nowhere was your value and influence so dramatically illustrated as during the whole McCarthy era and in every issue which involved freedom and justice. "See It Now" was the most important single influence in saving our country from McCarthyism.

I shall close with this story. My son graduated from college last June. He was considered to be one of the superior boys in his class. He was deeply interested in entering

SOPHIA J. KLEEGMAN, M.D.
FIFTY-NINE EAST FIFTY-FOURTH STREET
NEW YORK 22, N. Y.

TELEPHONE PLAZA 3-8839

the field of TV, and investigated it from many angles. This was his conclusion: "If I were sure that I could spend the rest of my life working for "See It Now", that would be my choice without question. I would not care what the hours or what the pay would be, because in working on a Murrow and Friendly program my life would be well spent. However, I have great doubts that "See It Now" will continue. I do not think TV is particularly interested in programs devoted primarily to service. I am afraid I would be continuously frustrated and perhaps prevented entirely from working towards my goals." Here is a reinforcement of your warning to TV. An able young man could not consider entering the field because he could not foresee leading a life of service in that media.

Whatever you may do, may your energies be free to fulfill your unusual talents which have already accomplished so much. We shall await your programs, particularly your documentaries, with enthusiasm and hope.

Good health to you and a long life in order that you may continue one of the most important contributions to our country.

Cordially yours,

Sophia J. Kleegman

Klein, Bunny

January 6, 1959

Dear Miss Klein:

I have your nice letter requesting an interview.

I am so sorry to have to say that this will be quite impossible. I am so busy these days with PERSON TO PERSON, SMALL WORLD, THE HIDDEN REVOLUTION, and my radio 7:45 evening news program that I just do not have any time left at all in which to see people.

I am sending you my biography which I hope will help some. I am sorry, but am sure you understand.

Sincerely,

Miss Bunny Klein
55 Washington Avenue
West Caldwell, New Jersey

mcc

Bunny Klein

Dear Mr. Murrow,

For an assignment in my Journalism I class, we have to get an interview with a famous person. Since you are famous and most of the students would be interested in reading about you, I would like to know if I could get an interview with you. Could you please notify me if you can do me this great favor?

Thank you ever so much.

Sincerely,

Bunny Klein

Klein, Mrs David

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Almost five years ago, an old acquaintance of mine by the name of Gladys Bruschi either used, or misused, your name in her relationship with me.

I have always been curious about this, and I wonder if you could tell me whether you knew her, or whether we know any of the following people in common:

Benjamin Edelson - Manhattan
Dr. Harold L. Ellis - Harlem Hospital
Dorothie V. Johnson, R. N. - Harlem Hoppital
Dr. Joseph Wielawski - New York Hospital and Mt. Kisco
Annabel Lee O'Brien, R. N. - Manhattan and Harrisburg
Mr. and Mrs. Thomas Frank - my mother's employers.
John Morrissey - Woodside.

For some time I have felt a very deep concern about your health, and hope it continues to be excellent.

Sincerely,

Vera M. Klein

Vera Matejka Klein

Dear Mr. Kline:

I am returning to you enclosed FORGOTTEN VILLAGE, IF I FORGET THEE and INSIDE AFRICA, together with the press clippings you sent Mr. Murrow.

I asked Mr. Murrow about the possibility of narrating the foreword portion of your forthcoming biblical film. I regret to tell you that he cannot do it. As I explained to you, he is going on a year's sabbatical leave in July, during which he wishes to make no commitments at all.

Sincerely yours,

Sheila Hogg
Secretary to Mr. Murrow

encs.

TO Mr. Murrow

FROM Sheila Hogg May 25

The director of these films, Mr. Kline, came in this morning to collect the script of THE THIEF AND THE CROSS (which he had also left some time ago for you to read) because he had sold the script and it is to be made into a movie. In case you did not have time to read it, it was a biblical story, similar in scope to THE TEN COMMANDMENTS or THE ROBE, and Mr. Kline would like to know whether you would be willing to make the introduction - just as you did for EIGHTY DAYS AROUND THE WORLD. I told him you would be much out of the country next year, and he said they would send a crew to wherever you were, and would naturally pay you for this.

LD

RADIO STATION KLZ

MAIN 3-4271 "THE PIONEER STATION OF THE WEST"

DENVER 3, COLORADO

ALADDIN BROADCASTING CORPORATION
131 SPEER BOULEVARD

January 29, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York 22, N. Y.

Dear Ed:

Here is KLZ Radio's annual report...a condensed review of how management and staff discharged our responsibility in over 6,500 hours of broadcasting during our 36th year. We hope you find it interesting and informative.

FIRST CHOICE WITH LISTENERS

Again in 1957 the nationally-recognized survey firm, Pulse, Inc., picked KLZ Radio as Number One in audience preference. The latest of these reports gives KLZ the highest average rating of all Denver stations.

NEW AND EXPANDED PERSONALITY PROGRAMMING

1957 was the year during which we continued to develop the KLZ concept of "live" personality programming. Jack Wells, a versatile musician and vocalist, became a part of our morning and afternoon schedules and has already established himself as a refreshing new talent to listeners and advertisers alike.

The old favorites, too, strengthened their popularity during the past year. Art Gow, with piano and organ and requests phoned in by his many listeners, was expanded to a full hour each weekday morning. Pat Gay's noontime chat with housewives exchanging information by phone regularly faced the problem of having more calls than time would allow. Starr Yelland's "Party Line" continued as the highest-rated program in the time period, with listeners calling in to talk and comment on any and every subject.

Rock 'n Roll fans had to look elsewhere, as KLZ continued to program for the widest possible audience...a thinking and buying audience...with the best music and personalities, who talk to (and with), entertain and inform their listeners.

NEW MANAGEMENT TEAM

Lee Fondren was named KLZ Radio Station Manager and Director of Sales in May. He succeeded Phil Hoffman, who was made Vice President and General Manager of the Minneapolis Time, Inc. Radio-TV property. Clayton Brace became Assistant to the President for both radio and television. Both Mr. Fondren and Mr. Brace are in their seventeenth year with KLZ.

INCREASED NEWS COVERAGE

KLZ's News Department added both manpower and facilities, resulting in more newscasts on the air and faster on-the-spot coverage. Jim Bennett was named successor to Sheldon Peterson as Director of News and Special Events upon Mr. Peterson's transfer to the Time, Inc. Radio-TV property in Minneapolis. Stan Brown was assigned as full-time producer to "Denver At Night" and a new Saturday feature, "Radio Active". With its augmented staff, "Denver At Night" now features three full-time reporters with direct and telephoned coverage of news and events occurring throughout the Denver area. "Radio Active" a four-hour-long Saturday feature, is radio on the move, with reporters in the field, locally and nationally, bringing news, weather, sports, traffic reports and good music to KLZ listeners.

With this expanded coverage came new and improved technical equipment, including a new direct line from News Room to Radio Control for instantaneous recording, as well as expanded use of an additional mobile radio-telephone equipped News Car.

KLZ now broadcasts 16 newscasts daily, 10 of them produced by the KLZ News Room and 6 from CBS. In addition to the well-known and accepted KLZ Newscasters, including Bob Butz, Stan Brown, Carl Akers and Warren Chandler, listeners regularly hear such nationally-famed newsmen as Edward R. Murrow, Lowell Thomas, Eric Sevareid, Charles Collingwood and Bob Trout. These experts, and the far-flung CBS correspondent corps, are featured on their own programs as well as "CBS World News Roundup", heard twice daily on KLZ, and the "World Tonight", an important segment of the KLZ evening schedule.

NEWS IN DEPTH

In addition to bringing the KLZ audience up-to-the-minute coverage of news events from throughout the region and the world, programming designed to give depth and understanding to these events continued to be a prominent part of the KLZ schedule. "Sounding Board", with informed and responsible community leaders in topical discussions, entered its tenth year of weekly broadcasts produced by the KLZ News Department. For the third consecutive year, "Inside Story" was prepared and broadcast by Starr Yelland as a daily commentary on people and events. "Voice In Congress", produced in Washington exclusively for KLZ, featured Colorado's Senators and Representatives discussing important legislative matters of prime interest to this region. Editorial opinion from Colorado newspapers was presented each week on "Colorado Speaks". Colorado's Governor McNichols and Denver's Mayor Nicholson were heard weekly with special reports to the people. As an example of special programming with an emphasis on timeliness, Mayor Nicholson took over Starr Yelland's "Party Line" for a full hour to answer questions from listeners regarding a proposed city income tax.

In addition, KLZ regularly carried many informative program series from CBS, including: "Capitol Cloakroom", "Face the Nation", "The Leading Question", "Do You Know?" and "So They Say".

Special programs dealing with timely and important events included "Report on Integration" and "Radio Beat", involving scientists and educators of the United States discussing the Sputnik and its effects with scientists and educators in the Soviet Union.

KLZ carried 12 addresses by the President of the United States during 1957, as well as talks by two former Presidents. In addition, the KLZ audience heard the Vice President, Secretary of State, and major congressional spokesmen throughout the year.

IN THE PUBLIC INTEREST

A carefully planned schedule of Public Service programming, covering all aspects of community life, continued KLZ's long-standing leadership in this field. Providing time, facilities and manpower, KLZ, for the 23rd consecutive year, broadcast full-hour services each Sunday direct from churches and synagogues throughout the Denver area. Special sunrise services from Denver's Red Rocks Amphitheatre on Easter Morning and the Christmas Eve midnight services from St. John's Cathedral were typical of other KLZ broadcasts in the interest of the religious life of the community. From CBS, KLZ aired the Salt Lake Tabernacle Choir from the Mormon Tabernacle as well as "Church of the Air", a network program for which KLZ originated several broadcasts.

Programs and announcements were broadcast for many campaigns and local organizations, typical of these including: United Funds, Red Cross, Blood Bank, Polio, Cancer, Muscular Dystrophy, American Heart, Crippled Children and Adults, Tuberculosis, YMCA, YWCA, Boy Scouts, Girl Scouts, Community Centers, U. S. Treasury Bonds, Armed Forces Recruiting, United Nations, Radio Free Europe, CARE and the National Safety Council.

The Salvation Army received funds from our "Party Line" Christmas Fund and Denver's Ridge Home for retarded children benefited once again from the toy and clothing drive conducted by Jack Wells and Art Gow.

In recognition of the programs broadcast on behalf of the reserve forces, KLZ Radio was awarded the coveted Department of Defense Award in 1957.

CONTINUING SERVICE TO AGRICULTURE

While most broadcasts are equally interesting and important to urban and rural listeners, KLZ recognizes the value of specialized information programs for farmers and ranchers. Over a full hour per day of news and features including broadcasts from Colorado State (A&M) University, plus two livestock market reports each day and coverage of special events, such as the National Western Livestock Show and state and county fairs, kept KLZ in the farmer's ear in 1957.

SPORTS LEADERSHIP

KLZ scored again in 1957 as the outstanding sports coverage station in the Denver area. For the third consecutive year, KLZ was selected by the Denver Bears baseball team to carry complete home-and-away schedules of all games, live and direct. As a result of the station's efficient broadcasting of the games, plus outstanding promotion, publicity and engineering efforts, the contract for the 1958 season has already been awarded to KLZ Radio. In addition to the regular season games, aired by veteran sportscaster Bill Reed, KLZ continued to be the voice of the Denver Bears right through Denver's winning the Little World Series in October.

Football broadcasts on KLZ featured Starr Yelland again giving live play-by-play descriptions of all University of Colorado games. Other local sports activities on KLZ included: The National AAU Basketball Tournament, the Colorado State High School Basketball and Football Championships, and the NCAA Intercollegiate Hockey Tournament. Seasonal local sports features on KLZ included "Dugout Interview", "Football Scoreboard" and "Bears At Bat", as well as year-round daily sportscasts.

Outstanding sports features from CBS included the Orange Bowl at Miami, the Cotton Bowl at Dallas, the Gator Bowl at Jacksonville and racing's Triple Crown - the Kentucky Derby, Preakness and Belmont. Regular CBS sports news coverage on KLZ was through Tom Harmon's daily sports report and "Sports Time", with Phil Rizzuto and Herman Hickman.

STAR ENTERTAINMENT FROM CBS RADIO

CBS, long acclaimed the outstanding radio network, continued to bring the KLZ audience the very best in network programming, including such favorites as: Arthur Godfrey, Amos'n Andy, Jack Benny, Peter Lind Hayes and Mary Healy, Robert Q. Lewis, Mitch Miller, Jimmy Wakely, Bing Crosby, Art Linkletter, Pat Buttram, "Gunsmoke", "F.B.I. In Peace and War", "Johnny Dollar", "Suspense", "Columbia Workshop", "Sez' Who?", "Young Dr. Malone" and "Backstage Wife". Fine music was represented by the New York Philharmonic, the Cleveland Symphony Orchestra, the Longine Symphonette and Percy Faith's "Best In Music" hour.

These and other programs and personalities added to the quality of entertainment available to listeners only through a station affiliated with a network such as CBS. We are proud that KLZ's affiliation with the CBS Radio Network is now in its 29th year.

ENGINEERING ADVANCES

To insure better quality of broadcast reception, a new and improved line between studio and transmitter was installed in 1957. A "constant volume control" unit was added to keep studio-to-transmitter sound at its best level. Studio and remote equipment was improved as well, with the addition of a new remote amplifier for broadcasts away from the station as well as new turntables installed in the studio control room.

A SOUND BUSINESS REPORT

Another indication that this was an outstanding year lies in KLZ's sales record during 1957...the highest national and local sales in the history of the station. As an example of this sales leadership, KLZ Radio lists over half a hundred quarter hours per week of sponsored nighttime local programming and news...far greater than most stations. Many of these quarter hours are sponsored by national advertisers who do not use nighttime radio elsewhere. KLZ's personality features and unique programming prove that if a station gives the public something more than mere background music, that same public will respond with deliberate, thoughtful and productive listening.

This radio success was shared by KLZ employees at Christmas when they received a substantial bonus from an appreciative management.

OUR THANKS TO YOU

The foregoing report of another stand-out year for KLZ Radio was made possible only through acceptance by listeners... advertisers...and friends. It has been a good year in every respect. For this, our thanks to all of you. We invite your comments or criticisms concerning our past operation and suggestions you may have for the year ahead...a year which we hope will be a full and happy one for you.

Sincerely,

Hugh B. Terry

Dear Ed:

I missed your last show but I have seen many of those you have put on the air over the years and, of course, before television heard you and admired your work.

I think your idea to take a year and live a more normal life and do just what you please is a most sound one. Everyone needs a change of pace and a change of scenery and a change of occupation from time to time. And, you have put in many strenuous, fruitful years.

This letter is to wish you happiness and good health during the coming year of ease and an even greater future ahead for you when you decide to get back into your stride again. People won't forget you - the press would not let them, even if you wanted them to forget you - and they will welcome you back whenever you are ready to come back. All I say is, relax, take it easy, take a hard look at what is going on around the world, and you'll find it interesting in that you won't have to rush to press, so to speak, to give your views.

And, if you are ever in the neighborhood of the Sheraton-East Hotel, drop in and see me in my offices on the second floor, where I have been the last ten years. I travel a great deal but you are always welcome.

The best to you in this year of change of pace.

Sincerely,

Edgar Kobak

Dear Ed:

Thanks for calling Richard Heffner's project to my attention. Although I haven't completely studied his entire proposal I feel that it is certainly an interesting undertaking.

In discussing it very broadly with Gordon Grand yesterday morning I learned that Mr. Heffner had made a contact with William Foster of our Washington office sometime ago regarding this proposal. Although our interest is evident, we will not be able to proceed because of the cost involved. I am sure you can appreciate that with our investment in television and in major print media, it isn't easy or too practical to come by an additional $750,000. However, Ed, I plan to call Mr. Heffner next week and explain our situation to him.

Thanks again for helping us to stay informed about such worthwhile matters. We certainly appreciate it.

Sincerely,

Stanley W. Koenig

580 Park Avenue
NEW YORK, N.Y.

Dear Ed,

The immediate effectin this office of your good letter of 11 November was to rouse a lethargic army of slaves into feverish activity madly painting a large red border round the month of January.

The Red Carpet boys are busily dusting, ready to start unrolling at receipt of your signal. I myself am about to step-up my daily jerks so that my arms can be wide enough to welcome you, Janet and Casey when you come. We are, as you see, practically all set.

Do happily in the meantime, have a wonderful Christmas, transmit my love to Janet and Casey and accept my best wishes.

Yours ever,

Theodore Kollek

TK/jd

PS. Just as I was curling the Y of my signature, the film arrived of your programme with BG and U Nu, about which so many friends who saw it have written so enthusiastically. We shall be having a showing with BG as soon as he emerges from his carpentry shop with a new cabinet.

Kollek, Theodore
Corresp.

June 26, 1959

Dear Teddy:

Thanks for yours of June 16. If I had to make a solid guess right now, I would think we would be in Israel about mid-January, but I will write again when plans are a little more definite.

As ever yours,

June 8, 1959

Mr. Theodore Kollek
Prime Minister's Office
Jerusalem
Israel

Dear Teddy:

We will indeed send you a copy of the Ben-Gurion/U Nu film. As you have heard, we encountered unusual technical difficulties but both men were most patient and cooperative. The final result will be a credit to both men.

My own plans are vague, as usual, but we should be in Israel some time in the course of the winter. I have an appetite for Casey to spend two or three weeks in a kibbutz. Could this be done? I don't mean as a visitor but as a labourer, with no special privileges and no favours. I want him to learn that not everyone in the world goes about in chromium-plated automobiles and lives in a house where champagne comes out of the faucets. I will write again when plans are a little more definite.

As ever yours,

New York, N.Y.

Dear Ed and Fred,

First of all many thanks for the regards you Ed transmitted to me through B.G. I was not present during the three-hour recordings, but I understand that you had quite a tough job getting your two participants together on the various subjects.

However, I am glad to learn from your cable this morning, that you are satisfied, and that a good program will result.

Many many thanks for your efforts and all the best.

Sincerely yours,

Teddy

Theodore Kollek

P.S.

I hope you will follow your usual practice by sending us a copy of the film to show here.

Dear Ed,

Thank you so much for your letter dated April 30th 1959, and for informing me of Mr. George Rosen's prospective visit to Israel.

Please have Mr. Rosen get in touch with me and I shall certainly be pleased to help him in any way possible. In case we do not hear from him, I shall be glad to call him at the King David Hotel around June 4th.

Unfortunately, Moish is out of the country right now, somewhere between Johannesburg and Accra, but we shall do our best to make Mr. Rosen's stay here as pleasant as possible.

We are looking forward to your crew arriving for the U Nu "Small World"

With kindest regards,

Sincerely yours,

Teddy

Theodore Kollek

Kollek, Teddy

April 30, 1959

Dear Teddy:

George Rosen is coming over to Israel on June 4 and will probably be staying at the King David Hotel in Jerusalem. He is the editor of VARIETY and an old friend of mine, as well as a stout citizen. Perhaps you and Moish could give him a ring while he is in Jerusalem.

As ever yours,

ERM:skh

Dear Ed:

The dent in the ceiling of my office, which you will see when you get here, was caused by my joy-jump on reading "we shall certainly be coming to Israel - all three of us" in your good letter. It's wonderful for your many friends here and it's a pretty good thing for the country.

Our welcoming arms couldn't be opener and, as Moish observes, our hooks couldn't be tenter.

We've started to count the days.

All love to you, Janet and Casey.

Yours ever,

Teddy

Theodore Kollek

March 17, 1959

Dear Teddy:

How I envy you the night on the water at Ein Gev.

Somehow next year we must do that together.

I'm taking a sabbatical year off this treadmill starting the first of July, and while we have made no plans at all aside from a lecture I must do in London late in October, we shall certainly be coming to Israel -- all three of us.

As you know, I have been determined for a long while that Casey should spend enough time there to get some feel of what is going on, and his old man also has an appetite to come back.

I will write again when plans are a little more definite.

As ever yours,

Mr. Theodore Kollek

Dear Ed:

I have just returned from a brief visit to Ein Gev - but long enough to go out for a night's fishing. As the Sea of Galilee fishing trip most prominent in my memory was with you and Fred, you were naturally much in my thoughts.

We made our catch only about thirty yards from the Syrian positions. And although sitting behind the Lux lamps does not induce the most confortable feeling in the world, the beauty of the night, the singing of the boys, the cooperation of the fish - we got in quite a haul - and memories of our joint nocturnal adventure crowded out all thought of trigger-happy Syrian gunners. The only incongruous note was the bottle of Bourbon I brought along. But strangely enough, the boys did not object too strongly to this switch from local cognac as our method of central heating. There were ten boats out, some from Ein Gev and the rest from private fishermen from Tiberias. All did well - the end proving as pleasant and as successful as the means.

I do hope that Janet's promise will materialize and that you will all come out to spend some time here. We shall then take Casey fishing.

My love to you all,

Yours ever,

Teddy

Dear Ed:

While flying to Milwaukee, I read your speech. As usual, you hit the nail right on the head. I'd like to know whether it had any effect (that you desired). Nobody could disagree, but what is being done about it? After all, over a month has passed, and by now its effects "should be showing".

I am mailing the speech to Moish with the request that he circulate it among two or three of your friends and to our radio people.

I particularly enjoyed your question on Sunday to Haggerty about the actors, the Republicans and the election results.

All the best.

Yours, ever

Teddy

Dear Mr. Murrow,

I hope you find the sun you seek. It is almost perpetual here which explains my maintaining a pied a'terre so remote from civilization.

Ever since 1938 or 1939 at Seattle, I have been listening to your newscasts when possible.

I expect to leave here on March 2nd, for a trip around the world with the first stop Tokyo. July and August I hope to be with friends at London and it would be a pleasure, indeed, if you would join me for tea at the English Speaking Union or for a drink somewhere should you be there at that time. I always report to the Military Attache' at the Embassy and sign the book at American Express.

Your proposed sabbatical is another of many wise decisions you have made and I hope it will be even more rewarding than you anticipate.

Very truly yours,

William K. Kommers

JUNE 1,1959.

Dear Miss Hogg:

Please set any day to Mr. Murrow's convenience next week. I will charter a plane to New York.

I would appreciate you setting the time as late as possible in the afternoon or evening. The reason for this is that I have never delegated much editorial responsibility here, and I must dummy up the front page and make sure late afternoon news goes into the paper. This can usually be done by 1 P.M. and I should be able to land in New York by 3 p.m. So the later the better.

I would not go to so much bother--to Mr. Murrow or myself--if I did not believe in the importance of the movement proposed. I would say that it could very well be the most important event in journalism in many years.

Very sincerely,

Seymour Kopf

Mayor Defeated, Drops Charge Against Reporter Who's Fired

GALVESTON, Tex.

Joel B. Kirkpatrick, 32, newsman ordered arrested after a name-calling row with fiery Mayor George Roy Clough, was fired from his post with the *Houston Chronicle* the day after Clough was soundly defeated in his reelection bid. (E&P, May 16, page 76).

Mr. Kirkpatrick, charged with disturbing the peace after he tried to question the mayor about shortages in public funds and appointments to the city-owned Galveston Wharves board, said his dismissal "came as a surprise."

The Chronicle news editor, Harry McCleary, declared Mr. Kirkpatrick's dismissal "had nothing to do" with the incident in the mayor's office. Mayor Clough had dropped the charges earlier that same day.

Mr. Kirkpatrick said he had been called on the carpet the day after his arrest and was told by Chronicle executives they "didn't want any kind of crusading in Galveston." Orders also were left that Mr. Kirkpatrick was not to cover any more politics in the city.

Mr. Clough, who on past occasions has tried to get newsmen and others fired when they disagreed with him, sought reelection to a two-year term in the May 12 city elections. But voters turned out in near-record numbers to elect Herbert Y. Cartwright Jr., 46, whose eight-year reign Clough ended in 1955. Clough ran a poor third.

When Mayor Clough revealed he had dropped the charge against Mr. Kirkpatrick, he declared, "In the future, maybe he'll learn to respect his elders." Then he added, "There's a new administration and they'll have a new judge. What chance would I have? I took the easy way out."

LEHIGHTON, PA.

MAY 12 1959

MAY 10TH, 1959.

Dear Mr. Murrow:

I put out the livliest small city World newspaper, and in the past I've been kicked around from one part of the country to another because I believe in honest reporting.

I am writing this letter to you because I am alarmed at the state of our newspapers and television. Believe me when I tell you that many on the shady side have have gotten control of much of our mass communications. Th should not be news to you having exposed the "party girls". If we really went out and saw who the owners are throughout the country (not the "front" men) even we would be shocked to find underworld, cheap political, and other low interests involved).

It is about time the honest TV and newspapermen (the few that are left) got together for our own self-protection as well as for the Nation's. Perhaps, in many ways, we can help each other out in matters of employment security, publicity, etc. if we banded together in some sort of dynamic organization--perhaps something like the Committees of Correspondence John Adams (I think it was him) had during the revolutionary war (or before it).

I am an independent guy and I've noticed a few things--I've noticed certain columnists, for instance, who are (or have been) "knocked off" to a large extent. Maybe it is my immagination, but where is Dorothy Thompson (she must still write a column because I saw them regularly in The Toronto (Canada) Globe Mail)?

(OVER)

st

of

the

Th

y

ont'

n's.

nt

fore

ed

to

son

ito

What about Lippman, Pegler, Ben Hecht, and I can go on. Whether or not we agree with them, one thing is very obvious: These columnists are not diplomats and there is something strange in the apparent way they are being "blacklisted". In the radio and TV field, you come across here and there an outspoken "disk jockey" or somebody who loses his job because of political or other pressures.

This is not America as I knew it, and it is all wrong. If we continue to let various pressure groups and others to take over, we will only turn out a conforming, second-rate citizen. On the radio, I used to turn on Lowell Thomas, or Gabe Heatter, or Kaltenborn and they told the news behind the news in language everyone could understand. Today you turn on TV, or you can read most newspapers, and you do not know what is going on. And if a big story does break--like the Cuban one--you are taken by surprise (because, maybe, the "reporter" played ball with the leaders in power or something).

If the underworld can hold their meeting in N.Y. State; if the Commuhists can hold their cell block meetings--why can't we undiplomatic, honest newsmen get together and make sure things like the Victor Reisel incident is avenged. Concurrently, we can help build better citizens as well.

Perhaps there is a chance if you can somehow repeat this appeal to your audience..or if you can do so yourself...so we can get together for the good of posterity. If we don't , we'll all "hang". For this is one battle that cannot be fought alone.

Sincerely yours,

Seymour Kopf

Editor.

MARATHON BRIDGE—Students at Stanford University, Palo Alto, Calif., are still full of energy as they halt their "Bridgathon." Their 196-rubber game lasted 168 hours. It was played between two dormitories, with 20 students from each.

'DONATE' PART OF LOOT

NEWTON, Iowa (UPI) — Burglars cracked the safe at the Newton Daily News and made off with $826 in cash. They left $20 in an envelope marked "for the Red Cross."

PEDESTRIANS VITAL

PHILADELPHIA (UPI) — The State Supreme Court said Tuesday that — all things being equal — the automobile must give way to the pedestrian.

The court upheld damages awarded to a Ford City widow whose husband was killed crossing a street in 1957.

Lawrence H. Dailey, the driver, had sought dismissal of the verdict arguing that he had stopped for a stop sign.

But the high court found the driver Dailey negligent.

"To say that a pedestrian may not cross the street merely because an automobile may be in view is equivalent to saying that the machine has rights superior to those of a human being," the court said. "The opposite is true.

"Everything else being equal, the automobile must give way to the prerogative of the foot passenger who does not wear a steel coat and is not equipped with bumpers and fenders to protect him in any conflict with his four wheeled potential adversary."

STRIKES CONTINUE—A woman (left) shows her disapproval as non-union workers are escorted by state troopers from the Harriet-Henderson Cotton Mill, Henderson, N. C. The violent strike believed settled, erupted in gunfire and dynamite explosions, with non-unionists forced to spend the night in the mill. Right, in Hazard, Ky., a supervisory employee (white shirt) prepares to take a coal train into a mining area as union engineers refuse to cross picket lines.

REMEMBER MARK TWAIN—Commemorating the death of Mark Twain, actress Julia Meade, in New York, presents Hal Holbrook with a statue of the famous author and a citation from the citizens of Hannibal, Mo., Twain's birthplace. Holbrook was honored for his unique one-man show, "Mark Twain Tonight," which is now appearing in a Broadway playhouse.

LATEST NEWS AND PHOTOS—A NEWSPAPER KEEPING ABREAST WITH OUR JET AGE

TELL OF TIBET MASS RAPE

By A. K. GUPTA
United Press International Cable
KATHMANDU, NEPAL

Communist Chinese troops have turned Tibet into a vast prison with thousands of Tibetans being whipped each day in the streets and Buddhist nuns forced into army camps as prostitutes for the pleasure of the troops, refugees fleeing to Nepal reported today.

They said nearly 2,500 Tibetan monasteries were damaged or destroyed by Communist artillery in the past month and nearly 8,000 monks killed, 12,000 arrested and about 800,000 lamas forced to flee homeless and hungry into the mountains.

This correspondent traveled through the snow-covered 17,000-foot mountain passes to reach the border of Tibet and interview the refugees.

At the Nepal-Tibet border a few miles north of the village of Tarke, I met some refugees who said some of 30 well-armed Chinese divisions in Tibet were led by Russians.

One English-speaking Tibetan named Thote, a 27-year-old graduate of Peiping University, said the Chinese killed 15 members of his clan in the village of Ghetumba in Kham Province.

He said he saw his father machine-gunned for refusing to betray other Tibetan patriots.

Thote said that during his flight to Nepal he passed through 65 villages that had been known as good trading centers and that every one was destroyed by the Communists with not a sign of life visible anywhere.

"Every Tibetan was a prisoner," he said. "The whole country is turned into a vast prison. Dusk to dawn curfews are imposed all over Tibet and did not allow normal living.

"Thousands of peaceful, innocent Tibetans were being whipped daily on open places in the course of questioning and inhumane methods were being applied for confession.

"Mostly the people preferred to confess as desired by the Chinese than stand tortures any longer.

"Markets are closed; essential consumer goods have disappeared; trade is finished, resulting in numberless deaths inside houses from artificial starvation caused by the Chinese.

"Large numbers of nuns, who locally are called "ennis," have been forced to live in army camps at the pleasure of the Chinese.

"Several nuns reportedly committed suicide to escape Chinese brutalities."

Lithon, another refugee, said 20,000 Chinese troops were searching each house and every person along the southwestern border of Tibet and that most of the people had fled to the barren plateaus and are now dying of hunger and cold.

"The Chinese have confiscated every ounce of corn available in the area and have scorch-earthed all the standing crops in the field, turning the entire vegetation into ashes," he said.

"Every person must beg food from the Chinese officer at the nearest camp, waiting hours in long unending lines and only those who could satisfy the Chinese of their loyalty managed to get one meal."

Anglani, who lost his wife and three children while escaping, said he saw Russians with the Chinese and believed they were helping the Communists build a big concentration camp at the 17,000-foot level at the northern base of Mt. Everest.

Despite this campaign of terror, the refugees said the Tibetans still were continuing their fight against the Communists and showing open defiance of their Red rulers.

They said lockets with the picture of the Dalai Lama were worn in spite of the fact that Chinese soldiers have orders to shoot on sight anyone wearing such a locket.

WILL PRINCESS MARGARET CONVERT TO CATHOLICISM?

ROME (UPI) — Princess Margaret braved Rome's worst traffic jam and angry protests from extreme Protestant groups back home today to attend a private, 23-minute audience with Pope John XXIII.

The visit established a modern precedent for the British royal family since it was Margaret's second with a Roman Catholic pope. She met the late Pope Pius XII 10 years ago.

Margaret and Queen Mother Elizabeth were greeted by the Pope, a portly figure in white, in the library of the Papal Palace.

The royal couple left the British Embassy early for their visit because of a transit strike that turned Rome into a motorist's nightmare.

Several times en route their Rolls Royce was stalled in an endless line of cars, but police jammed their car ahead of other protesting drivers and they arrived 10 minutes ahead of schedule.

After the audience Margaret went sight-seeing. Tonight she'll be at an all-night champagne-drinking party in one of the plushiest nightclubs in the Italian capital.

Her visit caused a flurry of criticism by church officials in Britain, particularly in Scotland.

It led to speculation that Margaret, who as a member of the royal family is a leader of the Church of England, was considering conversion to Roman Catholicism.

The British Embassy here called the speculation "balderdash," Vatican officials refused even to discuss the subject.

A letter from Clarence House, the princess' official residence in London, called the audience a courtesy visit, saying it would be improper for Margaret not to accompany her mother on a call to Vatican City.

The letter apparently failed to satisfy the church's ommittee on Religion and Morals, which said:

"The fact remains that the claims of the Pope as head of the Roman church and sovereign ruler of the Vatican City are so closely interwoven that we cannot help but condemn the act."

WOMEN BETTER BARTENDERS?

NEW YORK (UPI) — Women are better students of bartending than men because they are "neater, more adept with their hands, have better memories and don't gossip."

The authority for this statement is John Boning, who has operated the Bartenders School in New York for more than 25 years.

More than 12,000 students have completed the school's five week course and about one-fourth of them were women.

Boning said: "Women make better bartender students, as a rule, because they're more careful about their own appearance and the appearance of their bars. They are better with their hands than men and can make drinks with a minimum of shadow boxing.

"Give a woman a drink recipe and she'll never forget it. And another thing — they mind their own business."

At school, the students work with artificial devices: colored water for whisky and wine, sand instead of sugar and marbles for olives and cherries.

"Off the campus," Boning added, the men students prefer scotch and martinis while the coeds go in for "something chic, such as cognac and French champagne."

IT'S TONSIL TIME AGAIN; HERE IS WHAT YOU CAN DO

DENVER (UPI)—Tonsil time is here again.

From now until June 1, youngsters of all ages will be making their first trip to the hospital to have tonsils removed.

The experience is terrifying to most youngsters, says Dr. Dorothy Morris, pediatrician at National Jewish Hospital at Denver.

But it doesn't have to be that way.

She believes sometimes parents themselves do not know what to expect, and often, in an attempt not to alarm the child, convey their own dread and anxieties.

"Absolute honesty is the only way to prepare a child for a hospital experience," Dr. Morris advised. "What a child knows, he is less likely to fear.

"If the parent has a calm, confident attitude toward hospitalization, the child senses this and reflects the same attitude.

"The parent should say pleasantly and frankly — 'Yes, your throat will hurt for a day or two after your tonsils are taken out."

TO AUCTION NAPOLEON'S GIFTS TO WIFE

BERN, Switzerland (UPI) —The fabulous golden "vermeil service" of Empress Josephine, the first wife of Napoleon Bonaparte, will be auctioned to the highest bidder.

But he will be expected to pay more than one million francs ($232,000) for the 41-piece set of tea, coffee and toilet utensile given by Napoleon to his wife over a period of 13 years.

Thirty-nine items are of vermeil (sterling silver overlaid with a gold wash), and two are solid gold. All are classical Empire styles.

One piece is a golden mirror which Napoleon ordered for his coronation on December 2, 1804, but it arrived too late for the ceremony.

Wedding presents when General Napoleon married Josephine Tascher de la Pagerie, widow of Viscount Alexander de Beauharnais, in 1796 laid the foundation for the collection which reflects the Emperor's mounting glory.

Napoleon permitted Josephine to keep the service when he divorced her in 1809, and five years later after her death, it was inherited by her son, Eugene de Beauharnais, Duke of Leuchtenberg and Prince of Eichstaedt.

His son, in turn, took it with him to the court of the czars at St. Petersburg when he married a member of the Romanoff family.

After the Russian revolution, the "vermeil service" was brought back to Western Europe and deposited in Switzerland as collateral for a loan.

Juerg Stuker, owner of the art gallery where the auction will take place May 8, said experts estimate the set's value at one million francs ($232,000), at least. He said it was being offered for auction because it had not been redeemed.

CHRISTIAN A. HERTER SWORN IN BY PRESIDENT

WASHINGTON (UPI) — Christian A. Herter was formally sworn in today as the new secretary of state. President Eisenhower, standing at his side, proclaimed that Herter was the "best person" for the job.

As the President handed Herter, 64, his commission of office, a white scroll tied with blue ribbon, the Chief Executive told Herter "you well know how you and I kept hoping and praying for Foster's early recovery in the hope that he could come back. . ."

Feel Better, Sleep Better
Look Better —DRINK
GERSTLAUER'S MILK

STRANGLED—Marvin Zdanowski (bottom), 5, of Detroit, Mich., son of deaf mute parents, was found strangled in a garage loft behind his home and an escaped mental patient was arrested as the confessed killer. George Rigola (top), 47, told police he escaped from hospital at Galesburg, Ill. His sister lives in the same apartment house as the Zdanowskis.

Dr. Charles Roberts, 155 S. Second St.

Mrs. Rose Marion, 274 S. First St.

William Mullen Jr., Jim Thorpe.

Edwin Yerger, Andreas R. 1.

Mrs. Margaret Miller, Jim Thorpe.

Surgical

Walter Gerstlauer, 340 S. Ninth St.

(Continued on Page Six)

AN EDITORIAL

THE TRUTH ABOUT COMMUNISM

Anyone who ever had doubts as to what Communists are like should be compelled to read the main story tonight of torture and degradation the Red Chinese (led by Russian Communists) are imposing upon the Tibetans and now (if you read yesterday's Leader) the Nepanese.

The Communists, schooled in cold-blooded massacre to achieve their aim of world dominance, are just as cruel as any Hitler SS Nazi or Mussolini blackshirt. The fact that many American newspapers are playing down the story of Communist rape and torture among the free peoples of the world does not relieve the nightmare.

By admission of the most respected American publishers and editors in the Nation, the Evening Leader more plainly and more powerfully focused the ordeal of Communist atrocities of Tibetans than any other newspaper in America.

Mr. John Knight, publisher of the Miami Herald and formerly of the Chicago Daily News, made this statement—and so did Mr. Charles Lewin, general manager of the respected New Bedford, Mass., Standard-Times, who is one the leading anti-Communist newspapermen in the world. Both congratulated the Evening Leader.

There have been some, including teachers, who quit the Leader because of our anti-Communist stand. We make this statement: We do not care for anti-American subscribers. We do not want brainwashed subscribers. We do not want subscribers who even remotely believe in Communism.

We believe the day will come when this nation will have to choose between freedom and slavery. We believe this day is near.

If we do not make a choice on the basis of our historical heritage we will fare no better that the poor people of Tibet and Nepal.

The name "America" will not stop the Communists—nor will the name magically stop them from coming to these shores.

The name "America" will not prevent our traitors within our walls from destroying this nation.

Eventually, if we do nothing, your own children will be sent to Army camps to please Communism just as the Tibetans are. And people will be whipped, on the main streeets here, too.

If you don't believe this, ask the people of Hungary, and they will tell you.

Ask the people of Latvia, and they will tell you.

Ask the people of Poland, and they will tell you.

The time is near, and unless America wakes up there will be tragedy and freedom's light will be virtually totally exhausted.

Daily Phone Interview

(The Evening Leader, with eyes closed, daily picks telephone numbers and asks a question of interest. Names will not be mentioned—only the person's phone number.)

Queston: Where do you plan to spend your summer vacation?

DR 7-1754: Well, I won't get a chance to vacation. I'm too busy making a living. You see, I have no husband and must make my own way.

DR 7-3436: I work at Brights. Every summer I attend the Knights of Pithias convention for one week. We hold it in a different city every year. Last year it was in York and the year before in Harrisburg. This year it'll be in Philadelphia.

DR 7-3108: We're not having a vacation. We are getting married Friday afternoon. Honeymoon? Just the weekend in Pittsburgh. We won't be able to afford too much.

DR 7-0488: New York. I go there a couple times a year. I'm going to see a couple of shows. Any special ones? No, you have to take what you can get for Broadway. Am I going with somebody? No, you see my wife passed away, so I'm going alone.

AROUND THE TOWN

Community chairmen have been named for the fund drive of the Panther Valley Carbon County Unit, American Cancer Society.

Area chairmen are Mrs. George Trexler, Lehighton; Mrs. Edward Hill, Mahoning Township; Mrs. Malcolm Arner, Parryville; Walter Zimmerman, Weissport; Mr. and Mrs. A. R. Berger, Franklin and Towamensing Townships; Mrs. Sherwood Andrews and Mrs. Anna Wilk, East Penn Township and Palmerton Community Chest, Palmerton, Bowmanstown and Lower Toamensing Township.

The drive opened on April 1 with a goal of $15,000 set.

Burgess George Demetriades of Lansford is crusade chairman.

Gnaden Huetten Memorial Hospital Auxiliary will hold a rummage sale this Friday and Saturday at Niehoff's Floral Shop, S. First St.

The sale will start at 9 a.m. both days and continue until 9 p.m. Donations can be taken to Niehoff's between 2 and 5 p.m. Thursday. Persons who wish to have their donations picked up may call Mrs. Helen Merluzzi, DR 7-1262.

Three members of the Lehigh County Chapter of the Penna. Association for Retarted Children will take part in a panel discussion to be held in connection with tomorrow's meeting of the Carbon County Chapter of Christ United Church of Christ, Palmerton, at 7:30 p.m.

Participating in the panel will be Joel Kline, president of the Lehigh County group; Donald Evoy and Wilbur Fleming.

Members of the social committee include Mrs. Joseph Kurtz, Mrs. Carl Beige and Mrs. Miles Mertz.

Nomination of officers and convention delegates will be held during a meeting of the Lehighton Eagles Lodge at 7:30 tonight in the lodge hall.

Officers whose terms will expire are Chester D. Solt, president; Bert Blank, vice president; Glenn Kershner, chaplain; Fred Niehoff, conductor; George E. Miller, treasurer; Erwin Andrews, inside guard and Marvin Rehrig, outside guard.

Election will be held May 13.

Pennsylvania Power & Light Company shaareowners today approved a two shares for one split of the Company's common stock at their annual meeting at Hazleton.

Also authorized at the meeting were additional common shares necessary to affect the stock split and an increase in authorized in capital stock by an additional one million five hundred seventy four thousand six hundred and twenty eight shares of common stock, bringing the total authorized common stock to fourteen million shares.

Mr. Charles E. Oakes, PP&L Board Chairman, served as Meeting Chairman and with Mr. Jack K. Busby, President, reviewed the Company's operation and discussed subjects related to the Company's future.

For the first quarter of 1959, Mr. Oakes said, "Kilowatt hours sales have shown an upward trend and are 5.4 per cent above the corresponding months of 1958.

Revenues were up 4.5 per cent or about 1.5 million over the same three months of last year. Net income was up $620,000 and showed better percentage of increase than for revenues, due primarily to the fact that the first quarter this year did not have the major snowsorm expense experienced last year and by reason of other items of a non-recurring character."

LONG BEACH, Calif.—James H. Radler, Jr., electronics technician seaman, USN, son of Mr. and Mrs. James H. Radler, Sr. of 257 N. Second St., Lehighton, Pa., is scheduled to arrive in Long Beach, Calif., today aboard the destroyer USS Brush after a tour of duty with the U.S. Seventh Fleet in the Far East.

Since leaving the U.S. last October, the Brush took part in various fleet operations and anti-submarine exercises with the Japanese Maritime Self Defense Force.

Between her sea missions, the destroyer visited Hong Kong; Okinawa and ports in Japan and the Philippine Islands.

A special service will be held at 7:30 tonight in the Church of the Nazarene, Third and Ochre Sts. The program will include a visit of the Scranton Nazarene Church by recording.

The Lehighton Women of the Moose will meet at 7:45 p.m. tomorrow in the lodge hall.

The Parryville School Assembly elected Keith Youse as president for the 1959-60 school term.

Other officers elected were Jane Wentz, vice president; Sandra Knauss, secretary; Connie Costenbader, treasurer; Donna Reiner, pianist; Julia Rehrig, Maureen Wentz and Jane Wentz, assistant pianists, and Larry Defor and Dennis Freeby, deacons.

Five Panther Valley - Carbon County area new state troopers will be graduated from the state police training school in Hershey tomorrow.

Upon their graduation they will be assigned to stations in Harrisburg and Philadelphia.

They are Harold J. Herring, Coaldale to Troop A, Harrisburg; William A. Digilio, Nesquehoning, and Thomas J. Halada, Palmerton to Troop B, Harrisburg and Joseph P. Olsovsky, Summit Hill and James H. Melber, Jim Thorpe to Troop A, Philadelphia.

Al Kotsch of town was a guest during the Jim Thorpe Rotary Club meeting held yesterday. Allen Kistler, county controller, was the main speaker at the meeting.

The Lehighton-Weissport Union School District's appeal for approval of its application for state assistance for a new high school was delayed by the Carbon County School Board after a lengthy meeting last night.

The county board decided to meet again at 6:30 p.m. Tuesday for more discussion.

The board also agreed to seek clarification of procedure involved in approval of the application.

A new traffic light system, one of the first of its kind in the Panther Valley - Carbon County area will be in service tonight for the first time at the intersection of Routes 443 and Legislative Route, 13031, Normal Square.

The light, equipped with highway detectors under a new system will control traffic at one of the regions hazardous intersections.

Under the system, the green light will remain on Route 443 until north or southbound traffic approaches the main highway from the legislative route.

When a car drives over the detector located beneath the legislative route, the traffic signal will change permitting traffic to cross or turn onto Route 443.

When heavy periods of traffic from the legislative route occur, the light will only permit a certain number of cars through, then it will automatically change to green for Route 443 traffic.

The light will change again after a certain interval on Route 443 to red and permit any cars still detained on the legislative highway.

The automatic changover from green on Route 443 to the legislative route is done through a memory control on the detector. It knows there is a motor vehicle waiting to enter Route 443.

When a vehicle traveling north or south on Legislative Route 13031 passes over the detector, continues through Route 443 and then over the second detector on the opposite side of the intersection, the signal will not change on any of the routes.

The same holds true for any vehicle that might back over the detector in an opposite direction. All traffic must travel in the direction of traffic to operate the control center.

Portable curbing will be placed at the intersection to keep traffic in its proper lanes. Mahoning Township supervisors will do the work.

Work crews completed the installation and testing of the new system yesterday.

The AmVets Post will meet tomorrow evening in the post home at 8 p.m.

A meeting of the Girl Scout Council will take place tomorrow night at 7:30 p.m. in the Boys Band Hall.

Lehighton Lions Club will meet in Trainer's Hillcrest Inn, at 6 p.m. tomorrow.

A meeting of the Eagles Auxiliary will be held tomorrow evening in the lodge at 8 p.m.

Lehighton Women of the Moose will meet at 7:45 p.m. Thursday in the lodge.

A preteen dance will be held from 7:30 p.m. to 9:30 p.m. on Friday in the All Saints Episcopal Church.

Three children and a man were treated for injuries at the Gnaden Huetten Memorial Hospital yesterday morning.

The children were Thomas Andrews, 10, son of Mr. and Mrs. Sherwood Andrews, Lehighton R. 4, cut of the hand; Debby Frey, 3, daughter of Mr. and Mrs. Woodrow Frey, Lehighton R. 3, cut on chin, and William Brian Andrews, 4, son of Mr. and Mrs. Robert M. Andrews, Lehighton R. 4, for a scratched face and mouth injury.

Richard E. Miller, 30, of Bridge St., had a metal chip removed from his eye.

A wide variety of spring flower arrangements were displayed by members of the Lehighton Garden Club during a meeting yesterday afternoon in Trinity Lutheran parish house.

Winners were Class A, Spring flowers and birds, Mrs. Wayne Reber, Mrs. Guy Gerhard, Mrs. James Beisel and Mrs. Daniel Gerould, tie for first; Mrs. Lawrence Freyman, second.

Arrangement using the container won in 1958, Mrs. Freyman, Mrs. Reber and Mrs. Charles Hartung, tie for first; Mrs. Beisel and Mrs. Gerhard, second, and Mrs. Gerould, third.

Japanese arrangement, Mrs. Gerhard and Mrs. Reber, first; Mrs. Gerould, second, and Mrs. Freyman and Mrs. Hartung, third.

As you like it, Mrs. Reber, Mrs. Beisel and Mrs. Gerould, first, and Mrs. Freyman, second.

Mrs. Gerhard took first place in Class A-1, for her arrangement of spring flowers and birds.

Class B winners were, spring flowers and birds, Mrs. Willard Wolfe, first; arrangement using 1958 container, Mrs. Wolfe, first; as you like it, Mrs. Durelle Roth, first; Mrs. Roy Blight and Mrs. Wolfe, second.

Specimen winners were Mrs. Beisel, first; Mrs. William Hoffner, first and second; Mrs. Freyman, first and second; Mrs. Reber, first, and Mrs. Hartung, first and second.

First place was awarded to Mrs. Grant Arner for her tea table arrangement of forcynthia, tulips, daffodils and hyacinths, and yellow candles in milk white holders.

Judges were Mrs. Hannah Mertz and Mrs. Maude Henderson. Mrs. Ruth Exner served as secretary to the judges.

Entertainment was a musical program under the direction of Mrs. Estella Diehl.

Included were the following selections: vocal solo, Roll on Thou Deep and Dark Blue Ocean, Harry Gilbert; piano solo, Waltz of the Bumblebee, Eileen Clay; reading, Naughty Miss Schultz, Mrs. Norman Clay; piano duet, Country Gardens, Mrs. Diehl and Christine Clay.

Poem, Daffodils, Eileen Clay; piano solo, The Storm, Mrs. Diehl; piano trio, Hungarian Dance, the Claf sisters and Mrs. Diehl; vocal solo, Christopher Robin is Saying His rayers, Eileen Clay; piano solo, March Triumphant, Christine Clay.

Vocal selections, Lead Me Lord, Jesus, Son of Righteousness, and Onward Christian Soldiers, by the Grace Lutheran junior choir; vocal solo, When Jesus Prayed Alone, Eileen Clay; vocal solo, Hear My Cry, Oh Lord, Mr. Gilbert, and vocal selections, All Things Bright and Beautiful and Master of the Garden, by the junior choir.

During the business session plans were outlined for the 28th anniversary celebration on May 20th.

The meeting will be held at 2 p.m. in Trinity Lutheran parish house, folowed by a banquet at 5 p.m.

Guest speaker wil be Mrs Robert Kistner, New York City, noted flower arranger. Mrs. Kistner was a blue ribbon winner at the New York Flower Show, and is well known throughout the United States for her 18th century flower arrangements.

Mrs. Leonard Swartz was admitted as a new member.

Serving on the social committee yesterday were Mrs. Mertz, Mrs. Mary Weyhenmeyer, Mrs. Shirley Mandour, Mrs. Helen Mantz and Mrs. Bessie Losos.

JUST REMINISCING

10 & 20 Years Ago

10 Years Ago

The World War II Mothers received an American flag from the Elks Lodge of town during a meeting of the group held in the Eagles Home.

The members of the American Legion Junior Drum and Bugle Corps outfitted in their new uniforms canvassed Lehighton last night in an effort to sell tickets for the Orpheus Male Chorus concert that will be held on Thursday, April 28.

20 Years Ago

Joseph Greco and Michael Lukish of Nesquehoning were formally admitted to the practice of law in the state of Pennsylvania when they took the oath administered in the Carbon County court house yesterday.

With about 300 children ill with influenza, Pen Argyl school and health authority this week took action to close the schools there until Monday.

Six members will be honored during the golden jubilee membership anniversary of the Weissport POS of A Washington camp No. 122 Monday night.

New Research Development

Fingertip Insect Control

Summer comfort at your fingertips is the promise of a new midget aerosol insecticide which packs the punch of pressurized sprays six times its size. Small enough to be placed in pocket or purse, carried to the beach or picnics, a two-ounce container is equal to one twelve-ounce bomb. Harmless to humans and pets, midget aerosol protects against flies, mosquitoes, ants, gnats and other insects. Development is the result of highly effective new insecticide concentrate named Pyrenone. The concentrate is a research development of Fairfield Chemicals, Food Machinery and Chemical Corp. A special metered valve controls the amount of spray, provides insect control wherever you go.

13 MAD DAREDEVILS ARE READY TO SERVE YOU!

MODENA, Italy (UPI) — It is easy to understand why a group of 12 men and a woman call themselves "The Mad Daredevils".

Sometimes, they can be seen landing on the rooftops of a nearby mountain village by parachutes, or dressed like men from Mars, in special asbestos suits, dashing through the fire and smoke of a blazing shack.

They have been seen scaling telegraph poles to join high tension power lines. They swim icy rivers, leap like hares across ditches.

The Mad Daredevils of Modena are officially known as the Volante del Soccorso, the flying emergency squad, a privately-organized group of unpaid volunteers trained to tackle any emergency at any time or place.

The leader is Ariodante Mazzacurati, a 34-year-old former paratrooper, who has given the group instructions in flying airplanes, helicoptors, driving all kinds of vehicles, including bulldozers and tanks.

The woman member is able to handle these mansized chores in addition to her duties as a nurse, cook and midwife. The Daredevils are financed by a group of Modena businessmen.

"We don't do this for profit," said Mazzacurati. "Our organization is the first in Italy and the second in Europe. In England, there is a similar group which has saved many lives. We also wish to save lives and we are always ready to do so. Try us. The phone number is Modena 31178."

DAILY HORISCOPE

If your birthday is today, April 22: Don't make too many decisions today and tomorrow. Don't answer the telephone unless it's very necessary. By all means, don't marry this week.

For those whose birthday is from June 21st to July 22 (Cancer): Stay away from those who are reckless—don't drive today.

If you were born August 23 to Sept. 22 (Virgo): You will feel very aggressive tomorrow, but try to make yourself as pleasant as possible.

Wedding Bells Ring In New Morning Schedule

Johnson & Johnson

BEAUTY BANDAGE protects hair as she makes up at bedroom vanity, leaving bathroom free so husband can shave.

By JEANNE D'ARCY

YOU'RE a happy young bride, delighted with your pretty new home. However, because everything's so new, there's not enough work to keep you busy all day so—with your husband's approval—you're planning to keep your job for a while.

Make Plans

So far so good! But your pretty new home will be the teapot for the tempest if you don't make some plans.

For example, your schedule, especially the morning one, will have to undergo changes.

No more turning over for a few more winks in the morning. You'll have to get out of bed at the first sound of the alarm if the household is to continue in peace and happy harmony. That first hour of your day is a busy one.

Why? Because there are two things you should know about husbands:

First, they hate to be kept waiting when it's their turn to shower.

Second, if you let them occupy the bathroom first, shower-time for you will be an old-fashioned lick and a promise. Men, as everybody knows, take twice as long as women to get ready for the day. And this is true no matter what men have to say on the subject!

So be wise. Take your shower first and vacate the bathroom as quickly as possible.

The Right Note

Apply your make-up at a well-lighted vanity table in the bedroom. Finish dressing while your bathroom baritone's warbling indicates his day's starting on the right note.

He may sing off-key but isn't it better than having him bang on the bathroom door and shout: "Miss America! I have to prepare for my public, too! Make it snappy!"

OBITUARIES

Elmer E. James, 2065 Glendale Avenue, Bethlehem, died at 8:35 p.m. yesterday in the home of his sister, Mrs. Amelia B. Keiper.

Born in Freeland, he was the son of the late William and Clara (Haas) James.

He resided in Lehighton for 10 years and took up residence in Bethlehem 3 years ago.

He had been employed by the Bethlehem Steel Co., the Pennsylvania Department of Highways and also worked in Hazleton as a miner in Mine No. 40.

Surviving are his wife, Anna M. (Brey) James; a daughter, Arlene, wife of Veaken Livesay; a son, Elmer E., Jr., sisters, Mrs. Amelia B. Keiper, Bethlehem, with whom he resided; Mrs. Anna B. Hartranft, of Hazleton and Mrs. Rose A. Frindt, of Chester. Also surviving are two grandchildren.

Services will be held at 10 a.m. Saturday from the Lamont H. Zimmerman Funeral Home, S. Third St. The Rev. Donald R. Repsher will officiate. Interment in the Lehighton Cemetery. Calling hours will be held Friday evening from 7 to 9 p.m.

Mrs. Alice S. Bast, Bethlehem, died last night in her home after a long illness. She was 79.

Born in Freemansburg, she was a daughter of the late Frank and Lydia Billgard Sherrer. Her husband, Newton W. Bast, died five years ago.

Surviving are a son, Weston F. Bethlehem; a grandchild and two great-grandchildren.

Services will be at 2 p.m. Saturday in the Steyers Funeral Home, 500 Linden St., Bethlehem. Interment will be in Memorial Park Cemetery, Bethlehem. Calling hours will be Friday evening.

Mrs. Carrie McGee, Jim Thorpe, died Monday night in her home following a lengthy illness.

A native of Lehighton, she was a daughter of the late Mathias and Ricka Langkammer.

She was a member of St. Mark's Episcopal Church, Jim Thorpe, and the Daughters of St. Marks, and the Railway Conductors Brotherhood Auxiliary.

Her husband, Harold McGee, died two years ago.

Surviving are a son, Charles, Jim Thorpe, three daughters, Mrs. Ruth Mulligan and Mrs. Ellen Christopher, Jim Thorpe; Miss Jane McGee, Philadelphia; four grandchildren and nine great-grandchildren.

Services will be at 2 p.m. tomorrow in the Melber Funeral Home, 524 Center St., Jim Thorpe. Calling hours will be this evening from 7 to 9 o'clock.

MEMORIAL TO McCARTHY—A bronze bust of the late Sen. Joseph McCarthy is unveiled by a Marine in the courthouse at Appleton, Wis., during ceremonies at the second anniversary of his death. At right is his widow, Mrs. Jean McCarthy.

ROYAL ROMANCE—Set to follow the lead of her brother, Prince Akihito, in marrying a commoner, Japan's Princess Suga, 20, is shown with her fiance. Hisanaga Shimazu, 25, looking at a photo album at the Imperial Palace in Tokyo. Emperor Hirohito's youngest daughter and Shimazu, a banker, will exchange betrothal gifts in the "Nosai-no-gi" ceremony May 15.

OFF TO NORWAY—Francis E. Maher, mail carrier in St. Louis, Mo., is shown as he left New York by ship for Oslo, at the invitation of the Norwegian government. He will spend two weeks delivering mail with a Oslo postal employe, demonstrating how U.S. carriers use three-wheeled vehicles to lighten the load.

SNAKES IN LOCKER

CHICAGO (UPI)—An unidentified woman declined to use a storage locker at a Chicago elevated station. Inside the locker attendants found five garter snakes up to two feet in length.

WHAT—NO APES?

MEMPHIS, Tenn. (UPI)—The Memphis Humane Shelter's April inventory showed inspectors picked up: 1,934 dogs, 301 cats, four foxes, seven rats, two possums, one squirrel, two rabbits, four fowl, one horse, one lion and a steer.

MARRIAGE NEWS

ARLENE JONES-HAROLD DOLL; MISS BECK-KENNETH SWARTZ

Miss Arlene Jones, daughter of Mr. and Mrs. Edward G. Jones Sr., S. Fifth St., will become the bride of Willard Doll, son of Mr. and Mrs. Harold Doll, Lehighton R. 4, at 3 p.m., Saturday in Zion United Church of Christ.

The Rev. Alton M. Leister, pastor, will perform the double ring ceremony.

Robert Benner, Lehighton, will offer vocal selections. Organist will be Paul Reichard, Lehighton.

The bride, to be given in marriage by her father, will wear a white lace ballerina length gown with a round neckline and three-quarter length sleeves. She will have a crown headpiece with a shoulder length veil, and carry a bouquet of white carnations.

Mrs. Barbara Leslie, Lehighton, will be matron of honor. She will wear a blue chiffon ballerina length dress with a white hat, and will carry a bouquet of pink carnations.

Bridesmaids will be Mrs. Nancy Weidman, Coply and Miss Nancy Arner, Lehighton R. 3. They will wear orchid chiffon dresses with white hats and will carry bouquets of yellow carnations.

Wendy Bausman, Lehighton R. 1, will be flower girl. She will wear a pink and white taffeta dress and carry pink carnations. Ring-bearer will be Kevin Bausman, Lehighton R. 1.

Stephen Tkach, Lehighton, will be best man. Ushers will be Woodrow Weidman, Coplay and Walter Beltz, Palmerton.

A reception will be held at 6:30 p.m. at the Packerton Welfare Building. The couple will reside in Levittown.

Fair tonight. Tomorrow's temperatures in high 70s.

QUAKE SETS WORLD ALERT!

A severe earthquake, apparently centered in the eastern reaches of Siberia, set off a "precautionary" tidal wave alert in Hawaii today.

The quake was recorded as a strong one on seismographs around the world.

It registered a magnitude of 7 on the Richter scale of 10 on the Fordham seismograph in New York.

The University of California at Berkeley set it at 7.5.

The shock was strong enough to put the instruments of the San Domenico Observatory in Prato, Italy, out of action.

First reports put the quake's epicenter near the Kamchatka Peninsula of the Soviet Union, near the Aleutian Islands, touching off the tidal wave alarm.

Later reports put the quake on the Siberian mainland, however, quelling the tidal wave alert.

The quake was recorded at 3:28.14 (EDT) in New York.

It was not immediately determined whether the quake's center was near a populated area but the likelihood was small.

Normally on-the-scene reports of earthquakes in the Soviet Union are extremely slow to break through official Soviet news channels to the outside world.

A quake of 7 or 7.5 on the Richter scale would be quite severe.

The scale, devised in the 1930's by Dr. Charles F. Richter of Cal-Tech, is based on the logarithm of the distance a seismograph needle is deflected by the shock, adjusted for the distance of the instrument from the quake center.

A magnitude 2 earthquake is 10 times greater than a magnitude.

1. A quake rated at 9, believed impossible, would be 100 million times stronger than a magnitude.

The Rev. Joseph Lynch, Fordham seismologist, placed the quake's center about 5,000 miles northwest of New York, or in Siberia.

The alert in Hawaii was sounded by sirens and through the civil defense Conelrad communications system.

LEHIGHTON CONFIDENTIAL

SCHOOL TEACHER HAS HARD TIME—Miss Marie Davis a school teacher returning home (251 S. Second Street) shortly after 4 a.m. in the morning discovered an intruder in her apartment as she was going to sleep. She ran to the police station. A policeman, arriving on the scene, sighted the intruder fleeing. He fired several shots, but the guy was as fast as a Kentucky Derby horse—and escaped.

THEY GOT KICKED OUT OF A 'PARTY'—Somebody got their invitations crossed and Lou Williams (coroner candidate), Charles Elsasser and wife (he's running for County Commissioner), "Preacher" Jones, (commissioner candidate) and Joe Greco (wants to be judge) went dressed in their Sunday best to the Committee Republican meeting at Palmerton's Blue Ridge Country Club. So what happens? They are politely told to leave. Seems the gentlemen aren't the "official" pick. Overheard Williams (of 258 N. Fourth Street) talking to a friend: "I don't know who called me. I got a phone call at 4:30 inviting me. This ain't democracy." . . . Embarrassing, indeed, we say!

ANYBODY DARE GIVE 'EM INSURANCE?—A paratrooper arrives with his pretty wife yesterday afternoon at Lehighton Airport. He is dressed in paratroop boots (those high ones with plenty of shoe lace). Of course, he is on a visit to the one and only Charlie Portz, Lehighton's most colorful paratroop veteran. The visiting paratrooper gave Charlie a parachute. He put it on and looked like a man from outer space. Seems that they wanted to jump over Lehighton yesterday, but although the day was sunny and very pleasant, it was quite windy up in the air and they might have drifted and landed up on a Palmerton or Allentown's housewife's lap in some backyard. The husband might not understand it. It is no secret that the local daredevils are going to put on a big paratroop jump show here. But before they do—they want insurance. Not for themselves. But in case they break somebody's roof by mistake. Are there any local insurance firm bidders (if so, see the Editor)?

HATS OFF TO THE LEHIGHTON POLICE DEPARTMENT—Shortly after midnight Saturday, our police took by surprise several alleged gas thiefs. Two of the boys were only 16 and 17. But we'll name the grown-ups that were caught by police: Marvin Hartranft, 19, of R. 2, and Fred Kemmerer, 19, of Jim Thorpe's Star Route. We didn't mention one fellow because it's his first offense. Police said that they were taking gas from a parked trailer owned by the Breiner Texaco Bulk Plant on East Penn St. . . One was found by a cop lying across the front seat of a car hiding . . . The rest fled and were picked up at home . . . They'll get a hearing in a day or two, and meanwhile all are released in the custody of their parents.

BRIGHT SAYINGS—This newspaper will print all bright sayings said by children here. Iron Street grocer Joseph Semanoff, tattle-tales one of his kids, likes to tell war stories, "but he keeps going all day." One of Joe's sons is named Gene Willard—Gene for Joe's brother who was killed in Saipan, and Willard for his wife's brother who was killed while fighting in Europe.

DEFECTIVE CIGAR—One S. Third Street gentleman, who is retired from Packerton Shops, was offered a 20 cent cigar to watch the Ketucky Derby (over TV). So what happens? Only one side of the cigar burns and he is through with the cigar even before Tomy Lee wins the race. From now on, he will stick to nickel cigars. They last longer.

BIKE RIDERS 'FAIR'

The conditions of Barry Sterling, 15, of 440 N. First St., and William Wittig, 10, of 446 N. First St., is repotred as "fair." They are patients in the Gnaden Huetten Memorial Hospital after driving their bike into the right rear fender of a car driven by Edward Bretz, 235 Coal St.

800 NEGROES PRAY AND FAST FOR RAPED GIRL

By LEON DANIEL
United Press International

TALLAHASSEE, Florida—Some 800 hymn-singing Negro college students began a program of praying and fasting today to tell the world of the rape of a 19-year-old classmate.

The Negro students at Florida A&M University turned out at 6 a.m. today on the campus quadrangle, dressed nearly alike to demonstrate that "people who think alike dress alike."

Four young white men are charged with the rape of the Negro co-ed.

The students planned to pray and fast voluntarily until nationwide attention is focused on the case.

Student President Clifford Taylor told the mass meeting that "no loyal student will attend classes today."

The student rally was called after formal charges of rape were filed Sunday against the four young white men, aged 16 to 24.

If convicted on the charges, the four could be sentenced to death, Florida's maximum penalty for rape.

A police investigator said the four told him they had been drinking and drove through the predominantly Negro section near the university "to scare" students attending a Friday night dance.

Police said the accused rapists found the girl and her date with another Negro couple in a parked car.

The white youths allegedly frightened the two Negro boys away with a .12 gauge shotgun and switch-blade knife.

Then they forced the girl into their car. The other girl broke away and hid in the bushes.

"They took this girl by use of gun and knife into the woods and all had intercourse with her — a couple of them twice," the sheriff said.

An investigator, who asked his name not be used, said the youths admitted raping the girl.

ARTHUR WALKS AROUND

NEW YORK (UPI) — Arthur Godfrey walked wihtout help several times for the first time since his lung cancer operation.

Godfrey's recovery from the five-hour operation Thursday to remove part of his left lung continued satisfactorily, a Columbia-Presbyterian Medical Center spokesman said today.

He is expected to resume his radio-television duties in about three months.

BABY FOR OLYMPIC STARS—Hammer thrower Hal Connolly and his wife, Olga, proudly show off their new son, Mark, in a Santa Monica, Calif., hospital. The youngster weighed in at 11 pounds, 3 ounces. Connolly met the former Olga Fikotova when both competed in the 1956 Olympics in Melbourne, Australia. She was Czechoslovakia's champion discus thrower.

THOUSANDS SEE 'MIRACLE'

NAPLES, (N.Y.J.—A.) — Thousands gathered in the cathedral of Naples today to witness the "Miracle of San Gennaro" — the liquification of the saint's human blood —that has baffled world scientists for 570 years.

Three times each year, a vial of his congealed blood is placed on the altar, locked and sealed.

The faithful pray to their patron saint and, in from 10 minutes to three hours, the blood becomes a pure liquid.

Doctors and scientists from all parts of the world — Catholic, Protestant, Jewish and athiest alike — have been allowed to extract some of the actual blood from the vail and all pronounced it human.

No less than 3,000 tests and investigations have been made but no one has ever been able to explain scientifically the liquification.

Tradition records that San Gennaro (St. January) was born in Naples about 270 A.D., become a Catholic Bishop and was beheaded in 305 A.D. during Roman emperor Diocletian's persecution.

His body was about to be thrown to the lions when a woman stepped from the crowd, retrieved the body and carried it off. The woman, Eusebia, extracted his blood and placed it in vials. In 449, the body and a vial of blood were brought to Naples. Both were veenrated by the faithful.

Just 570 years ago, the first "miracle" came to pass. The faithful were praying before the congealed blood on Sept. 19, when it suddenly began to liquify.

On Dec. 16, 1631, it liquified on a second day. In later years, it liquified on the first Sunday of each May, the anniversary of its arrival in Naples.

Gnaden Huetten Hospital Notes

Admissions and discharges at the Gnaden Huetten Memorial Hospital from Saturday 10 a.m. to Monday noon include the following:

ADMISSIONS
Medical

Francis Beesek, Nesquehoning.
Miss Janet Plesnierski, Jim Thorpe.
John Gavornik, Jim Thorpe
Mrs. Martha Hochstatter, Tamaqua.
Metro Lengyal, Nesquehoning.
Miss Darlene LaRizzio, Nesquehoning.
Mrs. Mary Markovich, Lansford.

WINNIE ARRIVES IN NEW YORK; IKE AWAITS HIM

LONDON (UPI)—Sir Winston Churchill respectfully raised his hat to an "honor guard" of three small boys in sailor suits and then took off today by Comet jet liner for a visit with President Eisenhower in Washington starting tonight.

The boys, children of Lady Christian Hesketh of Northampton, were driven to London Airport by their mother especially so they could see the great man.

As the aged statesman walked slowly towards the BOAC plane he spotted Alexander 8, Robert 7 and John 6 drawn up in a line. Sir Winston smiled and with elaborate care raised his hat. The boys saluted smartly.

Churchill's flight, BA509, arrived in New York at 4:50 p.m.

The visit, at the invitation of the President, was pegged a "social call," but British political sources hoped the sharp-minded political veteran would reassure Eisenhower on British East-West policies.

There have been some fears that Britain planned major changes in its cold war approach to the Russians but British diplomats insist there is no appeasement in mind although they believe concessions to Russia will bring concessions.

This was Churchill's first trip to the United States since June, 1954. He carried with him a box of his favorite cigars.

Churchill will spend three days at the White House and then stay one night at the British Embassy before leaving for New York on his return flight to London.

It was announced by the White House that former President Harry S. Truman declined an invitation from President Eisenhower to have dinner at the White House this week with Sir Winston Churchill.

FOUND IN SHOWER

OSSINING, N.Y. (UPI)—Guards at Sing Sing Prison today found their missing prisoner after an all night search.

He was hiding in a shower stall in one of the old buildings on the prison grounds.

GINGER ROGERS SAFE

NEW YORK (UPI) — A Pan American air lines DC7C en route to London with actress Ginger Rogers and 38 other passengers, aboard, developed engine trouble over the Atlantic Sunday and returned to Frobisher Bay, Canada.

NBA TAKES AWAY SUGAR'S CHAMPION BOXING TITLE!

MULLENS, W. Va. (UPI)—The National Boxing Association today vacated Sugar Ray Robinson's world middleweight championship because of his failure to defend it as required, NBA President Dr. Ward Wylie announced this afternoon.

"The National Boxing Assn. is withdrawing its recognition from Robinson as champion," Dr. Wylie said.

Dr. Wylie then announced that the NBA would recognize as new champion the winner of a fight between former title-holders Carmen Basilio of Chittenango, N. Y., and Gene Fullmer of West Jordan, Utah.

The NBA president added that the Basilio - Fullmer victor would be required to defend within 90 days against a challenger selected by the NBA.

He said that the challenger might be Spider Webb of Chicago, who is rated third among 160-pound contenders.

Robinson, who was 39 years old Sunday, hasn't defended since he captured the title from Basilio March 25, 1958, despite the NBA rule which requires the champion of each division to defend at least once every six months.

FIRST NATIONAL PHARMACY

AROUND THE TOWN

The sixth annual fire school of the Carbon County Volunteer Firemen's Association will be held on Sept. 12 and 13 at Baer Memorial Park, it was announced by the executive committee of the group.

Two separate courses will be offered to the volunteer firemen this year.

One course will be devoted exclusively to pumps. It is a new course. The other course will comprise classes in fire fighting, Civil Defense and rescue and first aid will be included.

The classes will be held from 9:30 to 11:30 a.m. and from 12:45 to 2:45 p.m. and from 3 to 5 p.m. each day.

Corvin Solt, Lehighton fire chief and George Samok, Palmerton fire chief who are the directors of the school, have been authorized to secure the necessary equipment and instructors for the school.

Fire companies who will take part in the schools are requested to have their men register with their respective fire chiefs prior to the start of the school. Late comers will be registered at 7 p.m. Friday, Sept. 11 in the Lehigh Fire Company No. 1.

More than 100 women attended the spring conference of District 9, Pennsylvania Federation of Business and Professional Women's Clubs, held yesterday in the Lehighton American Legion home.

Members of the Lehighton BPW Club were hosts for the affair.

The program opened with a worship service led by Mrs. Doris Leister and Mrs. Loretta Lusch, club president. The service was dedicated in memory of Mrs. Mae F. Meyers, late president of the Nazareth BPW Club.

A vocal solo was presented by Mrs. Violet Arner, a member of the Lehighton club. Selections were also sung by a group of Lehighton High School girls.

Officers elected during the business session were Mrs. Helen Schuylkill Haven, district director; Miss Lorraine Kratzer, Nazareth, assistant director; Mrs. Naomi Sweitzer, Reading, recording secretary; Mrs. Jean Runkle, secretary and Miss Ethel Bausum, Pottsville, treasurer.

They were installed by Mrs. Grace Elliott, Johnstown, state first vice president.

Reports were presented by each of the 21 clubs represented at the conference.

Members of the Lehighton Club presented a skit written by Mrs. Lusch. Participating were Mrs. Arlene Tweedle, Mrs. Rose Leibowitz, Mrs. Ruth Reid, Miss Evelyn Gabert, Mrs. Myrtle Stewart, Mrs. LaTour Koegel, Mrs. Helene Schultz and Mrs. Alyce Setar.

Initiation, memorial and a Mother's Day program were held yesterday by the Lehighton Eagles Auxiliary in the lodge with more than 50 members and guests attending.

Nine new members were initiated into the membership, with the Apple Team winning the membership drive conducted the past two months.

Memorial services were held for the late Hilda Strom, a member of the auxiliary.

Flowers were presented to each member present, with the table settings in accordance with Mother's Day.

Mrs. Lulu Arner was the oldest mother present, with Mrs. Catherine Bennett the mother with the most children. Mrs. Ruth Ann Drombrosky was the youngest mother.

Bertha Moyer presided in the absence of Cora Snyder, president of the auxiliary who is ill.

Among the guests present were Mrs. Eleanor Schradley, state past madam president, Pottsville; and Mr. and Mrs. Ernest Ridgway, Stroudsburg. Mr. Ridgway is state president of the Eagles.

Visitors from Philadelphia, Pottsville, Bethlehem and Easton were also present.

Two Lehighton brothers, William Frey, 21, and Jacob Frey, 19, were lodged in the Carbon County Jail on charges of burglary and larceny.

William, father of two children, S. Fifth St., and his brother of Lehighton R. 2, were arrested by state police yesterday at Penn Forest Township in a junk yard owned by Ralph Messinger, Northampton.

The Police were notified by Cy Behrens, Penn Forest Township, who rents a building and lot to Messinger, that he had witnessed the two men removing scrap from the yard and saw them placing it in their car trunk.

Behrens, said he drove to the junk yard with his truck and blocked the Frey car from leaving the premises.

In the trunk of the car were rolls of copper wire, several sections of television antennas and aluminum pots and pans. The loot was valued at $25 police stated.

A hearing was held today for the two men in the office of the Justice of the Peace Robert Semmel, Lehighton R. 1.

Rehearsal of Treble Clef will be held at 7:30 p.m. today in the home of Viola Fritzinger, the Heights, followed by a business meeting. A social session will be held after the meeting in the home of Mrs. Anna Buss, Alum St.

The Lehighton Democratic Booster Club will meet at 7:30 tonight in the Lehighton AmVets Post. All members are requested to take game awards. Lunch will be served.

A party for the junior music students of Mrs. James Foley, was held in her home in the Heights.

Two students were awarded prizes for their fine piano work. Joanne Hill was presented a collection of piano pieces for having the least number of mistakes. Melanie Kistler won the second place award in this category. She also won the memory award for having memorized 50 pages of music.

Hostesses for the party were Joanne Hill, Linda Hagenbuch, Melanie Kistler and Debbie Zuber.

The intermediate music students will hold their party May 9 in the home of Mrs. Foley.

Fourteen employees at the Army Signal Corps Depot in Tobyhanna shared a total of $615 in awards.

The awards were for money-saving ideas estimated to save $5364 annually, superior work records and special acts of service. Presentation was made by Depot Commander Col. Clifford A. Poultre.

Winner of the largest award, $200, was Daniel Bloom Jr. of Kingston, a management analyst in the Supply Management Division. He was cited for his "exceptional ability and outstanding work performance" over a two-year period.

Leo Zarnosky, Olyphant, received $100 for an idea that will eliminate a control file and speed the processing of Army shipping documents. Estimated yearly savings were $2945.

A new supply action card that gives instant information on stock levels and prices in the Depot Property Offices was worth $50 to its inventor, Edward Occhipinti of Dunmore.

Robert Spiotto, Scranton, received $40 for his idea to establish a numerical system for plugboards used to wire the electrical accounting machines in the System's Engineering Office.

Other suggestion winners were: Victor Malinowski, Scranton, $30; Arthur Frishie, Lake Ariel, $10; and William Gilbert, Olyphant, $10.

Seven employees received $25 each for special acts of service. They were credited with "untiring effort and superior performance" in converting Signal Corps stock numbers to Federal stock numbers on approximately 150,000 locater cards.

The cited workers, all employed in the storage division, were: Ernest Antonelli, Freeland; Biasio Azzeroni, Duryea; Edward Beckett, Lehighton; Dino Canarini, Wilkes-Barre; Joseph Kwiatkowski, Taylor; Joseph Ratchko, Hazleton; adn James Spitale, Pocono Pines.

SKINDIVER BADLY BITTEN BY TIGER SHARK

PANAMA CITY, Fla. (UPI)—A young skindiver was attacked and badly bitten by a large tiger shark, apparently attracted to the scene by blood in the water.

Ernie Grover, 21, a student at nearby Gulfcoast Community College, was bitten on the back, legs and hands as he grappled with the shark.

He was rescued by a passing fishing vessel and rushed to a hospital.

Doctors later said his condition was good.

Grover was spearfishing with a group about one mile off Panama City beach when the shark struck.

Science Shrinks Piles New Way Without Surgery Stops Itch—Relieves Pain

New York, N. Y. (Special) — For the first time science has found a new healing substance with the astonishing ability to shrink hemorrhoids, stop itching, and relieve pain — without surgery.

In case after case, while gently relieving pain, actual reduction (shrinkage) took place.

Most amazing of all—results were so thorough that sufferers made astonishing statements like "Piles have ceased to be a problem!"

The secret is a new healing substance (Bio-Dyne*)—discovery of a world-famous research institute.

This substance is now available in *suppository or ointment form* under the name *Preparation H.®* At your druggist. Money back guarantee.

STOLEN CHIMP FOUND—Michael Blanchet, 4, son of pet shop owner Norman Blanchet, of Oakland, Calif., feeds year-old chimp Lulu from the feeding bottle which helped establish her identity after she was stolen. Valued at $1,250, Lulu was spotted in a Glendale, Calif., shop. Comparison of Lulu's prints with those from the bottle proved she belonged to Blanchet. The shopkeeper said a stranger sold Lulu to him.

Merrily He Goes Along!

NO WONDER Marvin Miller wears a great, big smile! As Michael Anthony, secretary to the fictitious, fabulously wealthy John Beresford Tipton of CBS-TV's "The Millionaire," he gives away a million-dollar check every week of the year. Since the series' debut in January, 1955, Miller has handed out more than 220 million dollars to amazed beneficiaries of Tipton's unlimited billions.

GETS JORDAN POST—Hazza Majali (above), 42, has been named Premier of Jordan, in Amman, to succeed Samir el Rifai, who resigned for reasons of health. Majali's most important task will be to maintain Jordan's sovereignty and protect it from danger.

NEW DRUGS PRODUCE NEW DANGEROUS DEATH GERMS!

ATLANTIC CITY, N. J. (UPI)—A Harvard University professor warned today that the new anti-germ drugs have defeated many serious diseases but have given rise to some new infections as well as giving old germs new destructive power.

Dr. Maxwell Finland, associate professor of medicine, told the association of American Physicians that more intensive research was needed to halt the rise of infection.

Finland said that a study of the treatment of 10,000 germ-infected patients at Boston City Hospital since 1935 showed that originally, diseases killed half of the patients while now, with the use of new drugs, only 30 per cent die.

On the other hand, Finland said the study showed a new activity of germs normally harmless and found in the human bowels and other organs.

These germs, he said, are the cause of an increasing number of deaths while in 1935 their relations to fatalities were virtually unknown.

OLD DAD?

HOLLYWOOD — Fred Astaire, on accepting a TV Emmy for "most outstanding single program of the year," declared today:

"This is a great night for old dad."

Dinah Shore, another "old-timer", shared the award.

CHICAGO (UPI)—The Animal Welfare League solved the mystery of Chicago's drunken pigeons today.

The league discovered the birds have been hanging around street corners drinking anti-freeze drained from cars.

STOLEN BABY BACK—Mitchell Johnson, 18 months, whose mother is a psychologist at the State Girls' Welfare Home in Albuquerque, N. M., sits in the Dallas, Tex., police station after the child was recovered. Police arrested Betty Smithey, 16, who ran away from the institution, taking the baby with her because he was crying.

UNEXPECTED ROLE — French actress Mylene Demongeot comes ashore, thoroughly drenched, after a dip in the water with her clothes on at the beach at Cannes, France. Apparently, Mylene did not have the bathing suit with her, but she took the plunge anyway. Miss Demongeot is one of many stars on hand for the Cannes Film Festival.

LATEST NEWS AND PHOTOS—A NEWSPAPER KEEPING ABREAST WITH OUR JET AGE

The Weather

Beautiful weather tomorrow — even sunnier than today. In some parts, scattered showers tonight.

JET SPEEDS 9,000 MI. NON-STOP

WASHINGTON (UPI)—A B-52G jet bomber, newest H-bomb and missile carrier of the Strategic Air Command, has made a record non-stop flight of more than 9,000 miles without refueling.

The spectacular performance took place last Dec. 15, but was disclosed only today.

It is the longest flight known to have been made by a jet bomber without refueling.

Criss-crossing the U. S. at 500 miles an hour for 18 hours, the new giant of the skies gave a striking demonstration of its potential as an "airborne alert" aircraft.

A true intercontinenal jet, able to reach any Russia target from North America, the B-52G proved its range without aerial refueling to be about 3,000 miles greater than that of its predecessor, the B-52.

It flew a course from Wichita, Kan., over Texas, California, Washington, back to Texas thence to Minnesota, Virginia, Mississippi, and home to Wichita.

It landed with ample reserve fuel in the tanks of its 185-foot wings.

SAC received its first B-52G bomber last February. Described as the first "missile-platform bomber," the plane will carry two Hound-Dog missiles under its wings and a heavy load of nuclear bombs.

Discontinue 60% Of Passenger Trains Here!

Effective at midnight on Monday May 11, the Lehigh Valley Railroad will operate the following passenger trains only. The Interstate Commerce Commission yesterday gave the company permission to discontinue 60 per cent of its passenger service.

Train No. 8 (The Maple Leaf) eastward daily from Buffalo to New York arriving in Lehighton at 5:56 a.m. (DST).

Train No. 28, (The John Wilkes) eastward daily except Sundays from Lehighton to New York, leaving at 9:33 a.m. (DST).

Train No. 29 (The John Wilkes) westward daily except Sundays from New York to Lehighton, arriving at 8:25 p.m. (DST).

Train No. 7 (The Maple Leaf) westward daily from New York to Buffalo arriving in Lehighton at 11 p.m. (DST).

Train No. 39 (The John Wilkes) westward from New York to Lehighton holidays only, arriving in Lehighton at 9:05 p.m. (DST).

The seven trains that will be dropped:

No. 9, westward daily from New York to Buffalo, arriving at Lehighton 11:42 a.m. (DST).

No. 11, westward daily from New York to Buffalo, arriving at Lehighton 3:02 a.m. (DST).

No. 24, eastward, daily except Saturdays and Sundays from Lehighton to New York, 7:22 a.m. (DST).

No. 10, eastward from Buffalo to New York, arriving daily in Lehighton at 3:32 p.m. (DST).

No. 4, eastward from Buffalo to New York daily, arriving in Lehighton at 4:23 a.m. (DST).

No. 12, eastward from Buffalo to New York, (Sundays only) arriving at Lehighton, 5:26 p.m. (DST).

No. 23 westward from New York to Lehighton, daily except Saturdays and Sundays, arriving at 6:55 p.m. (DST).

The famed Black Diamond, pride of the LVRR for the past 63 years, will be making its last run next Monday.

The Lehigh Valley is currently asking the Pennsylvania Public Service Commission for permission to abandon an interstate service between Lehighton and Hazleton.

LONDON COURT ORDERS WIFE: PAY FOR YOUR DIVORCE!

LONDON, England (UPI) — A court here ruled Wednesday that Leonora Millington, who recently won a $15,000 TV-quiz prize, must pay the costs of a divorce from her college - teacher husband, who earns $3,360 a year.

Judge John Bladgen was unmoved by a comment from Mrs. Millington's attorney, who said the decision means "chivalry is dead."

"I have difficulty seeing how women can claim to be on a basis of complete equality with men and at the same time invoke the principles of chivalry when their pocket, or rather their handbag, is affected," Bladgen said.

ARTIST SHOWS UP WITH 2-TON RHINOCEROS; THROW OLIVE PITS

PARIS (UPI) — Artist Salvador Dali showed up at a smart Paris charity ball with a two - ton rhinoceros.

He was booed and bombarded with olive pits for his trouble.

Members of the fashionable crowd became irritated when the surrealist painter gave a wordy lecture about the merits of rhinoceros horn.

The artist climbed a nearby derrick truck and started delivering a long "Pholosophico-pragmatic" lecture.

There were whistles and jeers from the crowd. Demonstrators in evening dress began throwing olive pits and wilted bouquets of roses in the direction of Dali.

Dali brushed off the petals and pits with a languid hand and continued lecturing.

MIDGETS WANT JOBS

HOLLYWOOD (UPI) — The Little People of America, an international organization of midgets, appealed to the Pentagon Tuesday night to allow midgets to aid the U.S. satellite program by riding in the rockets.

SHE'S THE TOPS—Judy Fay Burd, 15, of Knoxville, Tenn., shows her lime-flavored meringue pie, which won top honors in the "Junior Cook of the Year" contest in Cincinnati, Ohio. The frothy delight became worth $5,000 and a trip to Europe.

HIGHEST PRICE EVER PAID TO LIVING ARTIST

LONDON (UPI)—A nude painting by Pablo Picasso was sold at auction here for $154,000 — highest known price ever paid for a picture by a living artist.

The 1905 painting by the Spanish-born artist, "La Belle Hollandaise," was bought by the Queensland National Art Gallery, Brisbane, Australia, at the Sotheby showrooms here.

Sotheby spokesman said the figure was "a world record for a Picasso."

The painting was once sold for about $90 by the friend of Picasso to whom it was dedicated, Paco Durio. He was reported to have sold it to satisfy some debts.

Picasso painted the picture of the husky Dutch nude in Schoorldam, The Netherlands.

David J. Muir, agent for an Australian art gallery who paid the record sum of $154,000, admitted tonight:

"When the bidding reached 30,000 pounds ($84,000) on the Picasso, I began to quiver. And when it mounted to 50,000 pounds ($140,000), I was really sweating. But I was determined to get the painting at any cost."

Londoners hoped that their city would now be the "world's art center."

LIVE HAND GRENADE IS FOUND IN POST OFFICE

WASHINGTON (UPI) — A live hand grenade wrapped in an old New York City newspaper was found by startled clerks today as they sorted mail from incoming trains at the main post office.

A clerk picked it off the conveyor belt and placed it on a desk in a well-isolated spot until an Army demolition expert arrived and carted it away.

Postal inspectors were mystified and Postmaster Carlton Beall said it would be "quite a problem trying to find out" where the grenade came from.

He said it was dumped out of a sack containing parcel post packages, but there were no broken packages in the sack that it could have come out of.

There were no wrappings of any kind except the old newspaper—"not the type of thing" a postal employe would put in a mail sack.

Beall said the mail being sorted had arrived by train from New York and Philadelphia.

He added that the grenade could have been tossed into the bag at Union Station here, or at postal stations in either of the other two cities, or even aboard the train.

The grenade, described as "a fragmentation grenade in good condition," still had the firing pin intact.

Officers at Andrews said they had little doubt the grenade was "live" but that it was considered "safe" since the firing pin had not been pulled.

Deaf And Dumb People Demand Television Reform

LONDON (AP) — Britain's deaf and dumb today demanded a little consideration from television.

An organization known as "The Campaign for Television for the Deaf and Dumb" sent Prime Minister Macmillan a resolution suggesting:

1. The most important bulletin of each day's newscast should be translated into sign language.

2. One play a month should have an interpreter wig-wagging the lines to those who cannot hear.

3. At least one sports event per month should be translated into hands talk.

4. A televised church service each month with the pastor's sermon made understandable to the deaf.

British viewers, including those who cannot hear or talk, pay a license fee of three pounds ($8.40) a year.

GOD WAS THERE

This morning I put on my clothes,
Then went outside and saw a rose.
'Twas formed and painted with such care,
I knew that last night God was there.

Luther Markin

IT HAPPENED TODAY

In 1833, composer Johannes Brahms was born.

In 1840, the Russian composer Tchaikovsky was born.

In 1915, the Cunard liner Lusitania was torpedoed off Ireland with a loss of 1,198 lives.

In 1945, representatives of the German high command signed an unconditional surrender at Gen. Eisenhower's headquarters at Rheims, France, on the 2,075th day of the bloodiest war in history.

20 CENTS TO PHONE THE MOON?

WASHINGTON (UPI) — A scientist said that radio-relay satellites might soon make it possible to telephone any point in the world for 20 cents.

Dr. Lloyd V. Berkner, president of the International Scientific Radio Union, told a scientific meeting here that one satellite orbiting 22,700 miles above the earth could relay 2 million telephone messages a year.

Berkner said the telephone company charges 10 cents "per local message unit." He added another 10 cents for the satellite's relay services and arrived at a cost of 20 cents for "talking to any point you wish."

Gnaden Huetten Hospital Notes

Admissions and discharges at the Gnaden Huetten Memorial Hospital from Wednesday noon to Thursday noon include the following:

ADMISSIONS

Medical

John Lapp, 231 N. First St.

Mrs. Emma Altemose, Saylorsburg

Mrs. Elizabeth Moser, Jim Thorpe

Surgical

John Keiser, Lehighton R. 3

Mrs. Betty Nenow, Lehighton R. 3

Eugene Leindecker, Bowmanstown

DISCHARGES

Mrs. Betty Lou Kotsch, Lehighton

Mrs. Margaret Miller, Jim Thorpe

CRAZY MAN, CRAZY!

PRINCETON, England (UPI)—Council Clerk Reginald Alp received a letter Tuesday which lacked sixpence postage. He paid it.

Inside the envelope was a sixpenny stamp and a note from the writer apologizing for forgetting to put postage on an earlier letter.

MOTHER'S DAY PRIVILEGE

OSSINING, N.Y. (UPI) — Sing Sing Prison inmates have a new privilege for Mother's Day.

Warden Wilfred L. Danno announced that prisoners may send Mother's Day cards to their wives if they have children.

In previous years inmates could send cards only to their mothers.

A BROKEN HEART

CHICAGO (UPI) — The pastor of Our Lady of The Angels Roman Catholic Parish, where 91 children and three nuns perished in a school fire last December, was near death today from a "broken heart."

The Right Rev. Msgr. Joseph F. Cussen, 66, suffered a stroke Monday. Officials at St. Elizabeth Hospital said his condition was grave.

The priest has been in poor health since the tragic blaze hit Our Lady of The Angels School last Dec. 1.

"It broke his heart," a friend said. "He can't put it out of his mind.

"He felt the loss of those children as much as if they were his very own. To him they were just that."

Friends said that since the fire he had been working doubly hard on construction of a new school.

He also had visited the families of the victims frequently and said "many, many Masses" for the children.

AROUND THE TOWN

Any Business and Professional Women's Club members who wish to attend the Allentown B.P.W. Birthday dinner on Wednesday evening, May 13, please contact Mrs. Loretta Lusch today, for reservations and transportation.

Donald R. Strausburger, Weissport, will be installed as president of the Lehighton-Weissport Parent-Teacher Assn. during a meeting at 7:30 tonight in Lehighton High School auditorium.

Other officers who will be installed by R.W. Hine, president of the Carbon County Council of Parent-Teacher Associations, are Mrs. Fred Young, vice president; Mrs. Durelle Roth, secretary; John Brown, treasurer; Mrs. Robert Feller, parliamentarian and Mrs. Walter Niehoff, historian.

Delegates to Carbon County Council who will be installed are Mrs. Young, Mrs. Marie Hager, Mrs. Gerald Wentz, Harvey Stout and William Levis.

The program for the evening will include a discussion on two motion pictures which will be shown to the group. Leading the discussion will be Mrs. Gordon Merluzzi, president, and Strausburger.

During the business session the annual report of the president and all committee chairmen will be presented. Following the meeting a social hour will be held in the home economics room.

Bright's Mother's Day program which will be held Saturday, will be telecast by film at 12 noon Saturday, May 10, over Channel 22, WDAU-TV, Scranton.

It was announced all TV-Cable companies will carry the program.

The 42nd annual spring music festival of Lehighton High School will be held at 8 p.m. tomorrow in the school auditorium.

Approximately 200 pupils from five musical groups will participate in the program.

The first part of the program will be presented by the concert band and orchestra, directed by Robert L Balliet, instrumental music director at the high school.

Rodney Grimm will direct the choral program to be presented by the girls choir, girls chorus and the school's mixed chorus.

Soloists will be Ritchie Ann Arner, pianist; Allen Green, accordionist, and George Donald, baritone horn.

Accompanists will be Miss Arner and Miss Elspeth Foley. Alan Poe will be narrator for one of the orchestra selections.

Instrumental selections will include "Fort Bragg March," Light Cavalry Overture" and "Burst of Flame", by the band, and "Mexican Sunday", "Little Bop Riding Hood" and "Dancing in the Dark", by the orchestra.

The girls choir will sing "Let There Be Music", "Love and Marriage" and "Red Sails in the Sunset", in addition to three other selections

The girls chorus will sing "Seek Ye the Lord", "I Love Geography" and "A Perfect Day."

The program will conclude with six selections by the mixed chorus. Included will be "The Happy Wanderer", "People Will Say We're in Love" and "With a Little Bit of Luck".

Following the program a dance will be held in the high school gymnasium.

Wilbur Warner was named as secretary of the Northeast District Elks, with Hayden F. Evans past exalted ruler of the Tamaqua Elks installed as president.

Other officers who wil serve are J. E. Cunningham, Scranton vice president and Joseph Dunleavy, also of Scranton, treasurer.

Evans announced the appointment of Gordon Merluzzi of town as sergeant at arms.

Mrs. Mary Davis and daughter, Margaret, and George Simon, motored to Washington to visit Airman George Lajack, who is a patient in the Andrews Air Force Base.

The Carbon County Tavern Association met this afternoon at Hajack's Horseshoe Bar, Summit Hill.

It was announced that all licensees who ae planning to attend the annual banquet of the association on Sunday, May 21, in the Summit Hill Rod and Gun Club should contact Mrs. Emma Herman, Jim Thorpe or Eugene Durigan, Mahoning Valley.

The Lehighton Athletic Booster Club will meet next Wednesday night at the Am-Vets Home to nominate and elect officers for the new fiscal year.

The Carbon County Commissioners authorized payment of $9,826.87 for the purchase of the former Hoovan Building, susquehanna St., Jim Thorpe.

The three-story structure will be used as an annex to the courthouse. The county superintendent of schools office will be moved to the building when renovations are completed.

The money represented the cost of the building less credits, transfer fees and property taxes owned by the former owner this year. The full purchase price was $10-000.

The 165th Military Police Battalion PANG, with headquarters in Lehighton, were granted an annual -100 appropriation by the Carbon County Commissioners.

Tonight in the Carbon County Courthouse, a coroner's inquest will be held in the deaths of a Hazleton woman and her nephew who were killed on Route 443, west of Lehighton, March 23.

Jack Ring, Jim Thorpe, Carbon County deputy coroner, said the inquiry wil cover the crash of an automobile and a milk truck that resulted in the deaths of the two persons, Mrs. Marie Yanuzzi, 52 and her nephew, Michael Yanuzzi, 22.

The two victims were in an automobile that collided head-on with a truck driven by James Reifinger, 27 of Sunnytown, Montgomery County. Injured in the crash were Reifinger, his helper, Stewart Keller, 33, of Souderton R. 1 and Miss Ann Yanuzzi, daughter of the dead woman.

Dee Anewalt, 14-month old daughter of Mr. and Mrs. James Anewalt, White St., Weissport, was treated at the Gnaden Huetten Memorial Hospial for cuts of the forehead, which she received in a fall.

Mrs. Martha Bowman, Lehighton R. 3, was also treated at the hospital for a cut of the index finger on her right hand.

Treatment was given Mrs. Louella Burns, Lehighton R. 4, for an injury to the right ankle received in a fall.

School taxes in Lehighton, Weissport, Packerton and Mahoning Townships will be increased for the 1959-60 school term under the new Lehighton Area Union School District budget that was tentatively adopted at a meeting Tuesday night.

Under the budget, the tax rate will be based on a 17-mill levy and a $12 per capita tax.

The rate is a one mill increase for the Lehighton-Weissport area and a four mill increase for Mahoning Township. Packerton's millage will remain the same as last year.

The $12 per capita tax will mean a $7 increase in Packerton and $2 in Mahoning Township. The per capita tax in the Lehighton-Weissport area last year was $12.

The four committees will comprise the new union district which becomes effective on July 1.

Members of the Lehighton Fire Department battled a blaze which extensively damaged a car driven by George Wachila of Ashley, on the Northeast Extension of the Pennsylvania Turnpike yesterday.

According to Wachila, a rear tire blew out and when he stopped, flames were shooting from underneath the car.

The firemen brought the blaze under control after battling it for 20 minutes.

SHOP AT YOUR LOCAL MERCHANTS

DAILY HOROSCOPE

If you are born today—You will be very wild in their teens, but will settle down when you reach 20. Persons born today will be very carefree and will live dangerously.

If you were born between Dec. 22 and Jan. 20—Limit discussions with young folks and loved ones tomorrow morning. Publicize your ambitions. You can get what you want.

Gypsy Says. . .

Two young men from the area will shortly be divorced and marry the two girls they are presently dating. There will probably be a double wedding. In one couple, I see two different nationalities.

A young girl who owns and drives a convertible is advised to drive more carefully in the future—especially near Jim Thorpe.

WIDOWS AND WIDOWERS

NEW YORK (UPI) — It may not be pure sentiment when a husband says he wants to die before his wife does.

Under inheritance tax laws, if the lady dies first there's an added tax of roughly $9,500 on a gross estate of $120,000. Take a really big estate of, say, $500,000 — the husband pays an added $78,000 if his wife dies first.

PHONE MANNERS TERRIBLE

By GAY PAULEY
UPI Women's Editor

NEW YORK—A secretary in our office came up to my desk with fire in her eye.

"Why don't you do a column about telephone manners," she said. "Or, maybe I should say, the lack of them."

"Putting a telephone receiver in the hands of a human being is like putting him behind the wheel of an automobile," she charged on.

"All bad traits emerge. The businessman who is soft-spoken, kind and patient when enuountered fale to fare bedomes a bellowing bully over the phone."

Not only is our girl perturbed. So is the Bell System which has put out a tidy little book on etiquette called, "The Voice of Your Business."

So are many of us whose working day is filled with the persistent jangle of that little black instrument. Sometimes we wish Mr. Bell has never invented it.

However, it is a part of our life at office and home. Let us use it with courtesy.

One of my favorite (?) telephone types is the voice that says, "Who's this?" when you answer. Who he heck was he hoping for? Marilyn Monroe?

And there is absolutely no excuse for the ualler who says, "Bet you don't know who this is," playing it hagey when not only do you not know, you also don't dare.

It's also embarrassing to answer the telephone and have the caller say, "This is Kitty," or "Helen" or "Mary." How many Kittys, Helens and Marys we all know and why make it a guessing game trying to figure which one is on the line. My guess inevitably is wrong.

Identification when you call should be a standard operating procedure. The true VIP tells his name and business connection. But not Joe Doakes. His attitude seems to be, "You don't know who I am? Well, my good woman, I suggest you find out."

Then there is the "wheel who has his secretary get you on the telephone and say, "Hold on a minute. Mr. so and so calling." with not even a "please".

OBITUARIES

NEW YORK (UPI)—Myron C. Taylor, 85, former special presidential envoy to the Vatican, died at his home here.

Taylor, a former board chairman of the U.S. Steel Corp., was named by President Franklin D. Roosevelt as his personal representative to the late Pope Pius XII in 1939.

The appointment drew severe criticism from Protestant leaders in this country.

But Taylor retained the post until 1950, serving under President Truman for the last two years of his tenure.

LOS ANGELES (UPI)—George W. Lupton, 88, retired assistant to the vice president of the Santa Fe Railway, died Wednesday.

Harvey H. Leffler, 59, of 148 Wagner St., Fords, N.J., a former resident of Lehighton, died unexpectedly yesterday in his home.

Born in Lehighton, he was a son of the late August and Elizabeth Krum Leffler. His wife died several years ago.

He was employed as a stationary engineer in the Perth Amboy Hospital, Perth Amboy, N.J.

Surviving are a son, Floyd, stationed with the Air Force in France; two daughters, Mrs. Marion Royale, Fords, N.J., and Mrs. Ardella Hoffman, Metchen, N.J., and a brother, Fred A. Leffler, Lehighton.

Services will be at 1:30 p.m. Saturday in the Garrett Funeral Home, S. Third St. Interment will be in the Lehighton Cemetery. The viewing will be tomorrow from 7 to 9 p.m.

No other paint is "good enough" for our home!

They know why Dutch Boy is called "THE 5-Year HOUSE PAINT"

20th Year For Back To The Bible Broadcast

LINCOLN, NEBRASKA—Founder Rev. Theodore H. Epp is ready for the slicing of a cake in celebration of the 20th anniversary of the Back to the Bible Broadcast, an international religious radio program, which emanates from here. May 1st marked the release of the 6603rd consecutive program.

Beginning as a 5-day-a-week program of 15 minutes over a 250-watt station, Back to the Bible now has more than 1,500 releases of 30-minutes each week which can be heard round the world. Studios here are now equipped for stereophonic production. Main speaker of the program and director of the hour, Rev. Epp is assisted by the Rev. G. Christian Weiss, voice of foreign missions.

Music on the broadcast is composed of a mixed choral group and a male quartet. Many of the musicians also assist in office work.

Once a week a choir of 26 school-age youngsters furnishes music for a specially designed youth broadcast. A story for and about teen-agers is presented weekly.

Back to the Bible office operations are conducted in nine branch offices in Canada, Britain, Jamaica, France, Ceylon, the Philippines, Germany, Australia and South Africa. More than half the mail received in the German offices comes from behind the Iron Curtain.

Foreign missionary work falls into four divisions: General promotion of world missions, support for 237 missionaries, channeled through the Broadcast; numerous major missionary projects, such as hospitals, printing presses, trucks, boats, etc., sponsored every year, and the 333 missionary broadcasts released each week in 30 countries, in English, French and German. In 1958 the Broadcast sold, or distributed free of charge, approximately 5,800,000 of gospel literature. Included were four million copies of the monthly publications "Good News Broadcaster" and "Young Ambassador", plus nearly two million copies of books, pamphlets and tracts. Its two book clubs have a circulation of 100,-000 books annually.

The "Monthly Literature Supplement" offered free on the daily broadcast is very popular with Back to the Bible listeners. In 12 months, nearly 800,-000 books were distributed in this way.

Program schedules so you can listen to Back to the Bible Broadcast are available by request from the office here.

Turn Beauty Spotlight On Your Best Features

Angel Skin

MAKE THE MOST of pretty hands! Use lotion to keep skin soft and smooth. See that fingernails are neatly manicured.

By JEANNE D'ARCY

TAKE what you have and make the most of it! It's a good rule for just about everything, including beauty. When it comes to appearance, play up your assets.

Are your eyes heavenly? Do people comment on their color? Do you do the utmost in calling attention to them? You should!

Tricks With Color

Wear colors that emphasize your eyes. Certain shades of blue and green do wonders for the blue-eyed beauty, make her eyes seem larger and more luminous than they really are. Beige and orange are flattering to the brown-eyed girl.

Do you have shapely legs? Does anyone notice them?

They will if you go in for smart shoes, wear sheer stockings with fashionably dark seams.

Is it your waistline that wows them? Do you cover it up in a bag-like dress or do you play it smart and choose styles that focus attention on your tiny waist?

Bouffant dresses that are nipped-in at the waist do the trick. So do sheath styles, provided they're belted in a contrasting color. Belts, in fact, are wonderful for the tiny waist, so invest in a wardrobe of them.

They come in the most heavenly colors, many decorated with jewels and ornaments that fairly shout for attention. And attention is just what you want at the waistline if yours is diminutive and worth noting.

Pretty Hands

How about your hands?

If they're graceful, for goodness' sake make people notice them! Keep nails beautifully manicured. Use lotion so skin will stay smooth and white. Go in for fancy gloves. Wear razzle-dazzle bracelets, too.

It's just a matter of common sense in beauty—or anything else—to make the most of a good thing.

Mr. EDWARD R. MURROW
CBS, New York City

RE 76400

LE 5-4120
Korn

Dear Mr. Murrow:

I called your office yesterday; my purpose was to seek advice: VICE CHANCELLOR DR. BRUNO PITTERMANN, the co-chairman of our Government, will visit the United States in February. He would like to look into -- rather than out of -- American TV.

He has the usual tight schedule (New York: February 17-21), and it seems to me that the only practical thing to do would be to enable him to talk to someone who could help him gain a balanced view of prevailing policies as well as of the more adventurous and exciting aspects of programing.

We have, as you perhaps know, an infant TV network in Austria which is state-run. The impressions which Dr. Pittermann will take home with him are therefore directly relevant to the development of television in our part of Europe. Whatever you could do to help, whatever you might be able to suggest, would be sincerely appreciated.

Thank you for your kind attention. I am

faithfully yours

Alfred M. Korn

IN REPLY REFER TO

ONR:109:JCK
8 July 1959

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, N.Y.

Dear Mr. Murrow:

Thank you for your kind reply of July 1st.

Enclosed please find rough-storyboard-script for the film I discussed in my letter to you.

The indicated transitions and narration are by no means final and any changes, additions or subtractions would be made to satisfy you that the overall picture will be good.

Interior photography on the Gondola, preparation for the flight, exterior and on the site photography to be accomplished at the time of the launch will be important as to what feels right for narration.

The brief historic background will consist of the finest old engravings and art available plus personal film belonging to Prof. Jean Piccard the balloon pioneer who is most enthusiastic about this filmed project.

Enclosed also are three photos, one depicting Strato-Lab in flight, the other two showing the famed scientist-pilot Commander Malcolm Ross who is technical advisor on this film and the late Commander Lee Lewis his partner on many flights whose death two days ago during a testing operation represents a loss to the whole country.

Since many of the details of this film are difficult or too involved to cover in a brief letter, Commander R.J. Mumford technical information officer here at O.N.R. and myself are readily available for discussions here or in New York at your convenience.

To accomplish the narration and to avoid interruption to your schedule we have available O.N.R. offices in London which enables us to cover any point in Europe.

Your consideration is sincerely appreciated by all concerned.

Cordially,

James Koukos

DEPARTMENT OF THE NAVY
OFFICE OF NAVAL RESEARCH
WASHINGTON 25, D. C.

IN REPLY REFER TO

ONR:109:JCK
8 June 1959

Mr. Edward R. Murrow
Pawling, New York

Dear Mr. Murrow:

This office is preparing a film depicting some of the accomplishments of our high altitude research program.

You are probably familiar with our laboratory-equipped gondola carried aloft to heights in excess of 80,000 ft. by means of a polyethylene plastic balloon.

Since this film is in the limited category of a scientific report there are no funds to pay contributors. A maximum of one hour recording time would probably be all that is necessary to accomplish the narration. The definite service of informing the public and the scientific community will be accomplished by this film.

Much of the usable footage will be acquired at the next launching some time in July when among other things a telescopic study of the water vapor content of Venus will be made.

I have a storyboard outline of this film nearly completed and would be most happy to show it to you in New York if you feel this might merit your consideration.

Cordially,

James Koukos

November 10, 1958

Mr. Ed Murrow
CBS
485 Madison Avenue
New York, New York

Dear Ed:

I would like to express my appreciation to you for a fine, stimulating program, "Small World". My family and I have enjoyed it tremendously for the past few weeks.

I too believe it is very important for American reporters to be able to go anywhere in the world, including China, and report their observations to the American people, and vice-versa.

Keep up the good work.

Sincerely yours,

Alex C. Kramer

Kreager

August 27, 1959

Dear Mr. Kreager:

Your letter of August 12th must have been misdirected and has now arrived after Mr. Murrow's departure for Sweden. Since Mr. Murrow will be traveling extensively during the coming months and it may be some time before I have a forwarding address for him, it is rather doubtful that I would be able to get the requested cable from him.

Sincerely yours,

Mr. H. Dewayne Kreager, Director
Department of Commerce & Economic Development
Olympia, Washington

August 12, 1959

Mr. Edward R. Murrow

Pawling, New York

Dear Ed:

On the eve of your world trip, I am reminded of the honor I have to substitute for you on the 50th anniversary of Gamma Mu of Kappa Sigma in mid-November. I don't know anyone I would rather be a substitute for.

In mid-November, from the conversation that you and Lois and I had in New York, you may be in Germany, India, or some place else. Before you leave, why don't you send me a few words that I can couch in terms of a cable from Ed Murrow and read to the assembled brethren in Pullman? I can stage this very nicely, and it will give them a real thrill. All you need to do is give me the idea of what you want to say and tell me where you expect to be at that time, approximately, and I will read it as a direct cable from Ed Murrow.

Please do this before you leave. If you don't, I will make up my own message from Ed Murrow and read it with proper staging, and send it to you after you get back.

I read your feature article in Look in the barber chair in the Athletic Club in Seattle, and enjoyed it. I think you will understand what I mean when I say that it was a great pleasure to me to read that you choose your preferences for your neighbors in Pawling with the taste and discretion I would expect of you.

Warm personal regards,

Sincerely,

Kreag

Kreager, DeWayne

May 20, 1959

Dear Kreag:

It will be good to see you again and I much look forward to meeting Lois. Give me a call when you get to town, so that we can arrange a time.

May 6, 1959

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Ed:

I have a personal favor to ask of you if it is at all possible to work it into your schedule the latter part of May.

I will be in New York from the morning of May 27 through Saturday, May 30. On this trip I expect to have my wife, Lois, with me.

I think it would be very nice for her if she could have an opportunity to meet you. She has been hearing about you for lo these 18 years we have been married, and has seen a lot of Lacey. As far as she is concerned, however, Ed Murrow is just a rumor, although she never misses one of your broadcasts.

With the exception of May 28, on which I have all-day meetings running into the evening, we will be relatively free. I will call you on arrival and perhaps we can get together and hoist one to wish you "bon voyage" on your sabbatical year.

Best personal regards.

Sincerely,

Director

Kreager, H. Dewayne

March 16, 1959

Dear Kreag:

If I last until the 1st of July, I am going to take that year off - haven't the least idea where we are going or what we are going to do, but will certainly be on the Coast some time during August.

I am eager to hear all about our row with the labor organization but, whatever it is, you have, by God, put your finger on the real source of satisfaction to be convinced you are right and willing to take the consequences involved in trying to prove it. In my small experience, the consequences are never as dire as predicted.

As ever yours,

Mr. H. Dewayne Kreager
Director
Department of Commerce &

February 26, 1959

Mr. Edward R. Murrow
485 Madison Avenue
New York City 22, New York

Dear Ed:

TV pages in the newspapers continue to report your proposed sabbatical year.

Lois, my much better half, insists that this is a tragedy. What, she says, is she going to do for a reliable news interpreter. She says you can go if you will arrange for Eric Sevareid to fill your spots.

At least, this is a tribute to both of you from a competent critic.

With the legislature in session, I find I haven't the slightest idea what's happening out here. I seem to be, strangely enough, the first liberal democrat in the history of the state to have taken on the whole labor organization head-on. My situation is less dramatic than your clash with Senator Joe McCarthy but perhaps none the less just. Maybe we can talk about this some time.

It is a satisfaction though, isn't it, Ed, to be convinced that you are right and to be in a position where you are willing to take the consequences to try and prove it? You should know.

Warm personal regards.

Sincerely,

Director

Kreager, H. Dewayne

December 9, 1958

Dear Kreag:

I have not been altogether forgetful about the business of somebody for your exposition. There seems to be a considerable opinion that Frank H. Kingman, Secretary-Treasurer, International Association Affairs and Exposition, 777 Arbor Road, Winston-Salem, North Carolina, would be at least a useful counsellor. I do not know him but thought you might want to get in touch with him directly.

As ever yours,

PERSONAL

Mr. Edward R. Murrow
485 Madison Avenue
New York City 22, New York

Dear Ed:

Lacey probably told you at some stage of the game that I, as a result of one of his "inspirations", am out here creating a Department of Commerce and Economic Development for the state of Washington. Actually, it is a lot of fun, considering that it is a temporary three-year thing as far as I am concerned.

I have to be in New York May 21st to 24th. It has been so long since I have seen you that it would be a pleasure to find you there and be able to fit into your schedule. If you have a moment, let me know if this is possible.

My duties on the "mashed potatoes and green peas" circuit have taken me to Pullman several times. Gamma Mu has a nice gang of kids who still maintain a picture of you top-row in the chapter room. They are hell-bent for a fancy new house and may have already contacted you on this.

Warm personal regards.

Sincerely,

Director

Krinsky, Ben

January 6, 1958

Dear Mr. Krinsky:

I have your letter of December 27th.

I appreciate your suggestion of a subject to be covered in my programs and regret that, like many other interesting ideas, it is impossible to find a place for it at the present time, but we will keep your idea on file.

I am grateful for your interest.

Sincerely yours,

Mr. E. R. Murrow
485 Madison Ave.
New York City

Dear Mr. Murrow;

My brother and I are not very famous people, but in our effort to obtain the world's most honored collection of envelopes and post cards carried on famous ocean airplane flights, we ran into several snags, which will make up quite a nice human interest story.

Checked on the Lindbergh-Hauptman kidnap case.
" several times by the F. B. I.
" by Navy Intellegance regarding Task Force.
" custom house officials.
" Nazi connections with Field Marshall Goering.
" about the Amtorg Trading Co. (the Russian outfit connected with Julius & Ethel Rosenberg on atomic secrets)
" about the bombing at the New York World's Fair.
Nearly picked up a divorce.

These are a few of the highlights in our career, and there are more.

Can you use this in an interview?

Sincerely

Ben Krinsky

The World's Most Honored Collection in the World's Most Honored Institutions.

The U. S. Air Force Academy, Lowery Air Force Base, Denver, Colorado
United Nations
British Museum, London, England
Smithsonian Institute, Washington, D. C.
Nationsl Philatelic Museum, Philadelphia, Pa.
Aeronautical Museum, N. Y. C.
Carnegie Museum, Pittsburg, Pa.
Air Force Historical Foundation, Montgomery, Ala.
St. Louis University, East St. Louis, Ill.
Yale University, New Haven, Conn.
Tufts College, New Bedford, Mass.
U. S. Air Force Museum, Wright Patterson Air Force Base, Ohio
U. S. Air Force Museum, Sampson Air Force Base, Geneva, N. Y.
U. S. Air Force Museum, Lackland Air Force Base, Texas
Cornell University, Ithaca, N. Y.
Holy Cross, Mass.
Notre Dame, Ind.

Each of the above received one of our collections (free of shipping, insurance and any other charges) envelopes and post cards carried on famous ocean flights. This work was started by my brother and myself some 30 years ago. We are not in this business, or any other, we are both workers who have to earn our own livelihood. We have spent a considerable large amount of money for men in our means.

This priceless collection contains every historical trans-oceanic epic and personality from the first non-stop crossing of the Atlantic Ocean in 1919 by Alcock and Brown through all the stages of trans-oceanic flying right up to the present time, including rarities that are the only ones in existence. It is endorsed by the Board of Education the City of New York, the former Commanding General of the U. S. Army Air Force, the library of Congress, Wash.DC. It ties in with the Atom Bomb at Hiroshima, Nakisaki and Bikini, Pres.Eisenhower, Pres. Truman, Pres. Roosevelt, Joint Chiefs of Staff, Gen. Lindbergh, Gen. Curtis Le May, Gen. Twinning, Gen. MacArthur,Gen.Vandenbergh,Gen.Bradley, Gen. Collins, Gen.O'Donnell,Adm. Byrd,Adm. Read (NC4-1919) Strategic Air Command,Royal Air Force, Jets, etc up to the present time.

The U. S. Air Force wants this material for many museums, so far we have sent collections to 4. We have no more funds at present. We would like to place one collection in each state of the U.S. plus one in every base of the U.S.Air Force Our collection is more than a hobby, it is a genuine attempt to place a coherent Transoceanic Flight Collection, fully illustrated with photographs, envelopes or post cards with accompanying text,with institutions that might find it of educational value, In addition to the collection winning top honors too numerous to mention, in a world competion held at the Grand Central Palace, the collection won the highest award in its class. At the N.Y. World's Fair,

(The collection was insured for $35,000.00) where only the outstanding prize winning collections in each field of philately, were invited to exhibit (Competing against many of the world outstanding stamps as shown in Life Magazine). The Airpost Journal, the official publication of the American Air Mail Society said quote, "The outstanding collection in the entire show is the ten frame display of William H. Krinsky, of Brooklyn, N.Y."

British Museum.

29th October, 1954

Sir,

I am directed by the Trustees of the British Museum to convey to you the expression of their best thanks for the Present, mentioned on the other side, which you have been pleased to make to them.

I have the honour to be,

Sir,

Dear Ed,

I am giving this note to my friend, Samuel Charles Fullman, who is in Toronto with CBC. He and his wife (who was at the MoI during the war) have been familiar to me since those years.

Mr Fullman can himself tell you just what he is doing for CBC. I understand he is producing a weekly half-hour commentary on significant news developments -- a TV program.

He is interested in making a change which will bring him to the USA. I know (unless the situation has changed) that you are not responsible for employing CBS staff generally, but I suppose you know those who are. I would like to commend Mr. Fullman warmly. He is experienced, able and a pleasant companion.

He is a Londoner like you and me, only more so.

Look me up when next you visit Washington.
Best wishes,

Frederick

MURRAY HILL 7-3480

March 6, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

This is to bring to your attention the activities of Mr. S. Edwin Piller, a radio engineer, who has been actively engaged in developing and fostering a relatively new technique which he calls "Communicasting". This is a combination of cochannel multi-lateral radio communication and broadcasting. It has the dual purpose of helping specialists who are widely separated geographically interchange information and at the same time educate a listening audience. He and I firmly believe that this concept of disseminating knowledge by multi-lateral radio communication should be extended on a considerably wider scope.

On August 15th, 1958, Mr. Piller was presented an award by Lt. General J. D. O'Connell, the Chief Signal Officer, for his work in the organization, direction and conduct of this communications net. At present he is president of the Single Sideband Amateur Radio Association, a world-wide organization of licensed radio amateurs dedicated to furthering good radio communication techniques. Among its members are such well known radio amateurs as General Curtis LeMay and Herbert Hoover, Jr.

The present operational network which has been in existence since the beginning of 1958 has been primarily concerned with conducting radio forums for the interchange of technical information relating to the electronic arts. At these radio forums, not only do speakers present papers on their specialties, but immediately thereafter calls are received from stations as far away as 400 miles, asking questions and making suggestions and criticisms.

Some time ago, Mr. Piller and I decided that such radio forums should be utilized by researchers, scientists and technologists in other fields, such as medicine, chemistry, physics, biology, as well as the social sciences, whereby more rapid dissemination and interchange of ideas may take place. The urgency of this is well known in the light of the well known time lag that exists between the determination of research data and its publication in journals. Also this radio forum technique for the interchange of ideas would enable researchers and investigators to attend seminars on a considerably more frequent basis than is feasible in travelling long distances to annual or semi-annual conventions.

It is contemplated that such radio forums would be organized amongst college campuses for use by the various departments, either on a graduate or ungraduate level, or both. Hospital staffs in different cities could very well meet on the air for upgrading their proficiency both in the medical sciences and in technologies. By the use of the proposed radio forum systems, a considerable amount of duplication of research might very well be avoided and investigations in progress would receive constructive criticisms and suggestions in order to assist the researcher in reaching his goal.

Mr. Piller and I are in the process of forming a non-profit foundation whose function will be to encourage the wider use of multi-lateral radio communication for science and the humanities. This foundation will perform the requisite organizational work involved in setting up one or more pilot networks as well as obtain proper frequency allocations for the purpose of interchanging and disseminating knowledge.

In view of the fact that you are having such outstanding success with your "SMALL WORLD" television program, which is somewhat analagous in form to the radio forum

network that has been in operation for some time, Mr. Piller and I would like very much to meet with you at an early date to gain the benefit of your advice and counsel since we are sure that our objectives are consonant with your well known attitudes concerning the best use of the radio medium. At that time we should be pleased to give you considerably more details about the operational network that is now in existence and about our purposes in broadening its scope for the benefit of a greater number of students and teachers.

Sincerely yours,

I. Jordan Kurnik

KUP'S COLUMN

KUPCINET

Coast-To-Coast—

THE CHICAGO BEAT: The inside on the **Nathan Leopold** parole: **Gov. Stratton** issued no public statement indicating his stand, but Leopold would not have been paroled unless Stratton had let it be known "through channels" that he had no objections. . . . Even with the governor's tacit approval, the Illinois Parole and Pardon Board vote was 3-2, with **Robert Branson** and **John Bookwalter** voting no and Chairman **Franklin U. Stransky, Joseph G. Carpentier** and **Joseph F. Novotny** voting yes.

Leopold's plan now is to "get lost" as quietly as possible. He hopes to leave Stateville Penitentiary and be in Puerto Rico (where a hospital post is awaiting him) before the public is aware of his release. How the most celebrated convict in the world can escape the press-radio-TV boys is a problem to tax the minds of Leopold, attorney **Elmer Gertz** and **Warden Joe Ragen.**

Faces and Places: Singer **Nick Todd (Pat Boone's** brother) leading the cheers for **Jennie Smith** at the Black Orchid. (But his heart belongs to former Miss America **Marian Ann McKnight,** currently a UCLA student.) . . . **Ben Bentley** of the Stadium huddling at Fritzel's with tuxedo tycoon **Ben Gingiss** about a mass rental deal for the fight writers' annual dinner March 23 at the Bismarck. It'll be strictly formal. (This we gotta see—the fight mob in black tie!) . . . **Mike Gill, Mamie Eisenhower's** nephew, visiting Chicago to buy a Cadillac and then catching his long-time pal, trombone star **Dave Remington,** at Jazz, Ltd.

Comic **Jonathan Winters** ended his Black Orchid stay Saturday night with orchids—the biggest box office in the cafe's history. (Especially remarkable because of the subzero spell and the start of Lent.) . . . The weather cost the **Mary Kaye** Trio, opening at the B. O. Sunday, $5,000. That's the sum they lost when snowbound Indianapolis had to cancel out a one-nighter. . . . Chicago's **Tommy Sands,** checks in next weekend to plug his "Sing, Boy, Sing," opening March 7 at the Loop.

CBS network will originate two musical pickups per week from the Pump Room—9:05 to 9:30 p.m. Wednesdays and 10:30 to 11 p.m. Saturdays. It's a tribute to maestro **David LeWinter.** . . . **Mike Nichols** and **Elaine May,** New York's red-hot comedy team (by way of Chicago), have to delay their Mister Kelly's bow until May 26 because of a TV commitment. They've been signed for a spectacular, starring **Donald O'Connor,** in April. . . . Nichols's wife, singer **Pat Scot,** was farewell-party'd (amid flowing tears) in the Pump Room by Channel 2 after her last In Town Tonight show Friday. She's moving to New York to be with her hubby. . . . Overheard at Shangri-La: "I've heard some awful things about you, honey—and I hope they're all true!"

THE WASHINGTON WHIRL: White House sources report **President Eisenhower** and his economic advisers have agreed that a tax cut is the best means of ending the recession. The President is expected to deliver the message "sometime in March." The cut will show up in your withholding tax. Each pay envelope thus will carry more money, which means increased purchasing power. . . . The AFL-CIO is now beset by two internal union struggles. The International Representatives Union (organizers) has been fighting for recognition for months. And the American Newspaper Guild is attacking the parent group over the firing of four editorial employes of the AFL-CIO News.

PRESIDENT EISENHOWER

A high government official who recently has wrapped himself in a "cloak of high principles" was the topic of discussion. **Speaker Sam Rayburn** (D-Tex.) withered him with this caustic comment: "His present attachment to high principles is the most unprincipled thing he's ever done!"

THE NEW YORK TICKER: Milton Berle's appearance in a serious role on the Kraft TV Theater actually was a test run for a new TV series to be called Off-Beat, in which Berle plans to make frequent but not weekly appearances. . . . Berle's widely publicized acting role gave Kraft the highest Trendex of its 10-year history, a 23.8, which came close to nosing out the sensational **Victor Borge** hour, which Trendex'd at 24.1. . . . Starting March 31, you'll get two **Arthur Godfreys** every ayem—9 to 10 on radio and 10:30 to 11 on television. It was Godfrey's decision (as reported here) to separate the two mediums.

THE HOLLYWOOD REPORT: Bob Hope will be reunited with his old sparring partner, **Bing Crosby,** on his TV outing next Sunday night. In addition to Der Bingle, Hope will be joined by **Anita Ekberg** and newlyweds **Bob Wagner** and **Natalie Wood.** . . . Hope at the Los Angeles dinner in honor of **Vice President Nixon:** "You'd think Nixon was **John Foster Dulles's** son the way he flies around the world. He spends more time on a runway than **Lili St. Cyr!" . . . Eve Arden,** losing her TV show, may take the night club plunge. The Hotel Deauville in Miami Beach wants her to follow **Donald O'Connor.**

ANITA EKBERG

Ex-Chicago model **Joan Tabor** is cutting a fancy figure in the movie colony. She has popped up on innumerable TV commercials and her manager, **Bill Shiffrin,** is negotiating for an important movie role. . . . **Joe Breeden,** a former Chicagoan (Senn High), is leaving the NBC press department to form his own publicity firm. First client: **Jimmy Durante.** . . . And for a closing chuckle, this sign appears on a TV shop: "Sputniks Repaired Here!"

Dear Ed,

I can "See It Now" --
Senator Edward R. Murrow!

Best of luck,

Kup

KUP'S COLUMN

KUPCINET

TV's **Ed Murrow** is being urged, person-to-person, by **Carmine De Sapio,** New York Democratic political chieftain, to become a candidate for the U.S. Senate. The astute Murrow, however, prefers his politics from the "outside looking in." . . . **Bob Hope,** our fearless, peerless leader, is eager to try his humor on the Russians. He'll confer with the State Department about visiting Moscow to entertain U.S. employes stationed there and also to film his last TV show of the season before a Soviet audience, with the aid of interpreters. Russia is one of the few spots on the globe that satellite Hope hasn't orbit'd to. (Question: Would the Red Squares dig this cat?)

MANY OF OUR TOWN'S BANKERS are screaming in anguish because **Mayor Daley** listed them as trustees of slum tenements. The bankers don't relish being associated with the blighted properties and point out they shouldn't take the rap for the owners, who don't want their names connected with the buildings—only the profits! So all the banks have to do, to get off the hook, is reveal names of the owners. Some mighty prominent persons would emerge.

MARLENE DIETRICH'S FRANK ADMISSION about her performance in "Witness for the Prosecution," currently at the United Artists: "For the first time in my life, I act." . . . And on the same subject: **Kim Novak** has the last laugh on all who scoff at her "acting." She's just been named No. 1 actress by Boxoffice, a trade magazine. . . . More woe for our police censor board: Movie producer **Don Hartman** is ready to fight the board's pink slip (adults only) for his "Desire Under the Elms" all the way to the Supreme Court.

MARLENE DIETRICH

ARTHUR GODFREY WILL SPARK his Monday night CBS-TV Talent Scouts with a $5,000 cash award for winners. And Artha also wants to separate his morning radio and TV shows, now a simulcast. Under the present arrangement, one of the mediums must suffer. . . . Reason for canceling "Compulsion," the Broadway show based on the **Loeb-Leopold** case which was due at the Erlanger Feb. 26: The play is so expensive because of its large (40) cast that it would have to do capacity business to show a small profit. And prospects of doing capacity weren't bright. . . . **Bob Feller** bounces back to baseball as a sportscaster. He'll handle Mutual Network's game of the day.

DORE SCHARY, WITH THE APPLAUSE OF his "Sunrise at Campobello," the F.D.R. story, still ringing in his ears, will be a Pump Room luncheon visitor Thursday. . . . **Joyce Brothers,** the comely boxing expert of $64,000 Question fame, will be the first woman to invade the Chicago Stadium press box. (G-r-r-r!) She's been assigned to assist **Jack Drees** on the CBS radio broadcast of the **Robinson-Basilio** fight March 25. . . . Fortune mag is ready to pop with a profile of the **Walter Heller** Co., one of the nation's largest finance firms.

TIN PAN ALLEY: Della Reese, a Rush Street click, worked "overtime" the last two nights, cutting a Jubilee album titled, "Della Reese Sings at Mister Kelly's." . . . And another: **"Betty Madigan** Sings **Jerome Kern,"** on a Coral label, is music to cheer by. Betty's currently warbling at the Camellia House. . . . And why not one called **"Tommy McDonnell** Sings and Pours at the Singapore"? . . . Singer **Johnny Raphael,** a Chicago boy, had to leave home to be discovered. He's a rage on the West Coast, where he recorded "We're Only Young Once." (And, as **Joe E. Lewis** put it,"If you play your cards right, once is enough!")

SAMMY DAVIS JR. UNDERWENT jaw surgery at 3 a.m. in Hollywood the other day so he wouldn't miss a performance at the Moulin Rouge. Samele opens at the Chez Paree Feb. 28, following storyteller **Myron Cohen,** who opens Monday night for 11 days. Young Davis cut an album with **Joya Sherrill,** co-star ring with **Teddy Wilson** at the Blue Note, titled "Sammy Jumps with Joya." Cute. . . . ABC has summoned deejay **Chuck Francisco** to New York to discuss a new type deejay show for the network. . . . The birth scene in "Farewell to Arms" at the Oriental apparently is a knockout—no fewer than six patrons fainted during the showing last week. (And all men—the sissies!)

JACK BENNY'S CBS-TV SHOWER OF STARS Thursday is loaded with chuckles. He finally hits the 40 mark. (His real birthday is Friday—64 Valentines.) . . . And **Jimmy Turchi Tattler,** the Pump Room's pint-sized quart-seller, celebrates his 43d on Thursday. . . . **Lincoln's** Birthday was a three-way celebration for lawyer **George Bieber** and his wife: Each celebrated a birthday, plus their 13th wedding anniversary. . . . And if you'll pardon a personal note: Happy anniversary to our ever-lovin' **Essie,** who has devoted the last 19 years to the same guy. (Lucky fella!)

DORE SCHARY

BLACK ORCHID STAR Jonathan Winters, a sellout every night, was feted at the Chez Paul by owner **Bill Contos** the other midnight. . . . **Harold Bock,** manager of the Sheraton Hotel, gets the plum of the chain's operation. He moves to the Ambassador in New York on March 1. . . . Overheard at Mike Fish's: "Latest expression in ad circles —"Be nice to everybody, the meeting isn't over yet!"

See Kup on WBBM-TV (Channel 2) at 10:50 nightly.

KUP'S COLUMN

KUPCINET

The feud between the two union giants, **Jimmy Hoffa** and **Walter Reuther,** is blazing anew. (There's no labor of love between 'em.) Latest blowup stems from Reuther's recent statement: "I want people who are guilty of things like Mr. Hoffa is guilty of to go to jail because they're a danger to America." Hoffa has instructed his attorneys to examine the statement for a possible lawsuit. . . . The inside-inside on Hoffa and Reuther: Some time ago, the two feudin' unionists reached an agreement to resolve their differences in private.

OF ALL THE VOICES TV could afford to lose, **Ed Murrow's** is the last we like to see go, even temporarily. We trust the rumors about his differences with CBS are just that—rumors. . . . The movies' **Alfred Hitchcock** turns his charm on the Executives Club Feb. 27. . . . Russia beat us to the satellite, but Uncle Sam may be first to have GIs fire a missile. (Up to now the scientists have been in charge.) The Air Force has set a July date on Atlas ICBM from the West Coast, with specially trained GIs doing all the work.

JERRY LEWIS, OPENING at the Chez Paree Wednesday, may be playing the cafe for the last time—as an employe. As we reported some time ago, Lewis is ready to make a financial investment in the club and become associated with co-owners **Dave Halper** and **Donjo Medlevine.** . . . Lewis is one of the few big-time stars who rose from night clubs and still remembers his background. He plays them now largely out of a sense of loyalty—to help keep them alive.

JERRY LEWIS

JERRY BOUNCED INTO TOWN for his "one-man show" with this entourage: His wife **Patti** (in charge of seeing he doesn't overwork); **Ernie Glucksman,** his manager and TV producer; **Jack Keller,** press chief and golf pigeon; **Louis Brown,** musical conductor; **Billy Richmond,** drummer; **Milton Hale,** road manager; **David Joesting,** stage manager, and **Hal Bell,** who appears in the act and serves as Jerry's stand-in for movies. Lewis may be zany on stage, but he's one of the most astute young men in Hollywood and leaves nothing to chance. For example, he even brings his own microphones and stage equipment. Lewis picks up the transportation and hotel tab for his entire entourage, which puts a hefty dent in his paycheck.

"RAISIN IN THE SUN" is being boomed for the Pulitzer Prize in drama. . . . **Jack Benny** and his **Mary** both were bedded at the Fontainebleau in Miami Beach with colds. Which hardly speaks well for the Florida clime. . . . **Jim** (Maverick) **Garner** is a brave cowboy, indeed. He'll sing on **Bing Crosby's** ABC-TV spec March 2. . . . The latest Nielsen rating puts **Danny Thomas** in third place—only non-Western to crack the top six. (Wagon Train is the No. 1.)

TV GUIDE'S JOHN HIGGINS reports our new Channel 2 show, At Random, should be sponsored by a ciggie firm: "It's a thinking man's show." . . . And **George Mashbitz** was disappointed "because you didn't have **Abe Lincoln** on the first program—after all, you interviewed him in your column!" . . . That gorjus redhead with **Bobby Van** (he's on the **Jerry Lewis** bill at the Chez) is his frau, the former **Diane Garrett.** She's the **ex-Mrs. Earl Muntz.** All three are veddy, veddy chummy. . . . It's **Robert Q. Lewis** in "Visit to a Small Planet" for Drury Lane Theater, opening March 10.

FACES AND PLACES: Bill Veeck and **Hank Greenberg,** two swingin' gents, getting their fill of jazz by traipsing from **Ella Fitzgerald** at Mister Kelly's to **Jonah** (The Wailer) **Jones** at the London House. . . . **"Thin Jack" Leonard,** who goes from the Black Orchid to the Studebaker in "Fun Time," engaging in his first argument with producer **Jules Pfeifer** in the Pump Room. Pfeifer insists no critics (his pet hatred) will be allowed to attend "Fun Time." To which Leonard niftied, "So we'll change the name to 'Death in the Aisle'!"

THIS IS SHOW BUSINESS: A short time ago singer **Fran Murray** guest'd on **Don McNeill's** Breakfast Club and elicited considerable interest. But nothing happened, and a gal's gotta eat. Now she's a secretary at Gibby's restaurant—biding her time. . . . Gibby's, by the way, will play host to the entire cast (80) of "Music Man" at a midnight repast Thursday. . . . **Al Hamburg** deadpans that he hardly can wait until "Music Man" star **Forrest Tucker's** mother does the sequel: "**Sophie Tucker** in 'Music Ma'am.'"

SOPHIE TUCKER

THE DUKES OF DIXIELAND march into the Blue Note Wednesday night with a $100,000 check—their advance royalty from Audio-Fidelity records. . . . More Dixieland jazz: **Santo Pecora** and his Ramblers at the Cafe Continental. They're gassers . . . Hollywood columnist **Sheilah Graham** meets her fellow press members over lunch Wednesday at the Imperial House to herald the movie based on her book, "Beloved Infidel." . . . WAAF deejay **Tito** and San Francisco model **Susan Howard** are now Mr. and Mrs. . . . And it's a boy, **Jeffrey Scott,** for Channel 2's **Jerry Levin.** . . . Overheard at Le Bistro: "A liberal is one who makes enemies right and left!"

Kupcinet, Irv

February 20, 1959

Dear Kup:

Thanks for not writing an obit. Must still make the effort until July 1. I am looking forward to the sabbatical so much that I'm thinking of changing the title of all programs to I CAN TASTE IT NOW.

Sincerely yours,

February 17, 1959

Mr. Edward R. Murrow
CBS
New York, N.Y.

Dear Mr. Murrow:

I have always been impressed by your achievements on radio and television but there are few of your actions which are more impressive than your decision to take a year of leisure. It is my feeling that one of our basic deficiencies in America is that we do not value leisure sufficiently and do not know how to employ it meaningfully.

I teach in a liberal arts college. In discussing the meaning of liberal education I lay great stress on one of its oldest meanings: education for leisure. It is not the education for a trade or profession, but the education required by men to learn how to make the most noble use of that time and energy which they do not have to devote to staying alive and paying taxes.

The best word on this subject was said by Aristotle in the eighth book of the Politics: (emphases mine)

> Leisure is the origin of all achievements. Granted that work and leisure are both necessary, yet leisure is the desired end for which work is done (an opinion not widely held in a society under the influence of Puritan values;) and this raises the question how we ought to employ our leisure. Not by merely amusing ourselves, obviously, for that would be to set up amusement as the chief end of life....Leisure is not a means but an end; it offers not only pleasure but happiness and the very joy of living, and these are not available to the busy man but only to the leisurly.1..There are some branches of learning and education that are pursued for the sake of knowing how to guide our leisure.... They are desired not because they are useful or necessary for a specific purpose but because they are liberal, i.e., proper for a freeman, and noble.

I see in your action an awareness of this conception of leisure and hope that your action will be an inspiration to others.

Sincerely yours,
Norman D. Kurland

December 31, 1959

PERSONAL NOTE TO EDWARD R. MURROW

You read the manuscript of CHALLENGE TO WORLD LEADERSHIP before it was published, and asked me to be certain to send it to you when it came out.

There are twelve years of exploration behind the pamphlet, and I think it is on your wavelength.

Krushchev again has an initiative in world public opinion by calling for permanent disarmament. This strikes close to the hidden nerve of world public anxisty. . . .whether he is sincere or insincere.

If we have a better plan . . .if we have a more moral goal for mankind . . . if we have a more majestic vision for the safety and security of the human race, we should be speaking forth strongly, right now. Apparently, we have not yet learned to think and plan national policy on the new-dimension of today's crisis.

The world is waiting for a new big idea . . .big enough to deserve support and loyalty from people of all the world's patriotisms, from all the world's religions and philosophies. In the pamphlet you will note the strong reactions of Catholic, Protestant and Jewish theologians . . .of medical, physical, psychiatric, psychological and legal disciplines . . .of Republican and Democratic political view.

With an anxious world waiting for moral world leadership to arise to lead the way OUT OF crisis, rather than deeper and deeper into crisis as both sides have been led, what a wonderful opportunity for radio and TV to lead the way in giving birth to such new-dimension leadership. . . but sparking the Great Debate that neither political party has courage to start . . .by continuing the Dialogue of Man in search for survival discipline.

Welcome your reactions. Do you see an opportunity?

Public Affairs Press, Washington, D. C.

ABOUT THE AUTHOR

In 1947 when the State Department crystallized the "containment" concept of U. S. foreign policy, Howard G. Kurtz was engaged in several years of graduate study in Russian-American problems at the Russian Institute of Columbia University. That year he also spent nine weeks in Moscow during the Conference of Foreign Ministers.

While analyzing the preconditions of international relations that would have to exist between the U. S. and the U.S.S.R. before full exchange of ideas could become possible, Mr. Kurtz came to the conclusion that "containment" was only a transient and defensive policy—a sort of holding operation until some effective positive solution could be found. For the past twelve years he has continued his search for a basic solution to the crises that have plagued the world since the end of World War II.

This pamphlet is a condensation of a recently completed book manuscript. Mr. Kurtz is Senior Associate of Handy Associates, Inc., New York management consultants.

ACKNOWLEDGMENTS

America's multi-million-circulation magazines have nearly perfected the ability to communicate *facts,* and to sell *things,* but they have not as yet discovered the way to communicate a big or new idea.

"There is no way *Challenge to World Leadership* can be told in pictures. It breaks through the barrier of *fact,* and into the realm of *meaning,* but we can't interpret it in images that our readers will buy. It is impossible to tell the story of the Golden Rule visually. Anyway, we couldn't handle that story either." This was the concensus of some editors of popular magazines who saw this manuscript. Pictorial journalism in print or television can arouse and titillate reader interest with the dramatization of death, disaster, violence, war, but their editors go blank at the prospect of dramatizing the new-dimension concept of a war-proof world. This seems to be too much for them.

"I think you may have written the word that is worth ten thousand pictures" was the verdict of a renowned creative photographer attached to a leading picture magazine that failed to discover how this vision could be interpreted to America.

Acknowledgment is due Professor David Botter of the School of Journalism at Northwestern University and former Assistant Managing Editor of *Look* Magazine. He suggested inclusion in this pamphlet of the blunt reactions, pro and con, of a dozen leading citizens from widely diverse points-of-view.

I am also deeply grateful to Mr. Richard W. Freeman, Chairman of the Board of Delta Airlines, Incorporated, who caught the impact of the air-age significance of the ideas and challenged me to set them down in the present pamphlet.

For stimulation and encouragement I am much indebted to Dean Chauncey D. Leake, Professor Kirtley F. Mather, Dr. Jerome D. Frank, Professor Gordon Allport, Mr. Robert H. Reno, Father John LaFarge, Rev. Dr. Kenneth L. Maxwell, Rev. Dr. Ralph W. Sockman, Rabbi Maurice N. Eisendrath, Lady Barbara Ward Jackson, Senator Ralph E. Flanders, Senator Hubert H. Humphrey and Dr. Everett R. Clinchy. Their words can well set the pattern for a new-dimension world vision.

Humanity waits anxiously for world leadership to emerge with a message that can lead the way *out of* world crisis, toward world security. If this pamphlet does not bring the common goal into focus perhaps it will encourage others to make the vision clearer.

HOWARD G. KURTZ

Chappaqua, New York

INTRODUCTION

The Great Debate in which the family of man is engaged has to do with human growth. Call it divine evolution in which man is an active partner, or development in greater maturity, or simply the struggle for civilization which the historians trace. In any case, this growth involves (1) economic growth in productive output to enable mankind to stay alive and live decently; (2) intellectual and spiritual growth to help the human species, while respecting the dignity of every individual as a creature of God, to increase in understanding of the physical world around him, the moral world within him, and the ethical relationships with all others, earthwide; (3) growth in techniques of living—those inventions and organizations of ideas and social machinery demanded by the advances in science, technology, and ethics.

Sources for the Great Debate, our ideas, morals, and spiritual values, lie in *all* the living philosophies and religions. Each has insights into meanings, worth, and mysteries that can enrich. Indeed, the unity of peoples hangs on the appreciation of cultural pluralism, as peace in a kin family rests on the discovery of personality manyness, with due respect for each.

Howard G. Kurtz has written this pamphlet to encourage debate in the third area of growth in human relations—particularly in regard to the questions of international safety in an extremely dangerous period. He has produced what can well be considered a *Manifesto For An Air and Missile Age.*

The Great Debate about the possibilities for a safety authority to support the rule of law in the world is enlivened by a symposium of twelve eminent citizens of widely diversified points of view, setting forth their vigorous reactions to engineer Mr. Kurtz's proposal: an eminent medical scientist, a leading physical scientist, a renowned social psychologist, a distinguished psychiatrist, an outstanding attorney, a leading Jewish theologian, a prominent Catholic theologian, a well known Protestant theologian, an official of the National Council of Churches, well-known Democratic and Republican leaders, and a distinguished expert on foreign affairs.

This symposium might be the igniting spark on a global scale comparable to the fire of serious Federalist debates which fomented the creation of a new concept of security in the small area of the thirteen

American colonies. Today the imperative demands raise the idea of national security to a new-dimension outreach toward security for all mankind.

There is an air-age analogy in this concept of safety as a universal motivation in environments of great physical danger. Howard G. Kurtz has been studying this analogy since 1946 when he began two years of graduate study into Russian-American problems at the Russian Institute at Columbia University while spearheading the advance planning for American Overseas Airlines' proposed operation of the air routes from New York to Moscow, as certificated by the U.S. Civil Aeronautics Board. He was studying the preconditions of safety in international affairs required before exchange of national air transport operations between the two countries ever could become maximum. Mr. Kurtz's writings in this field have received international recognition.

The National Conference of Christians and Jews gave him a citation during World Brotherhood Week, in recognition of his passion and energy for his vision. Today he is a Senior Associate in the management consulting firm of Handy Associates, Inc.

I commend him to you as a kind of contemporary Tom Paine pleading for the application to national and world defense, of the universally accepted principle of safety control of air traffic and police authority against violators.

Let the Great Debate proceed!

EVERETT R. CLINCHY

President, World Brotherhood; *Past-President,*
National Conference of Christians and Jews

CHALLENGE TO WORLD LEADERSHIP

By Howard G. Kurtz

When man first found himself flying in an airplane, he encountered an intense new anxiety, different from any he had ever experienced. And out of that anxiety he learned an important new lesson.

Flying blind in a cloud, the pilot realized grimly that other pilots might be flying blind in the same cloud. He could not see them. They could not see him.

On land or sea, man could slow down or stop. He could bring down the sails, heave out an anchor, or put on the brakes to protect himself in an emergency. But in the air the pilot could not slow down. His plane had to maintain its high speed in order to stay aloft. The other pilots could not slow down either. Hurtling toward each other at breakneck speeds, the pilots realized that should collision occur, it would happen in the twinkling of an eye. There would be no time for evasive or defensive action. It would be all over before the brain could register the warning.

To make the situation even graver, only a limited time existed in which to solve the problem. Each gas tank carried only a specific number of minutes of flight. The pilot could not sit and wait as earth-bound man had been able to do.

Most frightening of all was the realization that if a collision should occur, without warning, both sides would be dead. No one walks away from a midair collision.

In the face of this ever-present danger, pilots found that all of the things that men disagree about, hate, or fight about, began to melt away. If you are flying one airplane in a cloud, and I am flying another, it no longer makes any difference what church you or I go to, what political party you or I belong to, what your color of skin is, or mine, what nationality your passport represents, or mine, or, for that matter, whether I like or understand you. We will both be dead if a collision is allowed to occur.

Nor is it possible to make any distinction in this cloud between my own selfish concern for my safety, and my concern for your safety. Everything I do for my own safety also assures your safety.

Airmen in all parts of the world reacted in much the same way to this threat. After much deliberation and consultation, they created a limited, higher authority, called Air Traffic Control, and charged it with the duty to prevent collisions.

The pilot remains in sovereign control of his own plane and passengers. If he does not deem it advisable to wait over an airport before his permission to land is given, he can decide to go to some other airport where the sun is shining. But if he decides to proceed in an area where a collision is possible, he turns himself over to higher authority.

Air Traffic Control, enforceable safety discipline, has transformed air travel into the kind of disciplined safety in which 100 million passengers a year purchase tickets on the scheduled airlines of the world, and do so with a high degree of confidence.

Lesson For the Nations of the World

The people of all nations are today on the verge of a similar final collision, a nuclear war which can exterminate mankind from the face of the earth.

Each nation is bound to move ahead toward future progress, in its own path, with its own objectives. No nation can slow down or stop its forward movement to avoid collision.

Since World War II, the United States and the Soviet Union have whipped up a feud of national fear and anxiety to the point where they are near a collision that could not only destroy them both, but all other men, women, and children on earth. The abrupt end of humanity in nuclear war can now come by human command, or by accident, or against the strategic will of both governments. Possibly, no one will walk away from the next war. And there is only a limited time left before a solution must be found.

Like the pilots, all of us are beginning to realize that in the face of final extermination it doesn't make much difference what people believe, what political party they belong to, or what color their skin happens to be.

For the first time since the world began, all mankind is caught in the same closed system of danger, threatened by extinction. From this new-dimension world-wide anxiety comes an intense yearning that world leadership will arise to point the way out of the crisis, rather than passively permit the world to drift deeper and deeper toward ultimate annihilation. If this opportunity is missed, and war allowed to come, there is no reason to expect there ever again will be a similar opportunity to take the necessary steps to assure the survival of man.

The United States can grasp this unique opportunity for world leadership. If it does not, the Kremlin or Red China may take the

initiative in this connection. Moreover, the "in-between" nations could take matters into their own hands and demand an end to the threat of war, willing to die for the right to survival.

Unfortunately, it is easier to lay all of the blame on the evil enemy than to assume responsibility for the security of the nation and the survival of mankind. It is easier to play on public fear for personal and political power (as both sides do) than to provide the security that the people need and want.

America's Reluctance To Lead

For years the Kremlin has been "on the offensive," holding the initiative in world affairs. For years the United States has had a primarily defensive policy of "containment." This assumes initiative by the Kremlin. The U. S. has waited for each new Soviet-inspired move to reach the White House; then the U. S. has reacted with a defensive maneuver and an increased show of military power. Each new expansion of U.S. military threat is justified as being in defense against further Soviet threat, but this policy also carries grave dangers. For each new show of American military force has two adverse effects: (1) It intensifies anxiety in the Communist world, making it easier for its leaders to mobilize public hostility to the U.S., and (2) it intensifies anxiety in the "in-between" countries, increasing their hopelessness for survival, no matter whether the United States or the Soviet Union actually starts the nuclear war. Each defensive act on our part, therefore, has had the undesired effect of increasing enmity in the Communist countries and the further effect of weakening the resolution to fight among the people to whom we look as allies.

No contest can be won by defensive strategy alone. A football team taught only defensive tactics can become very effective in blocking each new thrust by the opposing team. But the team can never win by defensive tactics alone.

Guided by its defensive foreign policy, the United States has taken a strong stand, in Korea, in the Middle East, and in Berlin against each new Kremlin offensive thrust. But defensive strategy alone can lead only to eventual defeat. A contest can never be won unless, in addition to a powerful defensive policy, there is also a winning or offensive strategy.

What must mankind face up to for survival?

First, accept the truth that the time has come when no nation can sky-lark alone any more than any single plane may lawlessly fly head-

long through the clouds without the protection of enforceable safety discipline.

The Key to Survival

The basic assumption upon which U.S. military and policy planning and decisions are based is a cherished historical concept that is no longer valid. The most crucial top policy decisions are being made by sincere and honorable men, based on military experience of the past. But those decisions have not, and cannot—unless the premises are changed—provide the security that everyone desires.

For centuries man has relied on a complex mechanism called the "nation" to provide security. For security was the basic motivation drawing men together in self-defense in increasingly larger units—the family, the tribe, the principality, then the nation. In moments of national emergency, such as Pearl Harbor, the protection and preservation of the nation become the supreme goal of all our people. In recent years, however, the breath-taking advances in science and technology have expanded the destructive capacity of military power beyond the imagination of earlier generations. No longer can any nation assure the safety of its citizens.

The very concept of national safety is no longer valid. If every department in our national government, or that of any other country, were to be granted not only the money requested in its present budget, but twice or three times the money requested for unlimited satellite launchings, unlimited nuclear bomb testing, unlimited pure research and development, unlimited stockpiling of military hardware and manpower, there still could be no assurance of survival.

Here, then, is the basic paradox. The people of the world yearn for the security that only a strong world organization can provide. But the operation of a world security authority requires initiative from the present national leadership. And that leadership, in both East and West, appears to be concerned primarily with furthering immediate national interests rather than the preservation of the world.

Dimensions of the Task

There is a great deal of talk about the "struggle for the mind of man," but little indication that the world's leaders yet recognize the dimension of the problem we face. World leadership must learn to speak for anxious men everywhere.

Today the world's population falls loosely into three groups: the

American people, the Communist people, and the "in-between" people.

The American People. In the U.S., 6.4 per cent of the world's population (7 per cent including Canada) is geographically isolated from most of the people of the world by vast sea and air distances. They are alone. They are deeply anxious about the threat of Soviet military power and about Soviet foreign policy.

The Communist People. Thirty-two per cent of the world's population will be found in the Communist areas of the world. This mass of humanity, divided among ten nations, is located on a contiguous land mass stretching across two-thirds of the world. These millions are deeply anxious about the threat of the American nuclear bomb held over their heads by United States foreign policy.

In-Between People. The large majority of the world's population, 61 per cent, is fragmented into 183 different national or patriotic groups scattered over all corners of the world, and torn apart by history-long frictions and hostilities and suspicions. Of these, only about 74 have attained a recognizable degree of self-government. The non-self-governing areas number 109 and are under the control of some other political power.

These people may all be dead if the next war starts, whether it starts as limited war or explosive war, either from the impact of the collision, or from the radioactive or bacterial or chemical fall-out disseminated impartially across the world by the winds.

The Challenge

The dream of a world organization that could protect the world against such a catastrophe—as air traffic control prevents catastrophes in the air—is far from new. It has moved men of good will with increasing urgency down through the centuries. It inspired Woodrow Wilson's efforts to create the League of Nations after World War I. It led to the establishment of the United Nations after World War II. But it has never been fraught with the urgency that exists in this day of missiles and nuclear power.

The practical problems of developing a world organization sufficiently strong to restrain even the two great super-powers—the Soviet Union and the United States—remain to be worked out. But the basic difficulties are psychological and moral rather than legal or military. For it is obvious that the details will not even be tackled without the driving force of world public opinion. And even that tremendous force cannot be mobilized effectively without effective leadership.

What is required for survival is a world security organization stronger than the League of Nations, which lacked power to provide adequate protection against the resort to war, and stronger than the present United Nations, which cannot as yet provide real security against the danger of war.

Such a world security organization may evolve by strengthening the United Nations or it may have to be formed outside the jurisdiction of the United Nations. It will have to be developed with checks and balances somewhat similar to those in our own Constitution so that it cannot become a tyrant super-government dominating sovereign national governments.

Within these limitations the world security authority must be strong enough to assure:

1. That no nation ever again will have the capacity to threaten or to wage war against other people.
2. That each nation or area will exist in an environment of enforceable safety.
3. That, after the world has been made safe from war and safe from foreign domination, the manpower, money, and materiel now dissipated in the preparation for war can be transformed into creative effort to feed, clothe, house, educate, and bring health and welfare to people of every emerging country with the help of all moral forces mobilized from outside.

Opportunity for the United States. The United States could electrify world public opinion by advocating the creation of a world security organization that would have the power to provide for the physical safety of all the world's peoples, of all the world's creeds and beliefs, of all nationalities, of all political opinions. This would provide a clear-cut goal for United States policy: security against war for all people. Details of the operation of this world security organization cannot yet be spelled out, but may be left as a challenge to the best available brains of mankind. What political or other leader would hold out against public support for this call for world security?

This may well be the most difficult task ever undertaken by mankind. It may be even more difficult to accomplish than the "impossible" problem of liberating the power of the atom in the mammoth Manhattan Project during the war. It may be even more difficult than the "impossible" problem of transit and survival in outer space. The difference is that nations are spending billions of dollars perfecting the nuclear bombs and preparing to lob human beings over the moon,

but they are spending scarcely a dime researching the basic problem of survival of man on earth.

Existence is a universal concern. A new foreign policy raised from the limited concept of national defense to the big concept of world defense of all mankind can deserve universal public support.

Impact on World Public Opinion

Public Opinion in the U.S.S.R. Since World War II it has been U.S. policy to threaten the elimination of every Soviet man, woman, and child in retaliation for Soviet aggression. The U.S. has built a ring of airbases around the Soviet people and placed a nuclear bomb over their heads. Today it is constructing a ring of nuclear-headed missile bases around them. The Soviet public could have no other reaction than to be anxious, hostile, and willing to fight—die, if necessary—to defend themselves against the American threat. As long as the Soviet people are kept in such a hot oven of anxiety, the Kremlin can manipulate them quite easily.

Instead of threatening the annihilation of all Soviet citizens, the new United States survival policy would hold forth the prospect of safety for all Soviet citizens, and protection against any future threat of war from any enemy. To the extent that this new goal becomes known to the Soviet people, their intense anxiety will tend to die down . . . they will tend to lose their will to fight the American people . . . they will tend to share America's deep yearning for the goal of the safety of mankind.

Reaction of the In-Between Countries. The citizens of Europe, Scandinavia, the United Kingdom, Middle East, Far East, and Africa are caught in a trap. They may all be dead, no matter whether the United States or the Soviet Union technically starts the war, and no matter which one pretends righteousness by waiting fifteen minutes to reply with massive nuclear retaliation. The "in-between" people will be wiped out without ever knowing who hit them . . . or who started it . . . or who retaliated . . . or who was right . . . or who was wrong. There is no deep motivation attracting these people to support either side of world conflict. Both sides threaten their destruction.

Instead of threatening these people with annihilation from massive nuclear retaliation against Soviet aggression, the new United States survival policy will hold forth the first tangible ray of hope for the safety of all these people. The basic motivation of public opinion in these areas can be attracted to the objective of security for all mankind.

Public Opinion in the United States. This new United States survival policy will not weaken the present American margin of safety in the slightest. Our military strength must remain powerful until the world security organization is real and can reduce the physical danger. The new survival policy can generate a new tidal wave of public support for the American government and its future policy committed to highest possible moral goals . . . in contrast to present quiet public reluctance to support without reserve the American threat to wipe out all mankind in massive nuclear retaliation.

The American people will be committed to the goal of security for their enemies and for their neighbors as well as for themselves, in the strong tradition of Catholic, Protestant, and Jewish teachings. This contrasts sharply with the present awkward situation in which religions have been courted to support the present American position of threatening the end of man on earth.

An anxious world is waiting for leadership to arise to tell of a vision of survival, and to lead the way.

The United States should invite the widest possible, freest possible, debate and discussion and exploration of the non-political design details of such a world safety organization in what might be called "Survival Seminars." These seminars should be held throughout the world, among all engineering and scientific and professional societies . . . among scholars of all academic disciplines . . . among philosophers and theologians of all points of view . . . among the peoples of all countries. Each person can remain fully patriotic to his own native land and maintain the integrity of his religious or philosophic beliefs, yet simultaneously strive for complete interchange of ideas and recommendations assuring existence and survival as rights of all mankind.

Where is leadership with courage to start the Great Debate on the *survival of humanity?* What leadership stands for world safety? What leadership prefers an un-safe world? These are questions that must be answered—*answered soon.*

VIEWS OF DISTINGUISHED AMERICANS

With an entire world anxiously yearning for a new-dimension idea, powerful enough to bring a white light of hope in the blackness of today's despair, does this pamphlet point the way for leadership for all the world's races, colors, creeds and nationalities . . . or is it just another futile attempt to be discarded?

Here are blunt personal reactions to *Challenge to World Leadership* from outstanding persons willing to start off the proposed Survival Seminars by telling what they think about it, pro and con. Here are the reactions of people in social science, physical science, political science, law, medicine . . . of Catholic, Protestant and Jewish theological points-of-view . . . of Republican and Democratic political affiliations:

ROBERT H. RENO:

Mr. Kurtz has his eye on the center of the target, although he has possibly exaggerated in stating that a nuclear war might destroy the U.S., the U.S.S.R. "and all other men, women, and children on earth." This is not to say, however, that civilization would not suffer a very serious blow from a nuclear war, even though there would almost certainly be many survivors.

That the United States has a unique opportunity for world leadership and that effective leadership requires boldness are obvious; but they need to be said again and again. Mr. Kurtz is eminently correct in saying that the world is crying for a system of enforceable world law in the limited field of war prevention and that no nation must have the capacity to wage war, or, in other words, that each nation must be disarmed down to the level required for the maintenance of internal order. (General of the Army Douglas MacArthur has also pointed out the absolute necessity for the abolition of the means to make war and the reduction of armed forces "to the simpler problems of internal order and international police," in his Los Angeles speech on January 26, 1955.)

But Mr. Kurtz is dead wrong when he says that the details of the operation of a world security organization *cannot yet be spelled out.* They *can* be spelled out, and they have *got* to be spelled out. Only then will the required support of world-wide public opinion be gen-

erated. As General MacArthur has said, "The leaders are the laggards." But must they always be so? *(A Concord, New Hampshire lawyer, Mr. Reno is a member of the World Peace Through World Law Committee, American Bar Association.)*

RALPH E. FLANDERS:

Challenge to World Leadership has deeply impressed me. It is intelligently and forcefully written and covers, in my judgment, an important part of the necessary action which the American people and their government must take if they are to win through to a peaceful world.

The other things that have to be done are to convince the neutral world of our sincerity and gain its support and, lastly, to gain the support of the people of the satellites and of the Russian people.

I am sorry to say that I have little faith in the effect of moral force on the Soviet leaders. They will move relentlessly with their program for communizing West Germany and will always be prepared for bloody suppression on the order of that used for the Hungarian Revolution. For this reason we will have to get to the masses of the population which are under their domination so that the Kremlin's purposes will meet with resistance at home as well as abroad. *(A former United States Senator, Mr. Flanders lives in Springfield, Vermont. He is a Republican.)*

JEROME D. FRANK, M.D.:

Though an eloquent and convincing presentation of the need for a world security system as a means of removing the danger of catastrophe, *Challenge to World Leadership* is disappointing. A minor flaw is that it overstates the destructive results of a nuclear war. Mankind would be decimated, to be sure, the suffering of the survivors would be appalling, and human progress might well be set back thousands of years, but in all probability humanity would not be exterminated. The dangers of nuclear war are sufficiently terrible so that there is no need to weaken the case by overstating it. The idea of "Survival Seminars" is a worthy one, but without concrete suggestions for implementation it is merely a pious hope.

The greatest weakness of this appeal is that it fails to come to grips with any of the problems involved in achieving a world security organization, and indeed seems to suggest a lack of awareness of them.

This is indicated by the statement that "United States military strength must remain powerful" until the world security organization is achieved. The concept of overwhelming military strength has become meaningless in a world full of nuclear weapons. Furthermore, I believe that it is the greatest obstacle to achieving a world security system because the possession of a large arsenal of nuclear weapons automatically carries with it the threat of massive nuclear retaliation, which is completely incompatible with a policy "committed to the highest possible moral goals."

The advent of modern nuclear, bacteriological and chemical weapons requires several drastic changes in habitual patterns of international relations if mankind is to continue to advance. These include abandonment of the concept of unlimited national sovereignty and of reliance on military strength to protect national security. The real challenge to America is to find the courage to be the first to cease the futile pursuit of the will-o'-the wisp of security through armament. Instead, it should initiate progressive disarmament while using the resources thus freed to intensify aid to the underdeveloped countries, and simultaneously working to establish a genuine world government. Such a policy would be based on the insight that the democratic way of life can be defended and propagated only by non-violent means. As a convincing demonstration of America's commitment to the highest possible moral goals, it would win widespread support even among the Communist countries, who would be under considerable pressure to follow suit. It would involve running grave risks, but these would not be as great as the virtual certainty of destruction of civilization created by the accelerating arms race. Above all, these measures would hold out hope for the continued progress of mankind, which present policies do not. *(Formerly Professor of Psychiatry at Johns Hopkins University, Dr. Frank is now associated with the Center for Advanced Study in the Behavioral Sciences, Stanford, California. He is co-author of "Group Psychotherapy.")*

FATHER JOHN LAFARGE, S.J.:

Challenge to World Leadership certainly offers no end of food for thought, and should stimulate us to more realistic thinking about the question of world security than we have been practicing. It is worth pushing and may have a success quite beyond my own anticipation.

However, my personal way of thinking raises for myself certain rather definite doubts.

1. The present abnormal situation is caused not by the usual historical factors of man's natural belligerence and the ordinary run of human ambitions. It is not, as is frequently pictured by our European friends, just a matter of two great national giants, each struggling for the mastery. The situation is created by the entirely abnormal, paranoiac mentality of our opponents, who are totally obsessed by the aim to extend their power and thus to rule the world. Toward this end, they have developed an incredibly persistent and flexible technique of utilizing—or trying to utilize—all conceivable aspirations for peace and security as psychological and political instruments to their own ends.

They might quite readily agree to conferences of the type you mention, but I think we would soon find ourselves outwitted and out maneuvered, unless we wished to engage in endless wrangling, which would parallel the experiences of somewhat analogous international conferences in the past.

2. In the second place, I am not altogether convinced that it is the wisest thing—even if it may possibly be the case—to represent the present East-West situation as a mere impasse; a naked tug-of-war between two unyielding elements. I say, not the wisest, because I fear anything that might even seem to weaken the unity of NATO. I would fear any world-wide, elaborate, great international action that might serve to divert the great Powers of the free world from their present front of unparalelled and unswerving unity. It may well be they will come to see that security, in the sense you have in mind, is better secured by strengthening the defenses of the Free World rather than by dickering with the Soviets.

Moreover, it is not certain that every conflict between East and West will necessarily develop into a maximum total war. Possibility of smaller engagements, of brush warfare, is not as yet ruled out.

3. I have a natural reluctance for large and comprehensive schemes. I have preferred to work upon a more pedestrian basis, particularly by advocating step-by-step, concrete measures by which to build up a new and better image of Western man among the as yet uncommitted peoples of the world. However, this is, as I say, simply my own personal reaction. I shall be greatly interested to know what is the response to the pamphlet, and will be better able to pass judgment upon it after you have made this venture. Your own high concern, your own patience and consistence will certainly bear some fruit. *(Father LaFarge is Editor Emeritus of "America," national Catholic weekly review.)*

REV. KENNETH L. MAXWELL:

In personalized, dramatic terms the elemental problem of survival is posed in *Challenge to World Leadership.* It can be helpful in stimulating more people to face up to the pressing issues of basic human safety in this revolutionary, nuclear-space age.

Striving for vivid brevity, it, of course, presents many pictures in black and white, rather than in shaded realities. Also, it does not seek to deal with many of the basic questions related to security such as: The sufficiency of the survival-drive; the effectiveness of motivation by fear, and alternative motives; the relationship of political dynamics to world organization; the role of economic factors, not after, but as a means toward establishing security. It sketches some line of *what* is needed, but little of *how* to get there from where we are.

Such questions must be explored by increasing numbers of citizens for a more informed and effective public opinion. These issues and many more are being discussed in a Nationwide Program of Education and Action for Peace, from June 1959-June 1960, sponsored by the Department of International Affairs of the National Council of Churches in cooperation with its thirty-three denominations and a thousand councils of churches across 50 states, among 38 million constituents. Many materials with various views and ranging from introductory to technical levels are being used in this program to encourage authentic education with increasingly deeper study of the many life and death issues, to result in more effective action.

Challenge to World Leadership concisely sets the issue of human safety in a way which should encourage "Everyman" to pause and begin to think and act on the crucial issue of survival and the many related problems we must all face now. This pamphlet reminds us that we all share in common the concern for survival. Men of good will welcome such stimulus and increasing opportunities to consider such questions with those of other religious, professional, technical and civic groups. *(Dr. Maxwell is Executive Director, Department of International Affairs, National Council of the Churches of Christ in the U. S. A.)*

RABBI MAURICE D. EISENDRATH:

Howard Kurtz deserves the commendation of every thoughtful person who is, with him, sick and tired of seeing our world trembling on the razor's edge of nuclear suicide. He has created a haunting image

of our time in his vision of an airplane, the pilot flying blind, hurtling through the clouds at another airplane he cannot see, cannot avoid, at a speed which makes evasion impossible. We are, all of us, in Mr. Kurtz's debt, for his insistent urgency, his indignation, and his fresh thinking. How desparately we need these very qualities!

I associate myself completely with Mr. Kurtz's stress on the safety of mankind and the aching need for imaginative and bold leadership to lead us out of the impasse. But he may well be quixotic in imaging that it will be possible to create a new "world security organization," stronger than the League of Nations and stronger than the United Nations. It was hard enough to sell the American people and the Communist powers on the United Nations, with all its limitations. Nor am I persuaded that the U.N. lacks the flexibility to accommodate itself to the kaleidoscopic changes in the world situation—provided there is leadership to harness the deep yearnings of all mankind for a peaceful world.

But there is the rub. Where is the leadership which will liberate the moral passion and express the outraged conscience of an anxious humanity? The leaders of the free world and of the Communist world have been reduced to sterile, self-justification and the empty litany of propaganda slogans. The generals, not surprisingly, see higher stockpiles as the greatest good. And the people, East and West, look on in numbed and passive acquiescence as the idiocy of a nuclear arms race rushes to its unspeakable climax.

Has not the time come for us to arrange a new Summit Conference, not of political leaders for political discussions, but of religious leaders of all faiths, impelled by a love of God and a reverence for man, inspired by the awesome need to think afresh, to build new bridges, to awaken new visions, to touch their followers, and to make the achievement of peace in our time the most solemn, ceaseless, and triumphant religious task to which we can put our hands? *(Dr. Eisendrath is President of the Union of American Hebrew Congregations.)*

DR. GORDON ALLPORT:

This manifesto strikes a responsive chord in every breast. It says something we all have wanted to say—that human survival is too serious a business to be left to statesmen who are addicted to old-fashioned power politics. Nowadays by conscious design we are achieving control of disease, space and nuclear power. How about

our human relationships? They linger in the mire of Stone Age stupidity.

The author, I feel, underestimates the extent of present concern. In a scattered way the assignment he gives to his "Survival Seminars" is already being carried out. Virtually all scientific societies, whether devoted to natural or social science, have committees working on problems of political tension, international understanding, or the conditions for a lasting peace. UNESCO and other UN agencies have compiled much relevant but unused knowledge. Intellectuals of all stripes are banded into international societies having lively concern for the problem. The National Committee for a Sane Nuclear Policy moves in the same general direction. Church bodies, foundations, institutes, peace societies too numerous to list, are likewise active. Still it is true that all of these efforts lack coordination. To employ Mr. Kurtz's telling analogy, there is as yet no Air Traffic Control.

What we need and must have, therefore, is a concerted and official move to make use of the accumulated wisdom that exists, plus of course, new wisdom to come. Such coordination can be sparked only in high places.

An imaginative move by the President or by Congress (or by both) is needed—a move clearly divorced from power maneuvers. Let the spark come from American leadership but let it be made plain that the effort is designed to include and benefit the peoples of all nations, harming none.

Perhaps the move might take the form of calling together a World Safety Commission whose duty would be to prepare by conscious design a formula for survival. If the formula were good enough to win the support of world opinion, each nation would be compelled to adopt it. While the implementation may eventually require UN machinery, still in the first instance the deliberations of such a Commission should be freed from the political rivalries that at present shackle the UN.

While we cannot predict the nature of the formula that will evolve, it will be based on the best thinking of agencies and indivduals now working on the problem, together with such creative ideas as will emerge.

It may seem utopian to call for non-political leadership from the President and from Congress, but the times demand exactly this type of moral inventiveness on their part. All nations will benefit from the deliberations of a non-political Commission of World Safety. Its wisdom, supported by world opinion, will compel nations to leave the

Stone Age of human relationships and enter sensibly into the Age of Safety. *(Dr. Allport is Professor of Psychology at Harvard University. He is past president, American Psychological Association; former editor, "Journal of Abnormal and Social Psychology"; and author of "The Nature of Personality" and "The Nature of Prejudice.")*

DR. CHAUNCEY D. LEAKE:

What price responsibility?

Howard Kurtz is issuing a challenging call to responsible people all over the world, but especially in the United States,—a call for leadership. This is the price of responsibility. No goal could be more worthy: security against war for all people.

Certainly leadership in this task will be tough. Yet it remains the obligation of responsible people, particularly in the United States, to undertake it. Here is a task on which we might all unite, with assurance that we would all derive benefit from what we do together.

The motivation for responsible leadership is subtle: it derives from a high sense of understanding of all peoples, beyond oneself. The psychology of responsibility has become buried since our great world wars by psychologies of persuasion on the one hand, and psychologies of determent on the other hand. These appeal to appropriate motivations for cowardly people based on the hope of reward on the one hand, or fear of punishment on the other. The price of responsibility is leadership, and only strong and determined people can give it.

The challenge to world leadership offers the people of the United States the greatest opportunity they have ever had for expanding their horizons, entering new frontiers, and carrying on their best traditions. Let's accept the challenge. *(Dr. Leake is Dean, College of Medicine, Ohio State University. He is President-elect of the American Association for the Advancement of Science and past president of the History of Science Society.)*

DR. KIRTLEY F. MATHER:

Although Mr. Kurtz has presented the facts of life (and death) in the nuclear-missile age with complete accuracy and utmost clarity, although his analogy between nations of the earth and men in airplanes is so perfectly appropriate, it is extremely difficult to grasp the full import of his words and even harder to respond to his ringing challenge. Most of us are now aware of the unspeakably horrendous

consequences of a war fought with nuclear weapons; we derive no comfort from the promises of our military leaders that in such a war we would always be able "to give as good as we take." Instinctively we feel that such a calamity would be so awful that it simply could not happen. Not yet are we prepared for the shattering thought that man's survival as an inhabitant of the earth is actually in doubt—*now*—in these very years in which we live.

Accept that thought, we must. And the time in which to react to it is rapidly running out. If present developments continue, it will be only three or four years before scores of intercontinental balistic missiles armed with thermonuclear war-heads are poised on launching pads at USA, UK, and USSR bases. The fallibility of nervous men in moments of tension is not pleasant to contemplate under such circumstances.

Equally disquieting is the expectation that many other nations than these three will soon acquire nuclear weapons. Without an effective international control system the probability that mankind will commit collective suicide in a nuclear holocaust increases progressively with the number of nations thus armed. A technical study of the so-called "Nth Country Problem" was recently made by a group of scientists under the auspices of the American Academy of Arts and Sciences, in the form of a "World-Wide Survey of Nuclear Weapons Capabilities." A summary of the report of that group, prepared by Howard Simons, has been published in the Summer 1959 issue of *Daedalus,* pages 385 to 409, under the title "World-Wide Capabilities for Production and Control of Nuclear Weapons." This technical study "showed that the emergence of new nuclear weapons' countries is more imminent than would have been supposed; that a minimal weapons' program is within reach of more countries than one would expect from the legend of the 'great secret;' and finally, that controls of a weapons-production program should be a much simpler technical problem compared to the difficulties that exist in controlling stockpiles."

Surely, with the emerging situation so clearly defined we must "face up to the problem of survival" with its inescapable requirement of a "world security organization." To establish such an organization in the present climate of international fears, suspicions, jealousies, and hostilities must not be cavalierly dismissed as an impossible achievement. It is truly a matter of the life or death of civilization; as such it calls for a supreme effort on the part of all who believe that life is worth while.

Whatever form the organization adopts, whether or not it evolves

from the UN or the IAEA, no matter what powers it is given, it must be so constructed and so administered as to make possible many significant peaceful changes in the status quo in all parts of the world. An international police force is not enough. There must also be an international court of justice with power to enforce a workable and equitable universal code of human rights and duties. The pattern must be that of a living organism with all its potentialities for growth and adjustment, not that of an efficient machine with its deadly uniformity of action. Stability is not a synonym for durability, nor should it be equated with security.

In the last analysis, the citizens of every country will have to decide whether they value national sovereignty above international security. In this nuclear age the archaic prerogatives of nation-states must be adjusted to the new conditions of the new times. The world today is a world of inescapable interdependence; unless men learn how to live together, they will die together. *(Dr. Mather is Professor Emeritus of Geology, Harvard University. He is President of the American Academy of Arts and Sciences and past President of the American Association for the Advancement of Science and the National Council of the Y.M.C.A.)*

BARBARA WARD:

The point is made in a striking way when we speak of the billions that are being spent to protect one man being lobbed over the moon, and the indifference to survival of the entire human race already living on this planet. Of course, the troubles that threaten a space traveler come from impersonal physical force, whereas our dangers come from human ambition, aggrandizement and fear. A Soviet and an American scientist can agree on cosmic rays, but can they agree on national sovereignty? I believe that all members of communities with common themes—such as scientists, doctors, health workers, engineers—ought to try to reach their opposite numbers and open up a "Dialogue of Humanity" or "Survival Seminars" as is suggested.

I wish our universities and learned societies would take more initiative in this matter and I am sure that the efforts of individual men and women are extremely worthwhile, even if they do meet discouragement and frustration. *(Miss Ward (Lady Barbara Jackson) is former foreign editor of "The Economist" and author of "Five Ideas that Change the World.")*

SENATOR HUBERT H. HUMPHREY:

The double threat of an aggressive and expansionist Communist tyranny and nuclear war hang over mankind like a two-edged Damocles sword. The proposal of Mr. Kurtz for a new world security organization as a substitute for present United States foreign policy focuses one's vision on the distant horizon. There are many significant steps we can take in the direction of this lofty goal. By persistent negotiation with the U.S.S.R. from a position of strength, by an imaginative foreign aid program in the economically underdeveloped and politically unaligned countries of Asia and Africa, by a greater exchange of persons and goods between the free world and the Communist world, by using our agricultural abundance as an instrument of peace, we can make a positive contribution to international security and justice. *(A Vice-President of the American Political Science Association, Mr. Humphrey, a Democrat, serves the people of Minnesota in the U.S. Senate.)*

REV. RALPH W. SOCKMAN:

Last night in the cloudy sky there were many airplanes circling around over our airports, "stacked up," as we call it, and as Mr. Kurtz so clearly describes. We coordinate our airplanes. We have enforceable safety discipline to prevent collision and to provide for air safety. What if we had planned our air transport planes on different principles, making them large enough, and tough enough, that they could crash their ways through any other airplanes in the way? The idea is too silly to ponder. It would be an insane practice, wouldn't it?

And yet, as a nation when will we learn that this idea of trying to live by increasing power to crash into and destroy all other nations and people is NOT the way of safety or survival? The principle of seeking safety by retaliation is insane.

We call ourselves a sovereign nation, but what does sovereignty mean in a nuclear age? How can sovereign nations protect their own boundaries? When we handle jet planes and nuclear energies we are taking hold of powers too great for the old ideas of sovereignty and border fortification.

There is a mounting world-wide passion for peace and there is a latent sense of decency in all men, which can be capitalized if we set ourselves to the responsibility for moral leadership, "coveting safety

for our enemies and our neighbors, as well as for ourselves." *(Dr. Sockman is President of the Church Peace Union and President of the Board of World Peace of the Methodist Church.)*

Important Books on World Affairs

CRISIS DIPLOMACY. D. A. Graber. A comprehensive history of U.S. intervention policies and practices. Published in cooperation with the Center for the Study of American Foreign Policy, University of Chicago. "In making clear for the field of intervention what has been the parallel development of theory and practice in different periods of American history, this study is expected to contribute both to the clarification of theory and the improvement of practice."—Hans Morgenthau in the Introduction. ($6.75)

FOREIGN AID REEXAMINED. Edited by James W. Wiggins and Helmut Schoeck. Based upon a symposium held at Emory University, this work brings together the views of 14 of the nation's leading social scientists—including J. Fred Rippy, George P. Murdock, Gottfried Habeler, Justus M. van der Kroef, and Warren Thompson. ($5)

TOGETHER WE STAND. Sylvan Gotshal. New perspectives on French-American relations. "This short volume explains much about France and serves to reiterate for American readers the significant role France has played in our heritage. It is to be hoped that the work will be widely read."—Carroll V. Newsom, President of N.Y. University, in the Foreword. ($3.25)

TOWARD UNITY IN AFRICA. Donald S. Rothchild. A study of federation trends in British tropical Africa. "To trace so carefully, yet succinctly as does this work, the differences of opinion and the events which led up to the major federal experiments . . . and to indicate the ways in which they have operated is a useful service."—Gwendolen M. Carter in the Introduction. ($5.00)

TURKEY AND THE WORLD. Altemur Kilic. An appraisal of events and policies since World War II. Introduction by William O. Douglas. "This book should be read by all Americans—indeed, all Westerners—who seek a better understanding of world affairs and especially of a remarkable nation which, since the second world war, has become our stout ally and a bastion of the free world's defenses against Communist imperialism."—Ernest K. Lindley, Newsweek. ($4.50)

WAGING PEACE: THE SWISS EXPERIENCE. William Bross Lloyd, Jr. Prepared with the encouragement of famed political scientist William E. Rappard, this book is in effect a companion volume to Rappard's studies of Switzerland. ($2.50)

EGYPT'S ROLE IN WORLD AFFAIRS. Emil Lengyel. This book deals with Egypt in relation to the nations affecting her fate—her Arab neighbors, Israel, the United States, Soviet Russia and Great Britain. ($2.50)

SWEDEN'S FOREIGN POLICY. Samuel Abrahamsen. Norwegian by birth and American by adoption, Dr. Abrahamsen offers a concise but fairly comprehensive survey of Sweden's foreign policies. Introduction by Alvin Johnson. ($2.50)

WOMEN IN JAPANESE HISTORY. Mary Beard. This exciting book verifies in terms of a single people the general proposition of Mrs. Beard's great work "Woman as Force in History." ($3.75)

EGYPT'S LIBERATION. Premier Gamal Abdul Nasser. An extraordinary book by one of the most extraordinary men of our time. Written autobiographically, this book provides a first-hand account of the deposition of Farouk and relates how the author rose to power. Introduction by Dorothy Thompson. ($2.50)

GROWTH OF DEMOCRATIC GOVERNMENT. Delbert F. Brown. A critique with proposals for streamlining cumbersome, outmoded institutions. ($3.25)

PARTIES AND POLITICS IN MODERN FRANCE. Richard Barron. A study of the major trends since World War II. "Dr. Barron's book admirably provides . . . understanding in a clear, lucid, sound analysis . . . he has presented his material in a manner useful both to the relatively uninformed as well as to those with a more professional interest in the subject."—Charles Micaud in the Foreword. ($4.50)

Kurtz, How

July 1, 1959

Dear Mr. Kurtz:

This is just to confirm our telephone conversation of yesterday, when I told you that unfortunately, your letter of June 23rd did not reach Mr. Murrow's desk until after he had left on his year's leave of absence.

It is, therfore, I regret to say, impossible for us to give you the permission to use the quotes you mention.

Sincerely yours,

KAY CAMPBELL
EXECUTIVE ASSISTANT

June 23, 1959

Mr. Edward R. Murrow
Columbia Broadcasting Corp
485 Madison Avenue
New York, N.Y.

Dear Mr. Murrow:

Thank you for your encouraging letter of June 19th.

May I ask an additional question?

The paper A CHALLENGE TO WORLD LEADERSHIP is to be published by Public Affairs Pamphlets (Maxwell Stewart, editor). As an experiment in communication, it is to be accompanied by blunt comment by eight or ten leading American citizens (and perhaps one or two from abroad). Those already agreed to write such comment in clude (1) Prof Gordon Allport, Social Science Department at Harvard, (2) Prof Kirtley F. Mather, president, American Academy of Arts and Sciences, (3) Robert H. Reno, World Peace through World Law Committee, American Bar Association, (4) Dean Chauncey D. Leake, president, American Association for the Advancement of Science, (5) Rabbi Maurice Eisendrath, leader of the Refermed Jewish Congregations in this country, (6) Rev Dr. Kenneth Maxwell, head of international affairs division, National Council of Churches, (7) Father John LaFarge , editor emerituse of the Catholic journal, America, etc..

These are not endorsements, but blunt reactions to the challenge of survival brought into partial focus by the paper . . .and perhaps going further in opening up the imagination of the reader . .or reacting pro and con.

WOULD YOU CONSIDER DIDTATING A PARAGRAPH OR TWO TO YOUR SECRETARY WHICH YOU WOULD THEN PERMIT TO BE PUBLISHED WITH THE PAMPHLET? The American people would profit by knowing in general how you reacted to it, pro and con.

Thank you for your patience

Howard G. Kurtz

May 14, 1959

Mr. Edward R. Murrow
C. B. S.
485 Madison Avenue
New York, N.Y.

Dear Mr. Murrow:

Ten years ago I visited with you in your office for a half hour, telling you of a research project I was digging into, in the realm of a solution to the clash between the U.S. and the U.S.S.R. . . before the fuse blew on the experiment of Man on earth..

You wished me well.

The research now has reached a point where an experiment can be run, perhaps as telling as the preliminary experiment in the squash courts where the insight into atomic energy became real for more people.

It is an experiment in public reaction on a world scale. The book manuscript is now completed after ten years of work. A five page condensation of the book has already struck a hidden nerve of action in the State Department. It seems on the verge of publication by Maxwell Stewart, editor, Public Affairs Pamhlets, accompanied by pro and con comment from leading citizens from divergent points of view. I have worked with top Catholic, Protestamt and Jewish leaders. . . with top scientists . . with men like Elmo Roper, and Don Harrington, and Gordon Allport at Harvard, making certain of the final details before launching the experiment.

May I come to see you again? I want you to know about it. I believe it is your kind of story.

Sincerely

Howard G. Kurtz

Re: WORLD HABEAS CORPUS

Dear Mr. Murrow:

WORLD HABEAS CORPUS has been recognized as the greatest modern concept that will contribute to the peace by insuring and protecting, by international legal procedure, the security of the individual.

It is premised on the fact that man, as the subject of international law, should have his individual security competently guaranteed by an international tribunal and treaty-statute rule of law in every state on the face of the earth, without the impairment of the sovereignty of the State.

IRV KUPCINET, who has been very helpful in the many years of the launching of this concept, is of the opinion that it has now reached the stage of responsible sponsorship that would merit a Documentary.

The history of habeas corpus, showing man's fantastic struggle for personal liberty and freedom in the 2000 years of Christianity; the 5000-odd years of Judaism, the ancient civilization, and the billions of years of creation, could be quite dramatic.

The Proposal for WORLD HABEAS CORPUS has been recognized as an inevitable extension of the cornerstone of Anglo-Saxon liberties. It is conclusively accepted that personal justice, through the rule of law, is a force that must ultimately succeed if civilized man is to survive in this age of count down to oblivion.

The enclosed publication affords much material.

As I see the Documentary, assuming it runs one-half hour, there could be 13 minutes of historical background

showing -

(a) that the natural Divine rights of man recognized by Christianity and Judaism, which decreed that that with which God had endowed man, should not be invaded by a government or rulers; and

(b) that legal implementation was necessary and personal body integrity became crystallized in the Magna Charta in 1215.

The Magna Charta was only intended to benefit the barons. However, the shield of protecting the person from unlawful detention spread to the masses. Actually habeas corpus lay dormant for 464 years until 1679, when a test case exposed the alarming fact that there was no procedural guidance for the Courts. This was resolved in the special safeguarding of liberty by habeas corpus in the Habeas Corpus Act of 1679.

The benefits flowing thereafter, which the early Colonists took for granted, were pointed up by the founding fathers failure to include habeas corpus in the Articles of Confederation. This defect, among others, led to the calling of the Constitutional Convention. At all times the importance of the human being, being the ultimate unit and beneficiary of all law, was in constant ferment. Lincoln's attempt to suspend habeas corpus in the Civil War was soundly rebuffed in the Milligan case.

The alarm of the scene of Hitler in 1931 prompted the projection and proposal of the international principle of habeas corpus, administered through an International Court of Habeas Corpus.

The United Nations Charter crystallized this concept by stating in the first seven articles that the matter of human rights (implying liberty and freedom rights) were now a matter of world concern.

Still the procedural implementation of WORLD HABEAS CORPUS is lacking.

You will note in the LIFE article the contextual reference to the great lawgivers of history with that of the author and his proposal for internationalizing habeas corpus.

If you produce such a Documentary, it would be of tremendous education-in-depth, showing how man, as a member of the international community and the subject of international law might conceive the problem of authoritative world individual security.

In the second half of the Documentary, such persons as have indicated their support could be called upon for a 30-second or one minute filmed observation.

This could include ROGER BALDWIN, Chairman of the Board of the INTERNATIONAL LEAGUE FOR THE RIGHTS OF MAN; SEAN O FAOLAIN, the great Irish playwright, of the IRISH ASSOCIATION OF CIVIL LIBERTY; the ALL-INDIA CIVIL LIBERTIES COUNCIL, possibly through Nehru; Mr. Justice Lauterpacht, of the INTERNATIONAL COURT OF JUSTICE, Great Britain; HARRY S. TRUMAN; the Holy Father at the Vatican; EARL WARREN; Etc.

Such a Documentary will overcome the melancholia in many parts of the world attributed to some of the failures or shortcomings and impotency of the United Nations. It will help to overcome the feelings, as expressed by Mr. William Henry Chamberlin of the WALL STREET JOURNAL, that "The UN is a Babel Tower of impotent futility, the most helpless organization of large pretensions since the Holy Roman Empire went into liquidation."

Such a Documentary would certainly project the message the present 31 nations who now have a remedy similar to habeas corpus, and would certainly point up the obligation of the United States to extend the most bountiful of all governmental personal liberty rights to other persons everywhere in the world.

This Documentary will obviously overcome the express views of the die-hards that law is static, and that the state of international affairs is static, and that the only way we can make human freedom prevail is to back it up with determined force and the readiness to sacrifice.

I trust that the foregoing will be of sufficient interest for you to pursue the next step.

Very truly yours,

Luis Kutner

LUIS KUTNER, President.

Appeal Made For Help To Expand Library Here

By MRS. FRANK OWEN
Chairman of the Library Committee of the Gibsonville Book Club

Does Gibsonville want and need a library?

Had you worked in the Gibsonville Branch of the county library situated in Whitesell Fuel Service Building this summer and seen the eager children who flocked in there each Monday afternoon there would have been no doubt as to your answer. School has begun and there is less time for reading but still the children come.

There has been an increased demand for books on science and science-fiction reflecting the awareness of the needs of this scientific age. The use of the library by adults has been most encouraging. Whenever possible requests for books not on the local shelves have been filled. There is need for space where magazines may be kept and read and where research work may be done or for just becoming acquainted with and making friends of books.

The Gibsonville Book Club, which took the first step in securing this branch and which has up to the present furnished the personnel to staff it, recognizes the need for a community effort to make the library more effective. The club, therefore, at its meeting on Thursday passed the following resolutions:

"Whereas our Community Library Project has outgrown the space which the Whitesell Fuel Service has so generously given us for two years and whereas the use of the library by the community has increased so much that we feel the Book Club should no longer have sole responsibility for its upkeep and management, we request the library committee to solicit help from other organizations and interested friends in the community to expand and develop plans for the future."

Straight Line, Police Court

October 12, 1958

Dear Mr Murrow:

As a Halyake Husband and as a former resident of Guilford County I have a double caption to capture your attention, please.

The Gibsonville Book Club consisting of fourteen "retiring ladies" - the majority are literally past retirement age - have started a Public Library in the town of Gibsonville.

For two years we have been occupying space generously given us by the Whitesell Fuel Service. The County Extension Service of the Greensboro Public Library are maintaining a revolving collection of 1700 books. We "retiring ladies" have been volunteer librarians. We have kept the Library open for three hours each Monday afternoon. The borrowers of books are largely children. This summer our circulation was

ville News

$2.00 Per Year

, October 2, 1958 Gibsonville, N. C.

79

about 300 books each Monday; now that school has started it has dropped to about 185. The enclosed clipping shows our present status.

On Tuesday, October 21 at 7:45 we have called a meeting in the Gibsonville Town Hall. We hope to form a Friends of the Library Club whose immediate purpose will be to raise $1000 to finance this growing Library for one year.

Why am I writing you, you ask? Well, Sir, it is this way. Will you please send me a letter by return mail that I can read at our meeting? Couldn't you commend us on our effort and ambition and wish us Good luck and a good night? A word from the wise is sufficient to help immeasurably. Please!

Sincerely,
Mabel Petty La Boyteaux

To The Board of Directors and National Sponsors:

I felt sure you would be interested in seeing this excellent story concerning the Lafayette Scholars now enrolled in American universities under the sponsorship of the Lafayette Fellowship Foundation. The magazine is sent to some 18,000 business concerns and individuals throughout this country. The article will also appear in Amerique Actuelle, which has a very wide distribution in France. It is evident that supporters and friends of the Foundation have every reason to be proud of the scholars chosen for the awards.

Top French Scholars in U.S.

LAFAYETTE, WE ARE THERE

America's most valuable export, according to five young French Lafayette Scholars now resident at Harvard and the Massachusetts Institute of Technology, is the know-how and spirit of U.S. business administration. As one of them puts it: "More and more it appears to us that good business and good productivity are a consequence of the attitude of management and the kind of leadership it gives."

FRANCE BETTER IN FACT THAN FANCY

As far as Franco-American understanding and relations are concerned, these outstanding young Frenchmen feel that American sentimentality ("I Love Paris in the Springtime") may be misting up that clear focus which would show France in its true and stronger light. They point out that France makes much more than saucy cinemas, silk, socks, perfume and champagne. More important—to France, and to its allies as well—they say, are their country's contributions in processes, productivity, products like radar, oil drills, and turbines, and the huge hydroelectric projects being constructed by French engineers and enterprises around the world. They take great pride in French economic efficiency and technical creativity, knowing that many of America's most successful enterprises today are using French formulae, machines and methods. Few Americans seem aware of this face of France, they find.

To their own dismay, these students have come to the conclusion that while Americans in general have quite romantic notions about France as a place for fun but not for serious business, they look to Germany in Europe as the reliable country of efficiency and productivity.

In the social welfare area, they point out that labor in France has the highest income in Europe, and that the health and social security system of their country ranks with the best in the world, including the greatly publicized Swedish and British systems.

The trouble with this fogged-up picture Americans seem to have of France, they say, is not only that America may discount the strength of France as the front line and steadfast ally it is, but that American enterprise may be overlooking its very real opportunities and advantages for doing good business in France.

OPEN DOORS

The French graduate students have been most highly impressed by American open-handed hospitality. One of them,

The Lafayette Scholars studying at Harvard and M.I.T.—left to right: Michel Guillemin, Bruno de Vulpian, Jean Soublin, Francis A. Lang, Jacques Descamps

Registration does not imply governmental approval.*

Jean Bataillard at Yale University Photo Alburtus—Yale News Bureau

hitchhiking to Florida, was forever being invited to spend time in people's homes along the way. Another tells of invitations received by the group through the International Students Center in Boston to visit with families in New Hampshire, Vermont and Maine. A third was invited for three weeks to a town in New York. Lafayette Scholars in California write of the overwhelming hospitality and generosity extended to them.

THE SCHOLARS

Eight Lafayette Scholars are studying in the United States this year—four at Harvard, and one each at M.I.T., Yale, Stanford and the University of California.

Jacques Descamps, 23, whose father was in the paint business in Lille, attended *l'Ecole des Sciences Politiques,* worked in a paper mill in Canada, traveled to Colombia and Venezuela to look at French turbine and textile installations in those countries. He felt that this experience abroad was essential to prepare him for some phase of the export-import business, "which France must develop more urgently."

Francis Lang, 27, from Alsace, studied business administration in Paris' *Ecole Supérieure de Commerce,* continued for two years at Heidelberg University, and for further periods at Berlin and Madrid universities. During Army service as a paratrooper, he had a bad fall and injured his back. Then, he worked a year for Unilever before coming to Harvard to study market research. He intends to specialize in this field, saying that even the top market research men in France today are not up to the American standard.

Jean Soublin, 22, son of a Norman who runs a fishing fleet, studied at the *Sorbonne* and *l'Ecole des Sciences Politiques.* Graduate work at Harvard is preparing him for his chosen career in advertising and public relations. He feels that advertising men today, and particularly in France, need a broader background of training and experience in all phases of business, finance and production.

Bruno de Vulpian, 24, son of a Paris doctor, was President of the student body at the top-rated *Ecole Polytechnique,* is now looking ahead to industrial and financial management. He may go into "oil, chemistry or a bank, all of them sure to be of expanding importance in France's future."

Michel Guillemin, 24, son of a Paris insurance broker, attended *l'Ecole des Arts et Métiers* before coming to M.I.T. to prepare for industrial management, preferably in Africa, where he has already worked in tire, lathe and oil factories. There, in future, as a business executive, he feels he can best put into practice his concepts of "human relations."

Jacques Haissinsky, 23, a native Parisian, has chosen nuclear physics as his future career, and is doing graduate work in that field at Stanford University. He received his Licence ès science with honors in 1955 at *l'Ecole Normale Supérieure,* and his Diplôme d'Etudes Supérieures de Sciences Physiques with highest honors in 1958. Scheduled to be awarded his Master of Science degree at Stanford at the end of this semester, Haissinsky considers it advance "preparation for future experimental research" during his second year at Stanford and later in France.

Pierre Sibi, 23, also a Parisian, received his training and degrees in law, economics, and political science at the *University of Paris,* and in 1958 was awarded the Diplôme of the *Institut des Sciences Juridiques et Financières Appliquées aux Affaires,* ranking first in a class of 32. Sibi is now working for his master's degree in business administration at the University of California.

Jean Bataillard, 29, born in Ugines (Savoie), received his Licence en droit from the *University of Grenoble,* and held French Government scholarships from 1948 to 1951 for study at *l'Institut d'Etudes Politiques de Grenoble.* For two years thereafter he was a Fulbright Scholar in economics at Amherst College. Returning to France, he worked at the Paris branch of the First National City Bank of New York. Now studying at Yale University, he has been awarded his master's degree in economics and is working toward his doctorate there under the auspices of the Lafayette Fellowship Foundation.

THE SCHOLARSHIP

Obviously, these young Frenchmen have those qualities of learning and leadership implied in the phrase "exceptionally gifted" which was part of the original basis for selection of recipients of scholarships. Established in 1955 in preparation for the celebration of the Lafayette Bicentennial, the Lafayette Fellowship Foundation is dedicated to the preservation and strengthening of the historic bonds of friendship between the United States and France.

The first four Lafayette Scholars were brought to the United States in 1957 for two years of graduate study in American universities. The objective is to have at least twenty such students annually, in the conviction that it is vital that those who are preparing to assume active roles in the economic, social and political life of France develop a better understanding of the United States.

Nominees are selected by a French Screening Committee, of which Maurice

Bayen, Associate Director of Higher Education in France, is Chairman and Professor Jean-Jacques Vignault, Executive Secretary. Other members are Gaston Berger, Director of Higher Education in France; Henri Bonnet, former Ambassador to the United States; Ambrose E. Chambers of Beckley & Chambers (attorneys); Edmond Giscard d'Estaing, President, International Chamber of Commerce; Johnson Garrett, Manager of the Paris Branch of the First National City Bank of New York; Miss Dorothy Leet, Director, Reid Hall; Jean Sarrailh, Rector, University of Paris; and Georges Villiers, President, Conseil National du Patronat Français. Candidates' names are then submitted for approval to the American Education Committee, headed by Dr. Grayson L. Kirk, President of Columbia University, and including the Presidents of Princeton and Florida State universities. Officers of the Foundation include: Elliott H. Lee, Chairman; Benjamin H. Namm, President; Philip Cortney, Treasurer, and Vada Horsch, Secretary. Chairman of the Foundation's Scholarship Fund is Washington attorney George W. Ball. Two nationally known industrialists, both of whom have wide interests in Europe and in France, have recently joined the Board of Directors of the Foundation. They are Thomas S. Nichols, Chairman, Olin Mathieson Chemical Corporation; and Milton S. Lightner, Chairman, the Singer Manufacturing Company.

Jacques Haissinsky at Stanford University

Pierre Sibi who studies at the University of California

BUSINESS SUPPORTS PROGRAM

Contributions to finance the program come from business firms, foundations, and individuals. American concerns with industrial and commercial interests in France have demonstrated marked interest. Some of the American enterprises financing Lafayette Scholars: International Business Machines Corp., and the I.B.M. World Trade Corporation, *The New York Times,* Godfrey L. Cabot, Inc., Standard Oil Co. of New Jersey, Kennecott Copper Corp., Eastman Kodak Company, and Socony Mobiloil Co.

Others who have played an important role in making possible the launching and progress of the Foundation program are: the Honorable David K. E. Bruce, Roscoe C. Ingalls, The Ford Foundation, Coty, Inc., Philip Sporn, The Dillon Fund, the Gillette Co., the Honorable Joseph P. Kennedy, the National Cash Register Co., and the New York Foundation.

IMPORTANCE OF MANAGEMENT

The Lafayette Scholars at Harvard and M.I.T. are concentrating on learning all they can about U.S. business administration, and hope to apply creatively in their future careers in France the knowledge they are gaining. They feel that American management methods, financial organization, marketing research, promotion and personnel administration are a vital challenge to their curiosity and will to learn.

Says Michel Guillemin: "Almost everything in this field has been new to me—standard costs, flexible budgets, investment decisions, business cycles and problems of line and staff relationship in a firm—and these certainly are good knowledges to take back to France. But American business administration is not a sum of its 'gimmicks,' as it sometimes may appear to be. It is the consistent whole of business administration, and particularly the spirit with which it is infused, which is most important.

ENGINEERING EXECUTIVES IN FRANCE

The students point out that most of those in top management in France come from the ranks of graduate engineers, technicians, and scientists. They are no longer sure that this preponderance of engineering executives is altogether good for contemporary market operations. Soublin is especially impressed with the "wealth of economic knowledge in the U.S., and the high stature of American economists in government and business."

KING CONSUMER

Jacques Descamps is greatly interested in American marketing techniques, which he finds much more highly developed than in France. Says he: "France has been preoccupied with creating and manufacturing fine products, and now must learn to pay more attention to the market and the consumer. (Who is he, what does he buy, and why?)" Establishment of the

European Economic Community (or Common Market), he believes, has provided a strong impetus for French production and sharpened its competitive attitude. "But if France is to succeed, she must learn modern marketing techniques in her approach to the consumer, who has become more selective."

In a general discussion on U.S. enterprise in the market place, they all said they cannot help but think that American business spends disproportionate amounts on distribution, promotion and advertising. Soublin believes it will have to be reduced. But Lang feels the trend cannot be reversed, and that in any case, "our country has not yet really utilized many of the worthwhile American methods of marketing and promotion." And Soublin, though still somewhat puzzled by the "Madison Avenue School," agrees that France may need more of whatever it is right now.

SCHOLARS' ACHIEVEMENTS

The Lafayette Scholars are earnest, thoughtful, and well able to express carefully considered opinions. One of their chief achievements in the United States, perhaps, is their acceptance by their American classmates, and the admiration in which they are held. They have also received recognition for outstanding work. De Vulpian as a class assignment wrote a case analysis which is being distributed to the first-year class at Harvard School of Business Administration as a model of its kind. Guillemin and Soublin are working together on a new concept: the application of mathematical probability to decisions in marketing.

TWO-WAY GAINS

These young Frenchmen now are more than ever convinced that

1. "There are many opportunities and advantages for U.S. enterprises to do business in France"; and

2. "If more Lafayette Scholars come to the U.S., we can soon learn to apply American business techniques on a broader scale in France."

An interested and qualified American who talked with the Lafayette Scholars in New England afterwards remarked: "The increasing interest that American business has displayed in the past few years in support of higher education takes on an added significance when related to these graduate students from France. A review of their careers and current training demonstrates more than anything else the essential validity of establishing permanent bonds between the United States and France by welcoming some of the best young students our fellow democracy has to offer and in giving them full access to our enormous reservoir of knowledge and experience in the fields of business and public administration."

Good Methods Can't Beat Bad Weather

THE YEAR IN FRENCH AGRICULTURE

While French farming today is far more productive and prosperous than it was before the war, 1958 was not an especially good year for the nation's agricultural community. Whimsical weather from week to week, along with too much summertime rain, were the chief culprits.

GRAINS AND ROOT VEGETABLES

As a whole, grain and root-vegetable crops, though greater than the 1953-1957 average, did not come up to expectations in 1958. Wheat production was down compared to the previous year, though this was not so serious for farmers as it would have been in prewar years when wheat accounted for 17 percent of the national agricultural gross, compared to the present 7.5 percent. Among other grains, corn and barley showed notable increases.

The harvest of root vegetables also was disappointing, with a poor potato crop reducing the average per-acre yield to

A farm in central France Photo Shell-Berre

Sheep grazing near Mont-Saint-Michel Photo Shell-Berre

35 tons (down from 38 tons in 1957). Sugar beet production was up, however—to a total 12.7 million tons and a per-acre yield ten tons above the 1953-1957 average. There were also good crops of red beets and turnips.

FRUITS, FRESH VEGETABLES AND NUTS

With the great recent increase in their consumption in France, fruits and fresh vegetables now represent about 10 percent of total farm income. Fortunately there was a relatively fair harvest of these items in 1958. The Ministry of Agriculture notes, however, that the year somehow turned out to be "a good one for fruits with seeds, but a bad one for fruits with stones." Thus, the crop of apples, pears and grapes (for eating as such) was very good, but prune production was down to 25 percent of normal and apricots to 55 percent. Chestnuts and other nuts had a fine year.

WINE

The 1958 wine harvest, as in the previous year, was far below average—a matter of serious concern to every red-blooded citizen of France and to wine-lovers everywhere, as well as to the French farming community since it accounts for 11 percent of gross agricultural income.

LIVESTOCK

By the end of the year there were some 18.4 million head of cattle in the country (of which 9.8 million were cows), 8.7 million poultry, 8.4 million pigs, 1.9 million horses (many French prefer horsemeat steaks to beef), and 1.1 million goats.

Meat consumption in France is now more than 2.6 metric tons a year, compared to over 1.7 million metric tons in 1929. The French still consume slightly more pork than beef.

Milk production has increased from 4.9 billion gallons in 1952 to close to six billion gallons last year. Consumption of milk and milk products, in fact, is now up 20 percent over the prewar years.

AGRICULTURAL INCOME

Total agricultural income last year was some 350 billion francs (around $833 million) higher than in 1957. This did not, however, give the farmers any real rise in purchasing power, since the prices they had to pay for goods and services rose at least as much as the income they received for their labors.

Other indices suggest that farmers either have less money to spend or have become more cautious in their expenditures. Tractor sales, for instance, were down 30 percent compared to 1957, and there have been large cancellations of fertilizer orders even in so highly developed and modernized a Department as Seine-et-Marne. Part of this purchasing fall-off, however, must be attributed to a natural and necessary pause after the extremely rapid pace of farm modernization and equipment over recent years.

AGRICULTURAL PROGRESS

Items in France's postwar agricultural progress:

- Production is now 40 percent above the prewar level.

Thirteen times as many tractors as prewar . . . Photo Shell-Berre

• There are thirteen times as many tractors in use on French farms today as there were before the war.

• Use of fertilizers has doubled.

• With increased use of fertilizers, better adaptation of crops to soil, better seed selection, and making full use of a naturally rich soil, French farmers have rapidly raised their output per acre. For instance, average wheat yield per acre (over 35 bushels) for all the farms in France in 1957 was just about 60 percent above that of the average yield on U.S. farms.

• France is the only country in Europe with an economy in balance between agriculture and industry, a fact that contributes importantly to the nation's social equilibrium and to its present and future economic well-being.

Best of Europe's Best

FRENCH CARS FIRST IN TOP ROAD TEST

France's automobile industry has scored its greatest postwar competitive triumph. In the recent Monte Carlo Rally, generally considered the top test for factory-made passenger cars, French automobiles finished first, second, third and fourth in the prized and all-important general classification category. And they carried off all the honors against 318 other entries representing Europe's leading automakers.

The Rally is a demanding drive for stock cars over 2,500 miles of Europe's variously cleared, wet, icy and snow-covered highways, byways and winding mountain roads. In the course of this long drive for the general classification prize, what counts most is endurance and steady, over-all performance. In one stretch, the test is for speed; in others, set minimum paces over all sorts of roads, hills and surface conditions.

THE WINNERS

First place went to a *Citroën* "ID 19" (see ***France Actuelle,*** Vol. VII, No. 19, November 1, 1958), new proof of the over-all excellence of this five-seater, front-wheel-drive, oil-suspension, utterly comfortable and safe family car—which incidentally make over 40 miles per gallon of gas on trips. A further indication of this automobile's value for the average driver: Pitted against Europe's best-made autos, often with professional racing drivers behind their wheels, the *Citroën* was piloted by three Sunday drivers from Paris, who took turns behind the wheel: 40-year-old shoe manufacturer Paul Coltelloni, 45-year-old wholesale grocer Pierre Alexandre, and 35-year-old printer Claude Desrosiers.

Second place in this highly-regarded event went to a *Simca* "P60" (***France Actuelle,*** Vol. VII, No. 19, November 1, 1958), third to a *Panhard* "DB," and fourth to another *Citroën* "ID 19." These cars too were chauffeured by amateur French crews.

Winning Citroen *"ID 19" and French crew*

THE OTHERS

First non-French car in the final ratings was a British Sunbeam, finishing fifth. Next came a Swedish Volvo, and after that a German DKW. The highest Italian entry in the classification was a Fiat which came in forty-third.

TAKE YOUR PICK

Citroën, Simca and *Panhard* cars are available in the United States, the *Simca* being distributed by Chrysler.

With Nothing to Lose But Their Commuting Trains

OUTSIZE ORB OF OFFICE WORKERS

Put on your old white collar, keep your stray frays from tangling with the new-fangled machines they keep putting before you, learn to live in a maze of duplicated papers and you're a ready recruit for the world's fast-growing army of office workers.

This, at any rate, probably is the way their cosmos looks to the demi-defeated clockwatchers among those irretrievably meshed into the modern administrative machine that—often to the annoyance of us all—just gets bigger and bigger everywhere.

THE FRENCH "COLS BLANCS"

Take France: Through this century of progress, the proliferation of white-collar workers has been closely equivalent to the breeding pace of mice and rabbits. In 1900, only three percent of the total number of persons employed in the nation were white-collar types. But by 1920 the figure had gone up to seven percent, by 1935 to ten percent and by 1956 to 25 percent. Today, some 6.7 million Frenchmen and Frenchwomen, or almost one-third of all those employed in the country, fit into this fattening employment layer between executives and factory hands.

Take the *Peugeot* Company: From 1939 to date, the number of general workers in this auto plant—and it is a typical example—increased only 0.4 percent, while office workers expanded 18 percent and engineers 109 percent.

MORE MACHINES, TOO

In an economic development not exactly according to Marx, more and more offices with more and more men and women employees are, at the same time, being filled with more and more machines. In France, office equipment manufacturers, in fact, are having a heyday. In 1952, their total gross sales amounted to about 11 billion francs ($26.2 million), but for 1957 their gross was over 26 billion francs ($62 million).

Just to show that France obviously isn't the only country mad for office machines and the men and women to master them, the French office equipment industry exported more than one-third of its production in 1957, amounting in value to well over $21 million.

UNCATCHABLE COSTS

Chief predicament of France's white-collar employees operating these office machines, as of course for their counterparts everywhere, is the fact that their salaries are stubbornly lethargic compared to the buoyant character of unionized manual workers' wages. Still, prices scoot upward at the same swift pace for all, while white-collar living costs rise ruthlessly almost out of reach.

"BURELAINES" WILL GET YOU IF YOU DON'T WATCH OUT

As if they haven't enough to worry about, many of these hard-pressed public and private clean-nailed employees have long labored under the other world's opprobrious term of "bureaucrat." It's the same half-sneered word in French. To help reconstruct the down-trodden psyches of those concerned, organizers of Paris' recent Office Equipment Show asked a panel of language experts to find a new and more dignified designation for this somewhat underprivileged and often underrated third of a nation.

After due deliberation, they came up with *"burelain."* As the experts explain it: "This new term localizes and describes a sojourn or way of life, as in *riverain* ("one living or dependent on a river"), *urbain* ("urbanite"), *forain* ("employee at a fair"), *châtelain* ("owner of a château"), and *chapelain* ("chaplain"). Thus, the person leading an office life is a *burelain,* for he, just like the *châtelain,* is at the same time guest and master of the structure of which he is also slave and partisan."

CAUSE FOR RECONVERSION

Clearly, in any case, there is to be no end to all this burgeoning of the bureaus, and if the masses of white-collar workers couldn't care less, the makers of overalls, at least, may have to reconvert themselves into carbon paper manufacturers or electronic computer operators.

noteworthy NOTES

More People, Fewer Deaths and Marriages

The population of France on January 1, 1959 reached 44,788,000, an increase of 460,000 over the figure a year before. In 1958 there were 805,000 births in the country, 155,000 immigrants (including Frenchmen repatriated from Tunisia and Morocco), and 500,000 deaths. The latter marked by far the lowest mortality rate ever recorded in France—11.2 deaths per 1,000 population. The infant mortality rate also was the lowest ever—28.1 per thousand under one year old. Though the 310,000 marriages in the year were fewer than in 1957, the National Institute of Statistics claims this is due not to any timidity or pessimism, but to the fact that the marriage age-group is smaller right now because of the low French birth rate from the Depression to the Liberation.

Busy, Still-Building Paris Airport

In the past year, a record 2,679,317 passengers passed through Paris Airport (Orly and Le Bourget fields), 4.1 percent above the 1957 figure and 400 percent over 1949. The airport, now served by 80 airlines of the world, also handled a record 44,508 metric tons of freight and 15,890 tons of mail. In the course of the year, no less than 643,000 paid admission just to watch the arrival and departure of planes from the vantage point of roof terraces over the terminals, and 107,000 participated in conducted tours of Orly and Le Bourget. In consequence of this traffic and public interest, nearly 15 billion francs ($30.4 million) will be spent this year on further modernization and extension of facilities at Paris Airport.

Big Lead Smelter

France has the largest lead smelter of the Common Market, an ultramodern plant in the north of France at Noyelle-Godault. France is melting down more than 75,000 tons of lead a year and is exporting 10,000 to 15,000 tons annually to Switzerland, Germany and Scandinavia.

High-Charged Electrical Equipment Trade

The French electrical equipment industry is expanding at a rate that doubles total production every six years. In the past year, output rose 15 percent; and the year before (last for which there are comparative figures) this French industry increased production 17.5 percent as against 14 percent for its counterpart in Italy, 11 percent in Germany, 7 percent in Belgium and 6.7 percent in the United Kingdom. Productivity is high, employment has reached 256,000, and the value of exports is at an all-time peak.

Shipbuilders' Shipbuilder

From French shipyards, since 1950, shippers in 26 different foreign countries have ordered 195 ships totaling 1.5 million dead weight tons. French shipyards are now building the largest tankers ever constructed in Europe. Since 1947, 22 French ships have been built for Norwegian customers (with three more now in construction), and nine for shippers in the United Kingdom.

Recently the *La Seyne* Shipyards delivered three freighters to Norway: two 13,000-tonners for shippers at Oslo and Arendal, and one 12,500-tonner to a shipper in Bergen.

Stained Glass for Hartford

The biggest stained-glass commission ever awarded ($500,000), has gone to the Jean Barillet Studios in Paris to create 26 windows for the nave of the new St. Joseph Cathedral in Hartford, Connecticut. The windows will cover an area of 22,837 square feet and weigh a total 260 tons. They are to "relate Christ to daily life and the needs of men in all ages."

Famed Frenchmen Receive U. S. Awards

In a ceremony at the U.S. Embassy in Paris, three Frenchmen were made Honorary Members of the American Academy of Arts and Letters and of the National Institute of Arts and Letters. Ambassador Amory Houghton made the awards to painter Marc Chagall, writer François Mauriac, and composer Francis Poulenc. The citations: Chagall—"has fused imagination and nature with a magical brilliance of color" and "moreover has restored a sense of fantasy so woefully lacking in the painting of our time." Mauriac—in his "powerful novels, classical in their spare and tragic rigor" has probed "the essential problems of religion: the letter and the spirit . . ., thus turning "a light not unworthy of Pascal at times . . . on the deepest problems of national and international existence." Poulenc — has been "the first to establish (himself) as the most traditionally French in the lyricism of (his) songs and the grace of (his) writing for the piano," and has "established (himself) as a composer of the first importance, with a melodic and harmonic elegance which is rare in contemporary music." Among other Frenchmen previously honored by the Academy and Institute: Georges Braque, Jean Cocteau, André Dunoyer de Segonzac, André Malraux, Jacques Maritain, Darius Milhaud, Jules Romains, Le Corbusier, Henri Sauguet and Albert Schweitzer.

More Coal

French miners in 1958 produced a record 60,034,800 metric tons of coal, surpassing their previous year's output by more than a million tons despite a reduction in the working force. Thus, French mining productivity, already first in Europe, made further gains.

Laird, Roy D.

February 7, 1958

Dear Professor Laird:

I have your nice letter of January 21st.

I appreciate the time and trouble you took in sending me a copy of your letter to President Eisenhower.

Again, thank you.

Sincerely yours,

Mr. Roy D. Laird
Assistant Professor

New York, New York

Dear Mr. Murrow:

I have enclosed a copy of a letter that I have sent to the President of the United States, which is concerned with a matter I regard as vital to the interests of our nation and the free world. I should like to solicit your effort in behalf of this cause.

Very truly yours,

Roy D. Laird
Assistant Professor

RDL:ef

Enclosure

January 21, 1958

The President
The White House
Washington, D. C.

Dear Mr. President:

The New York Times of January 15, 1958 carries an item that is very encouraging to the citizen who believes, with you, that in our struggle to survive and to preserve our freedoms in this post-sputnik age we must not miss a single opportunity to employ our intellectual resources to the fullest. American intelligence and wisdom is the great secret weapon in our time; therefore, I applaud the decision of the Eisenhower administration to make the United States Government's extensive translations of Russian scientific writing available to American scientists. Simultaneously, however, I am struck by a great fear that this decision may well represent one of the greatest mistakes our government can make in this day of all-out hot and cold wars, in which nearly all aspects of our economic and intellectual activity contribute to our defenses. I am referring to your administration's failure to make available at the same time to those in the rest of the intellectual community, government translation of materials that fall into the categories of the social sciences and humanities. I hardly need remind you that it is at least equally important for the West to take continual readings of the Soviet economic, political, and social climate as it is to know what they are doing in the material sciences.

Mr. President, you yourself have noted with vigor that we must not allow recent Soviet scientific achievements to stampede us into an unbalanced crash program in our educational and other intellectual endeavors. Bluntly states does not your administration's decision to release only Soviet scientific translations clearly imply that you believe our knowledge of the strengths and weaknesses of the Soviet social fabric is less important than a knowledge of what they are accomplishing in their laboratories? The American researcher who is striving mightily to assist you in our overall defense effort is surely in complete disagreement with such a conclusion.

Mr. President, I have long believed that a great tragedy exists in the expenditure of our taxpayer's money for extensive translations by our government of Soviet press materials (obviously not classified although much of it is stamped "Official Use Only") that are then denied to the public and especially to the many researchers in the Universities of our nation who are working continually to improve our understanding of the Soviet enigma. In the past I have made some informal inquiries into this problem and I have always been stopped (unofficially to be sure) by

the assertion that this is an old battle that cannot be won because our government is afraid that our great news gathering agencies will complain that the Federal Government is competing in their field of enterprise. I concede this point, but have you considered the price that is paid for withholding this basic material from the social sciences researcher? There is very little difference between this and denying the nuclear physicist access to fissionable materials while asking him to get on with his job. Actually, however, there is a most simple solution to the problem that should keep everybody happy. The social sciences researcher is not interested in making headlines and competing with A.P. and U.P. services. Even in the analysis of current Soviet trends and action the social scientist's materials are just as valuable when they are a week, a month, or a year old. To be sure, the American Council of Learned Societies does publish the truly invaluable weekly The Current Digest of the Soviet Press. As good as the Current Digest's coverage is however, if the U.S. Government's coverage in translation of the Soviet press is comparable to the stated coverage of Soviet scientific publications (and I feel certain this must be the case) the offerings of the Current Digest must be minuscule in comparison to what is available in Government offices. Why then could not the Government turn over its translations of Soviet press materials to some private operation such as the American Council of Learned Societies or the American Political Science Association with the clear understanding that these materials would not be released to the nation's Universities and research institutes until they are at least a week or a month old? If publishing of these translations was underwritten by one of our great private foundations (and I am confident their help should be forthcoming) this action would not cost the taxpayer anything more than a few cents postage. Our defense effort would surely be immeasurably enhanced. Such action would offer little or no competition to our private news services. In any event I cannot believe that these agencies are so selfish that they would wish to deny our country the great advantage that would be gained in a cold war that is fought very largely with brains.

Mr. President, I am but one of a small army of people in our nation who are usually referred to as "Soviet experts" and although I cannot pretend to speak for my colleagues in this effort to improve our understanding of the Soviet system, my knowledge of these people leads me to believe that they would be virtually unanimous in supporting some such proposal as presented in this plea. In any event I urge you to give this matter your most serious attention.

Respectfully,

Roy D. Laird
Assistant Professor

RDL:tp

P.S. Copies of this letter have been sent to Senator Frank Carlson of Kansas, Senator Hubert Humphrey of Minnesota, Mr. Heald, the President of the Ford Foundation, the Associated Press, United Press, International News Service, the New York Times, the Washington Post and Times Herald, Mr. Chet Huntley, NBC and Mr. Edward R. Murrow, CBS.

Lambourne, L.A.

November 9, 1959

Dear Mr. Lambourne:

Mr. Murrow is in Europe at the present time, but I should like to thank you on his behalf for your gracious letter of November 2nd and for your kind comments regarding SMALL WORLD.

In answer to your request for Miss Suyin's address, I am sorry but we are not authorized to give out this information. I can tell you that although her appearance on SMALL WORLD originated from Hong Kong her home is in Singapore. If you would like to write a letter to her, mail it to us and we shall be glad to forward it to her.

Sincerely yours,

Gabrielle Wachsner
Secretary

Mr. Leonard A. Lambourne

2nd November, 1959.

Mr. Edward R? Murrow,
Columbia Broadcasting System,
NEW YORK UNITED STATES.

Dear Mr. Murrow,

Last night I watched your presentation of Small World dealing with the problem of China with Mr. Alsop, Lord Boothby and Miss Han Suyan. Next month I am leaving for a tour of 14 South-East Asian countries including Hong Kong and Formosa and I would like to meet Miss Suyan when I pass through Hong Kong and I would be pleased if you could let me have her address so that I can write to her.

I enjoyed watching yournprogramme, which was one of the rare occasions I watched T.V. It certainly kept me interested.

I look forward to hearing from you.

Yours sincerely,

(LEONARD A. LAMBOURNE)

Dear Ed,

I called today to see if there was a still a chance of our getting together before you took off and learned, to my chagrin and disappointment, that our appointment time had come--and gone. The simple, foolish truth: I never got the message.

It kills me. You are an important part of this book I'm doing about the television industry, and I've been looking forward to a meeting as a major event in its development. I hate to think that because of a secretarial goof, I'll have to rely on second-hand material on a major subject. I intend, incidentally, to show some of the underlying pressures, the motivating forces and the key personalities who are amking this business what it is--and what it is becoming. This is a story that needs telling, I think.

Can you possibly see me soon? Any time of day or night--anywhere? Or perhaps after you have left 485 Madison? I know it will be hard to reach you then, but it's worth a try.

Thank you for your courtesies in the past. I can only assure you that if you do lift a necessary restriction on your time and energy to see me, the effort won't be wasted.

Sincerely,

Herman

Dear Ed:

After reading your Chicago speech, it occurred to me that you might find interesting two stories in our current issue. One deals with Jack Gould. The other, on Armstrong Cork, documents very convincingly, I think, the thesis that serious -- though not controversial -- programming can be "commercial".

If your invitation of last year still holds, I'd like very much to have another visit with you.

Sincerely,

Herman

SUBJECT: Brussels Worlds Fair

Hugh Lucas of Campbell-Ewald was in on Friday to request that we consider meeting a corporate image interest of the Burroughs Corporation of Detroit, Michigan.

According to Mr. Lucas, $500,000 has been specifically earmarked for television by Mr. John S. Coleman, President, to get across to the public the fact that the Burroughs Corporation is interested in areas over and beyond the making of good adding machines.

Preliminary thinking at the agency and at Burroughs has led them to request we consider doing 2 one-hour programs about the forthcoming Worlds Fair in Brussels.

Our News Department is coming up with an outline and I wondered whether or not you had any ideas. A preliminary presentation should be made to Burroughs no later than Tuesday, February 4th. I suppose I should also tell you that Mr. Lucas was on his way to see Mr. Kintner at the conclusion of our conversation.

Lankler, Ralph C.

October 31, 1958

Dear Ralph:

Thanks for sending me the document from WHEN. I refuse to be surprised. As I have told you, if we were to do the second coming of Christ in colour for a full hour, there would be a considerable number of stations who would decline to carry it, on the grounds that a western or a quiz show would be more profitable. Forgive the irreverence, but there are times when I think the Lord is wholly indifferent to this business of television, and this is why.

As ever yours,

Dear Dr. Lankler:

I have your note this morning inquiring why we did not choose to transmit the program "SMALL WORLD" on Sunday evening.

We, too, regret that we are not able to carry this series, but the explanation is a simple one. That time period has been contractually committed for many months now to its current sponsor and that contract still has some time yet to run.

At the time this contract was entered into, the "SMALL WORLD" program did not exist. Even though that series has now come into being, we are still bound by the previous contract and must honor it.

Perhaps some time later on the situation may change and it may be possible for us to carry "SMALL WORLD". I hope so.

Cordially,

Gordon Alderman

November 7, 1958

Dear Ted:

Many thanks for your letter of November 3rd.

I am delighted to hear that you like SMALL WORLD. Thanks also for your suggestions. We are, as it happens, already working on a program concerning race relations.

Unfortunately, there is nothing I can do to stimulate a foundation to finance the distribution of kinescopes as you suggested. It is a good idea.

With best regards.

Sincerely yours,

Mr. Ten Eyck Lansing

November 3, 1958

Dear Ed

Last night I caught SMALL WORLD again, and just want to say that I think it is a knockout format. For my money, it is the most stimulating and exciting package for ideas that television has had yet.

In fact, I think so much of it that I'm emboldened to make a couple of respectful suggestions:

1. Kinescopes of the shows should be made available to idea-minded groups around the country. I can't think of a better kickoff for an evening's discussion or a more effective way to needle the brains of a group. And certainly it is of urgent importance that people in Dubuque and Dallas and Kokomo talk about the issues of our time among themselves.

Some foundation ought to be interested in footing the bill for the kinescopes. Distribution could be made in many ways--e.g. through such outfits as the American Association for the United Nations, the World Affairs Council, the General Federation of Women's Clubs, and so on, to pick a few off the top of my head. (Frank Kelly of the Fund for the Republic tells me just now on the telephone that he already has talked with you about a kine on American freedoms, which simply goes to show that great minds work on the same ESP channels!)

2. Here are two SMALL WORLD programs I, as a consumer, would like to see:

(A) An attempt to reduce the racial question to what Harry Ashmore calls "rational terms." This might be very well done by, for example, Margaret Meade (anthropology), Arnold Toynbee (historical effects of racial tension) and C. G. Jung (collective unconscious of mankind, where I have a notion race prejudice may be taprooted). This of course is a global problem in any world where three out of ten men are white and are apt to distrust or dislike the other seven who are non-white.

(B) Another go at the question which never really got answered or properly discussed last night: How come that, although people agree on the facts and the dangers, nobody seriously does anything about such things as stopping tests of nuclear weapons or improving our educational system to meet the demands of the future? I'd love to hear this one tackled by, for example, Andrew Malraux and Harry Ashmore as journalists and Paul Lazarsfeld as a perceptive analyst of the communication process. Put another way, the question is: Can we and, if so, how can we get through to people to stimulate action on great issues before it is too late?

I hope this letter doesn't carry too much coal to Newcastle. You probably have thought about these things. But SMALL WORLD stimulated me so much last night that I wanted to get this off the chest.

It was good to see you and your excellent lady after the Freedom House dinner and I was only sorry you departed so prudently early--way before daylight.

Again, SMALL WORLD is swell. I hope it bears great fruit in many ways and many minds.

Sincerely,

Ted Lansing

Lasley, R. L.

R. L. Lasley
4011 Gilmore Drive
Greensboro, N. C.
February 5, 1959

Mr. Edward R. Murrow
Columbia Broadcasting Company
New York, N. Y.

Dear Mr. Murrow:

I am writing to raise the question whether your high standard of broadcasting and, I am sure, the high standards you exact in accepting sponders, is compatible with the questionable character of the insurance company which is sponsering your current series of commendable revelations of wrongdoing in high places.

The questionability of the character of your sponsering insurance company has been raised in my personal instance by my experience with it. I had, until last October, carried for, I estimate, an automobile insurance policy with that company for some twenty years--in fact it was the only company, as I recall, with which I ever carried insurance. Since I had no claims, as I remember, during that time, I was not aware of having insurance, except at premium payment time. However last summer I filed two trivial claims--one for a scratched fender in a parking accident and one for a slight bit of damage from a falling tree during a windstorm, while the car was parked. The total amounts were respectively $10.00 and $8.00. The notice of cancellation, a mimeographed form letter, gave no reasons for the cancellation except that "a review of your policy shows that it is not to the best interest of our other policy-holders to keep your policy in force," or words to that effect.

It may be added that the first company I applied to after this cancellation insured me without question, doubtless on the basis of the questionability of my cancelling company. In fact the agent of this present insuring company, as well as a casual, unsolicited comment of an agent of another company, apparently not feeling bound by any professional loyalty to your company, expressed, to say the least, strong disapproval of it. The agent of your company in another state, where I carried my insurance for most of the years I have mentioned, writes me that he had left the company a few years back because he had been ashamed to meet his client friends whose policies your company had arbitrarily and unwarrantedly cancelled. Although news accounts do not ordinarily mention the names insurance companies, your company was not long ago thus mentioned for cancelling a policy of a Negro because he lived in a community where race tension was somewhat marked, and was mentioned in another case, the details of which I do not recall.

It may be added that the two companies I have mentioned are among the oldest and most respected in the country.

Doubtless it is the practice of your company that has prompted the introduction by representative George Uzzell in the current session of the North Carolina legislature a bill forbidding the arbitrary and unwarranted cancellation of insurance policies. A cancellation in this state, where automobile liability insurance is mandatory, and in view of the practice of insurance companies in pooling their records, makes it virtually inpossible to find insurance elsewhere, and practically amounts to taking away a driver's license, a decision which should be left to the proper legal authorities.

Doubtless there will be a hearing or hearings of Representative Uzzell's bill, from the records of which you may obtain further information about your sponsering company. I feel so strongly about the matter that I have offered to testify before a committee hearing, if one is held.

Realizing the cliche-like habit of throwing Madison Avenue around as an epithet, none the less I believe you and your broadcasting company have been sold a bill of goods. That bill is the idea, as old as Machiavelli, of building up an image which need not correspond to the reality designated by the image. That image is that of a company which continues to project in large, a community of honest, kindly neighbors building their own local insurance company and dealing with each other in a personal and human way. The comany sponsering you in its early days when I first knew it, I believe, may have been such a company. It is now conceivable that some smart, high pressure promoters have gotten hold of the company, changed its name, and are making piles of fast bucks by collecting premiums and paying no losses to speak of. Otherwise where is the money coming from to splash around their high-priced publicity on a country wide scale?

Again I have every regard for the scrupulous integrity of both you and your broadcasting company, and I am sure you will make every effort to reappraise that of the company sponsering the series of broadcasts I have mentioned.

Very sincerely yours,

Robert L. Lasley

Robert L. Lasley

Laubach, Frank C.

March 23, 1959

Dear Dr. Laubach:

I write to thank you for your gracious letter of February 27.

I do indeed want to see what you term "the under-half of the world". I think I am too old a hand to be led about by professional diplomats and government officials, but I shall certainly take advantage of your offer to supply me with a list of persons who might be helpful.

As soon as I make any kind of plan, however tentative, I shall send you an itinerary and ask your help.

Sincerely yours,

KRM:skh

February 27, 1959

Mr. Edward R. Murrow
CBS, New York City

Dear Mr. Murrow:

From the newspapers and Life Magazine, I learn that you are taking a vacation, and it seems, going out to see the world.

In Memphis, Tennessee we have just organized a Foundation for World Literacy through TV. Our aim is to try to do as much of the literacy job as possible through educational television. You are in the perfect position to find out the possibilities of educational television throughout the world. The U. S. government has a large amount of money in the banks of many countries, which accumulated from the sale of our agricultural surplus to those countries. The money is not in gold, and so remains unused in those banks. Congress has ruled that it may be used for literacy as well as for a dozen other purposes. This is under what is known as Public Law 480.

Mr. Gerald Winfield, visual aids head of International Cooperation Administration, is probably in India right now investigating the possibilities of television, especially to make India literate.

If you want some names of people who would help you to really see the illiterate under-half of the world, I would be glad to give them to you if you tell me what countries you will visit. If you do not have such names, and are led around by professionaldiplomats, you are likely to see the government officials, the aristocracy and the rich, and to get from them a very distorted view of the vast multitudes who often hate the very men you would be with. I am in touch with the other half of this world, and want you to see it.

God bless you.

Frank Laubach

Frank C. Laubach

P.S. If you find a way out of our world predicament while you are on your travels, be sure to let me know.

September 5, 1958

Dr. Frank C. Laubach

Copy

Aug. 29, 1958

Dear Lowell Thomas:

A couple of years ago you asked me whether your son and I could not take a trip together. This reminds me that the tour I am about to take has tremendous photogenic possibilities. I believe that someone should go along to take a picture of it. I will be teaching illiterates at the Trade Fair being held under the patronage of the United States Government and that will be interesting. But even more interesting will be a visit to Italian Somaliland, British Somaliland, Yemen and Saudi Arabia, which are picturesque and also very significant. I shall also be in Egypt, which is very much in the limelight these days. There will be ten Mohannedan countries in all and there will be plenty of opportunity for bizarre, dramatic, startling, picturesque, exciting, adventurous pictures.

Possibly you have a top flight photographer who might like to go along on this trip - possibly you or your son. I am trying to get in contact with Colonel Mahs, who has become an expert photographer, to see whether he might, perhaps, go along and take these pictures. He did a picture of my literacy work in New Guinea and another in India. One was made by 20th Century Fox and neither of them, I am sorry to say, can be used on television. But we need to make some which can.

Somaliland is so primitive that they have not even produced their language to writing and only a few people know English or French or Italian. They are probably 99% illiterate. The same is true of Yemen. I am told that the mountain scenery in Yemen is magnificent.

Perhaps I should say that I have already helped make lessons in 265 languages in 92 countries.

There are marvelous shots of people, as well as animals, in the Sudan and in Kenya which I shall also visit. The trip would end in Iraq, and the revolution, which took place there recently, makes that another dramatic place for picture taking. I think the dramatic possibilities of this trip are so great that it should not be taken without a photographer.

I am enclosing the dates of my coming tour.

Cordially yours,

EUGENE, OREGON

DEPARTMENT OF PSYCHOLOGY

November 17, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Mr. Murrow:

I have just finished writing letters to Eric Sevareid and the Monsanto Chemical Company with regard to the Sunday, November 16th program "Conquest" which dealt with the human brain. That particular half hour of show was about as good a job as one could find in introducing the student to some of the problems of psychophysiology in relation to human behavior, and I was asking whether the film was available for classroom use.

But the program which came on immediately afterward was equally as good because you were able through "Small World" to give the viewer some insights into public relations and propaganda which would otherwise be very difficult to come by. Just as the "Conquest" film is well suited for classroom use in courses in Introductory Psychology and Physiological Psychology, your November 16th "Small World" interview is ideally suited for courses in Social Psychology.

I would certainly be interested in knowing if these two films might be made available and whether C.B.S. is setting up some policy for their more widespread use in the college classroom.

Yours very truly,

Paul J. Hoffman

Television Office,
U.S.I.A.
Washington, D. C.

mcc

UNITED STATES INFORMATION AGENCY
WASHINGTON

April 15, 1958

Dear Mr. Murrow:

The Information Agency has, as one of its major objectives, the job of selling disarmament and of convincing the world of our country's sincerity in this direction. As you well know, we're a long way behind on this propaganda-wise.

Attached is a script for a 15-minute television program I am planning to produce as an English-language pilot. If the program wins acceptance with my Area Directors and with the State Department, it would be produced in other languages.

As you can see from reading the script, it squarely places the blame for the armaments race, for the world's inability to achieve disarmament--and therefore a real peace, on Moscow's doorstep. It could be both dramatic and convincing.

A subject such as this is very difficult to tackle and yet, if the Agency is to achieve any worth while TV programming, it must produce such subjects. Touchy as it is, and hard to sell to the conservative elements in both the Agency and State, it is my belief I could do it if I could use the hard-hitting, realistic delivery you are so famous for.

In other words, you could sell my program to my superiors for me, and the American people would benefit abroad from this story of our long-time sincerity and the Soviet's constant "Nyet!"

If you feel the program has merit and could see your way clear to add the prestige of your presence and voice, I would be deeply appreciative. Incidentally, if you find the idea useful for one of your own "think piece" programs, please feel free to make use of it, expanding it to suit your needs. I am confined to the 15-minute length because of budget and overseas placement considerations.

The Agency has a contract with educational station WGBH-TV in Cambridge, Massachusetts, for production of 10 such programs.

Should you.....

Mr. Edward R. Murrow
CBS Television
485 Madison Avenue
New York, New York

Should you decide in my favor, I can hand them the production problems. They can work it out with CBS to do the show right in New York, thus holding any inconvenience to you down to a minimum.

I earnestly hope you decide to join forces with me in this. Rest assured that I am cognizant of the pressures upon you and that you are probably importuned to do sound tracks at every turn, but please believe me, I would not ask if I were not aware of your own concern for the place of America in the scheme of things.

Sincerely yours,

Dan Lawler

Dan Lawler, Chief
Near & Far East Division
TELEVISION OFFICE, U.S.I.A.

Enclosure: Treatment of Program

SUBJECT: Kinescope Production - Disarmament Program

PARTICIPANTS: Mr. Edward R. Murrow

TREATMENT: We open in a set that has an atmosphere of a news and commentary program. On the left (Camera) side of the set are three screens with different pictures on them. The set to the right is appointed with globe, wall maps, bookcases and other paraphernalia.

Camera opens on Mr. Murrow sitting in this set examining some newspapers. He turns to the camera:

"Hello, I'm Edward R. Murrow. I've been doing a lot of thinking on one of the oldest problems man has dealt with. It has been with us since the first cave man picked up a rock and used it as a weapon against another man. The problem -- disarmament."

Turns now to the headlines that he was looking at as the program opened. He continues:

"Do you remember some of these headlines?"

Puts the first paper on the desk and as he is placing it down we cut to overhead camera so that we can read the headline.

GERMANY INVADES FRANCE!

He continues with the rest of the papers by placing one on top of the other.

PEARL HARBOR BOMBED!

SOUTH KOREA ATTACKED!

Camera cuts back to medium shot as Mr. Murrow picks up the last paper he laid down.

"Some of you may be too young to remember the first headline, or perhaps even the second, but for most of us, for a man like myself ... in my lifetime, armament has only resulted in expensive wars and human disaster. You can see why the question of disarmament is a serious one that affects the lives of all of us ... everywhere."

He sits in a chair next to the table but a little ahead of it.

"You might ask me what we can do about the past? Why bring up these old human problems now? Well, my answer would be, that through studying our failures in the past, we can chart a peaceful future through disarmament."

The dialogue would continue on this level eventually placing the blame for armament in the Free World on the shoulders of the Soviet Union. With statements like this :

"The Free World arms itself only for safeguards, not for attack, still believing that the only sure road to peace is through disarmament. In every major disarmament conference the Free World Powers have argued for disarmament, while the Soviet Union, through various tricks, false promises and confusion, has managed to support continued armament and force an arms race rather than follow the lead of the other countries toward disarmament."

He then walks to the part of the set with the three vertical screens.

"Let's take a look at the record of the United States on the log book of international peace efforts. On these screens are films from different times in the world's recent history. Let's take a look at some of the individuals who have helped shape history."

Camera dollies into picture of Theodore Roosevelt which is the first frame of a film sequence. Dissolve to film sequence showing his being awarded the Nobel Peace Prize... this goes on until we bring the story up to date. Each time we jump ahead in history, we come back to this set of screens and look at a new frame, then go to a new piece of film. (Some sequences are already narrated, so we would have to re-narrate them from studio using Mr. Murrow's voice)

The above takes on a systematic development of recent history in Disarmament. In each episode it is pointed up that the United States has always favored disarmament and that the Soviet Union has always managed to block this idea.

After this sequence is completed, we come back to the set.

"As you can see, these moments in history that we have brought to the screen, point up dramatically the efforts of the Free World to maintain peace through disarmament."

He walks back to his original set and sits down in his chair for the final summation and clinching argument.

"So that is the picture. On the one hand we have a picture of negation, of obstruction, of willful disagreement on the part of the Kremlin toward disarmament. On the other hand we have a long-standing, documented, and sincere effort on the part of the United States to relieve the people of the world of the burden of armament which, if successful, would provide bread instead of bayonets, health instead of horror, peace of mind instead of fear. Efforts at disarmament that were so sincere they placed the United States and its people in dire peril (stands) only a generation ago. Efforts that were so sincere that, despite the fact that she today, maintains an air force, a navy, and an army that stand as a bastion of strength for your defense and mine, for the defense of the whole free world, she will never cease her efforts to try again and again and again to bring about the closing of the wound in the world's economy through which drains the whole world's energies and chances for survival -- to bring about man's age-old dream -- Disarmament.

Bill Lawrence

August 24, 1959

Dear Bill:

This is dictated just before sailing for Scandinavia. I have turned your naval documents over to my attorneys and you may expect to receive notice of legal action in the near future.

Sorry I could not get down for a game of golf, but I have the feeling we will meet somewhere in the course of the coming year. I hope it won't be in Laos.

Casey, who is going to spend some time in school in Switzerland, instructs me to send greetings to "Mr. Growl".

As ever yours,

ERM:skh

Aug. 19, 1959

Dear Uncle Ed,

The Navy sent along today a loyalty questionnaire, which I have answ ered, and it was generous enough to suggest my answers would be kept confidential. But I felt fairness dictated I should make a photostat so you could see the replies, prepared in consultation with Paley, Stanton, Daly, Downs, Cronkhite, Reston, Randolph Churchill and Dwight D. Eisenhower. I am sure there is nothing here that will interfere with your commission.

Anyway, what the hell are you up to, and, if you ain't working, how come you ain't down here playing golf. I'll even get Reston out to play if you'll descend in this direction. When do you head for Europe? I might work my way north one of these days, and, if agreeable, perhaps we could meet on the links. Let's try anyway.

My love to Janet, and to Case.

All the best,

Bud

Approval expires: 28 Feb 1959.

DEPARTMENT OF THE NAVY

14 August 1959

William Lawrence
The New York Times
1701 K Street
Washington, D. C.,

My dear Sir:

Re: Edward Roscoe Murrow

The person whose name appears above is applying for an appointment as a commissioned officer of the U. S. Navy. To assist us in evaluating his worth as a potential Naval officer, will you please complete, to the best of your knowledge and belief, the form on the reverse side.

The guide lines furnished below are to assist you in evaluating his personal characteristics and to standardize the grading to the greatest extent possible.

OUTSTANDING	No other person of superior caliber, within group of similar age and experience, known by the person making the evaluation. Corresponds to a numerical grade of 95-100.
GOOD	Generally above average. Equal to a numerical grade of 85-94.
SATISFACTORY	Generally average. Equal to the majority of persons within group of similar age and experience. Corresponds to a numerical grade of 80-84.
FAIR	Generally below average as compared with persons of similar age and experience. Corresponds to a numerical grade of 75-79.
POOR	Generally unsatisfactory as compared with persons of similar age and experience. Corresponds to a numerical grade of 74 or below.

The information you furnish will be held in the strictest confidence. Please return your reply as soon as possible in the franked envelope enclosed.

Your interest and cooperation in this matter is appreciated.

Sincerely yours,

J. K. LANLEY
LCDR USNR

INQUIRY

(NPERS-1751 (NOV 2-55))

1. Name of applicant (last)	(first)	(middle)	2. Date
Murrow	Edward	Roscoe	18 Aug. 1959

3. Is (was) applicant in your employ?	4. If so, what is (was) nature of duties?
NO	

5. How long have you known applicant?	6. What is the extent of your contact with him?
Fifty years	Distant

	YES	NO	
7. Would you have any objection to having this person represent your Nation as a naval officer in a foreign country? If you would, please explain.		x	Navy is on it's own
8. Would you object to having a member of your family serve under this person's command? If you would, please explain why.	x		
9. Do you know of the applicant's ever having been discharged from any employment? If so, what was the reason?		x	He always copped a plea.
10. Is he related to you by blood or marriage? If so, what is the relationship?		X	Positively
11. Has the applicant, to your knowledge, ever been arrested, fined, or convicted? If so, for what reason?	x		Morals charges
12. Does the applicant, to your knowledge, have any relatives who maintain residence in a foreign country? (If possible, specify country, relationship, and names.)	x		Soviet Union, Hungary, France,
13. Does the applicant appear to have evidence of chronic illness? If so, please explain fully.	x		see below
14. Is there any history of insanity, intemperance, or unfavorable reputation in members of his family? If so, please explain fully.	x		Grinds his teeth in sleep
15. Has the applicant, to your knowledge, had any serious accidents, diseases, or nervous disorders? If so, please explain fully.	x		See above
16. Do you know of any undesirable habits (immorality, use of drugs, excessive use of alcohol, etc.) which the applicant may have? If so, please indicate fully.	x		excessive use of drugs and alcohol

Please check your estimate of the applicant's qualities listed below as compared with those of other individuals of similar age and experience	95-100 OUT-STANDING	85-94 GOOD	80-84 SATIS-FACTORY	75-79 FAIR	0-74 POOR
A. Ability to make logical decisions.					x
B. Ability to originate and act upon ideas of his own.				x	
C. Reaction to frustration and opposition.					x
D. Ability to lead others; to direct them in carrying out his wishes.			x		
E. Degree of cooperation with others.					x
F. Emotional characteristics and stability.				x	
G. Attitude toward carrying out desires of those in authority over him.					none
H. Attitude toward his work, and motivation concerning it.	x				
I. Loyalty to organizations with which he is connected and to his associates.					x
J. Personal appearance.				x	
K. National loyalty. (to what country?)					
L. Reputation. Negligible					
M. Integrity.				x	

ADDITIONAL COMMENTS OR EVALUTION:

Joe McCarthy answered these questions better than I.

PERSONAL

Mr. David Lawrence
1241 Twenty-Fourth Street N.W.
Washington 7, D.C.

Dear Dave:

You are a generous man to have written me at such length. I do indeed remember your broadcasts vividly and doubt that I missed more than a handful of them.

I must say that I find your suggestion that TV channels should be awarded to the highest bidder a completely novel and altogether admirable idea. If only we had started in that fashion! It seemed to me that the material uncovered by the Committee on Legislative Oversight regarding the F.C.C. was like catching the boys playing penny ante in the outer room when, if they had gone in the back room, they would have found them playing for millions. This trafficking in licences is one of the more unsavoury aspects of the whole industry.

I assume and hope that you are now in your lovely home in Florida and wish that we may have opportunity for a long talk. Thanks again for taking time to write as you did and for the interesting enclosures. I would guess there are few people in the mass media anywhere who could match your course record for consistency.

As ever yours,

ERM:skh

THE VANISHING FIRST AMENDMENT

by

DAVID LAWRENCE
(*Editor*, THE UNITED STATES NEWS)

A Paper Delivered Before the Annual Meeting of the American Society of Newspaper Editors at Washington, D. C., Saturday, April 22, 1944

THE VANISHING FIRST AMENDMENT

By David Lawrence
Editor, THE UNITED STATES NEWS

(A Paper Delivered Before the Annual Meeting of the American Society of Newspaper Editors at Washington, D. C., Saturday, April, 22, 1944)

My thesis is a simple one: I do not believe that the First Amendment of the Constitution of the United States is today an adequate protection for the freedom of the press in America. Judicial interpretation has nullified the original purpose. I believe there must be an additional Amendment to safeguard the freedom of the press.

For many years now members of our profession have relied upon the First Amendment. But in case after case fought through the courts, the First Amendment has been narrowly construed. Today the entire business and profession of publishing has been gathered in under the so-called "commerce clause" of the Constitution. In other words, the power "to regulate commerce"—which has been held by the Supreme Court to include the publishing of newspapers, magazines, and other periodicals—is the power to regulate every phase of the business of publishing. Only when it can be established to the satisfaction of the courts that the regulation is being applied in a discriminatory fashion and calculated primarily and deliberately to interfere with the freedom of the press, is there apparently any limitation upon application of the "commerce clause."

This means, to be sure, all publishing enterprises are subject to the anti-trust laws, the minimum wage and maximum hour laws, and to all other statutes relating to collective bargaining or other labor union activities.

I think it is high time that the editors of America realize that in almost every case in which the First Amendment was invoked as a protection in recent years as against labor legislation, for example, the decision has invariably been against the validity of such a contention.

It may be thought by some that this is a recent development. There are many people in America today who think of the Wagner Labor Relations Act as solely the creature of the New Deal and a Democratic Congress and as something that was upheld solely by a Supreme Court influenced by New Deal philosophy. As a matter of fact, the genesis of the Supreme Court decision in April 1937 upholding the Wagner Labor Relations Law is to be found in a unanimous decision of the Supreme Court of the United States handed down on May 6, 1930, in

a case called "Texas and New Orleans Railroad vs. Brotherhood of Railway and Steamship Clerks." In that case the Supreme Court, through an opinion written by Chief Justice Hughes, made it clear that collective bargaining is a fundamental right entitled to the protection of Congress. In upholding the constitutionality of the Railway Mediation Act passed by a Republican Congress and approved by a Republican President, the Chief Justice said:

> "The legality of collective action on the part of employees in order to safeguard their proper interests is not to be disputed. It has long been recognized that employees are entitled to organize for the purpose of securing the redress of grievances and to promote agreements with employers relating to rates of pay and conditions of work. * * * Congress was not required to ignore this right of the employees but could safeguard it and seek to make their appropriate collective action an instrument of peace rather than of strife. Such collective action would be a mockery if representation were made futile by interferences with freedom of choice. Thus the prohibition by Congress of interference with the selection of representatives for the purpose of negotiation and conference between employers and employees, instead of being an invasion of the constitutional right of either, was based on the recognition of the rights of both."

This was more than seven years before the Wagner Act came before the Supreme Court in the Associated Press and Jones & Laughlin cases. Not only was the validity of the Wagner Act affirmed by the Court in the AP case on April 12, 1937, but the right of collective bargaining by newspaper employees was deemed not to be diminished in any way by the plea that the freedom of the press would thereby be impaired. It was held in that case that newspaper copy, its preparation and distribution, is an activity in interstate commerce, a subject for regulation by Congress under the "commerce clause."

Many of us up to that time had believed that state lines were rigidly drawn and that "production" was not "commerce" either in manufacturing or in professional work. But in redefining the power of Congress under the "commerce clause" of the Constitution, the Supreme Court on that day broadened the scope of that power to include almost all activities that affected interstate commerce directly or indirectly. Since then, in one case involving a public utility in New York City, the courts have held that this particular company is engaged in interstate commerce because a small part of the electrical current comes from outside the state over power lines. In another case, it has been held that because some of the tenants in a building are engaged in producing commodities sent into interstate commerce, the building service em-

ployees are entitled to claim the benefits of the federal Wage and Hour Law on the ground that they are engaged in occupations necessary to the production of the commodities.

It is the new interpretation of the "commerce clause" which is so all-embracing and which has delivered, it seems to me, a body-blow to those who have theorized for years that the First Amendment of the Constitution is an adequate protection for the freedom of the press. Its effects were not immediately perceived but we are confronted with the consequences at almost every turn.

Quite recently the Newspaper Commission of the War Labor Board was given instructions through the Chairman of the War Labor Board, William H. Davis, on the subject of "maintenance of membership." Mr. Davis sees no conflict between ordering such a clause and the freedom of the press. He refers to the Associated Press case of April 1937 and points out that newspapers are engaged in interstate commerce, are subject to the "commerce clause" and hence enjoy no immunity from "maintenance-of-membership" orders. To claim that the opinions of those reporters who become imbedded in the "maintenance-of-membership" scheme (and by inference in the "closed shop" idea, too) might impair objective reporting and editing of the news, Mr. Davis offers the suggestion that an impartial arbitrator can be appointed to decide in each case whether bias appears in the work of the reporter or whether the motives of the publisher, in the event that a discharge may have occurred, were merely anti-union.

There is, of course, no warrant in law for the imposition of a "maintenance-of-membership" clause on any company whether inside or outside the newspaper business. But if such a statute is passed, it will apply to newspapers.

Let there be no misunderstanding about it. Congress has the constitutional power to enact into law a "maintenance-of-membership" device or to delegate to a board the imposition of such a device within the Board's discretion.

There is no special privilege inherent in the conduct of employer-employee relations in the newspaper business or profession which, judging by recent decisions of our Supreme Court, can be derived from the First Amendment to the Constitution.

The situation could conceivably be widened to include political as well as labor relations. If a political party choosing to collect its dues from members should be protected by a statute which permits employers to check-off dues for a political party, and should individual reporters become active in the workings of such a political party, it may be doubted whether, under recent decisions of the courts, the employer could suc-

cessfully contend that such association or voluntary organization by the reporters as members of a political party is harmful to the interests of the newspaper in question. We can almost hear the Supreme Court citing the AP case and saying that the political activities of employees are no concern to the employer whatsoever. It may well be that the courts would say that perhaps the particular reporter who writes political news can be discharged if he exhibits a bias or becomes identified with a particular political organization. This would be, however, a norrow ground applying only to a particular kind of reporter whose writing of political news might be regarded as *sui generis*. But so far as the preponderant number of reporters is concerned, these political affiliations, it could be asserted, are not in any way impaired by employer action.

The same thing might hold true with respect to the economic views of the reporters. The First Amendment to the Constitution does not prevent the passage of a law forbidding editors to hire or fire reporters because of their political or economic views. Congress plainly has the constitutional power, according to recent decisions, to prohibit any discrimination in the hiring or firing of any reporter on the ground that he holds political or economic views in disagreement with the publisher or the editor. The "commerce clause" of the Constitution as interpreted today could be invoked to protect applicants for editorial positions on those grounds and to prohibit discriminations of any kind due to views held by individual reporters.

This does not mean that such a prohibition could be easily enforced. We are discussing today merely the powers of Congress under the Constitution and I think we should recognize that these are virtually absolute now under the "commerce clause."

What then does the First Amendment protect? Broadly speaking, it covers only the right to publish information that is not libelous or obscene or tainted with fraud. The best—and incidentally the most recent—outline of present-day judicial thought on what the First Amendment does exclude is given in an opinion of the U. S. Court of Appeals, Sixth Circuit, in the case of the Jackson (Tenn.) Sun Publishing Company vs. Walling, involving the Wage-Hour Law. The opinion stands because the Supreme Court has declined to review it. In that case, Judge Simons on January 24, 1944, wrote:

> "The appellant assails the decree on numerous grounds. With a single exception, to be hereinafter considered, its defenses may be dismissed without extended discussion, either as being foreclosed by controlling authority or lacking in persuasiveness. Its allegedly controlling contention is that the press is immune from Congressional regulation by virtue of the terms of the First Amendment

which provides that 'Congress shall make no law * * * abridging the freedom of speech or of the press. * * *' It is quite clear, upon a consideration of *Associated Press* v. *N. L. R. B.*, 301 U.S. 58, and the cases therein cited and discussed, that this view must be rejected. Not even the dissenting opinion in the case lends support to it, based as it is solely upon a consideration of the right of the Associated Press to be freed from the hazard of a biased distortion of news on the part of an employee shown to have strong sympathies upon rival questions.

"While the Associated Press case involved the impact of the National Labor Relations Act upon the news distributing business, the argument that Congressional regulation impinges upon freedom of the press was precisely the same as that here invoked. The court there said, 'The publisher of a newspaper has no special immunity from the application of general laws. He has no special privilege to invade the rights and liberties of others. He must answer for libel. He may be punished for contempt of court. He is subject to the anti-trust laws. Like others he must pay equitable and non-discriminatory taxes on his business.' True, it is, that the enforcement of the present law may drive an economically marginal newspaper to the wall, but the same may be true of an increase in taxation or a judgment for libel, and the Constitutional immunity is not a guaranty to a newspaper publisher of economic security, or a sanction to free him from the business hazards to which others are subject.

"*Lovell* v. *Griffin*, 303 U.S. 444, and *Murdock* v. *Pennsylvania*, 19 U.S. 105, are not contra since they involve ordinances imposing direct and discriminatory license taxes on the distribution of literature, and *Schneider* v. *State*, 308 U.S. 147, condenmed a statute which directly prohibited distribution of handbills and imposed a limited censorship on the literature permitted to be distributed. *Near* v. *Minnesota*, 283 U.S. 697, involved a statute which imposed a form of pre-publication censorship. All of these cases involved attempted interference with the right of free expression. We are concerned with nothing of that kind in the enforcement of the Fair Labor Standards Act. As observed in *Overstreet* v. *North Shore Corp.*, 318 U.S. 125 at 131, the Act aims at protecting commerce from injury through adjustment of the master-servant relationship by eliminating substandard working conditions. It is doubtful that newspaper publishers generally would conceive, or, so conceiving, declare that the guaranty of a free press includes the right to maintain such conditions. *Grosjean* v. *American Press Co.*, 297 U.S. 233, which held invalid a Louisiana tax on advertising of all newspapers with circulation greater than 20,000, is a closer case, but this was a discriminatory tax laid on newspapers, applicable to no other business, and there the court specifically declared, 'It is not intended by anything we have said to suggest that the owners of newspapers are immune from any of the ordinary forms of taxation for support of the government. But this is not an ordinary form of taxation, but one single in kind, with a long history of

hostile misuse against the freedom of the press.' * * *

"The contention that the Act is not applicable to the appellant's business because its employees are not engaged in commerce or the production of goods for commerce, must be rejected on the authority, among others, of *Associated Press* v. *N.L.R.B., supra.* Likewise it is unimportant that only a small percentage of appellant's newspapers are sent out of the state. *U.S.* v. *Darby,* 312 U.S. 100; *Chapman* v. *Home Ice Co.,* 136 F. 2d 353 (C.C.A. 6). The Act, by its terms, is applicable to newspapers generally because by its express terms it exempts weeklies and semi-weeklies and those with circulations less than 3,000."

We come now to the postal power under which even the contents of publications and periodicals may be scrutinized by executive agencies and penalties imposed which are in effect equivalent to the total destruction of such daily publications or periodicals.

The editors of America have too long been asleep on the subject of the abuse of the postal power. Under the postal power the rights of the press have been gradually curtailed by a process of judicial attrition that has escaped general notice. In this respect the recent determination of Postmaster General Walker to carry into the courts the question of what constitutes a publication disseminating "information of a public character" in granting second-class mail privileges is a salutary development. If he had rested the case solely on the ground of belief that certain publications are on the borderline of obscenity, no constitutional question would have been raised and the issue would have been decided on the facts. But the Postmaster General has asked the courts to define what Congress meant when it prescribed the broad standards for the grant of second-class mail privileges.

There are a number of decisions which support the theory that Congress intended merely to describe certain classifications of publications and to indicate that those which physically appeared to contain information of a general character came within the privilege to be granted. But in view of the recent decision of the Supreme Court of the United States in connection with the National Broadcasting Company case, we may well wonder what the outcome of this new case on second-class mail may be.

It will be recalled that the Supreme Court held there that, because radio licenses were granted by the Congress, the legislative body had a right to prescribe the conditions for the use of such licenses. The Federal Communications Commission, under its grant of authority from Congress, has interpreted this as a mandate to control the broadcasting business and to use the licensing power even to choose between equally stable applicants for radio stations and to determine such applications

on the basis of the Federal Communications Commission's idea of which will render the better service. This brings the "composition of the traffic" and the contents of programs into the picture. The FCC denies it intends to exercise that right, but there can be no doubt the Supreme Court holds Congress may pass a law delegating that right to the FCC.

The grant of a license to a radio station is analogous to the grant of a "privilege" to newspapers and magazines to enjoy second-class mail rates. The courts have decided that second-class mail rates are a "privilege" and that, because of the grant of such a privilege, the Congress has the right to prescribe the conditions under which the privilege shall be exercised. Under that broad grant of power, already standards have been set up in the second-class mail statutes and it is not to be doubted that if Congress at any time desires to regulate the conduct of the press it may do so under the second-class mail statutes.

During the last two decades there has arisen a perplexing principle in constitutional law that the beneficiary of a privilege granted by the Federal Government does not have the right to raise questions of constitutionality. Chief Justice Taft, in the famous Booth Fisheries case decided May 1926, laid down the rule in a workmen's compensation controversy over a Wisconsin law. He said:

> "More than this, the employer in this case having elected to accept the provisions of the law, and such benefits and immunities as it gives, may not escape its burdens by asserting that it is unconstitutional. The election is a waiver and estops such complaint."

Somewhat the same reasoning was employed in denying second-class mail privileges in the famous Berger case during World War I. In that case Justice Clarke held that the newspaper had second-class mail rates as a privilege and not a right. Because the Postmaster General simply denied second-class mail privileges, the newspaper in question was supposed to be free to use other classes of mail. The realistic fact was that the withdrawal of the second-class privileges was tantamount to a destruction of the newspaper property.

The gradual use of the second-class postal power to restrict rights of the press has been described very forcefully in an article in the Columbia Law Review published in 1938, which reads in part as follows:

> "Although Supreme Court decisions adverse to federal legislation under the postal power are lacking, the exercise of this power, like that of all Congressional powers, is said to be subject to the limitations of the Bill of Rights.
>
> "*Freedom of Speech and the Press.* Much discussion of the postal power centers about this point, since use of the mails is a vital link between individuals and the sources of information. The unrealistic suggestion in early opinions of the Supreme Court, that denial of

mail privileges does not prevent publication or circulation, seems to have given way to the more realistic attitude which admits curtailment of speech and the press but justifies abridgment on the ground of preservation of the state or the attainment of other legitimate objectives of government. As thus conceived, the constitutional question becomes one of balancing the desirability of spreading 'truth' on subjects of general concern, against the other purposes of government. That freedom of speech and the press ought to weigh heavily in the scale would seem to go without saying, yet, upon analysis of the cases, astonishingly enough, it is difficult to reject the conclusion that as far as the postal power is concerned, the free speech and the press clause of the Constitution has been greatly restricted.

"Although it has been construed as at least guarding against previous restraints upon publication, the First Amendment has not been applied to restrict the power granted to the Postmaster-General to deny second-class mail privileges to newspapers found printing 'seditious' articles. Imposition of a fine or imprisonment for circulating 'unlawful' literature through the mails would seem a severe penalty, yet the newspaper editor has more to fear from the administrative denial of second-class privileges, since, even though he may have the right to judicial review, the delay may ruin his circulation and force him out of business.

"Another rationale advance to sustain exclusion of seditious literature from the mails is that use of the postal system is a privilege accorded by the government only on certain terms and the choice by an individual to avail himself of this privilege may 'necessarily limit, or wholly suspend the exercise of some of his constitutional rights. * * *' Assuming that the use of the mails is a privilege, undoubtedly Congress could decline to carry newspapers, or to carry them at less than cost, but to say that certain publications containing opinions deemed unsound or undesirable by Congress may not be transmitted through the mails because Congress can give or take away this privilege at will, is to reduce the constitutional guarantees of free speech and free press to nothingness. Although Congress can condition the use of the mails upon discontinuance of certain acts, such conditions should be subject to the limitations common to all powers of Congress."

This question of postal power has been raised in a unique way in the same Jackson (Tenn.) Sun case quoted above. There the U. S. Court of Appeals, while denying all other contentions relating to the First Amendment, does hold that it is not proper, in punishing a newspaper for violating the Wage and Hour Law, to impose as a penalty the denial of the channels of commerce, including the mails. The Court said:

"We come then to the one challenge to the decree which, because of its importance, may not summarily be dismissed. Section 17 of the Act grants jurisdiction to the district courts to restrain violations of Sec. 15. Section 15(a) prohibits the transportation or

delivery in commerce of any goods in the production of which an employee was employed in violation of Secs. 6 or 7 which deal with failure to pay minimum wages.

"Since the distribution of newspapers out of the state constitute a shipment of goods in interstate commerce, Sec. 17 would seem to give sanction to the injunctional order of par. 3 of the decree which restrains the defendant therein from delivering or transporting or selling in interstate commerce any goods in the production of which its employees have been employed at rates less than those specified in other sections of the decree, and this squarely raises the question whether, in the enforcement of a regulatory measure of the type here involved, no conviction upon a criminal charge having been had in trial by jury or to the court upon written waiver of a jury, one may be deprived of the fundamental right to disseminate information or opinions, either within or without the state, a right within the connotation of the freedom of speech and of the press. No case has been cited and none has been found by independent research which holds that a newspaper may be barred from the channels of commerce as a means of effectuating an administrative regulation, or a court decree enforcing an administrative order.

"If the Congress has the power to withdraw from a newspaper publisher the right to disseminate news and opinions as a means of compelling compliance with law, then it has likewise the power to withdraw from newspaper publishers, and all others, any or all of the fundamental rights preserved by the Constitution. This is not to say that the Congress is impotent to enforce the Fair Labor Standards Act or any other regulatory measure, nor that it has failed to provide for its enforcement both by criminal penalties upon conviction and by civil remedies after judgment, but permissible enforcement does not include withdrawal of Constitutional immunities in the absence of conviction, or plenary judgment in accordance with due process of law. Section 17, as here applied, does not deal with punishments; it provides for no punishment except in cases of contempt for violation of the court's order, but for suppression and injunction which is a restraint upon publication. *Near* v. *Minnesota, supra.* The main purpose of such Constitutional provisions is to prevent previous restraints upon publications, they do not prevent subsequent punishment. *Patterson* v. *Colorado,* 205 U.S. 454, 462.

"It is true that publications have been barred from the mails because seditious, *Milwaukee* v. *Burleson,* 255 U.S. 407, or obscene, *Tyomies Publ. Co.* v. *U.S.,* 211 Fed. 385 (C.C.A. 6), or because they contain illegal advertising, *In re Rapier,* 143 U.S. 132, or because intended to influence a court's decision, *Toledo Newspaper Co.* v. *U.S.,* 247 U.S. 402. But there is no precedent in such cases for the breadth of the injunction in the present decree. Newspapers and other publications are granted low postal rates in pursuance of the traditional policy of the government to grant special favors to publishers because of their contributions to the public welfare. *Mil-*

waukee v. *Burleson, supra; Lewis Publ. Co.* v. *Morgan,* 229 U.S. 288. They are granted the second-class mailing privilege only when the Postoffice Department is satisfied that the publication contains nothing other than 'mailable matter,' and it has repeatedly been held that the power to suspend or revoke such second-class privilege is a necessary incident to the power to grant it. *Smith* v. *Hitchcock,* 226 U.S. 53, 57; *Houghton* v. *Payne,* 194 U.S. 88.

"The effect of the presently ordered injunction is not the mere withdrawal from the appellant of the second-class mailing privilege which may be withdrawn only by the Postoffice Department, but it is to close to it all the channels of commerce * * * The injunction ordered by the decree below restrains the appellant from distributing its newspapers in interstate commerce, and may not, in its present breadth, be sustained * * *

"We are not advised that the appellant distributes in commerce goods other than its newspapers, such as commercial printing, for example. It will therefore sufficiently serve present purposes if the decree below be amended by adding to par. 3 thereof the following: 'Provided that nothing herein shall prevent or prohibit the defendant from shipping, delivering, transporting or offering for transportation or sale its newspapers in interstate commerce or otherwise,' and as so amended, the decree is affirmed."

Perhaps the Circuit Court of Appeals had in mind the principle enunciated by Chief Justice Hughes in the Electric Bond and Share case, decided in March 28, 1938, when he said:

"And while Congress may not exercise its control over the mails to enforce a requirement which lies outside its constitutional province, when Congress lays down a valid regulation pertinent to the use of the mails, it may withdraw the privilege of that use from those who disobey. *Champion* v. *Ames; Lewis Publishing Co.* v. *Morgan.*"

But what is a "valid regulation" and what can be considered now outside the "constitutional province" of Congress when the Supreme Court has bestowed upon Congress the almost unlimited right to construe any or all acts of publishing as "commerce"?

Originally the second-class mail statute contained a few simple provisions describing the nature of the articles which could be mailed under second-class rates. In *Lewis* v. *Morgan,* Chief Justice White, speaking for a unanimous court in 1913, held that the second-class rates were a "privilege" and that publishers derived great advantages and pecuniary benefits therefrom and that the discrimination as against the public in the matter of rates was for the purpose of a wider dissemination of news and information. Hence, he said, "it is equally certain that for the purpose of securing the public benefits which it was conceived would result from the giving of the privilege, it was deemed that the power

and duty existed to fix a standard which should be complied with by those who wished to enjoy the privilege * * *"

The statute under consideration was passed in August 1912 and required the publication of the names of the owners—creditors as well as stockholders. The objective was a desirable one—to make disclosure to the public of the facts of ownership—but the right to require this was derived from the second-class mailing statute and was upheld by the Supreme Court as a valid regulation and pertinent to second-class mail operations.

It is not a far cry from this mode of reasoning to the enactment of a statute which requires disclosure of the authors of all articles that appear anonymously now in the press or the identification of the sources of all information which perhaps in the public interest should not be disclosed. Experience has revealed in numerous instances that the publication of the sources prevents the mobilization of facts and testimony enabling newspapers to expose scandals and achieve needed reforms. Editors have risked contempt charges and jail sentences to resist this intrusion, yet it can be made mandatory overnight by a simple amendment to the second-class mail statutes.

But that Congress has such a right and could if it chose exercise such a right constitutionally need not be doubted after reading these decisions rendered both before and after the New Deal came into being. Certainly if the Congress, which is already discussing the advisability of such a regulation, has authority under the licensing power to require radio stations to furnish time in rebuttal to anyone who is attacked in a controversy on the air, so may Congress feel it also has the right under the second-class mailing privilege to insist that newspapers give equal space to those attacked. But is this not "editing" our newspapers? Certainly, and so would any stipulation as to how broadcast programs shall be composed be "editing," for in allocating by law certain space on the air for this or that speech or statement the element of program judgment or news judgment is impaired.

In my judgment the Congress has been put on notice by the Supreme Court that it possesses these sweeping powers. For the courts have rejected, in all the second-class mail cases thus far, the argument that the First Amendment is in any way violated.

The absolutism which has isolated the First Amendment is nowhere better illustrated than in the Berger case decided March 7, 1921, in which Justices Brandeis and Holmes dissented. The issue in that case was the denial of second-class mail privileges to those who were deemed to have violated the Espionage Act by articles tending to discourage

recruiting and otherwise interfering with the prosecution of the war. The statute itself called for prosecution of the individuals concerned and presumably the denial of the mails only to those convicted. But the Supreme Court construed the power of the Postmaster General as adequate to declare publications non-mailable even without trial of the individuals accused of discouraging recruiting or interfering with the prosecution of the war.

It might be thought that the issue here was that of a wartime restriction. But this is not so. The majority opinion written by Justice Clarke defines the powers of Congress under the second-class mail statutes in such a manner as to apply to peacetime as well as wartime conduct by publications. He declared that the Postmaster General's powers sprang not merely from the Espionage Act but from the second-class mail laws, the first of which were passed in 1879. In dissenting, Justice Brandeis said:

> "This case arose during the World War; but it presents no legal question peculiar to war. It is important, because what we decide may determine in large measure whether, in times of peace, our press shall be free.
>
> "The denial to a newspaper of entry as second-class mail, or the revocation of any entry previously made, does not deny to the paper admission to the mail; nor does it deprive the publisher of any mail facility. It merely deprives him of the very low postal rates, called second class, and compels him to pay postage for the same service at the rate called third class, which was, until recently, from eight to fifteen times as high as the second-class rate. Such is the nature and the only effect of an order denying or revoking the entry. In this case, entry to the second-class mail was revoked because the paper had, in the opinion of the Postmaster General, systematically inserted editorials and news items which he deemed unmailable. The question presented is: Did Congress confer upon the Postmaster General authority to deny second-class postal rates on that ground? The question is one of statutory construction. No such authority is granted in terms in the statutes which declare what matter shall be unmailable. Is there any provision of the postal laws from which the intention of Congress to grant such power may be inferred? The specific reason why the Postmaster General deemed these editorials and news items unmailable was that he considered them violative of title XII of the Espionage Act. But it is not contended that this specific reason is of legal significance. The scope of the Postmaster General's alleged authority is confessedly the same whether the reason for the nonmailable quality of the matter inserted in a newspaper is that it violates the Espionage Act, or the Copyright Laws, or that it is part of a scheme to defraud, or concerns lotteries, or is indecent, or is in any other respect matter which Congress has declared shall not be admitted to the mails. * * *

"There is, also, presented in brief and argument, a much broader claim in support of the action of the Postmaster General. It is insisted that a citizen uses the mail at second-class rates not as of right, but by virtue of a privilege or permission, the granting of which rests in the discretion of the Postmaster General. Because the payment made for this governmental service is less than it costs, it is assumed that a properly qualified person has not the right to the service so long as it is offered; and may not complain if it is denied to him. The service is called the second-class privilege. The certificate evidencing such freedom is spoken of as a permit. But, in fact, the right to the lawful postal rates is a right independent of the discretion of the Postmaster General. The right and conditions of its existence are defined and rest wholly upon mandatory legislation of Congress. It is the duty of the Postmaster General to determine whether the conditions prescribed for any rate exist. This determination in the case of the second-class rate may involve more subjects of inquiry, some of them, perhaps, of greater difficulty, than in cases of other rates. But the function of the Postmaster General is the same in all cases. In making the determination, he must, like a court or a jury, form a judgment whether certain conditions prescribed by Congress exist, on controverted facts or by applying the law. The function is a strictly judicial one, although exercised in administering an executive office. And it is not a function which either involves or permits the exercise of discretionary power. The so-called permit is mere formal notice of his judgment, but indispensable to the publisher because, without it, the local postmaster will not transmit the publication at second-class rates. The same sort of permit is necessary for the same bulk service at first, third, or fourth-class rates. There is nothing, in short, about the second-class rate, which furnishes the slightest basis in law for differentiating it from the other rates, so far as the discretion of the Postmaster General to grant or withhold it is concerned. * * *

"The contention that, because the rates are noncompensatory, use of the second-class mail is not a right, but a privilege, which may be granted or withheld at the pleasure of Congress, rests upon an entire misconception, when applied to individual members of a class. The fact that it is largely gratuitous makes clearer its position as a right; for it is paid for by taxation. * * * The government might, of course, decline altogether to distribute newspapers; or it might decline to carry any at less than the cost of the service; and it would not thereby abridge the freedom of the press, since to all papers other means of transportation would be left open. But to carry newspapers generally at a sixth of the cost of the service, and to deny that service to one paper of the same general character, because to the Postmaster General views therein expressed in the past seem illegal, would prove an effective censorship and abridge seriously freedom of expression. * * *

"In conclusion I say again—because it cannot be stressed too strongly—that the power here claimed is not a war power. There

is no question of its necessity to protect the country from insidious domestic foes. To that end Congress conferred upon the Postmaster General the enormous power contained in the Espionage Act, of entirely excluding from the mails any letter, picture, or publication which contained matter violating the broad terms of that act. But it did not confer—and the Postmaster General concedes that it did not confer—the vague and absolute authority practically to deny circulation to any publication which, in his opinion, is likely to violate in the future any postal law. The grant of that power is construed into a postal-rate statute passed forty years ago, which has never before been suspected of containing such implications. I cannot believe that in establishing postal classifications in 1879, Congress intended to confer upon the Postmaster General authority to issue the order here complained of. If, under the Constitution, administrative officers may, as a mere incident of the peacetime administration of their departments, be vested with the power to issue such orders as this, there is little of substance in our Bill of Rights, and in every extension of governmental functions lurks a new danger to civil liberty."

Mr. Justice Holmes, also dissenting, said:

"I have had the advantage of reading the judgment of my brother Brandeis in this case, and I agree in substance with his view. At first it seemed to me that if a publisher should announce in terms that he proposed to print treason, and should demand a second-class rate, it must be that the Postmaster General would have authority to refuse it. But reflection has convinced me that I was wrong. The question of the rate has nothing to do with the question whether the matter is mailable, and I am satisfied that the Postmaster cannot determine in advance that a certain newspaper is going to be nonmailable, and on that ground deny to it not the use of the mails, but the rate of postage that the statute says shall be charged. * * *

"To refuse the second-class rate to a newspaper is to make its circulation impossible, and has all the effect of the order that I have supposed. I repeat. When I observe that the only powers expressly given to the Postmaster General to prevent the carriage of unlawful matter of the present kind are to stop and return papers already existing and posted, when I notice that the conditions expressly attached to the second-class rate look only to wholly different matters, and when I consider the case with which the power claimed by the Postmaster could be used to interfere with very sacred rights, I am of opinion that the refusal to allow the relator the rate to which it was entitled whenever its newspaper was carried, on the ground that the paper ought not to be carried at all, was unjustified by statute, and was a serious attack upon liberties that not even the war induced Congress to infringe."

But unhappily the dissents of Justices Brandeis and Holmes are not the law of the land. And today in the era of new "liberalism" and in the hey-day of the "reconstructed Court," we find the Postmaster Gen-

eral invoking the 1921 opinion of Justice Clarke as the justification for denying the second-class rates to certain publications whilst the Department of Justice, for some mysterious reason, declines to prosecute the editors thereof for the alleged violations of the Espionage Act under which the publications themselves allegedly became nonmailable.

We find also that the Postmaster General is asking the courts now to determine for him what Congress meant when it granted second-class mail privileges. One of the conditions in the statute says that to be admitted to second-class privileges a publication "must be originated and published for the dissemination of information of a public character, or devoted to literature, the sciences, arts, or some special industry, and having a legitimate list of subscribers, etc."

What, asks the Postmaster General, is meant by "information of a public character"? And what perhaps is meant by "literature"? Doubtless the courts which have undertaken also to regulate the affairs of our press associations by judicial decree will be obliged to take under their jurisdiction these broad questions. For who else is to determine them? Congress has delegated the power to the Postmaster General and the latter will probably be told by the Supreme Court that his "findings of fact will be conclusive if supported by substantial evidence." Certainly if the Federal Communications Commission has the power under a grant from Congress to determine for itself what is meant by the allocation of station licenses on the basis of "public interest, convenience or necessity," may we doubt the constitutional power of Congress to delegate to the Postmaster General the right to issue permits for second-class mail rates and to define what is meant by "information of a public character" or "literature"?

There was a time when such a sweeping delegation of power was frowned upon by the Supreme Court, as in the Panama Refining case decided by an 8 to 1 vote in January 1935 and subsequently in the unanimous opinion in the Schechter case invalidating the NRA in July 1935. But most Supreme Court decisions since then have utterly disregarded the abuses in delegation of legislative power and have tended to support executive agencies in their unqualified right to prescribe their own standards or yardsticks for the interpretation of congressional acts.

The remedy against this trend of judicial interpretation is not to be found by "packing" the court with Republican or conservative judges in the event that fate brings vacancies in the next several years. The remedy lies by direct steps to safeguard the freedom of the press in the Constitution itself. For the trend toward narrowing the First Amendment began before the New Deal came into power. *Near* v. *Minnesota*,

which was hailed as a victory for freedom of the press, was decided on June 1, 1931, by a 5 to 4 vote, and the four who dissented and favored the affirmation of the Minnesota gag law were so-called "conservative" justices.

It has seemed to me that a new Amendment to the Constitution might well be considered by the people in order that this article of the Bill of Rights—the most important of the "Four Freedoms"—may be absolutely protected against the mischief of class-minded judges or an intolerant majority in Congress. Perhaps the following language may serve as a pattern for the writing of such an amendment:

> "The grant, sale or lease of any facilities, licenses or privileges by the United States to the press, to radio broadcasting, to television, or to any other medium of public expression shall not vest in the Congress or in any executive agency or in the several States the power to limit, restrict or regulate the contents of any printed publication, radio program, or creative work emanating from any medium of public expression except as any of these media may offend against the common law governing fraud, obscenity or libel, or except as acts of treason are committed and punishable under Article III, Section 3."

It has seemed to me that the editors of America should not fail to perceive in recent trends a warning to bestir themselves in protection of their fundamental rights.

In conclusion the words of one of our late Justices seem pertinent:

> "Do the people of this land—in the providence of God, favored, as they sometimes boast, above all others in the plenitude of their liberties—desire to preserve those so carefully protected by the First Amendment: liberty of religious worship, freedom of speech and of the press, and the right as freemen peaceably to assemble and petition their government for a redress of grievances? If so, let them withstand all *beginnings* of encroachment. For the saddest epitaph which can be carved in memory of a vanished liberty is that it was lost because its possessors failed to stretch forth a saving hand while yet there was time."

"In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened."

★ ABRIDGEMENT OF FREEDOM OF THE PRESS AND RADIO

By David Lawrence

The Constitution of the United States says in the first article of the Bill of Rights that Congress shall make no law abridging the freedom of the press or freedom of speech.

The Supreme Court of the United States is entrusted with the solemn obligation of protecting the people against such abridgement.

Congress in 1934 passed a law governing the issuance of wave length licenses for radio broadcasting and nowhere in the debates that preceded passage was there indicated the slightest intention of abridging freedom of speech or of the press. But now the Supreme Court majority of five justices—Frankfurter, Jackson, Stone, Reed and Douglas—has rendered an opinion constructing artificially what these five men say was the intent of Congress. To their credit be it said that Justices Murphy and Roberts dissented.

The Congress, of course, can rewrite or revise the law and say what it means, but the Supreme Court has just furnished to the arbitrary-minded majority of any future Congress the legislative power whereby freedom of the press and the radio can be abridged in peacetime as well as war by a simple device.

All that any Congress now needs to do is to pass a law or write an amendment to any existing law simply stating that any privilege or grant of facilities by the Federal Government embracing the licensing power carries with it the right of an administrative agency to regulate the conduct of the newspaper, radio station or other medium of public expression receiving the license. The press, it will be noted, also operates on a license system—permits from the Government to send their newspapers and magazines by second-class mail.

This sad turn of events—a tragic milestone in the history of freedom of speech—comes at a time when our leaders are exhorting the people to make sacrifices for the preservation of the "four freedoms."

RULING COULD BE BASIS OF MOVE TO CONTROL PRESS

How has this been done? By what trick of language and devious twist of the intent of Congress has this usurpation of power been consummated? To understand the answer it is necessary to explain that when Congress passed a law prescribing that wave lengths should be allocated by licenses issued by the Federal Communications Commission, the basis for allocation was to be "public interest, convenience and necessity." For more than a decade it has been fully understood—and a previous Supreme Court opinion written by Chief Justice Hughes specifically affirmed it—that the business of broadcasting itself, the programs themselves, were not to be regulated by the Government, that the public interest would be served by making sure that wave lengths would not collide with one another in injury to the listener's opportunity. It was stipulated that the distribution of the mechanical facilities throughout the country should be equitable as to sections and populations.

At no time was there the slightest suggestion that the social or economic or political concepts of a station owner could be taken into account in the award of licenses. For it was plainly recognized by Congress what an instrument of intimidation and influence any political-minded administration would have if it could issue licenses or threaten to revoke them by means of any such basis as political, social or economic doctrine.

Justice Frankfurter's opinion of last week now makes a scrap of paper of the NRA opinion on delegation of power and says that the language "public interest, convenience and necessity" is a sufficient standard for regulatory purposes. Such a phrase, of course, can confirm almost any kind of bureaucratic action. It is probably the broadest grant of power ever given to an executive agency by the Supreme Court of the United States in all its history, comparable only to the powers assumed by the States in regulating monopolies in the electric light and power field.

But is radio broadcasting to be made a public utility? If so, cannot the newspaper business or the press association business and other press services be made into public utilities by a simple act of the legislature? What becomes, then, of freedom of the press and of the radio?

This question would be more abstract than real were it not for the fact that the same administrative despots are prosecuting in the Federal courts a case—soon to be passed upon by the same Supreme Court—declaring that the biggest press service in the United States, namely the Associated Press, is a "monopoly" and that it must sell its services to whoever wants it in a given city or else it cannot collect news and exchange its own version of that news with selected member newspapers in other cities.

Here we have the commerce clause of the Constitu-

States News

"I wholly disapprove of what you say but will defend to the death your right to say it."
VOLTAIRE

Frankfurter opinion puts broadcasting into firm control of administrative bureaucrats and introduces broad interpretation of the licensing power which can abridge the freedom of the press as well.

tion invoked to interfere with freedom of the press and, if that lawsuit stands, some day we shall have the same language, "public interest, convenience and necessity," used to say how many newspapers there may be in a given community and how the political, social and economic concepts of the owner must be safeguarded against his purchase or publication of this or that news service.

But let us quote the language of Justice Frankfurter:

> "We come, finally, to an appeal to the First Amendment. The Regulations, even if valid in all other respects, must fall because they abridge, say the appellants, their right of free speech. If that be so, it would follow that every person whose application for a license to operate a station is denied by the Commission is thereby denied his constitutional right of free speech."

What utter nonsense is this coming from the highest court in our land? Does this mean that every applicant for a license who plainly does not conform to the existing rules and regulations concerning purely mechanical aspects of wave-length allocation could justly raise the cry of free speech?

But here is more sophistry from the Frankfurter opinion:

> "Freedom of utterance is abridged to many who wish to use the limited facilities of radio."

Is that, strictly speaking, true? Is there any viewpoint denied utterance over the radio today? It is true that not every individual can speak on the radio but it must be noted also that not every individual can get his "letter to the editor" printed, because of lack of space and the limitations of economic law in publishing varying sizes of a newspaper or magazine.

NEED FOR LEGAL PROTECTION OF FREE EXPRESSION

But does that circumstance constitute a justification for saying that "freedom of utterance is abridged to many," and may that quibble be offered now as justification for further abridgement? The Constitution doesn't say so.

Justice Frankfurter continues:

> "But Congress did not authorize the Federal Communications Commission to choose among applicants upon the basis of their political, economic, or social views, or upon any other capricious basis. If it did, or if the Commission by these Regulations proposed a choice among applicants upon some such basis, the issue before us would be wholly different."

Yet in the very same opinion of last week, in an earlier paragraph, Justice Frankfurter notes with approval the following language of the Federal Communications Commission in its attempt to justify one of its regulations concerning the length of contracts between station owners and affiliated networks:

> "Regardless of any changes that may occur in the economic, political, or social life of the Nation or of the community in which the station is located, CBS and NBC affiliates are bound by contract to continue broadcasting the network programs of only one network for five years. The licensee is so bound even though the policy and caliber of programs of the network may deteriorate greatly. The future necessities of the station and of the community are not considered. The station licensee is unable to follow his conception of the public interest until the end of the five-year contract."

There we have the whole explanation—the key to the Frankfurter school of thought in present-day government. It is that the citizen is a child, he is unable to contract for himself in business. The Commission says he can make a two-year but not a five-year contract. As to the use of his own judgment in making a three-year contract, however, he is helpless and ignorant and must have the strong arm of the State to protect him in "his conception of the public interest."

The latest Supreme Court opinion is an abridgement of the freedom of public expression for all media in any way related to mechanical or transportation facilities that happen to be under Government control or operation. To say that the licensing power includes the right to protect the "concepts" of the owner of a newspaper, radio station, auditorium, movie house on such highly controversial matters as the "social, political and economic life of the nation or the community" is to endow governmental commissions with the power of life and death over the biggest of the "four freedoms."

The remedy must lie now in a constitutional amendment protecting the press and the radio and all other media of public expression against the insidious and sinister doctrines of administrative absolutism.

DAVID LAWRENCE

1241 TWENTY-FOURTH ST., N. W.
WASHINGTON 7, D. C.

December 31, 1958

Mr. Edward R. Murrow
c/o Columbia Broadcasting System
485 Madison Avenue
New York, N.Y.

Personal

Dear Ed Murrow:

A copy of your speech of October 15 before the Radio and Television News Directors Association convention has just come to hand. I had seen some brief references to it, but not until today did I have a chance to read the full text.

You have put your finger on something very fundamental. It has bothered me ever since radio began to be a medium for the transmission of news.

I have felt for years that there is not a proper understanding of the place that radio -- and now television -- should occupy in our scheme of things.

My primary objection has been that, from the start, radio has been under a form of government control. It is unthinkable that a news medium should be, directly or indirectly, controlled by the government. Yet that is the fact.

I first voiced my objection to the control of radio by the government in several editorials which appeared in the United States News back in the '30's (when it was in newspaper format). I'm sending them to you under separate cover.

It will interest you to know that Bill Paley at the time

differed with me very emphatically, and insisted that a measure of government control was inevitable. I think his view was concurred in by others in the radio business, but I was consoled a bit some years later when David Sarnoff told me that he thought perhaps the industry had been wrong and that I was on the right track in the original criticism.

To refresh your memory about my own relationship to the radio broadcasting side of things, I was on the air for fifteen minutes, from 9 to 9:15 p. m. every Sunday for seven years, beginning in 1926 and winding up in 1933.

Time and again the late "Deac" Aylesworth, who was President of the NBC, would not give up that very important spot to a commercial program. He insisted that a "sustaining" program was absolutely necessary. Bear in mind, incidentally, that my program was not of the news commentary type. It was entirely expository and educational. The subjects were of a non-controversial nature. Each Sunday night I would take up some bureau or agency or department of the Federal Government and explain how it functioned. My idea was that the people ought to be better informed about the operations of the Federal Government.

All of a sudden, in 1933, the pressure became too great for that 9 o'clock spot, and, believe it or not, it was turned over to a public utility company for a commercial program. The late Louis Howe, who had become private secretary to the President of the

United States, Franklin Roosevelt, appeared on the program for several months with a news commentary. He was paid directly, of course, by the public utility, about $1500 a broadcast. (Shades of Sherman Adams!)

I myself was not particularly disturbed over the change, because I was tired of the broadcasting job and had neglected some of my own work in order to do it. Perhaps I should mention here that it was a labor of love, as I never accepted one penny for the seven years of work. In fact I have always declined to accept any fees for public speaking. I gave up speech-making in 1933.

My contacts with broadcasting were not limited to the program I mentioned. I did some spot news broadcasting from the National Conventions, and also helped to broadcast the inaugurations of 1929 and 1933 -- but it, too, was a labor of love.

My reason for mentioning all this to you is that I have had from the very beginning a sympathetic feeling about radio, which for many years was not shared by most of the people in the newspaper business. There was a good deal of criticism, for instance, of newspaper men who did radio broadcasting on the side.

Viewing the radio medium objectively, however, it always seemed to me that it was on a par with the newspaper. It was simply a different mechanical form. Hence, under our constitutional traditions, it seemed to me that radio should be treated exactly like the newspapers are today -- there should be no form of government control whatever imposed on it.

Maybe my opinions are influenced to some extent by a study

of the Supreme Court decisions and the constitutional interpretations that relate to the press. I have never accepted the doctrine that the existence of second-class postal regulations entitles the government to put a higher tax on advertising content than on news content--both being reading matter.

To indicate to you how far back my own protests on this subject have gone, I shall send you separately a paper I delivered before the American Society of Newspaper Editors in 1944, on the "Vanishing First Amendment." I have always been in favor of letting radio stations express their editorial views as they pleased. So far as program content is concerned, I don't believe it is possible under existing tax laws for companies to sponsor educational programs or to contribute toward that result through large expenditures.

I say "existing tax laws" but I really mean existing tax rulings. The Internal Revenue Service has been driven by some of my "liberal" friends in Congress into the blind alley of penalizing corporations for expressing their views in advertisements, and it has been held that the content of the advertisement must be germane to the business itself. Some day a lot of hitherto deductible expenses for advertising on sponsored television programs will be jeopardized -- if the present trend in the rulings continues.

There was a time when the Treasury Department ruled that it was deductible expense for a company to put an ad in a newspaper advocating the sale of Liberty Bonds, and that all that was necessary was the name of the company at the bottom. This, of course, was the

right legal view. But in recent years the content of the advertisement has been examined by the Internal Revenue Service to determine whether it is eligible for deduction. This is a very disturbing trend, and I believe violates the basic principle of the First Amendment as enunciated by the Supreme Court in the famous Huey Long tax case in Louisiana.

Broadly speaking, one of the difficulties with the whole problem of programming on the radio and television is that you cannot make a medium that is all things to all people. You cannot publish a New York Times in every city in the country, and you cannot publish a Saturday Evening Post or a Look Magazine and still give some of the things that other magazines are giving and in which, in a sense, they are specializing.

There ought to be some division of the radio and television time for the benefit of certain groups of people, but I'm afraid that a mass medium is a difficult one to separate into categories.

But, even so, the question of what is or is not "educational" will be debated by the advertisers who are spending the money for those programs. They will insist that they have nothing to do with the content, but just the same their stockholders, their executives and their customers will all lambast a company if it sponsors a program that has a definite slant in it.

The sensitiveness of the public to "slanted" broadcasting is growing. It is also true with respect to "slanted reporting" in the newspapers. Some of the newspapers are distinguishing between

"commentaries" and news stories, but I'm afraid they have not made enough distinction, and people are constantly criticising newspapers as well as broadcasters for "slanting" their reports.

I was raised in the school of the Associated Press, which did not permit even the use of adjectives or words that could produce the slightest impression of partiality. I remember that in 1912, when I was covering Governor Woodrow Wilson in his campaign for the Presidency, and I wrote a dispatch saying:

> "Governor Wilson frowned when he read today a press dispatch from the New York State Convention stating that Governor Sulzer was going to be appointed temporary chairman, etc."

the AP boss told me that I had no business using the word "frowned" and that, unless Wilson would himself say he was disappointed in the choice, I could not say so on my own.

All this seems to be changed now, and the individual reporter feels that he can comment at will on the news of the day, and of course radio is doing more and more of that. Maybe it's a good thing and maybe not. Certainly I would favor straight reporting on the news broadcasts themselves, and labeling the commentaries plainly so that the listener would know he is getting an editorial interpretation.

The newspapers, of course, for years did not designate their columnists' output as "interpretative." They simply used the same by-lines on that kind of material as they did on straight news

reports, and I think it led to a good deal of confusion. In recent years there has been a reform in that direction, and I'm all for it.

But anyway, my main object in writing is to tell you that I am in general sympathy with your raising of the issue concerning the place that the broadcasting industry must occupy in serving the public. I do think, however, that not enough attention has been given to the indirect influence and pressure, and indeed control, which the government exercises over the radio and television mediums.

History repeats itself. Whenever the government has a contract to award, and does it on the basis of picking out through an arbitrary formula just who the beneficiary shall be, there is always a scandal. It seems to me that an ethical procedure would be to require applicants to show that they are financially capable and nothing more. Then the TV channels could be awarded to the highest bidder on the basis of a lease which would give the government an annual fee, subject to revision after a period of years, so that the government would benefit as the business itself prospered. We had in recent years a system of leasing synthetic rubber plants which was, in a sense, analagous.

But it is not the business of the government to pick out who is the best applicant from the standpoint of the "public interest." No such judgment can be equitably made under a political system.

This letter is, of course, personal and for your own eyes, but I did want to write you frankly about it, for I think you have touched on something very vital to the future of radio and TV.

With regards, I am

Sincerely yours,

David Lawrence

DL:R

Lazarow, Arch

August 13, 1958

Dear Mr. Lazarow:

Thank you for sending me the pamphlet. I have seen it. There is nothing to be done about that type of literature.

Thanks for your gracious comment, and I do indeed remember our meeting on board the Northwest Airlines plane.

Much luck to you and your assignment.

Sincerely yours,

Mr. Arthur Lazarow

Mr. Edward R. Murrow
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Enclosed is a pamphlet containing a vicious attack upon you and upon your television and radio broadcasts. If you have not already seen it, I thought you would be interested in looking it over. Those of us in the broadcasting business are happy and proud to have a man of your stature speak out for liberal causes and speak against such radical conservatism as espoused by pamphleteers such as the enclosed.

I'm sure you won't remember me but I was one of a group of AFTRA delegates on the way to an AFTRA Convention in Seattle when we met on board a Northwest Airlines plane a few years ago. Since then I have made a complete switch from president of the Detroit Local of AFTRA to management.

Best regards.

Sincerely,

Art Lazarow

WHAT YOU DON'T SEE IN "SEE IT NOW"

(A biographical sketch of Edward R. Murrow)

HIS CAREER BEFORE TELEVISION

Murrow is about 50 years old. Born in North Carolina, he spent his childhood in the State of Washington, where he graduated from Washington State College.

At that time there was a national student organization known as the National Student Federation. Murrow was an active member while he was an undergraduate. He was elected national president. After graduation, he devoted two years (until 1932) to promotional work for the National Student Federation. At that time the Communists and Socialists had a rival national student organization — the American Student Union. As president of the National Student Federation, Murrow did not fight the A.S.U. as other conservative student groups were doing: he 'coexisted' with it.

In 1932, he secured his first important job as Assistant Director of the Institute of International Education. This organization promotes interchange of students between countries, and distributes scholarships. It is endowed by the Rockefeller Foundation. Its director, when Murrow was appointed, was Stephen F. Duggan. In the Institute, Murrow met Duggan's son Lawrence Duggan. It was during the period that Murrow was with the Institute that Lawrence Duggan was active, with Alger Hiss and Noel Field, in the Washington Soviet Spy Ring, as Elizabeth Bentley, former spy ring courier, revealed to the Committee on Un-American Activities in 1948. When Miss Bentley exposed him, Lawrence Duggan committed suicide by leaping out of the window of the Institute.

It was while he was assistant director of the Institute that Murrow publicly showed his sympathy for Soviet Russia.

In 1933, *Intourist,* the official Soviet Russian travel agency, announced the organization of a Summer course of study for American students in the Moscow University. The official literature of *Intourist* describes the arrangement as follows:

> "In order to insure close cooperation with American educational institutions, and with students and educators in the United States, an advisory relationship was established in 1933 with the Institute of International Education. At the same time, a National Advisory Council of prominent American educators was formed by Prof. Stephen P. Duggan to assist the Institute of International Education in its advisory capacity."

The man who helped organize this 'Advisory Committee' for the University of Moscow, under Duggan, was Edward R. Murrow. Murrow was a member of the Advisory Committee himself. His name appeared on the letterhead of the 'Advisory Committee' for two years — from 1933 to 1935.

The Summer Course, naturally, was a camouflaged Communist propaganda activity. American students, when they reached Moscow, found themselves indoctrinated in the virtues of Soviet Communism. Intourist reported that in the Second Summer Session, held in 1935,

212 students attended.

Murrow, when confronted by the printed matter of this Summer Session of the Moscow University, denies that he was active in the program. His denial is a bare-faced lie. As Duggan's assistant, the administration of such matters was in his hands. It was impossible that he did not know that he was helping Communism.

HE ENTERS RADIO AND TELEVISION

In 1935, Murrow was employed by the Columbia Broadcasting Company to direct a talk-and-social-events department. He was thus able to get in on the ground floor of news broadcasting, then at its beginning. In 1937, he was appointed by C.B.S. as European Director. His task was to organize a system of news reportage of European events. He distinguished himself in anti-Hitler reports during the years just before World War II. When the war broke out, he became a national figure by his broadcasts from London during the Nazi blitz of 1940. He won the admiration of William S. Paley, President of C.B.S., and, in 1945, he was promoted to the post of Vice-President of C.B.S. He resigned the Vice-Presidency in 1947 and returned to broadcasting.

In 1950, in cooperation with Fred W. Friendly, Murrow inaugurated a radio program called "Hear It Now". In 1951, the partners dropped the radio program and started a television program called "See It Now". This program is still in progress. It is estimated that 3,000,000 viewers listen to it. Later, Murrow added another regular television program in interview form, "Person to Person". He also has a daily radio news broadcast.

HOW HE SLANTS HIS TELEVISION SHOWS

The Galindez broadcasts was one of a series of heavily biased broadcasts and telecasts in which Murrow has praised or favorably publicized Left individuals or causes, or has slandered anti-communists. It is difficult to escape the conclusion that he deliberately rigs his elaborate "See It Now" shows to discredit anti-Communists and to glorify American Leftists.

Let us give a few illustrations. Many others could be cited.

(1) In 1953, he devoted a "See It Now" to the so-called Radulovich case. Radulovich was an Air Force Reserve lieutenant. The Air Force Security Board discovered that both the lieutenant's father and sister had been active in Communist work. The Board dismissed Radulovich as a security risk — a perfectly reasonable decision. Murrow put on a sympathy-loaded program which made Radulovich out to be a martyr. There was such a storm of protest from sentimentalists who saw and heard the Murrow program that Secretary of the Air Harold E. Talbott panicked and ordered the over-ruling of his Security Board and the reinstatement of Radulovich.

(2) In 1954, Murrow held the American Legion up to contempt. The Indianapolis, Ind., American Legion officers had objected to the establishment of a branch of the American Civil Liberties Union in Indianapolis, in view of its subversive record. Murrow, in a heavily slanted program, showed the American Civil Liberties Union in an extremely favorable light in a way to capture public sympathy. But his portrayal of the Indianapolis Legionnaires showed them to be bullying, ignorant figures. One of his clever touches was to have

the case for the A.C.L.U. presented by a Catholic priest. The implication was plain that Catholics are for the A.C.L.U. which is a direct distortion of the truth. As John Crosby, a leftwing critic, described it: "Murrow showed the two meetings — the Legion's and Civil Liberties Union's — jumping back and forth from the regimented atmosphere of the Legion's to the democratic reasonableness of the Union's."

(3) At the height of Senator Joseph McCarthy's campaign against Communism, Murrow deliberately ran an anti-McCarthy "See It Now" program, holding McCarthy up to contempt and trying to get across the impression that he was a thief in his personal life and un-American in his public career. The Communists and Communist sympathizers whom McCarthy had exposed were played up sympathetically as persecuted men and women.

In order to inflame Negroes against McCarthy, Murrow did a broadcast defending Anna Lee Moss, a Negro Communist woman whose Communist Party background had been brought to light by witnesses before the McCarthy Committee and who had been suspended from her Defense Department job. Although the evidence pointed clearly Mrs. Moss's Communist record, Murrow made her out to be a martyr and aroused so much public agitation that a week-kneed administration reinstated her in her job.

McCarthy protested so vigorously to C.B.S. against the unfairness of Murrow's programs that he was given free time in which to reply.

(4) When Dr. J. Robert Oppenheimer was denied top security clearance by the United States after he had admitted under oath that he had contributed money to Communist causes, that his brother had been an active Communist Party member and associate of the atom spy ring in Berkeley, Cal., and that his wife had formerly been married to a Communist, Murrow proceeded to whitewash him. Oppenheimer was invited to a Murrow "Person to Person" program and interviewed admiringly and approvingly. This Murrow telecast did more to rehabilitate Oppenheimer after his exposure than any other publicity.

(5) When Senator Knowland, in 1955, came out in favor of a blockade of Red China in order to free the captive American fliers, Murrow tried to discredit the proposal by telecasting an interview with a Stanford University professor who pooh-poohed the idea of a blockade and argued that it would not be effective.

(6) Murrow staged a "See It Now" interview with Prime Minister Nehru of India and, with apparent approval, permitted Nehru to make a venomous attack upon Chiang Kai--shek, America's ally. Murrow conspicuously avoided putting any embarrassing questions to Nehru, whom he described as 'a great statesman.'

In his news broadcasts and writings, Murrow has repeatedly shown his bias in favor of Left-Wingers and persons accused of Communist activities. He gave a backhanded defense of Harry D. White, when Attorney General Brownell exposed him in 1953 as a Communist spy ring member. He testified in favor of Joe Julian, a radio writer who had brought suit against 'Red Channels' for exposing him as pro-Communist.' When Owen Lattimore was charged as being pro-Communist by

the McCarran Committee, Murrow defended him. In Lattimore's words:

> "Before I could speak for myself, Murrow kept the record straight by repeatedly drawing attention to the fact that nothing had been proved against me. Later, by . . . using recordings, he gave me a national forum of my own, so that millions of people could hear me speaking for myself."

So much protest arose against Murrow's loaded telecasts that Alcoa, his original 'See It Now' sponsor, cancelled its sponsorship of his telecasts. However, Murrow has found other sponsors.

Perhaps the best evidence of the light in which the pro-Communists hold Murrow is the fact that Harold J. Laski, the British Russia-defending pro-Communist intellectual dedicated one of his books to Murrow.

Murrow is one of those extremely dangerous public opinion leaders who claim to be "anti-communist", but who always leap into controversial situations, with powerful mass communication facilities behind them, to defend Leftists and pro-Communists, and to ridicule those who expose them. In the common vernacular he is cute and clever. He has a solemn, sanctimonious manner, behind which he is capable of almost any publicity skullduggery.

One will get nowhere by trying to prove that Murrow is a Communist. If accused of Leftism he blandly denies it and then proceeds to make his accusers look ridiculous by citing praise which he has received from President Eisenhower or from other ultra-respectable conservatives, or by flaunting his Peabody award. The only way to discredit Murrow is to expose the bias and the pro-Leftist slanting which has characterized all of his public work. If one attempts to fasten the outright Communist label on him, it will simply play into Murrow's hands.

It is natural that he defended Galindez. They are cut from the same ideological stripe.

Those who have worked with Murrow, in all but a few instances, heartily detest him. They have found him a cold-blooded, thoroughly merciless individual. Murrow has collected around himself in the C.B.S. News Department a group of yes-men, several of whom have shady left-wing records. His right-hand man, Eric Severeid, who is in charge of his Washington office, is a former active Socialist, who admitted the fact in his autobiography. One of his broadcasters, Winston Burdett, when flushed out by the House Committee on Un-American Activities, admitted to the Committee that he had been a secret member of the Communist Party for several years. Murrow accepted Burdett's resignation after this exposé, but after the publicity died down, he reinstated him. Another of Murrow's Washington staff, William Costello, was exposed by a witness before the Committee on Un-American Activities of having been a secret attendant at Communist Party meetings in Honolulu before he joined C.B.S. It is obvious that Murrow would not have such assistants around him if he vehemently opposed Communism or Communists.

The above material was prepared by the Pan American Anti-Communist Association of New York, Inc.

Additional copies may be had in bundles of 25 for $1.00.

Dear Mr. Lazarus:

Thanks for your letter of May 15. Please think nothing of the premature release. It seems to me that I was unknowingly eloquent.

We should like to see PORGY AND BESS on June 23 and are much looking forward to it.

Sincerely yours,

OFFICE OF
VICE PRESIDENT

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, N. Y.

Dear Mr. Murrow:

Please enter this in your red-faced department - or, under the advertising man's nightmare.

Some months ago when our advertising agency was preparing a campaign for Samuel Goldwyn's PORGY AND BESS, which we are distributing, they presented a layout which suggested an endorsement of the film by you. We loved the idea but, naturally, understood that we could not approach you on such a thought until we could show you the film.

In preparing for our openings out of town we sent a rough of this layout, together with others, to several theatres with the strict admonition that these roughs were not to be considered advertising material but were to be used only for design purposes.

Our over-zealous manager in Los Angeles, contrary to our specific instructions, prepared the attached mailing piece which he sent to only 400 people. Needless to say, he did this without showing it to us or to Mr. Goldwyn. When this came to our attention yesterday, we immediately issued a "kill" instruction - both as to the material and the manager.

Therefore I am bringing this to your attention with our most humble apologies and the assurance that this will go no further. We do hope that we will have the pleasure of your attendance at the first preview of this film in NewYork June 22nd or June 23rd. If you are able to attend, would you please notify my office so that we could set aside good tickets for you. After that, I hope that you will feel that you would want to put your name to the statement which was prematurely assigned to you!

Meanwhile, our sincere apologies again, and hope that this will cause you no embarrassment.

Sincerely,

Paul N. Lazarus

Mrs. Robert J. Phillips, President

January 5, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Mr. Murrow:

I am quite aware that you don't mark anniversaries or pay tribute on your programs, but I would be derelict in my duty to the League of Women Voters which she founded if I did not bring to your attention the fact that January 9th marks the 100th anniversary of the birthday of Carrie Chapman Catt, the great American suffrage leader.

I am enclosing a new publication about Mrs. Catt. I think you will find that she was quite a remarkable woman. I only wish I could think of some legitimate way to tie the anniversary of her birth into the news of the week--especially during a week in which so much will undoubtedly happen.

In a less busy week I might suggest a pause to reflect on whether women have done very much in the last 38 years with the vote which Mrs. Catt worked so hard to win. Just in case you might want to reflect on this privately I am also enclosing the draft of a speech we got together a couple of years ago on this subject. And if you can think of a way in which Mrs. Catt ties into Friday's news we will, of course, be grateful.

Sincerely,

Mary Ann Guyol

HUGGING A DELUSION?

In 1916 the old LIFE magazine published a cartoon showing a rather mannishly dressed woman seated in a rocking chair. Cradled in her arms is an oversized roll of paper entitled "The Ballot." The picture is captioned "Hugging a Delusion."

Now some forty years later, and the 36th in which women have had the ballot, there are some who still feel that the women who wanted the vote were "hugging a delusion" and that they are still hugging a delusion--a delusion that anything can be accomplished by women through using their vote.

The main argument mustered to show that women have accomplished very little through the franchise is that there are still not very many women serving in legislative bodies throughout the country--especially in the Congress of the United States.

I agree that there are too few women in Congress and I hope there will be more in the years to come. But there is a very simple reason for the smallness of the number of women serving. Most women are housewives and mothers. The job of the housewife is in the home or close enough to home so that she can get there in a hurry if the need arises.

But electing women to Congress is not the only thing a woman can do with her ballot. She can--and has proved that she can during the past 36 years--achieve a great deal politically. It seems to me much more than a coincidence that the period of great strides in social legislation, in education and in working together internationally have occurred during the 36 years women have had the vote.

It is always difficult to say categorically that any one group has achieved any particular reform. One reason it is difficult to point with pride to specific achievements of women is because very often they have found that the best way to attain their purpose is to work through men. As previously noted, most legislative bodies are composed almost exclusively of men, and consequently it is necessary to push and prod and persuade great numbers of men to change their point of view before the desired legislative end is accomplished. Quite often in the process of being wooed and won, the men have convinced themselves that the legislation was their idea in the first place. And when the dust of battle has cleared away and photographers called in to memorialize the occasion, the women are left out of the picture. It is not that men are dishonest about these matters; it is simply that they have forgotten where the original impetus came from.

Well, that's all right. As long as the objective is gained it doesn't matter who gets the credit, but when an eminent historian says, "There is so small a proportion of women associated with government that, quantitatively their influence may be disregarded," it is time to take up the cudgels.

I contend that "influence" cannot be measured in terms of numbers of office holders but rather in numbers of objectives realized.

When women got the vote they wanted an end to illiteracy—they wanted something less than a 72-hour week for women workers--they wanted better local government--they wanted an end to child labor--they wanted a lower death rate for mothers and infants--they wanted clean milk and clean streets and clean restaurants.

They wanted equal guardianship for their children and they wanted to serve on juries--they wanted honest elections and shorter ballots--they wanted consolidated schools and the control of venereal diseases--they wanted better libraries and compulsory school attendance laws--they wanted protection of dependent, delinquent,

neglected and handicapped children and they wanted better ways to nominate candidates for office. They wanted freer trade among nations and they wanted independent citizenship of women--they wanted the abolition of the spoils system and the strengthening of civil service.

Well, they got most of these things, and a lot more besides, and they didn't do it by simply mentioning the matter to their city councilmen, their state assemblymen, or their Congressmen. They studied and they worked and they were politically effective.

Recently in the League of Women Voters we have been going back into our history --the history of the 36 years of the franchise for women, and quite frankly we have been amazed and excited at what we've found. We've always been so busy doing the job we didn't have much time to reflect on our accomplishments. What's more, most of women's achievements have been done by the piecemeal method, - put together so painstakingly bit by bit that it was hard to see the total picture of accomplishment.

One of the things we have found in League records and in conversation with early leaders is the way in which women, League members particularly, pioneered in the development of the techniques of interesting people in government and voting. In 1920 such things as nonpartisan get-out-the-vote campaigns were unheard of. The political parties were the only ones who urged people to the polls; it wasn't really considered quite decent for others to do so; it was strictly a party affair.

Interest in getting out the vote was kindled by the humiliating fact that the first time women were allowed to vote in a nationwide election only 26 per cent of the eligible women voters went to the polls. Women in the League were horrified and called for a "crusade to restore majority rule in this country." They set their goal in 1924 at 75 per cent of the vote that could have been cast in 1920, or a gain of about 25 per cent. "Enlist the help of the press, the churches, and as many other groups of public spirited citizens as possible" urged Mrs. Park, the first League president. "Urge organizations to compare membership lists with lists of registered voters and point out to members who have not registered the importance of doing so. Collect and give out in simple form brief information about the qualifications of voters and the places and dates for registering. In other words, organize a campaign for active citizenship such as this country has never known before."

Step by step directions were given on the way to hold candidates meetings at which all candidates were invited to speak; how to organize forces, precinct by precinct, street by street. This was done all over the country; and yet with all that effort the vote was raised only from 49 to 50 per cent.

But the women kept plugging and the techniques that they developed--parties for 21-year olds, baby sitters for would-be voters, traveling registration booths, transportation to the polls, telephone squads, -- are still being used but by more organizations and consequently with more effect.

Pollster George Gallup reports that in the last presidential election 60 per cent of the women of the country voted--a fine increase from the 26 per cent of 1920, but still a far cry from the 75 per cent envisioned by Mrs. Park.

In teaching themselves about government, even in such simple things as marking the ballot and how to register, women taught men a few things too. One early League leader recalls the time that a United States Senator addressed a League meeting and he was telling what a broadminded person he was and how he didn't always vote a straight ticket. "When I go to the voting place," he said, "and I am confronted with this paper ballot, I take out my fountain pen and I always check carefully the people I vote for." Someone asked, "You always use your fountain pen, Senator?" "Yes, I always use my fountain pen." Well, the regulations were that

you use the little blue pencil in the voting booth and nothing else. The poor Senator's vote had never counted!

The Senator was not alone in his ignorance. When women got the vote it was difficult in most states to find out just what the regulations were as the election laws were not codified. The League set about seeing that this was done. In 1924 the League got out "The ABC of Voting," a compilation of the voting qualifications in each of the states. They also worked to improve election machinery. By 1930, 76 state legislative victories had been won. Election law reforms were achieved in 16 states in that same period and gradually permanent registration became the rule instead of the exception throughout the country. In the first ten years after they got the vote women successfully opposed 60 measures weakening the election laws including 32 attempts in 20 states to repeal the direct primary. In many states there was a legal list of voters for the first time. Thus fraudulent voting by the dead wood on the list or one person voting several times became increasingly difficult, important factors in achieving clean elections.

It is impossible to describe all of the legislative triumphs--local, state and national, that women have achieved since they attained the vote. It is even difficult to select those that were the most important. One, however, is outstanding. It was recalled thus by one of the early League leaders:

"In Chicago in 1920 the brand new League of Women Voters jumped into the midst of a campaign when it endorsed the seemingly uncontroversial bill, 'The Sheppard-Towner bill for the public protection of maternity and infancy.' It sounded to us a simple plan to hit at an obvious social problem--the disgraceful death toll of mothers and babies. But immediately there arose a storm of protest. The new organization found itself assailed from all sides. This bill was 'federal mid-wifery,' said the opponents; official meddling between mother and baby meant the abolition of the family; it was paternalism, communism, socialism, and all the other isms combined into one. The opponents used tactics that are familiar today--trying to defeat the bill by vilifying individuals connected with it, calling them subversive. It was charged that the funds for the campaign came directly from Russia and the Third Internationale. All of the political acumen gained by the suffrage leaders was needed to win this campaign. -- Conferences with leaders on the Hill, the ever potent back-home work, the cultivation of party leaders and political parties, the need to ferret out sources of opposition and to help League members with facts to stand up against the opposition."

In the frenzy of the campaign one League leader was told that maternity was none of woman's business, and a Congressman was quoted as saying that maternity was too sacred a word to mention on the floor of Congress!

The bill finally passed and the League's national chairman wrote to the state chairmen in December 1921, "The S-T bill has passed the house and been signed by the President and is at last a law. We, the LWV, and all the other organized women who have stood together for this measure have great cause for rejoicing...But we also realize that our work is never done. The S-T Act will be a success just in so far as the women of the country make it so... We have a peculiar responsibility in seeing to it that it is honestly and efficiently carried out by the states, that workers under it are chosen for ability and not for political pull, that the work is done where the need is greatest.... the first thing to do is to see to it that your state formally accepts the initial appropriation.... second, establish personal contact with the heads of the agency.... third, carry out a survey, etc."

A leading woman's magazine of that day reported "Forty states by legislative action accepted provisions of the act largely because of women's advocacy of the measure." Related legislation was also backed by women's groups. In four years

in 45 states 130 bills related to child welfare were supported by the League of Women Voters and were passed.

In 1928 the Children's Bureau reported, "Already results have begun to show in actual lives of babies saved. In 1928, 16,000 babies lived, who, under 1922 conditions would have died before reaching their first birthday... More than 55,000 midwives have been enrolled in classes as a part of the maternity and infancy program... Over 2000 permanent child health centers have been established.. more than four million babies and pre-school children have been given a better chance to be healthy and strong."

As a result of their work on Sheppard-Towner the women knew that the grants-in-aid method had worked and had gotten results in maternity and infancy care. It was logical that it would work in other things like care for dependent and crippled children, the blind, the disabled. All these things were included in the Social Security Act. Women knew too that this large scale increase in the social welfare program meant a big increase in federal and state jobs. We knew the legislation would come to nothing unless honestly and skillfully administered. So we made sure that those jobs were put under the merit system. The League organized a tremendous, nationwide, six-year campaign for the extension of that system in the states and nationally, the most successful ever waged against the spoils system.

It must be remembered that in 1936 about one-half of the federal employees remained outside the Civil Service System; only nine states had civil service laws, a small percentage of cities and a very small number of employees of counties and other local units of government were under merit systems.

League women advanced on spoils on all fronts -- protesting the firing of married women as a violation of the merit principle, deploring the "temporary" appointment of teachers, making vigorous speeches against veterans preference,and intensive studies of civil service ordinances in cities, towns and villages. Where merit systems covering <u>all</u> state employees seemed impossible of immediate attainment, the League sought merit provisions in laws setting up new services.

As one small example indicative of the kind of activity that took place all over the country, I should like to cite the case of the state legislator from Grand Rapids, Michigan, who had voted for a bill to destroy the state civil service. He said he doubted if there were 10,000 people in his district who cared anything about civil service. Within one week the League had two thousand post cards on his desk each with five signatures protesting his stand. He changed his vote.

If it was "natural" for women to work on matters pertaining to children and health and "logical" to insure through proper administration that these legislative gains not be dissipated, it was considered decidedly improper and unnatural to have such an unladylike concern as utility rates and public power. But this too was a League interest and setting up Muscle Shoals as a demonstration for power development and distribution can in some measure be attributed to the League of Women Voters. Although the lion's share of the credit goes, and quite rightly, to Senator Norris who so doggedly fought for Muscle Shoals throughout the years, he himself credited the League with much of the basic educational work necessary to get public understanding and support of the measure. The League of Women Voters started support of Muscle Shoals in 1925 and persevered until 1933 when it was passed, and at no time did the organization advocate government ownership of all utilities -- only of Muscle Shoals and as a yardstick.

An eye witness to the signing of the bill recalls, "On the occasion of the signing of Muscle Shoals the whole group was in holiday mood and as President

Roosevelt took up his pen he said, 'Are we all here? Where is the Alabama Light and Power Company?' Everyone laughed as that company had been bitterly opposed to TVA. The first pen went to the father of the bill, Senator Norris and others were presented to several of the men including, to my amusement, some who had fought the bill in its early stages but then when they saw it was going through got on the band wagon and claimed to be uncle, grandfather or close relative! And finally when the signature was almost used up someone said 'Is there no pen for the League?' and the President said, 'Oh certainly,' and he finished the signature with a flourish and gave the final pen to Miss Sherwin."

Muscle Shoals was a bitterly fought battle. So too was the extension of the Food and Drug Act. For many years the League had known that the Food and Drug law was seriously in need of modernization as little change had been made in it since the original act passed in 1906. When the first bill went through in 1906 women didn't use cosmetics as they used them in 1933; advertising was completely different too, so the Federal Trade Commission had no controls over cosmetics or false advertising. All they could do was to say that something was mislabeled. The reason the fight was so exciting, and so difficult, was that it was the first time that we were in any legislative campaign where we didn't have radio, newspapers, or magazines to help us spread word of it to the people. The patent medicine people and some of the food people so frightened the advertisers and some of the publishers that nothing about the fight was permitted to be published. If you mentioned the Food and Drug Act over the air, you were immediately cut off. Therefore, it was one of those campaigns that was actually carried out by word of mouth.

Food and Drug is definitely a bill that women got through and they personally sat in the gallery of the Senate along with representatives of Lydia Pinkham and the food industry and the advertisers who were there to see to it that it wasn't acted upon favorably. The women were there the day when one of the representatives of a great drug company signaled to a Senator on the floor to come up to the gallery, watched the whispered conference between the two and then noted with dismay when the Senator moved to insert a comma in the bill, a comma which would have meant seriously crippling the legislation.

But in spite of commas and in spite of the antagonism of the press the Food and Drug law was finally passed and so too were many other pieces of legislation, not only national legislation, but state and local.

Women worked for and got legislation to protect other women -- women who worked in factory, beauty parlor and laundry. With a 40-hour week standard throughout the country, it is hard to believe that it wasn't too long ago that women worked 72 hours each week. One League member recalls that her first visit to a state legislature was to listen to a very distinguished woman lobby for a 54-hour week for women. She recalls "We went into the Senate and the man we approached had his feet up on his desk; he had a cigar in his mouth, a paper in front of him, and in spite of her great dignity and importance, he didn't put his feet down, and he didn't take the cigar out of his mouth, but she said very politely, 'I'm interested in the bill which would reduce the number of working hours to 54 for women.' His reply was, 'It don't hurt no woman nohow to work,' and the bill was not passed." But it was later and so were minimum wage laws, the prohibition of night work for women in certain industries, and laws relating to the improvement of conditions under which women labored.

At the same time that laws for the protection of women were being set up the newly enfranchised women were equally busy working for change in the laws discriminating against them. Some of these were in the field of public rights such as the right to hold public office and to serve on juries and to participate in political parties. There were also private rights such as those for equal guardianship of

children and control of their own separate property. One by one, state by state, these discriminations were picked off until now they are the exception rather than the rule.

Taken over all, women's role is rather impressive -- but one important question remains. Why haven't women been able to achieve peace in the world? There are many who ask this question quite seriously and point to World War II, the war in Korea and the cold war as another indication that women haven't achieved anything with the vote.

Women have been lauded -- in a rather saccharine manner -- for being "for peace" whatever that statement might mean. They have also been criticised for that same attitude. One male critic cited this inclination to peace as a reason women should be denied the vote. He wrote "...women voters have such a fear or horror of war that they would willingly sacrifice everything we Americans hold dear rather than make the sacrifices incident to a justifiable war."

Actually at least one well known authority on international relations credits the League of Women Voters with having taken the glamour out of the peace movement. She maintained that there were those during the first world war who were eager not only to have peace but who were convinced that all you had to do was to push for it and say you wanted it. There was for instance the movement to have war eliminated by having a referendum and the theory was that we would all vote and we would be against war and there wouldn't be any. A fine theory, but the members of the League were unwilling to have the public sold such a phony panacea so the League opposed the war referendum.

And that made people say, "oh, so you like war, you want war," and that was not a very pretty position to be in. Far from being starry-eyed idealists, women have become extremely prosaic about the attainment of peace. In the League we agreed that one of the ways to help bring about a peaceful world is to have better trade relations and so we took up the trade agreements. We analyzed what international trade meant to the different states in the Union and what our trade meant to other countries. When the Reciprocal Trade Agreements program was started we were practically the only voluntary organization in the country which supported it. It can be said, of course, that the Administrations, both Democratic and Republican, have supported reciprocal trade since 1933 and that claims about the help of organizations are absurd. But all during those years -- whether Republicans or Democrats were in the saddle -- the trade battle was always, and continues to be, tight enough so that the additional push we gave made a real difference.

More important perhaps than the actual legislation supported or opposed was the climate of opinion which was created by the League and other organizations.

As early as 1923 the League recognized by Resolution of the Convention, that "a policy of isolation from world affairs is neither wise nor possible" for the U.S.

Starting back in the 1920s with the World Court, the League carried on grass root education which eventually resulted in the repudiation of isolationism as a policy of government. An early League leader described the methods used in this way: "We had carloads of women going out all over the state of Minnesota. We covered nearly every little town in the state. We would drive into the town and go to see the editor of the newspaper. We would tell him our interest was in the World Court and of course he didn't know much about the World Court but we would never pretend that he didn't. In the course of the conversation we would ask him who were the leading citizens and he would give us their names and they would usually call a meeting for us in which we would have our petitions. In our drive

in Minnesota we got about 22,000 names on long petitions. We glued them all together and we marched down the street carrying our petitions over our shoulders (like a daisy chain). And we took them to Washington in hat boxes and presented them to President Coolidge."

This sounds easy and rather naive. It wasn't. "I got blacklisted by two patriotic societies," recalled a distinguished woman who had seconded the nomination of Herbert Hoover for President in the Republican Convention of 1920, "because I worked for the World Court....We were a big factor in the fight for the World Court.... the summer that Coolidge went in we went over to Europe and when we came back we had an interview with the President on what could be done on the World Court and international relations and when we came out reporters asked, what were we going to do? and we said we are going to work for the World Court and they said, 'That's no good. It's all tied up. Senator Lodge won't have anybody on the Foreign Relations Committee who hasn't signed a pledge that they won't allow the World Court to be reported out.' So we said that we didn't like to be ineffective but there were times when you must stand up and be counted and we were going to stand up and be counted.

"I spoke in 11 states that winter -- I went out to Montana in the middle of the winter campaigning for the World Court. At that time through the middle west the League of Nations had gotten so mixed up with party campaigns that a lot of people's minds had closed up tight on it, but very obviously they had a guilty conscience that something had to be done about international cooperation and maybe the World Court was the start and you could talk to them about that."

Another League leader tells of the defeat of the World Court in the Congress even though it seemed an innocuous resolution at the time and there seemed a good deal of public support for it.

"We decided there must be some good reason why this measure was defeated and to show you the confidence Congress had in the LWV we asked a selected list of Senators, -- we divided them according to party, geographical location, and so on-- we asked if they would give us permission to analyze their correspondence and find out what it was that people objected to in the World Court. We thought this might be sympotomatic of the reaction to more important matters in the international field. Well, we did it and it was a most interesting and enlightening survey. Of course, we never published it but we used it for our own guidance in preparing material. And then came the next piece of legislation on neutrality and there again we were almost alone. We did not think that a policy of neutrality which made it impossible for the United States to take sides was one of which our country could put its weight behind peaceful relations.... One of the moments that I remember most vividly was when I had to appear before the Senate Foreign Relations Committee... and again, you had the atmosphere that if you didn't take the easy way out there was something wrong. One Senator said, 'Oh, so you want our boys to go and get killed'... That took my breath away for a moment but then my freshman rhetoric came to my aid. I said, 'I assume that's a rhetorical question,Senator.' The other Senators laughed at him and he didn't come back again into the argument. But again it shows what terrific opposition we had to encounter. It was a very lonesome era I think, but I think everybody should know that the League did remain steadfast.

"It was climaxed in the Lease-Lend legislation of 1941 and it was put out that the League had endorsed this legislation....again we campaigned up and down the country explaining the theory of collective security."

Thus, starting where people were -- where they could be reached -- gradually isolationism was broken down so that the same woman speaking of the United Nations could say -- and truly -- "When it came to the United Nations we were a very great force."

I believe that women were -- and are -- a great force in many fields of government. Some of our detractors have said that women have gained no victory like the one they fought and won in getting suffrage itself. In some ways that is of course true. Mrs. James Morrisson, the suffrage leader and League leader I have quoted so often has this to say on the subject, "The work the Leagues does is a harder job than suffrage -- it is more discriminating. Suffrage is a tool -- all kinds of women wanted it for all kinds of reasons. It had the challenge of a crusade, the simplicity of war. The tactics of war or a crusade take plenty of thinking out, but the basic ideas are simple. Once you have decided to crusade, to go to war, then you have a yardstick by which you measure everything. Will this action help or hinder victory? No other consideration matters.

"The problems of peace are much more complicated, as we are finding out all over again. National aspirations, economic compulsions, humanitarian ideals, prejudices, habits, ideologies, self-interest -- all struggle for dominance."

But as another great League leader said, "To my mind there is no comparison between the interest of working for a tool, the means to an end, and the interest of working with that tool for the end itself. We are working for ends now and that is a glorious thing to be doing."

Introduction: The Centenary of Carrie Chapman Catt

January 9, 1959, marks the hundredth anniversary of the birth of Carrie Chapman Catt, American woman leader whose organizing ability brought through to completion the constitutional change that in 1920 gave nation-wide suffrage to the women of the United States.

To mark this milestone, the Carrie Chapman Catt Memorial Fund is presenting a brief story, first of how American women became full citizens under Mrs. Catt's leadership, and then of how their practictal experience as citizens has been shared around the world by means of the Fund established in Mrs. Catt's honor, particularly in countries which have recently either emerged from totalitarian rule or gained independent nationality.

As an indication of the direction to be taken by this living memorial in the future, the Directors of the Fund point out that the ballot is only the beginning; democratic government is not a classic work of art presented intact for the admiration of a spectator generation, but an everyday way of life; year by year and decade by decade, freedom must continually be earned.

CARRIE CHAPMAN CATT
1859—1947

THE MOMENT OF VICTORY

In the twenty-six room mansion known as Suffrage House at 1626 Rhode Island Avenue in Washington, three women looked at each other in silence. It was shortly after eight o'clock in the morning on Thursday, August 26, 1920. Carrie Chapman Catt had put the receiver of the wall telephone back on its hook; turning, she said, "The Secretary has just signed the Proclamation of the Amendment. He wants us to come to the State Department to see it."

The amendment to which she referred was the nineteenth, which wrote woman suffrage into the Constitution of the United States. At four a.m. that morning, the ratification of Tennessee, thirty-sixth state to act and the state whose action made the amendment binding, had been received by registered mail at the State Department. It was at once referred to the Department of Justice, where the Solicitor General had waited up all night to certify the correctness of its form. At eight, back at the State Department, Secretary Bainbridge Colby affixed his signature to the official Proclamation.

With Mrs. Catt, president of the National-American Woman Suffrage Association, were Mrs. Harriet Taylor Upton, vice-chair-

man of the Republican National Committee and past manager of the Association's National Headquarters, and Mrs. Helen Gardener, President Wilson's appointee as first woman member of the U. S. Civil Service Commission, who later in the morning took Mrs. Catt to pay her respects to the ailing President of the United States. Their moment of silence recognized the successful conclusion of a long effort. In its general form of a campaign for women's rights and woman suffrage, that effort had been under way for nearly three quarters of a century. In its specific form of the campaign for the nineteenth amendment, the strategy celebrated by the moment of victory had been progressing from carefully planned stage to carefully planned stage since the first inclusion of suffrage planks in the platforms of the two national political parties in 1916.

WANTED: A CONSTITUTIONAL AMENDMENT

The decision to make an all-out drive at the national level in the 1916 presidential year was based on recent successes in the states. During the last third of the 19th century, four Western states—Wyoming, Colorado, Utah and Idaho—had granted full suffrage to women, but from 1896 to 1910 no additions accrued, in spite of vigorous efforts. Then in rapid succession, Washington, California, Kansas, Oregon, Arizona, Montana, Nevada and the Territory of Alaska joined the full-suffrage column; Illinois approved woman suffrage for presidential electors; and in thirteen further states, other votes on the issue, lost by varying margins, nevertheless laid promising siege to the area east of the Mississippi.

When Congress assembled in December, 1915, Bill No. 1 in both Houses proposed an amendment to the Constitution providing votes for women. Encouraged, the national suffrage association regrouped personnel and formulated new strategy. Mrs.

Catt, resuming the presidential office she had held from 1900-1904, emphasized: "Whether for Congressional work or for state work, the only solid foundation is organization."

From her earliest efforts for suffrage in Iowa in the 1880's, Mrs. Catt had always had a "Plan of Work." She now determined to establish action programs for every state in which suffrage was still to be gained, and to stage major demonstrations at the national conventions of the political parties in favor of the inclusion of suffrage planks in their 1916 platforms.

UMBRELLAS IN CHICAGO—The Republican Convention met in Chicago. The suffragists planned a mammoth parade, complete with elephants, to start from the newly-filled land at Grant Park and proceed down Michigan Avenue to the Coliseum, timed for

Umbrellas in Chicago

entrance into the convention hall at the moment when the Resolutions Committee would receive the plea for a suffrage plank. When November 7 turned out to be a day of driving wind and lashing rain, other demonstrations were cancelled. Mrs. Catt announced, "Our parade will start as scheduled, but I advise raincoats and rubbers." Interspersed among marchers whose soaked skirts dragged a pavement clobbered with Grant Park's clay, twenty-four brass bands, horns a-gurgle, drew crowds to sidewalks and windows. *The New York Times* reported:

> "The firemen's parade was called off, but 10,000 women took part in the suffrage parade, marching for more than an hour in a heavy downpour and biting wind. In the hotel lobbies tonight . . . politicians are calling it the pluckiest thing they ever knew women to do . . . Tremendous publicity has been gained."

In the Coliseum, Senator Henry Cabot Lodge of Massachusetts, firm opponent of woman suffrage, read the platform committee's report. From the packed galleries and in some cases from delegates' seats on the floor, the women listened. Finally, he came to this section: "The Republican party, reaffirming its faith in government of the people, by the people and for the people, favors the extension of suffrage to women. . . ." He was interrupted by a tremendous cheer. Shouting above it, he continued, "But we recognize the right of each state to settle this question for itself." The cheer died.

SUNSHADES IN ST. LOUIS—Yet while giving no encouragement to a federal amendment, the Republican party had gone on record for suffrage in principle. With this fact established, Mrs. Catt and her group departed for St. Louis to prepare the walkless parade that became known as the "Golden Lane." This was a form of psychological warfare devised to win recognition from the Democrats. Some years earlier, at the suggestion of Laura Johns, yellow rosettes had been adopted as the official color of the suffragists. So, in a line that stretched all the way from the Jefferson Hotel to the St. Louis Coliseum, more than half a mile, women dressed in white with yellow sashes and parasols stood flanked by their

St. Louis Post-Dispatch Photo

Sunshades in St. Louis

state banners. Midway, in front of the St. Louis Fine Arts Building, a symbolic tableau featured the Goddess of Liberty as its central figure. Delegates en route to the convention hall had to run this gauntlet.

The plank announced by the Democratic resolutions committee, after an internal struggle that produced a strong minority report, read: "We favor the extension of suffrage to women, state by state, on the same terms as to men."

When the vote on this plank was taken, the galleries fluttered with roll call blanks on which the women jotted down each delegation's response. The *New York Times* commented:

> "It was like the French Convention of the revolution, gallery ruled, and the women with the roll call blanks suggested the knitting women of the Reign of Terror."

After the two conventions, the *New York Evening Post* editorialized:

> "Woman suffrage has acquired an entirely new status . . . To have made the conquest over both Republicans and Democrats in a single year is a signal achievement."

But to realists in practical politics it was clear that both parties had shied away from a federal amendment, and tried to buy time through proposing a state-by-state approach. Mrs. Catt immediately called an emergency convention of the suffrage association for September.

MRS. CATT'S MASTER PLAN

Her detailed plan, followed for four years thereafter, demanded concentration on passage of a federal amendment. To this end—to the chagrin of some states-rights Southerners—it vested in the national board authority over the previously self directing state suffrage associations. Each state was given an assignment and thirty-six state associations formally accepted their concerted responsibility. Over the next three years, the number of presidential electors in whose choice women shared rose from 91 to 326.

Both of the Presidential candidates were invited to address the 1916 suffrage convention. On the Republican side, Charles Evans Hughes was unable to come, but issued a surprise statement just

before the convention opened, in which, in his individual capacity, he endorsed woman suffrage by federal amendment.

Hence additional suspense awaited President Wilson when he said: "We feel the tide . . . and we shall not quarrel in the long run as to the method of it. . . . I have come to congratulate you that there has been a force behind you that will beyond any peradventure be triumphant, and for which you can a little while afford to wait."

The member who responded to his address, Dr. Anna Howard Shaw, commented: "We have waited long enough, Mr. President, for the vote; we have hoped it might come in your administration." On the spot, the convention pledged $818,000 toward a million dollar campaign fund.

To both parties, the western vote in the 1916 November election was thought-provoking. Newspaper headlines based on eastern trends, announcing a Hughes victory in early editions, had to be reset as returns came in from beyond the Mississippi, the area where most of the suffrage states were located. The capstone of the Wilson victory was the vote in California, where women had been enfranchised in 1911. At the same time, Montana elected Jeanette Rankin the first woman to serve in the national House of Representatives.

POLICY AND PROGRESS IN WARTIME

For months, the imminence of war had been in all minds. In February, 1917 to clarify the policy of the suffrage association in advance of an actual declaration of hostilities, Mrs. Catt called the executive council to meet in Washington. Many of the women prominent in the suffrage movement, Mrs. Catt included, had long been active in the cause of peace; the newly-seated Congress-

woman Jeanette Rankin, in the special session called by President Wilson on April 2, was both sponsor of the current suffrage amendment bill and one of the few House members to vote against the declaration of war. After difficult negotiations, the suffrage association declared the movement would support the government but would continue to put priority on the suffrage amendment, regarded as both a war measure and a means of assuring women a voice in the peace.

In the spring of 1917, massive financial aid for the suffrage cause suddenly became available, after prolonged litigation, with the settlement of conflicting claims under the will of the New York publisher, Mrs. Frank Leslie, who died in 1914. This opulent, experienced, and childless widow had observed from a distance Mrs. Catt's organizing capacity; to the surprise of the recipient, she bequeathed most of her estate to Mrs. Catt to be used "as she shall think most advisable to the furtherance of the cause of woman's suffrage." Mrs. Catt established the Leslie Woman Suffrage Commission to receive the legacy, which totaled $901,-979.49; with the first money paid over, it enlarged the 47-year old *Woman's Journal,* now renamed *The Woman Citizen,* to provide a new mouthpiece for the coming campaign.

Among all the states in which renewed efforts to gain the vote were undertaken in 1917, the outcome of the New York constitutional referendum in November was expected to have the greatest national impact; earlier in the year, favorable action on some form of woman suffrage had already been taken in North Dakota, Indiana, Vermont, Rhode Island, Michigan, Ohio, Nebraska and Arkansas.

Mindful of the impact of the 1915 suffrage parade, when from early afternoon until after dark 50,000 marchers, ranging from Seventh Avenue garment workers to Lillian Russell, the toast of Broadway, had streamed up Fifth Avenue from Washington Square to Central Park, the woman suffrage parties of New York City and New York State combined to prepare a similar demon-

stration. Headed by Mrs. Catt and the other national officers, some 20,000 marchers dramatized the manifold occupations of women in wartime. Signatures to the suffrage petition, election district by election district, were displayed on 2,500 standards. The total, 1,030,000, represented more than a majority of the women of the state.

The political picture was confused: New York's Republican Governor Whitman was for the suffrage amendment, but his colleague, Senator Wadsworth, differed; among Democrats, Tammany had been against it, but underwent a last-minute change of heart. When the polls closed on November 6th, 1917, however, women were voters in the state of New York, and the move for a Federal amendment was on in earnest.

THE SIEGE OF CONGRESS

Mrs. Catt's presidential address before the suffrage convention in Washington a few weeks later was directed not to association members but to members of Congress:

> "Woman suffrage is inevitable—you know it. The political parties will go on—we know it. Shall we, then, be enemies or friends? There is one thing mightier than kings or armies, congresses or political parties—the power of an idea when its time has come to move. The idea will not perish; the party which opposes it may."

The convention voted that if this Congress did not submit the suffrage amendment to the states, efforts would be made at the November Congressional elections to defeat candidates who had proved unwilling. It raised over $800,000 to back this intent.

THE HOUSE RESPONDS—In the House, after a quick, favorable Committee report, January 10, 1918 was set as the date for the

vote. To pass, the amendment had to have a two-thirds majority. The vote was 274 to 136; by a hair-raising, hairline margin the constitutional requirement was met.

The Senate, however, adjourned its spring session without action and when the bill came up in October, it fell two votes short of success.

Campaigns were promptly launched to unseat four anti-suffrage senators; the defeat of Weeks of Massachusetts and Saulsbury of Delaware, and the commitment of their successors to the amendment, assured enough votes to win in the incoming Congress. (Actually, Mrs. Catt pressed for a second Senate vote at the lame duck session of the old Congress, after death and election changed a vote in South Carolina, but one more vote was still needed; the tally was 63-33.)

THE SENATE YIELDS—President Wilson called a special session of the new Congress for May, 1919. Three days after convening, the House passed the renewed suffrage bill by a huge majority, and on June 4, a Senate vote of 66-30 sent the nineteenth amendment to the states. Within an hour, Mrs. Catt wired the governors of all states where special sessions of the legislature would be necessary if action were to be taken on it that year. When the convention of the suffrage association met in Chicago in February 1920, twenty-eight states had ratified and four legislatures were in session; in speed of ratification, the nineteenth amendment had made record time.

THE LEAGUE OF WOMEN VOTERS

The suffragists had hoped that by this time suffrage might be an accomplished fact: forseeing the possibility, Mrs. Catt had used the association's Jubilee Convention in St. Louis the previous

spring as an occasion not only to preview the victory that was clearly in sight, but to prepare for the period in which women who had obtained the ballot would be exercising their new franchise. She wanted to provide new and constructive channels for the organizing ability and the nationwide capacity for united work that had developed through the suffrage campaign.

The 1919 convention call contained the following sentence:

> "As a fitting memorial to a half century of progress, the association invites the women voters of the fifteen full suffrage states to attend this anniversary and there to join their forces in a League of Women Voters, one of whose objects shall be to speed the suffrage campaign in our own and other countries."

In her presidential address, Mrs. Catt expanded this idea: the League, free from religious or racial bias, should work to liberate women from remaining legal inequities, and to aid the enfranchisement of women of other lands. At home, it could present a program of nonpartisan political education, an expansion of the schools for citizenship which had already been operated under its auspices. A League of Women Voters was accordingly set up, composed of the organizations in states where woman suffrage had already been attained, and headed by Mrs. Charles Brooks of Kansas; it was to act as a section of the suffrage association until the 19th amendment was actually ratified.

MRS. CATT CONVEYS A HERITAGE

So, at the Chicago convention, celebration of the success of three generations of effort was combined with establishment of a new vehicle for women as enfranchised citizens. The League of Women Voters, conceived the year before at St. Louis, was given a formal birth certificate; Mrs. Maud Wood Park became

its executive, and a new group of younger women formed its board. In describing the function of the new organization, Mrs. Catt said:

> "In the League of Women Voters we have an anomaly; we are going to be a semi-political body. We want political things; we want legislation; we are going to educate for citizenship. In that body we have got to be non-partisan and all-partisan. Democrats from Alabama and Republicans from New Hampshire must work for the same things . . ."

At the same time, Mrs. Catt made it clear that she expected woman voters likewise to take part in partisan politics:

> "For sixty years we have been appealing to the political parties to give us the vote. I do not think we have won the vote in a single state where one or both parties have not given their consent—so powerful are they. Well, then, is it our intention to remain outside of those parties as we have been for sixty years? . . .
>
> "The only way to get things done is to get them done on the inside of a political party . . . You will be disillusioned, you will find yourselves in a political penumbra where most of the men are . . . But if you stay long enough, you will discover a little denser thing which is the umbra of the political party—the people who are picking the candidates, doing the real work that you and the men sanction at the polls. You won't be welcome, but there is the place to go. You will see the real thing in the center with the door locked tight. You will have a long hard fight before you get inside . . . but you must move right up to the center . . ."

Commenting on Mrs. Catt's handling of this meeting, one journalist reported:

> "The proof of a good workman is the way he leaves his job for another man to take up . . . Mrs. Catt had a great organization under her hand . . . What she did was to meet the new conditions, and see to it that women capable of guiding those new conditions were put at the head with plenty of power and a chance for initiative."

But, as of March, 1920, one last rugged fight was ahead before the job would be finished; women would not vote for president in November unless another state's special session ratified in time. As soon as the governor of Tennessee, where women had been enfranchised by state constitutional amendment in 1919, called the legislature, Mrs. Catt, from the Hermitage Hotel in Nashville, worked unceasingly with local leaders.

The Tennessee Senate ratified promptly, but the House was another matter. The Speaker was strongly opposed to woman suffrage. The first vote was on a move to table the motion, offered by the Speaker with the assurance that "The battle has been fought and won." With 96 members present, the outcome was a 48-48 tie. This opened the way to a vote on the motion itself, in which the Speaker expected to break the tie by voting against the amendment. But when the roll-call reached the name of young Harry Burn, a newly elected member, there was an unexpected development. Back in the hills of McMinn County, Mrs. Burn, a strong suffragist, had written her son: "I have been watching to see how you stood, but have not noticed anything yet. Don't forget to be a good boy and help Mrs. Catt put 'rat' in ratification." So, reversing his vote on the motion to table, young Harry shouted "Aye!" and thereby gave the amendment a winning majority.

Various rear-guard actions were attempted, including an effort to enjoin the Governor from signing a ratification certificate and sending it forward to Washington. But he signed it, and hence on August 26, 1920, woman suffrage became a reality in the United States.

By a rare political circumstance, the wording of the new amendment was identical with the first proposal drafted by Susan B. Anthony forty-five years previously. It stated simply:

> "The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.
>
> Congress shall have power to enforce this article by appropriate legislation."

THE LAST PARADE

The following afternoon Mrs. Catt's train pulled into New York's Pennsylvania Station at the end of a triumphal progress up the seaboard. She looked out onto a solid mass of faces. Governor Al Smith was waiting with a state committee of welcome. The 71st Regimental Band played "Hail the Conquering Hero Comes!" An enormous bouquet of delphinium and yellow chrysanthemum was duly presented; Mrs. Catt was installed in a waiting car surrounded by a guard of honor; and the last of the suffrage parades swelled up Fifth Avenue.

The Victory Reception

Section II: How Practical Experience Has Been Shared

A LIVING MEMORIAL

Mrs. Catt's decisive part in securing votes for women in the United States was coupled with lively interest and active cooperation in the world-wide movement for woman suffrage. As head of the International Woman Suffrage Alliance, she made repeated trips to Europe, and a world tour in 1911-12. In the 1920's, after her retirement from suffrage organizations, her world interest expressed itself through the Conference on the Cause and Cure of War.

Though in 1928 Mrs. Catt bought a home in New Rochelle, New York where she lived first with Mary Garrett Hay and after Miss Hay's death with Alda Wilson, she was often elsewhere. She worked with that former arch opponent of woman suffrage, Elihu Root—whose Washington residence, by a turn of fate, had later become Suffrage House—on behalf of the Permanent Court of International Justice. She was the recipient of a lengthy list of awards, decorations, honorary degrees.

In 1936, a celebration of her jubilee of public service included a visit to the White House which she had first entered to ask

Theodore Roosevelt to support woman suffrage. This time, Franklin D. Roosevelt presented her a letter which read in part:

> "Our old friendship, dating back to the days when I was a very young State Senator in 1911, would be a sufficient reason for me to write you on your completion of half a century of public service. But there is a greater reason—because the whole country applauds you and your very great contribution to our well being."

As the two sat side by side, the other members of the delegation remarked the resemblance of the profiles of these two indomitable, amiable extroverts, each of whom had been the instrument of major change.

Only two months before her death in 1947 at the age of eighty-eight, Mrs. Catt attended a testimonial birthday dinner organized by the American Association for the United Nations. Later that spring, a group of sponsors made plans for a living memorial.

THE CARRIE CHAPMAN CATT MEMORIAL FUND

For years, a constantly mounting volume of inquiries from women in countries overseas had been received by the League of Women Voters of the United States. Either by mail or in the course of visits to the United States citizens of countries which were either attempting to operate new democratic constitutions in the rubble of totalitarianism or assuming political responsibility after a period of colonial tutelage were requesting material that they might use at home. No staff or budget existed for response to these requests. So at its Council meeting in April, 1947, the League welcomed and approved a project "for spreading the practical knowledge and the underlying theory of how a democracy in a free country works, and why." By the end of 1958, the Carrie

Chapman Catt Memorial Fund had completed a decade of active operation.

Over that decade, both in agenda and in financial resources, the CCCMF developed well beyond its early goals. Initial contributions, many of them in amounts from $1.00 up, came from Mrs. Catt's friends. A Memorial Volume, listing the early donors, was presented to the Library of Congress in 1951.

But as the seed money thus obtained produced successive harvests, it attracted additions. Repeatedly, in one part of the world or another, work initiated through a CCCMF grant has been continued or expanded with funds from local sources. At the same time, grants from foundations have enabled the Fund to originate its projects on a somewhat larger scale.

Through 1957, 1450 individuals and 31 foundations made contributions to the Fund's work; the CCCMF had at its disposal over $450,000.

ROUND-THE-WORLD EXCHANGE OF PERSONS

The round-the-world coverage of the Fund during the past ten years appears alike in the story of the exchange of persons under its auspices and in the record of its distribution of materials.

COUNTRIES RENEWING A DEMOCRATIC STRUCTURE—When the Fund started, the number of appeals from women's organizations that had been cut off from all communication during the war indicated that its energies might be absorbed in two-way exchanges with these countries.

In the year of the Marshall Plan, the women of recently-occupied France were newly enfranchised and the women of Germany and

Italy were engaged in the rebuilding of a democratic society. Anne O'Hare McCormick of *The New York Times* wrote:

> "The living memorial could not be more timely, more needed or more in tune with the ideas of Mrs. Catt. The European crisis is a crisis of democracy, and democracy has to be saved largely by women who form the majority in most war-ravaged countries. In a struggle for survival and freedom too desperate for Americans to imagine, they need contacts, encouragement, cooperation."

Along with other citizens, Anna Lord Strauss, then President of the League of Women Voters of the United States and now President of the Carrie Chapman Catt Memorial Fund, had urged inclusion of a section on women's affairs in the United States Office of Military Government in Germany. The first exchange-of-persons program of the Fund grew out of its work. The group of seven German women—members of provincial parliaments and of the Berlin Assembly, an educator, an editor and a lawyer—who arrived in 1949 for a two-months tour of the United States under Fund guidance, were the first of a long series of German visitors.

Similarly, at the instance of Military Government in Japan, the Fund provided facilities for a prewar Bryn Mawr graduate, who was back in the United States taking a refresher course in administration, to tour the country observing citizens' organizations. A teacher of English at Tsuda College in Tokyo, she was President of the New Japan Women's League; subsequently, she became Chief of the Women's and Minors' Bureau of the Japanese Ministry of Labor, and in 1957-58 returned to New York as first an alternate and then a full member of the Japanese Delegation to the UN.

Among visitors from Western European countries isolated during the war was a young lawyer from the Netherlands who had completed her studies in haylofts as a member of the Dutch resistance. Having won a U.N. interneship, she made contact with the CCCMF in New York; a small grant enabled her to do a

grass roots tour of the country, mostly by bus. After her return to Holland, she was elected to the City Council of Utrecht; as a member of the budget committee, she struggles with problems of school finance and gives special attention to women's prisons. She is currently the Netherlands representative in the World Federation of University Women and the International Alliance of Women.

The first American to go overseas on behalf of the CCCMF was Mrs. Marc. A. Law, who went to Italy in 1948 at the invitation of Italian women's organizations. She was impressed by UNLA, the Society to Combat Illiteracy; at her instance, the Fund granted $4,000 to be used by UNLA for a 20-day training course for teachers conducting night classes for illiterates and employed teenagers in the Southern provinces of Matera and Lucania. The illiteracy rate there was 48 per cent. As soon as the course was announced, 1300 teachers applied; only 100 could be accommodated. When these returned to their villages, some 50 Centri di Cultura Popolare were founded; without party or religious affiliation, democratically controlled by those who attend classes, they initiated the teaching of reading and writing, handicraft, health, agriculture, and citizenship. Subsequently, the substantial funds from other organizations attracted by the success of this pilot project have greatly enlarged the work.

COUNTRIES EXPERIENCING NEW NATIONHOOD—But while two-way exchanges with countries eager to catch up with democratic developments have continued, in more recent years the inflow of visitors to the offices of the CCCMF has included men and women from newly independent nations around the globe from Korea to Sierra Leone, and invitations have come to CCCMF consultants from areas where women have emerged directly from purdah into the political arena.

To take care of overseas visitors in the nation's capital, and to facilitate contact with arriving participants in intergovernmental programs of leadership exchange, a Washington office of

the CCCMF was opened in 1950. One of its specialities is a Capitol Hill tour, in the course of which the American legislative system, with its Congressional procedure, its committee hearings and reports, its House and Senate debates and roll-calls, is explained, and illustrated by visits to the galleries and interviews in member's offices. In 1957, such briefings were provided for visitors from Argentina, Australia, Austria, Ceylon, Costa Rica, France, Germany, Ghana, Greece, Guatemala, Honduras, India, Indonesia, Italy, Japan, Nigeria, Norway, Pakistan, the Philippines, Somalia, Sudan, Switzerland, Turkey and Yugoslavia.

In addition to these political briefings, through CCCMF facilities a good many women who have come to the U.S. from newly independent countries have had first-hand opportunity, elsewhere than in Washington, to check on impressions that they had before they came, and to acquire new ones. Some, conditioned by the movies to expect all Americans to live in penthouses, discover that the average housewives who are the active element in PTA's, Leagues of Women Voters and other community organizations can do what they do not because they have servants but because they are good administrators and organizers, because of carpools, household machinery, every-one-bring-a-dish community suppers, and because of husbands who, when it comes to drying dishes or changing diapers, are neither aloof nor unskilled. In the cross country tours arranged for such visitors, the cooperation of the more than a thousand local Leagues of Women Voters is invaluable; and conversely, opportunity to see themselves through the eyes of strangers supplies material for self-analysis to many Leagues.

An example of the type of experience made available through Fund resources to citizens of newly independent countries is that of a Philippine lawyer, who came to the United States in 1954 as a graduate student at New York University, eager to observe U.S. electoral procedures. She was Chief Attorney to the Commission of Elections in Manila, where thumb-marking was then

used as a means of identifying voters. With CCCMF help, she observed on the spot various American and Canadian systems of establishing and maintaining registration lists. After touring eighteen U.S. and three Canadian cities, she thought the best equipment was to be found in Toronto's highly mechanized arrangements, regarded New York's practices as poor. On one of Manila's problems she got no help at all: Philippine voters don't like to queue up for voting, but no technique for avoiding this necessity seems to have been developed elsewhere!

A member of the League of Women Voters of the Philippines, now in its 22nd year—its older members recall Mrs. Catt's encouragement of Philippine suffragists on her visit to Manila in 1912—this visitor's current post is executive trustee for the Ramon Magsaysay Award Foundation, which offers annual awards, open to persons in the Philippines and other countries of Asia, in the fields of government, public service, international understanding, community service, journalism and literature.

At the same time that the CCCMF has made it possible for incoming visitors from newly organized countries to see more of the U.S., invited consultants have continued to go overseas under CCCMF auspices. The outbound exchange that began with Mrs. Law's trip to Italy has included visits by Anna Lord Strauss to various countries, under State Department and UN auspices, and by others, with CCCMF introductions, to most major world areas.

Beginning in 1955, Mrs. Elizabeth T. Halsey spent fourteen months in the Far East. She went to the Philippines, to Ceylon, where she was consultant to the All Ceylon Women's Conference, and to Pakistan, where she worked with the All Pakistan Women's Association. Among the fruits of her time in Pakistan is a "Leadership Handbook for Office-Bearers and Members of Organizations in Pakistan;" adapted from the "Handbook of the U.S. League of Women Voters," it gives brief directions for setting up an organization, framing a constitution and by-laws, making and financing a budget, running meetings and discussion groups.

In India, a CCCMF grant financed a primer for use in the simultaneous teaching of literacy and government, called "We the Government." First printed in English, and later in Hindi, it won a prize offered by the Ministry of Education. Then came "Vote and Be a Partner in Government," which explains, in pictograms and simple text, what a vote is, how to register, for what candidates one is eligible to vote, how to assess a candidate's merits, how to recognize the party symbols at the top of ballots, how to go to a polling place, mark a ballot, put it in the box.

The most recent CCCMF overseas programs are in Latin America. From March to May, 1956, Mrs. John Gillin, a former president of a state LWV, fluent in Spanish, was cosponsored by the CCCMF and the State Department on a consulting trip to Brazil, Uruguay, Peru, Costa Rica and Guatemala. In February, 1957, the Pan American Union with the cooperation of CCCMF brought together in Washington representatives of women's organizations interested in Latin American countries. Then in November a CCCMF representative who was already in Peru was asked to go to Argentina to meet with delegates of 17 women's associations that were engaged in a cooperative effort —their first—toward citizen organization. That same year, an Argentinian, sponsored by her government and the State Department, and in the U.S. as an official representative on the UN's Status of Women Commission, was enabled by the CCCMF to travel and observe the procedure of local Leagues of Women Voters and other non-governmental U.S. groups that cooperate with the Women's Bureau.

MILEAGE ON A SHOESTRING

In practically none of the above cases has the CCCMF made expenditures that could be called anything but modest. Over and over, a grant of a few hundred dollars has enabled a visitor whose

time would otherwise have been spent in a single place or at a single university to supplement this experience with illuminating travel—rounding out what she saw in the U.S., observing an additional demonstration in the field of her specialty, becoming aware of another facet of American life or government. This ability to make money go far has been an asset in attracting further contributions—over and over, one shoestring has turned into a pair.

THE CCCMF'S PUBLICATIONS

Publications as well as persons have carried American women's experience in citizenship abroad under the auspices of CCCMF. Of its publications, the greatest demand has been for "Simplified Parliamentary Procedure." When the CCCMF was started, Mrs. Harry Harvey Thomas, who had for some years been parliamentarian of the League of Women Voters, donated, as her contribution, a twelve-page digest of the 304 pages of Roberts Rules of Order. Successive editions of the digest, which is distributed free, have mounted close to the three-quarter million mark; it has been translated into well onto a score of languages, including German, Japanese, Arabic, Italian, Turkish, Greek, Bengali, Spanish, Portuguese, and Urdu.

Requests for this first aid to the harried chairman likewise pile up from inside the U.S.A.—a single day's demand may range from the Club Activities Section of the Board of Education of Atlanta to the Business and Professional Women's Club of San Francisco; from the Westchester Unit of the United Church-Women of the Greater Philadelphia Council of Churches to the American Legion Auxiliary of Goliad, Texas; from the Future Homemakers of America of Charleston, West Virginia to the Club de Leones of Lares, Puerto Rico.

Another group of widely travelled publications explains various aspects of the United States: when the only woman member of the Virginia House of Delegates wrote "Self-Government, U.S.A.," one of the first orders was for 1,000 copies to go to Accra, now capital of one of the newest of free nations, Ghana. Other titles in this U.S.A. group include: "Individual Liberty," "Making Foreign Policy," "What's the UN to US?" These are out of print. Still available are "Choosing the President of the U.S.A." and "The Role of Political Parties, U.S.A."

A guide for incoming visitors, "You In The U.S.A.," is available in English; it was translated into Hungarian in an edition of 10,000 for the briefing of arriving refugees after the Revolution of 1956, and plans are under consideration for a Japanese edition.

The "Handbook for Leaders of Organizations" and a publication describing "New Patterns for Women" form a third group of available materials.

THE CCCMF'S DOMESTIC PROGRAMS

Two limited-term domestic activities of CCCMF have also resulted in widely distributed publications.

THE BIG CITY—In 1952-53, the League of Women Voters of the United States requested the CCCMF to finance research on the problems of communications in big cities between government and citizenry. In today's metropolitan area, how can citizens make effective contact with their government? Where do they go? Whom do they see? What are the current obstacles to better citizen participation?

Philadelphia was selected as the area for study; between February 15 and May 1, 1952, an intensive analysis was made of

Philadelphia's citizen organizations, their structure, financial base, type of meetings, programs and publications, and the part taken by them in the Philadelphia Charter movement. Based on the findings of this analysis, suggestions, applicable to the circumstances of any city, were made available, covering establishment of citizens training schools, self-analysis by organizations, and organization of a central citizens information center. The CCCMF underwrote the research and the ensuing publication.

FREEDOM AGENDA—In 1954-56, a second limited-term program was carried on in a time of national tension to promote wider understanding of American constitutional freedoms. As the *New York Times,* commenting on the program, put it editorially:

> "Among the innumerable fine accomplishments of the League of Women Voters is creation of the Carrie Chapman Catt Memorial Fund, a research and educational group working to promote among the women of America, Europe and Asia the principles and practices of democratic government. But the most interesting project this Fund is undertaking now is right here in the United States. It is known as the Freedom Agenda.
>
> The idea behind Freedom Agenda is the development of a grass-roots understanding of the principles of American civil liberties and constitutional government. The new program—which is supported by substantial grants from the Fund for the Republic—aims at bringing home the significance of the Bill of Rights and basic constitutional liberties through the development of discussion groups among ordinary citizens of diverse political beliefs throughout the country. It rests on the sound conviction 'that honest discussion of the issues involved in contemporary questions of civil liberty is the best way to promote a healthy public atmosphere for constitutional government'."

A national committee, under the chairmanship of Anna Lord Strauss, invited the cooperation of about a hundred national organizations in informing their local branches of the availability of a series of pamphlets on the bill of rights and constitutional liberties and their relation to loyalty programs, Congressional investigating committees, sedition acts. In addition to the League of Women Voters of the United States, which carried the pro-

gram in 797 communities distributed among all 48 states, use was made of these materials in library and school groups, adult education organizations, newspapers and radio stations, the American Association of University Women, Anti-Defamation Leagues, bar associations, religious bodies and many more. In 1958 the pamphlets became the basis of a book, "Foundations of Freedom in the American Constitution," edited by Alfred H. Kelly.

In its domestic as well as its overseas ventures the CCCMF has seen its pilot projects expanded and continued under other auspices. For example, in connection with the Freedom Agenda, during the 1956-57 school year the CCCMF sponsored an in-service training course for teachers in New York City on the law of the Bill of Rights. It began with a one-semester trial run. When it was repeated the following year, advance registration of 1300 swamped the available auditorium; over 900 were turned away. The course now seems likely to become a regular offering in the teacher-training curriculum; the CCCMF has published a report on its inception as a record of an experiment in community education.

AN ON-GOING EFFORT

The first source of funds for CCCMF publications was $3000 from the sale of a beautiful star sapphire which admirers of Mrs. Catt gave her at the Chicago Victory Convention of the suffrage association. Money to purchase it had been raised by a public subscription in which school children were asked to join at a penny apiece. The story has endured of a small boy who experienced some difficulty in explaining to his mother the purpose of his request for a penny. It had, he thought, something to do with a monument to Charlie Chaplin's cat. When the recipient of the star-sapphire heard the story, she asked "Who is Charlie Chaplin?" From such beginnings did the education of citizens acquire a base.

Postscript and Prelude

The activities of the Carrie Chapman Catt Memorial Fund in the last decade, in meeting varying needs at home and abroad as they made themselves felt, have expressed its members' conviction that freedom must be daily earned.

To Mrs. Catt's generation in the United States, and to the generation of many women now living in other countries, the foremost need was to obtain the ballot. But the generation in the United States that has participated in the League of Women Voters since 1920, and the generation that since World War II has been developing Leagues of Women Voters around the world from Japan to Italy, know that the ballot is only the beginning, that citizenship goes far beyond making a mark on a piece of paper, into exploration of the broad area of the rights and responsibilities of man.

This record of the practical political sense and the flexible strategy through which American women obtained the franchise under Mrs. Catt's leadership, and of the projects undertaken after her death as a living memorial, is thus presented as a prelude to a long future, in which still younger generations, active participants in the democratic process, will in similar practical ways find freedom and make it work.

Leahy, Edward

February 10, 1959

Dear Mr. Leahy:

I have your nice letter telling me of your idea to produce a television series entitled, MEN AT WAR.

Unfortunately, my present radio and television schedule makes it impossible for me to take an interest in any other programs. Therefore, I would be wasting both your time and mine if I were to see you.

Sincerely,

Mr. Edward Leahy

no Chance

Dear Mr. Murrow:

I have in mind to produce a television series, -"Men At War"- this to be done in documentary style as in "Air Power" but broader more flexible in its coverage.

For each chapter we would select a campaign or a battle, thus:

(1) World War I - The Italian Front
(2) The Riff Wars
(3) The Greco-Turkish War of 1922
(4) India - The North West Frontier
(5) Paschaendaele
(6) Cassino
(7) The Spanish Civil War
(8) Caporetto
(9) Ethiopia

In each instance we would investigate the background, political and sociological as well as military, and then we would depict the fighting of the battle itself. Finally we could bring out the historical consequenses of the action.

A series of this kind could be interesting as well as educational - and could make a real contribution to our understanding of modern History.

I would appreciate a chance to see you and discuss this with you further.

Sincerely,

Edward Leahy

Mr. R.E. Lear, Jr.
24 Beacon Street
South Burlington
Vermont

Dear Mr. Lear:

Thanks for your thoughtful and stimulating letter and, by the way, this ain't no form letter. I am inclined to agree with most of your suggestions and criticism but unhappily have not got time to make extended comment on all of them.

However, you do raise one specific question: "Is there a Jewish influence out of proportion to Jewish numbers affecting the transmission of news?" I do not believe this to be the case, at least in so far as radio and television are concerned. An obvious case can be made out that a high percentage of the instruments of mass communication are owned by Jews but, in my own experience, I have not been subjected to pressure as a result of that fact.

Since you are interested in this subject, I venture to send you a copy of a small effort I made in Chicago last autumn, trying to set forth my own views in certain related areas.

Sincerely yours,

EEM:skh

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Ed;

I have some criticisms of television newscasting which I would like to get off my chest so I'm writing to you. I hope you don't mind but I'm counting on the fact that $300,000 a year has provided you with a charitable temperament.

It doesn't bother me that most television news programs aim at being neutral; but the newscaster, by virtue of his sound and image, creates the public impression of being objective, wise, learned, and rather idealistic. As a result the public builds up a respect for, and a confidence in, the newscaster. Unfortunately, the newscaster is human and he does have many opinions which are strictly opinions; he also has certain likes and dislikes, derived as much from superficial considerations as from intrinsic evaluations. In presenting the news the commentator recites with imperturbable, detatched demeanor - like a philosopher. This is grossly unfair. The newscasters' opinions and prejudices should be made known to the public, then the news may be presented as seen fit and the public will be in a position to evaluate the completeness and objectivity of the presentation. For instance, on your roundup December 28th, Mr. Severeid summed up the American domestic scene during the past ten years as a period when we searched for a villian and then for a hero. Such really brilliant historical commentators as Tawney and Laski tended to make glib analogies but one knew the exact political position of these men and so could evaluate the analogy. The average American probably doesn't consider that Mr. Severeid's light is anything but white.

Next, I agree with the newsmen's favorite saw that a well informed public is the backbone of a democracy. Unfortunately the public is uninformed or misinformed in many areas. For example, I have long assumed that there must be an Arab side to the Isreali question; that our mideast problems result more from our unique relation with Isreal than from the Aswan Dam. I smell a rat in this area because Forrestal noted in his diary that he had never been under such pressure as he was to reverse his position on the formation of the Jewish State. Is there a Jewish influence out of proportion to Jewish numbers affecting the transmission of news?

I also wonder whether there aren't better spokesmen for the South than Senator Eastland. If a serious attempt is being made to inform the public then it would seem obvious that the most capable informers should inform.

My last criticism is in reality a repitition of my first, and also to some extent an inverted suggestion. It may be assumed that newsmen are more informed and have a greater knowledge of information sources than T. C. Mits. Why not let the man in the street take advantage? For instance, I would like to know what is wrong and what is right about Batista, Trujillo, etc. Where can I get this information? Who provides the best argument pro and who con? Let men who intelligently represent both sides have their say without interruption.

The end I seek by this suggestion is quite noble. Let me illustrate. In 1914 the United States was really neutral about the European war. However by 1917 the majority of our citizens wanted German blood. Yet historians all tend to agree that the case against Germany was very, very weak. Now why was the Americal public so aroused, why the Germanaphobia? The answer is simple: The public did not realize that it was being fed biased reports and propaganda instead of news. If the public had been informed of where and how to get the intelligent arguments of both sides then our international policies might have reflected the will of an informed public. The will of a misinformed public is merely the will of the misinformers.

Cordially yours,

R. E. Lear Jr.

Lederer, W. J.

March 16, 1959

Dear Bill Lederer:

I suppose in due course the scars will heal. I don't wound very easily but, on this occasion, both Fred and I were determined that we would do a job of which our kids could be proud. I still harbor the hope that the four of us may one day collaborate to the end that we will cause the body politic to itch a little.

It is quite true that I shall be "liberated" for a year which I propose to devote to the probably futile effort to learning something. We think to take our thirteen year old son, Casey, with us and, at some point in our peregrinations, we shall certainly be passing through Honolulu. I will let you know when a plan is made.

Fred and I are going to continue to produce SMALL WORLD, which means that I will have the fun and do the traveling, and he will have to do the work but, after all, that is the way we have divided our labors for many years.

My wife instructs me to say our thanks for the beautiful and exotic flowers. One day I will tell you the intimate story of the ugliest American that ever I did see. Meanwhile, I send you my best salute.

As ever yours,

Mr. W. J. Lederer
4447 Kahala Avenue
Honolulu 15, Hawaii

ERM/hl

TO Mr. Murrow

FROM Sheila Hogg March 6

The flowers referred to are outside on my desk. I have sent a little note to Mrs. Murrow telling her about them, and giving her Mr. Lederer's address in case she would like to write.

4447 KAHALA AVE.
HONOLULU 15, HAWAII

February 25, 1959

Mr. Fred Friendly
Mr. Edward R. Murrow
CBS
New York, New York

Dear Ed Murrow and Fred Friendly,

Being isolated out here in the hills of Hawaii, there is always a considerable delay before the news reaches me. So if I'm slow on a response, it's only because I'm a hillbilly and not through any lack of enthusiasm.

Bud wrote me the details of how everything ended, and I felt quite disappointed; because I had been looking ahead to the pleasure of being associated with you two. I felt this way not only because of the probable high quality of the end product and a profit motive, but also because I would have enjoyed the intellectual stimulation which you guys inject into everyone who is near you. At lease you inject it into me.

At any rate the association -- although short and hectic -- was a lot of fun; but, I assure you, it has whetted my appetite for more.

The newspaper reports have it that you, Ed, are about to take a year's sabbatical. I think that's fine. But I think you should start your year by coming to Honolulu for a week or two, holing up, and absorbing a bit of tranquility and sunshine.

If you and Mrs. Murrow have in mind to do such a thing, I can make all necessary arrangements from this end. I could either find you an isolated spot where you could hide out alone for awhile, or pick you a hotel room in Waikiki. If you don't mind three young men in the house (14, 12, and 10) at night, we have a spare room with a private entrance at our house -- and your staying with us would bring great pleasure to the whole Lederer family.

Fred, what are you going to do for the next year?

These flowers are for your wives. They deserve some little bouquet for all of the frenetics to which they were exposed during "The Ugly American fracas".

With much fond Aloha to both of you,

Bill

Dear Mr. Murrow:

Many thanks for your telegram of congratulations and good wishes which reached me at the luncheon given to me by the Liberal Party at the Astor Hotel on March 29th. It was very thoughtful of you to take note of my birthday, and I greatly appreciate it.

Mrs. Lehman and I were deeply moved by the expressions of regard and affection which came to us from our many friends and associates.

Again, many thanks for your good wishes.

With kindest regards in which Mrs. Lehman joins me, I remain

Yours very sincerely,

Herbert H. Lehman

Lehman, Herbert

February 13, 1958

Dear Senator Lehman:

Your letter to Mr. Murrow arrived in his absence on vacation.

He will return in two weeks and I will bring your letter to his attention. In the meantime, I am sending you two transcripts of the interview with President Truman.

Sincerely yours,

Florence Crissan,
Secretary to Mr. Murrow

The Honorable Herbert H. Lehman

New York, N. Y.

Dear Ed:

I was in Washington over the week-end, attending the meeting of the National Democratic Advisory Council. For this reason, I was, unfortunately, on the train enroute back to New York at the time your interview with President Truman was broadcast.

I read with great interest the news reports of this interview, and I have heard many favorable comments by friends who were privileged to watch and listen to it. I wonder if you have a copy of the script of the part that was broadcast. I would very much like to read it.

I read, for instance, that on this broadcast, President Truman made an excellent little dissertation on the Middle East. I would be especially interested in having the text of that.

If you can arrange to have this script sent to me, it would be appreciated. In fact, I would like to have two copies, if they are available.

With kind personal regards.

Yours very sincerely,

Herbert H. Lehman

January 21st, 1958

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, N. Y.

Dear Ed:

Of course your letter of January 9th was disappointing to me. However, I understand your problem. In fact, I more or less anticipated it. Yet, since the matter was, in my judgment, of such importance, I thought some way might be found for you to do another See-It-Now on Israel.

I am sure that if there is an opportunity or an opening, you will give it every consideration.

I think that your idea of a special TV program about the Army of Israel, with emphasis on its education and indoctrination program, is an excellent one. The Army has become one of the truly fundamental influences in the great amalgamation of peoples of various origins and cultural backgrounds in Israel. Its achievements in this regard are really arresting. I have been told by Israeli leaders that in this respect, the Army does what could not be done in any other way.

I shall continue to hope that you will find some way, during Israel's 10th Anniversary year, to give special notice and attention to the significance of this event.

With kindest personal regards.

Yours very truly,

Herbert H. Lehman

Lehman, H. H.

January 9, 1958

Dear Senator Lehman:

Please forgive the delay in answering your gracious letter of December 14th. I was in Paris for the NATO conference and have also been engaged in preparing a number of special programs.

As you know, I welcome any opportunity to visit Israel, but feel there is no possibility of our undertaking the program you propose during the next six months. SEE IT NOW is confined to nine programs a year and our commitments must be made well in advance.

I have had numerous discussions with friends of mine in Israel about the possibility of one day doing a television program on the Army of Israel -- not the hardware or the tactics, but rather the whole information and indoctrination program which is far and away the most impressive I have ever seen. However, I fear this will have to wait until a later date.

I know that our Programming Department is planning several special programs in connection with the 10th Anniversary and I am truly sorry that I cannot make a satisfying contribution.

Sincerely,

Senator Herbert H. Lehman

SUITE 2704
ELDORADO 5-1182

December 14, 1957

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

My dear Mr. Murrow:

It has been some time since I have personally seen you, but I have been "watching" you by means of your favorite media. I have also been thinking of you in connection with a major undertaking with which I am intimately connected, and with whose purposes I would think that you would sympathize.

I agreed to become General Chairman of the American Committee for the Observance of Israel's Tenth Anniversary, and am associated in that undertaking with a very great number of eminent Americans of all faiths, creeds, etc.. We are interested in seeing that the story of Israel is told and retold to the American people during the coming year. It is an opportunity to make a real impact on the public and to strive toward a better understanding of the basic factors in the Middle East. I know I do not have to convince you of this. You have done as much as any other individual to further this purpose in the past.

I am writing to you to inquire whether it would be possible for you to make another trip to Israel in the coming months, with a view to presenting a special program on "See It Now", somewhat along the lines of programs you have done in the past, but with a broader and less immediate perspective.... looking back over the whole decade in the Middle East. Of course I can think of no-one who could do this better, or as well. It would be a real contribution to the objective of reaching millions of Americans with the story that still has not been sufficiently told -- the story of Israel's significance, of the forces arrayed against her, of the identity of American policy interests --in the interests of peace -- with the fundamental interests of a free and democratic Israel.

Would it be possible for you to do this? Would you agree that it is desirable? We are hoping to get as much attention as possible on radio and television during the coming year, for a portrayal, in various aspects, of the subject. A "See It Now" feature would be the capstone. I would be glad to discuss this with you by telephone or in person, if you thought it would be helpful. I would also like to get any other ideas you might have that would contribute toward the objective in question. I have committed myself to this activity because I believe that it can contribute to the cause of peace, understanding and stability in the Middle East.

With kindest personal regards, in which Mrs. Lehman joins me.

Yours very sincerely,

Herbert H. Lehman

Dear Ed:

I assume I will be hearing from you further regarding the program on which you plan to use Attlee. As I wrote you, I hope that it can be at the end of November.

In connection with this program of yours, you are presenting people for whom we undoubtedly would find interest for lecture tours, and I am wondering if I could come up to see you sometime later this week or next week, to discuss this. You were kind enough when you were in London to recommend people to us, and I've always appreciated this.

We are now in the process of building our list of speakers for the 1959-60 season and I am certain that you would have some interesting people that we might approach about tours in this country.

I shall call you on Wednesday or Thursday and hope that it might be possible to work out a date to sit down and talk to you.

Sincerely yours,

Bill

SO SIEHT AMERIKA DAS DEUTSCHLAND VON HEUTE:

Neue Rhein Zeitung" - pro SPD

Den Deutschen ist noch immer nicht zu trauen

Von HANS JOACHIM OERTEL

Wie sieht Amerika das Deutschland von heute? Wie wird es dem amerikanischen Durchschnittsbürger gezeigt? Rund 25 Millionen Amerikaner sahen vor einigen Tagen auf ihren Bildschirmen — einen Deutschland-Film. Der prominenteste Fernsehstar, Edward R. Murrow, war mit einem Kamerateam kreuz und quer durch die Bundesrepublik gereist. Er präsentierte einen abendfüllenden Steifen über das Deutschland von heute. Was sahen die Amerikaner?

Edward R. Murrow arbeitet mit „Schwarz-Weiß-Technik": er zeigt die Ruinen des Jahres 1945, die heimkehrenden Soldaten, die zerlumpten Menschen — und Sekunden später die Stahlhochhäuser des Jahres 1958, die eleganten Läden der „Kö", die gutgekleideten Bundesbürger und einen hypermodernen Friseursalon. Mehr noch: Murrow zeigt die Gaskammern der Konzentrationslager — aber nur Sekunden später die „Anne-Frank-Aufführung" im Düsseldorfer Schauspielhaus.

Die Bilder schockieren durch ihren Kontrast. Murrow selbst sagt ganz offen, daß das sein Ziel gewesen sei; zu zeigen nämlich, wie es war und wie es heute ist — und die Frage offen zu lassen, ob man den Deutschen trauen könne.

Meister de Gaulle vor einem neuen Stoß
Vicky im Daily Mirror

Der Film ist kein Kompliment für Deutschland. Es plätschert nicht an der Wirtschaftswunder - Oberfläche. Hier ein typisches Beispiel:

● **Murrow zeigt eine Kompanie Bundeswehr, wie sie singend aus dem Kasernentor zieht. Unmittelbar darauf Bilder aus einer bürgerlichen Unterrichtsstunde für junge Soldaten. Frage des Offiziers: „Welchen Begriff verbinden Sie mit Adolf Hitler?" Antworten junger Rekruten: „Der Mann hat die Autobahn gebaut"; „Der Mann hat ein gutes Sozialversicherungssystem geschaffen"! „Er hat zwar den Krieg verloren, aber..."**

Das ist peinlich. Peinlich für das Deutschland von heute, so auf den amerikanischen Bildschirmen präsentiert zu werden.

Ein optimistisches Gegengewicht zu solchen Szenen geben die Kurzinterviews mit prominenten Wirtschaftlern und Gewerkschaftlern:

BERTHOLD BEITZ: „Wir werden nie wieder rüsten, auch dann nicht, wenn die NATO uns darum bittet."

LUDWIG ROSENBERG vom DGB-Vorstand: „Die Demokratie in Deutschland zu stärken, ist eine der wesentlichen Aufgaben des DGB."

Aber solche Dinge verblassen etwas hinter dem Gesamteindruck. Hinzu kommt, daß die Frage, ob man Deutschland vertrauen könne, nur in Verbindung mit Adenauer positiv beantwortet wird. Tendenz: Adenauer ist gut. Er ist der Garant für die Demokratie. Aber alle anderen..."

Wer den Film gesehen hat, bedauert, daß den Amerikanern ein nur teilweise richtiges Bild von Deutschland gezeigt wurde. Kein Wunder, daß die Fluggesellschaft PAA, die den Murrow-Film mit 200 000 DM finanziert hat (das ist so üblich in Amerika), den Streifen nicht wie ursprünglich geplant, für Werbezwecke ausnutzt. Es sei nicht ratsam, diesen Film den Deutschen zu zeigen, lautet die Begründung der Fluggesellschaft...

Hunderttausende in Tschenstochau

NRZ-Nachrichtendienst

Tschenstochau. Zum zweitenmal innerhalb zweier Wochen veranstalteten Polens Katholiken in Tschenstochau eine machtvolle Demonstration: Nach Maria-Himmelfahrt am 15. August strömten jetzt wieder Hunderttausende am Tag der Feier der Mutter Gottes im Kloster Jasna Gora zusammen. Die ganze hohe Geistlichkeit, an der Spitze Kardinal Wyszynski, war vertreten.

Neue Rhein Zeitung
As America Sees Today's Germany
The Germans are still not to be trusted.
By Hans Joachim Oertel

How does America see the Germany of today ? How is it presented to the average American citizen ? Approximately 25 million Americans saw a while ago on their TV screens - a film on Germany. The most prominent television star, Edward R. Murrow, had travelled with a team of cameramen through Germany. Murrow presented an evening-filling film on today's Germany. What did the Americans see ?

Edward R. Murrow works with a "black-white technique": He shows the ruins of the year 1945, the returning soldiers, the people in rags - and seconds later he shows the steel skyscrapers of 1958, the plush shops of the "Kö" (Königsallee in Duesseldorf), the well-dressed citizens of the Federal Republic and a super-modern hairdresser's shop. But that is not all : Murrow shows the gas chambers of the concentration camps - but only seconds later the performance of "Anne-Frank" in the Duesseldorf Theater.

The pictures shock through their contrast. Murrow himself says quite frankly that his aim had been to show this contrast, to show what Germany was like and what it is like today, and to leave open the question whether Germany can be trusted.

The film is no compliment to Germany. It does not go lightly over the surface of the "Economic Miracle". This is a typical example: Murrow shows a platoon of the "Bundeswehr" as they leave the barracks, singing. Following immediately are pictures of an instruction course in citizenship for young soldiers. Question of the officer : "What do you associate with Adolf

Hitler ?" Answers of young recruits : "He built the autobahn". "He instituted a good social insurance system". "He did lose the war, but....." This is distressing, distressing, for today's Germany to be presented in this fashion on American television screens.

An optimistic counterpart to such scenes are the short interviews with prominent economic figures and trade unionists. Berthold Beitz : We will never rearm, even if NATO asks us to." Ludwig Rosenberg of the board of the Trade Union Federation : "To strengthen democracy in Germany is one of the most essential taks of the German Trade Union."

But these things lose emphasis somewhat in the general impression one gets from the film. It must be added that the question of whether Germany can be trusted is given a positive answer only in relation to Adenauer. The implication : Adenauer is good. He guarantees democracy. But all the others....." Viewers of the film will be resentful that the Americans were shown only a partially accurate picture of Germany. It is no wonder that PAA, which financed the Murrow-film with DM 200,000 (that is customary in America), is not using the film for publicity purposes as originally planned. It is not advisable to show this film to the Germans, is the reason given by the airline.

GENESYS

CORPORATION

VERMONT 7-5161 · TEXAS 0-2777

10131 NATIONAL BOULEVARD

LOS ANGELES 34, CALIFORNIA

December 24, 1958

Mr. Edward R. Murrow
National Broadcasting Company
Madison Avenue
New York City, New York

Dear Mr. Murrow:

I was treated to an unexpected and pleasant surprise last week when I read your article, "How TV Can Help Us Survive."

We are obviously confronted with the ultra-smooth, Madison Avenue brand of fact encapsulation, which guarantees that truth is pre-packaged in the most charming way imaginable so that we can laugh our way into oblivion while our enemies become stronger and more dangerous day by day. In view of this, it was interesting to see you speak out as you did. I am afraid the time has come for all of us who know the truth to be more than academically concerned.

I believe that the National Association of Manufacturers or the Three Rivers Garden Society or somebody should become a focal point for the dissemination for truth unadorned by aphrodisiac encasements because this is really a battle for survival in magnitude and intensity never before seen or even imagined. If somebody doesn't wake up our chubby man on the street there won't be a man, or a street, for very long.

I am really writing because I am curious about the reaction from your article. I would like to see the man on the street surround you with plaudits and I am very much afraid it won't happen; that the connotations of this article are just too unpleasant to be allowed to ruffle anyones equanimity. If, however, you have aroused just a few it may be possible to eventually arouse on a larger scale and dispell our national rose-tinted smog.

I suggest, if you get many responses of the latter type, that perhaps there will be some active support for a series of films to be distributed free of charge to local television stations depicting the actual advances made by our enemies and showing how rapidly we are losing ground. I personally was on the firing crew of one of the earliest guided missiles ever fired in this country. I was instrumental in building a model

guided missile which tried in vain to sway a United States Congress into active support of the missile program. I worked with captured enemy components and was startled by their mechanical excellence. In short, I was frightened long ago.

Today, "Madisonism" has extended into practically all aspects of our life. We hire "experts" in all phases of some of our most crucial activities and these same "experts" are busy turning out millions of words per month justifying our failures and sugar-coating our shortcomings.

It has become unfashionable to be worried. Our tranquilizer bills alone would probably solve many of the killer diseases that are now murdering us by the thousands, if we could but show some honest concern.

I am with you, Mr. Murrow. Something should awaken our latent pioneer spirit. What do you suggest as a concrete step?

Yours very truly,

Ret. tape
don't have
as requested

Dear Sir:

My hobby is the study and history of World War II.

Of course, I have your Columbia album of "I can hear it now". I also have a number of books, maps, films and recorded tapes, pertaining to the subject.

I would like to delve a little further into it though.

Enclosed you will find 1200 feet of recording tape. Would you be kind enough to have a few of the momentous newscasts and major speeches transcribed on the tape so I may add it to my library and collection?

I am particularly interested in the speech President Roosevelt made to Congress immediately after Pearl Harbor, in which he called the Japanese attack "one that would live in infamy".

Also, if you have a recording of any of the complete speeches or excerpts from the speeches of Adolph Hitler and Benito Mussolini, I would appreciate them also.

Hitler's invasion of Poland, Sept. 1, 1939, June 6, 1944 D-Day, the newscast announcing VE and VJ day, would also make my library more complete.

I realize you are very busy and you have many, many things to attend to, but if you would delegate the job of transcribing

some of the more important things of this era, depending on your judgment, on tape for me would be appreciated.

For me to say that I watch all of your programs on TV, including Person to Person, See It Now and other miscellaneous programs, would sound as if I was trying to compliment you into doing this for me. But it's true that I am an ardent fan of yours and wait impatiently for each of your programs.

If there would be a service charge for this request, please advise me before it is recorded.

Thank you very much for your attention to my letter.

Very respectfully yours,
Thomas F. Leo, Jr.

Dear Mr. Leon:

In reply to your letter of August 4, I have checked with Mr. Murrow, as you suggested, and regret to tell you that he is unable to discuss the fall of 1960 at this time. As you know, he is leaving the country in about ten days' time and last-minute commitments at CBS as well as personal arrangements will completely occupy his time until then.

Sincerely yours,

Sheila Hogg
Secretary to Mr. Murrow

Dear Miss Hogg:

Thanks for your letter of July 21st.

Mr. Murrow suggested that we get together after he was finished with his present commitment to discuss the fall of 1960.

I would appreciate it if you would discuss this matter further with him.

Sincerely,

WILLIAM MORRIS AGENCY, INC.

Dear Mr. Leon:

I apologize for the delay in replying to your letter of June 29, which arrived after Mr. Murrow's departure. As he has not been in the city since then, he has not seen your letter. However, I understand from him that he does not intend to make any plans in connection with the Fall of 1960 at least for the next few months.

Sincerely yours,

Sheila Hogg

Dear Ed:

I was most impressed with your closing remarks on your last PERSON TO PERSON show. I assure you the American public will miss you during your well-earned sabbatical.

In our last conversation you suggested that we should get together some time after your last show to discuss your television plans for the Fall of 1960. I would like very much to arrange lunch with you, Wally Jordan and myself at any time that you plan being in the city. If it is more convenient to visit with you somewhere, Wally and I would be very happy to do that. Would you be kind enough to have your secretary arrange for us to meet at your convenience.

Kindest regards.

Sincerely,

April 22, 1958

Dear Sol:

I have looked the Pulitzer material over.

My feeling, for what it is worth, is that there is a fine series to be done in the area, but I also know there isn't the slightest chance of my finding either the time or the energy to have a try at it.

I wish you luck.

Sincerely,

Mr. Sol Leon

July 21, 1958

Dear Bill:

Sorry for the delay in answering your letter of July 11th. I was on vacation.

I will gladly purchase two tickets for the Trotting Races at the new Yonkers Raceway on Thursday, October 9th, to benefit the Association for the Help of Retarded Children.

My check for $50.00 is enclosed herewith. With all good wishes.

Sincerely yours,

Mr. Bill Leonard

Mr. & Mrs. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Janet and Ed:

On Thursday, October 9, 1958, we are planning an evening of Trotting Races at the New Yonkers Raceway to benefit the Association for the Help of Retarded Children.

Since I have agreed to serve as Chairman of this event, I have suggested your name for our list of patrons and hope you will accept. Each patron is requested to be responsible for at least two tickets.

The cost of the ticket, which is $25.00 (tax deductible), includes a special dinner in the Raceway Pavilion, Club House entrance fee and gratuities. And, of course, we shall be able to view the races from our tables.

May I hear from you as soon as possible, since we must go to press with the program, and we would like to include your name.

We do hope you will join us--it will be fun!

Sincerely,

Bill

June 14, 1959

Dear Mr. Murrow:

In our present era, you, more than any other man, stands out in my mind as a champion for human dignity be it your handling of McCarthyism, Clinton, Tennessee, or the housing situation in Harlem. It is for this reason that I thought that it might be of interest to you to know that another social worker and myself have been fired for honoring the picket line at Mount Sinai Hospital. We feel that the hospital strike situation is no longer another bread and butter issue but basically a struggle for human decency and dignity. For the past 12 years, I have been a psychiatric social worker solely responsible for the Psychiatric Ward and Psychiatric Follow-Up-Clinic. Despite the fact that Miss Siegel, our Director stated publicly in the New York Post on May 19th that she respected our right to hold to our principles and did not "contemplate any disciplinary action to be taken", within a few days after this statement, we were dismissed.

As social workers, we dedicate ourselves to the principle of helping people to help themselves through avenues of their own choice. If the hospital employees see the union as a means of achieving a better life for themselves or raising their dignity and self-worth, then, according to the teaching and training of my profession, I must respect their fight for union recognition as symbolized by the picket line. I cannot have a double standard of helping people, one for patients and another for hospital employees, Employees are people too.

If you feel that I have a right to act according to the dictates of my conscience without suffering reprisals for this, I would appreciate your voicing your sentiments whether you want to do this as an individual or utilize whatever medium you deem most effective. Any correspondence in this matter should be sent to Mr. Joseph Klingenstein, Board of Trustees, Mount Sinai Hospital; Dr. Martin Steinberg, Director of Mount Sinai Hospital; Dr.M.Ralph Kaufman, Chief of Psychiatry; as well as Miss Doris Siegel, Director of the Social Service Department. The address is 11 East 100th Street, New York,29, N.Y.

Thank you for your interest and support.

Sincerely yours
Sylvia Leshowitz

New York 22, New York

Dear Mr. Murrow:

On November 26, 1958 I took the liberty of sending you a complimentary copy of a novel which I had translated from Yiddish into English. To date I have had no acknowledgement. I am taking it for granted that either my book and the enclosed letter, or your reply was lost in the mail. If so I shall be happy to send you another copy if you have not received the firsto one.

The following is a copy of the enclosed letter:

"Last summer Mr. Taube brought me the Yiddish manuscript of Empty Pews and asked me to read it, with the thought of translating it into English. I read the manuscript and was so moved by the story and the characters, that I proceeded with the translation.

" We at home watch your TV programs almost without fail. All of them have given us pleasure. We were especially impressed with your Israeli programs. Your evening news program is the favorite course of our evening meal.

" Many times I have wanted to write to you expressing my gratitude to you for your pro Israel attitude. It is my pleasure and privilege to present to you and to Mrs. Murrow a copy of my first published translation.

" I would be very grateful for your opinion of Empty Pews."

Sincerely,

Sarah C. Lesser

Mr. Ed Morrow pgm. puff
485 Madison ave. to do a film on Mozart
New York 22, N.Y.

Dear Mr. Morrow,

I am a musician and a great admirer of Mozart. I think he was the greatest musician who ever lived in spite of his short life of 35 years.

I am enclosing some articles on him with the hopes you may read them.

My purpose in writing you is the hope that perhaps some time when you are in Europe you may fulfill the hopes and dreams of thousands of people in making a film of the Mozarteum museum in Salzburg, Austria where Mozart

was born and where his meager possessions are housed, pictures music and his piano which I am told were in reverse, the keys being black and the upper part in white.

This is the only hope I have in my life time to at least see in film the story of the greatest musician that ever lived

Yours truly,
Jack Levenson
1094 Quatan St
Silver Spring, Md.

Postlude

Beecham in Library Lecture Lauds Mozart as the 'Most Gifted Musician'

By Paul Hume

More than fifty years ago Sir Thomas Beecham made his professional London debut as a conductor, leading the Queen's Hall Orchestra. And if the books are right, it was sixty-six years ago that he formed an amateur orchestra sufficiently good for Hans Richter to direct frequently.

Looking pink enough for a fast discussion of cricket, or an all-night conversation on music, Sir Thomas held forth last night in the Coolidge Auditorium of the Library of Congress on the man he described as "in some ways the most gifted musician who ever lived, Wolfgang Amadeus Mozart."

Tonight Sir Thomas will conduct the Philadelphia Orchestra in Haydn, Handel, Delius and Berlioz. Each of these composers stands well up on the list of Beecham favorites, tnd to each he has rendered notable service in his magnificent personal history of conducting great music.

Yet if you could pin Beecham down to a single favorite composer, he would have to give you the name of Mozart. Last night's conversation gave lots of reasons why he feels as he does about Mozart. Beecham centered his comments around the real revolution in the attitude of the world of music toward the art of Mozart. It is a revolution that has taken place within Sir Thomas' own lifetime.

The great Lancashireman referred to a magazine article he wrote recently in Britain, entitled, "The Immodesty of Criticism." This reminded me of Beecham's own superlative use of modesty. By "superlative," I mean that he knows when it has some connection with himself, and when it would be quite out of place for him to assume it. He was willing last night to state clearly that he has a strong preference for success in concerts, when it comes to the box office.

But Sir Thomas, while he is justly proud of his own contributions to the revolution in Mozartean habits today, is still, we think, too modest in public assessment of his personal contribution to that turnabout. For if the world today hears regularly more than a dozen symphonies, a half dozen operas, 10 or a dozen piano concertos, and many of the myriad other works of Mozart's greatest genius, it is in many ways due to Beecham that it does.

And if, in hearing those works, we listen with a feeling for style and justness to Mozart's intentions, that happy esthetic achievement is also in large part due to Beecham's striking performances of this music.

If you would hear Sir Thomas himself, his conversation on Mozart will be broadcast next Saturday over Station WGMS. If you would hear his music, though not Mozart, it, and he will be on hand tonight in Constitution Hall. His influence is great, and since he too, is great, the world is much the richer for his life and work.

MOZART, *Music's Wonder Child*

By
Donald Culross Peattie

Positively the last concert! . . . The boy, not yet seven, will perform on the harpsichord, play a concerto for violin, and accompany symphonies on the clavier, the keyboard being covered with a cloth, as easily as if he could see the keys. He will name all notes sounded at a distance, singly or in chords, and improvise on harpsichord and organ as long as desired. Tickets ½ taler.

THUS did a notice in a German newspaper in 1763 advertise, as if he were a side-show freak, the most universal genius of music the world has ever known, Wolfgang Amadeus Mozart. In the audience sat another boy, the 14-year-old Goethe, destined too to become immortal. Years later he could still recall the far-off bright picture of the merry-faced little musician who ran to the bench before the harpsichord in his absurd, exquisite costume of lilac satin, with powdered wig and tiny sword, and flung his heart into the glittering notes.

Born with absolute pitch, infallible rhythm, and natural comprehension of harmony, Master Mozart had come into this world with an inexplicably complete gift. That is how, at the age of four, the child began to learn to play the clavier (a forerunner of the modern piano) and at five picked up a violin and, reading at sight, staggered through six trios with his father and a friend.

This child read and wrote notes before he could do as much with letters. Compositions dating from his sixth year are recognizable from the opening bars as the music of Mozart and nobody else. Graceful and sure, spirited, precise and brave, they are the work of a unique stylist and a great soul.

Fingers and brain were endowed alike. At ten the boy astounded the Hollanders by playing superbly on the largest, most complicated organ in the world. At 14 he was taken to hear the Vatican choir sing a long, difficult *Miserere* which was kept so secret that the singers were forbidden to copy the score on pain of excommunication. The boy drank in every note, walked home and wrote the entire thing out from memory. On a second hearing, he

was chagrined to find he had made three mistakes. Instead of excommunicating him, the Pope made him a Knight of the Golden Spur.

The father of this phenomenon was Leopold Mozart, a second-rate violinist and first-rate teacher, of Salzburg in Austria. Always reverent before his child's genius, he nevertheless exploited it. With Wolfgang's sister, a talented young pianist, he dragged the boy all over Europe. The children played before the rulers of France and England, and for the imperial family of Austria. On that occasion the boy slipped on the palace floor, got a bad bump, and was comforted by a girl who helped him to his feet. By way of thanks, Wolfgang offered to marry her when they grew up. But ahead lay a different fate for Marie Antoinette.

Rumbling coach and miry road, wretched inn and long hard hours could not exhaust the merriness and spirit of the boy. Delighted audiences often refused to leave their seats, and the obliging child would play on and on, seemingly in a spell of enchantment, inventing melody upon melody, the notes of the one rushing back and forth across the other like a spring shower dancing upon flowers. Until at last Papa Mozart would call a halt, and the fashionable ladies and gentlemen would shower the child with caresses and applause, none of which ever spoiled his natural sweetness.

The financial returns of the tours, however, always proved less than the expenses. The high-born listeners were likely to pay in snuffboxes, shoe buckles and trinkets. Papa Mozart took it all with a bow, and bundled the children off to play for their supper elsewhere.

He was the boy's sole teacher. Wolfgang never went to school, but he flung himself joyfully on all forms of learning. Especially did arithmetic fascinate him, and he chalked sums all over the tables and walls, enchanted by a science which could be made to yield the one right and perfect answer. Here is a key to why his music is right, perfect, exactly satisfying. But Mozart is happy, tender and loving also. He is as heartening as he is easy to listen to.

In Mozart's time people found some of his music "too modern, too advanced." And to our ears a Mozart piece, heard for the first time, sounds as though you had known and loved it all your life. The reason is that Mozart profoundly influenced the music that came after him. Beethoven studied him constantly, and Haydn paid his young friend the sincere flattery of imitation. Chopin was deeply imbued with Mozart's spirit and said at his death, "Play Mozart in memory of me." Even the proud Wagner bowed his head to him. You can trace much of the gay spirit of Strauss waltzes, much of the great songs of Schubert back to the pure fountainhead of Wolfgang Amadeus Mozart.

Melodies sprang from his fingertips. He would sit in a rocking coach drumming his fingers on his knee,

delight on his face, until the theme was worked out in his head and he could scribble it on a scrap of paper. At 14 his newest opera was produced in Milan, under his own direction, by the largest orchestra in Europe. At 15 he was the author of 14 symphonies and six short operas.

In the years from 15 to 21 he invaded the most technically difficult fields of composition, where to step at all is to invite comparison with past masters. He showed that he was the master of them all. Every year his gifts, like a new star rushing toward the earth, grew brighter. In all justice he should have been given the highest musical post that his emperor, Joseph II of Austria, could bestow.

Instead he was neglected and snubbed by the Emperor, whose mean-spirited hirelings were fearful and jealous of the prodigiousness of Mozart's gift. Rival musicians prevented his works from being played, or when they were produced the performers were often bribed to ruin the music. There was no copyright to protect a composer; once a piece of music was known it could be freely performed, or even appropriated into another man's work.

The only security for a composer was to be taken into the employ of some court or person of wealth. Mozart did get such an appointment — at about $67 a year! His employer, the Archbishop of Salzburg, had Mozart eat with the servants, and supposed that by grossly insulting him he could keep him properly humble. Resigning, Mozart settled in Vienna as a free-lance artist.

When the celebrated musician Christoph von Gluck died, Wolfgang was given his post — "chamber composer" to the court — but at scarcely more than half von Gluck's pension. Yet he was humbly glad to get even this, for he had married young and impulsively, and the babies came promptly.

His wife was Constanze Weber, one of four pretty girls in a family where everyone was musical. Constanze was a giggly 13 when he first saw her, or rather looked past her at her older sister Aloysia, a 15-year-old with a gorgeous figure and singing voice. Aloysia promised to wait for him while he went off to Paris seeking his fortune. When he returned, unsuccessful, hers was already made in the opera. Long after, asked why she turned down Mozart, she confessed, "I thought he was such a *little* man."

Constanze picked up the pieces of his broken heart, and, to the unforgiving rage of Papa Mozart, they were marrried. "Stanzi" was a tuneful little blonde, an ideal companion for picnics in the Vienna woods. As a wife she lacked all domestic capabilities. Mozart could see the pathos of her fun-loving disposition caught in the wheels of poverty and childbearing. So her "Wolfi" extravagantly spent money on little luxuries to coax back the smile of childish delight he had married. Worse, her health was frail, her childbirths were agonizing, and

five of her seven children were swept into an early grave.

Mozart had troubles enough to have set any other musician to writing dirges. But into his music he never brought the sorrow, grime and humiliations of his life. The worse things got, the more he poured his courage into his art. And it is never grim courage, but blithe as bird song.

In order to pay the butcher and even stave off the sheriff (who called frequently and took away pieces of furniture), Mozart got up concert after concert. For each one he composed a fresh work. Frequently it was finished only at the last moment; some of his greatest works were written in a matter of days.

Sometimes in the notoriously dank Vienna winters it was difficult for Mozart to keep warm enough to practice. A man called to find Wolfi and Stanzi dancing about. This story has been told as if they were waltzing gaily and regarded it as a joke. Actually they were almost paralyzed by cold and were throwing themselves about hysterically. The friend rushed out and got them fuel.

But the friend to whom the world owes most was a businessman named Puchberg, who repeatedly let Mozart have small sums when the distracted composer was driven to the wall. Reading Mozart's letters imploring his friend's aid, we burn with indignation to think that this radiant genius was reduced to begging.

In Prague, at least, Mozart was understood in his lifetime and adored. When he was invited there to conduct his gay opera *The Marriage of Figaro,* which had been coldly received in Vienna, he found that nothing but *Figaro* was whistled in the streets. While there he wrote the beautiful Prague symphony, and presently he returned to prepare an opera especially for that music-loving town.

It was one of the good times for Wolfgang and Constanze when they journeyed over the mountains to the mellow Bohemian capital where Mozart worked on *Don Giovanni,* often called "the perfect opera." Da Ponte, the poet who did the libretto, was a merry scamp who lodged across the narrow street from the Mozarts. From time to time one man would shout across to the other with a request to come and hear new pages. Or, to the delight of all Prague, they would swing down the street together, singing, to the tavern for a bottle of wine.

Admirers entertained the Mozarts everywhere, so much so that time ran short. On the day before the opening the overture was still not written. The lights in the house were already up when the score was flung on the desks of the orchestra. The musicians played its rousing measures at sight.

Never had comedy been expressed in music with such delicious effect. But the *Don* is also a tragedy, and showed Mozart for a writer of demoniac power and dramatic instinct. Applause and encores stretched three hours of music into six. The box-office receipts saved the theater

owner from bankruptcy, but the composer received only a flat—a very flat—sum.

As the brief star of Mozart's life rushed toward perpetual darkness, it seemed to gather speed and to glow more dazzlingly. His last nine symphonies, some of which never got a hearing in his lifetime, are worthy to stand with Beethoven's nine. Too often people dismiss Mozart as dainty, knowing only the minuets and little sonatas taught to children; but you cannot hear his music to the end without discovering his depth.

In the 35th year of his life, though he was very ill in Vienna, he composed the famous fairy opera, *The Magic Flute,* filled with wonderful melodies. A fly-by-night producer brought it out in a ramshackle theater. News of it got about and all Vienna flocked to hear it. The producer made so much money he built a new theater. But Mozart was too ill to see the performances; he would lie eyeing his watch saying, "Now the curtain is going up." "Now they are walking unhurt through the flames, to the sound of the magic flute."

A few months before, Mozart had been visited by a stranger, a grim fellow who was empowered by his employer, he said, to commission Mozart to write a Requiem Mass for male and female voices, in honor of his employer's deceased wife. The messenger would not give his master's name. It is now known that the employer, Count Walsegg, was fond of commissioning musical works secretly and then having them performed as his own.

Many interruptions prevented Mozart from delivering the piece. At intervals the messenger reappeared to hurry the composer. As Mozart became delirious he imagined that this emissary came from the Other World and that the *Requiem* was for his own death. Feverishly he strove to finish it. With terrifying power the *Requiem* sounds the very depths of grief and shuddering repentance, explores the farthest horizons of our human longing for immortality, and ends in a clear, serene chord of faith. On his deathbed, his few best friends about him, his lips shaped the notes of the Judgment Day trumpet that rings through the *Requiem.*

A few friends gathered in the gloom of a coming storm to hear a brief Mass said over Mozart's casket. As they set out toward the cemetery lightning flashed and lashing rain and wind bent them double. They turned back, and the hearse went on alone. Into an open pit, among the decaying remains of vagrants and prostitutes, was flung the slight form that had housed the most singing spirit which ever dwelt on earth.

Mozart triumphed over injustice, sickness, debt and death itself. To all that was ignoble, or appalling, he returned an answer that tingles still with the rapture of living.

Levin, Meyer

MEYER LEVIN
270 RIVERSIDE DRIVE
N.Y. 25, N.Y. AC 2-7938

Mr. Edward R. Murrow,
CBS, N.Y.

Dear Mr. Murrow:

Mr. Glaubman of the Anti-Defamation League suggested that I get in touch with you in connection with material on Israel which you have in preparation. He thought you would want to see my film "The Illegals," a documentary record of the trek from Poland to Palestine. Enclosed are excerpts from the reviews. The scenes crossing the Alps, and the scenes aboard the illegal ship, even today awaken responses such as "people who went through that-now for the first time we understand what they are like."

I don't know the scope of the subject you have in preparation, but I have for a long time sought to film the situation of the Jews throughout the world. Part of this would go with material from "The Illegals" as a documentation for history, of the "Ingathering." The life of Jewish groups in the Atlas mountains, of Jews in Ethiopia- the Falashas- of Jews in India, would be included. The material as you know would be extremely picturesque, and the whole of the film would give a better-proportioned view of the Jewish story than the usual material that is shot only in Israel. And for a complete story, scenes of Jewish life in America and Europe should be included.

Perhaps you would be interested enough to talk to me about this project. I've just completed a novel and would like to return to documentary film work for a while, at least.

Sincerely,

Meyer Levin

PRESS COMMENT on "THE ILLEGALS," a film by Meyer Levin.

VARIETY: ..certain to endure in the historical record as a summation of this era's hopes and agony.. packs a terrific wollop.. Levin let the facts speak eloquently for themselves.. it never reaches for dramatic effect.. Levin's background narration is tempered with judgment and restraint...

MOTION PICTURE DAILY: ..one of the most ruthlessly honest and engrossing documentary dramas of many seasons ..

FILM DAILY: "The Illegals" is one of the most extraordinary films ever made.. a monumental piece of news reporting, powerful, unforgettable document..

HOLLYWOOD REPORTER: ..the most timely and moving story-documentary produced since the war.. modern Odyssey.. a realistic and unspoiled account.. an emotionally exciting experience...Meyer Levin has turned in a brilliant work of creative interpretation..

N.Y.TIMES: ..gains strength through understatement.. Levin makes the most of the poignant futility of the effort which leads, nine times out of ten, not to Palestine but to Cyprus...

N.Y. WORLD-TELEGRAM: ...convincing reality leaves one deeply stirred. Fervor, emotion, and real people are the dramatic material here. They are the elements of a rousing drama of human bondage, hardihood, and hope.

N.Y.POST: A labor of pure devotion, it stands the test as a record of undying hope and noble fortitude..

N.Y.DAILY NEWS: .. a cinematic victory as well as an historical saga..

N.Y.JOURNAL AMERICAN: .. one of the most gripping pictures of our times. It is de profundis told not with a pen, but with a soul-searching camera.

BROOKLYN EAGLE: ..living history, photographed as it was happening.. A rare achievement by Meyer Levin.

CUE: A remarkable achievement and a moving record of the second exodus.

SOCIETY OF CINEMA CLUBS OF FRANCE: Ranks with the great post-war Italian films.

T Thursday June 6th 3; 00

Dear Mr. Murrow,

As events in the Middle East move from crisis to crisis, the views of the Herut Party in Israel assume vast importance. Herut (Freedom) is the second largest party in Israel, and the chief opposition to the Ben-Gurion government. It has its roots in the now disbanded Irgun Zvai Leumi, famed underground army of Palestine.

As the head of the Herut delegation to the United States, I would appreciate the opportunity of meeting with you, at your convenience, so that I can present our viewpoint and give you valuable background on the news.

I look forward to meeting with you,

Sincerely yours,

Nahum Levin.

Dear Mrs. Levine:

I have your letter of January 21st.

If, at any time, we plan to photograph or do a program on a home for the aged, we shall surely be in touch with you.

It was very nice of you to bring it to my attention. Also, thank you for the photograph of your group.

Sincerely yours,

Mrs. Helen V. Levine

Edward R. Murrow
Columbia Broadcasting Station
485 Madison Avenue
New York, City, N. Y.

Dear Mr. Murrow:

My Husband and I operate a Home for the Aged. All of our aging people are ambulatory and alert.

When we undertook this field of work, we decided not to mix feeble people with alert, as we knew that there were nursing homes that could provide the type of care senile people required.

Our home is like a private hotel with personal care. Our people, both men and women, come and go as they choose. They patronize our local stores, are interested in civic affairs; attend the church of their faith; and it is most stimulating to listen to their conversation.

This letter is by no means promotional. We are usually full up. However, I would like to convey a message to many lonely men and women all over the country. They need not live alone, but to seek a home such as ours, where they can have congenial companionship, a pleasant atmosphere, proper diet and someone who cares about them. It is a far cry from "Over the hill to the poor house".

If you are interested in photographing our people, when dining, at recreation, gardening, watching television, etc. we would be pleased to assist you.

Sincerely,

Helen V. Levine

To Irene

Dear Mr. Murrow:

The Harvard Crimson is now preparing its fourth annual "Guide to Career Opportunities," which will be distributed free of charge to 45,000 college seniors throughout the country this winter. Our purpose in compiling this Guide is to give these students the benefit of the experience, advice, and information of men who are leaders in their respective fields.

This year we should like to ask you, as a distinguished executive in the broadcasting industry, to contribute an article on that field for the 1959 Guide. The article might consist of the information you feel to be important for a student considering his future vocation. Among the considerations which you might cover are the size of your industry, its rate of growth, the type of positions open, the financial rewards, and the non-pecuniary satisfactions.

In addition, may we suggest that you include personal observations and experiences, since these are the features which make the articles in this Guide distinctive and extremely readable. For example: why you are in the broadcasting business, what pleasures you derive from it, what problems and challenges confront you These are aspects of a career which bring it very much to life for a college senior.

Although the exact length of the article is left to your discretion, we consider an ideal length to be between 800 and 1,000 words. Our copy deadline is September 1, but we would appreciate it if you could let us know as soon as possible whether you will be able to write the article.

We hope you will be able to write this, for we feel it will be a definite asset to the Guide and an aid to our readers. If you have any questions, please feel free to write us. A copy of last year's Guide is enclosed for your perusal.

Thank you for your attention.

Yours truly,

Richard N. Levy

THIRD ANNUAL GUIDE TO

CAREER OPPORTUNITIES

Published by

THE HARVARD CRIMSON

CAMBRIDGE, MASSACHUSETTS

Editors: **George H. Watson and Leo A. Guthart**

Associate Editors: ADAM CLYMER, DAVID I. GORDON, ROBERT S. NOVEMBER

(COPYRIGHT 1958, THE HARVARD CRIMSON)

Introduction

WITH this completely new edition of "A Guide To Career Opportunities," the Editors of *The Harvard Crimson* present the third of these publications. Another Guide has been published because readers have led us to believe that the magazine fills a definite gap in the public information available on various vocational areas.

Unlike catalogues of company advertisements or dry, statistical accounts of salary scales, the Guide strives to gather personal articles written by men who are acknowledged leaders in their fields. It is hoped that this approach will afford the reader a deeper understanding of the careers these men represent.

The format of the magazine remains essentially the same as its predecessors, except that the Editors have included a special section on careers in major technological fields. This is because of recent events both in this country and abroad which indicate a pressing need for educating a greater number of well-trained scientists.

Naturally it is impossible to include articles on every vocational area, and the Guide makes no pretence to completeness. Nor does it seek to make invidious comparisons between those careers included and those left out. Rather the Editors have selected the best of what was available to them.

To the men who took their time to write for the Guide, the Editors are greatly indebted, and they hope that the 40,000 college seniors who will receive copies of the magazine will in turn find the articles interesting and rewarding.

The Editors of *The Harvard Crimson*

BUSINESS CONFERENCE

The never-ending search for oil takes men to strange places—even to ocean floors.

Here Mobil scientists, the first company team of research geologists trained as skin divers, probe the bottom of the Gulf of Mexico.

From their findings have come clues which may lead to the location of new oil reserves to strengthen the Free World—to guarantee you a continuous and abundant flow of the thousands of products made from petroleum to enrich your life.

Geology is but one of many professions represented on the world-wide roster of Mobil personnel. We also employ nuclear physicists, mathematicians, chemists and engineers of every type, marketing analysts, marketers . . . people prepared to handle more than 100 different positions.

If you qualify, the Mobil companies offer you an opportunity to build a career through training that will utilize your talents to the fullest . . . constantly challenge your ingenuity . . . reward you with a lifetime of richly satisfying work.

For more information about your opportunity with the world's most experienced oil company, see your College Placement Officer.

ON THE UNIVERSITY LEVEL

by Milton Eisenhower

A striking fact about a career in higher education is the multitude of possibilities it offers. The variety of opportunities is legion. Most of the disciplinary specializations found in government and business are duplicated or have their counterparts in colleges and universities.

We have more than 1,800 institutions of higher learning in the United States. There are colleges, technical institutes, junior colleges, professional schools, universities, and other types of institutions. Some are publicly supported; some are church-related; some are private and independent. They represent the broadest range of purpose and scholarly achievement. And we need them all, for the urgent demands of society are as varied and complex as these institutions.

Increasing numbers of young people are reaching college age, and a higher percentage of them want a college or university education. It seems certain that present college and university enrollments, now totalling about 3,250,000, will double in the next fifteen years.

This is to be applauded, not deplored. It is still true that a free society requires, as Jefferson argued, a rising level of education and understanding among all the people. It is also true that the democratic concept of the human scene requires each individual to develop his unique talents to their fullest potential, quite apart from the utilitarian value of such achievement. And in sheer materialistic terms, we cannot sustain and further develop our complex, interdependent society without more and more men and women trained in the basic sciences, in the social studies and humanities, and in the technologies. Thus, for example, to maintain present industrial productivity and to meet the needs of the armed services, we should be graduating at the baccalaureate and higher levels twice as many engineers as we are now doing each year.

In a career spanning thirty-three years, Milton Eisenhower has become well known as an educator, agricultural specialist, and government expert as well as a prominent figure in international affairs. Dr. Eisenhower has served higher education—as President of the Kansas State College, of the Pennsylvania State University, and now of The Johns Hopkins University. He is a director of the Fund for Adult Education and until recently has been a member of the Committee on Utilization of College Teaching Resources of the Fund for Advancement of Education.

Meeting these demands will cost a lot of money. We shall have to spend billions of dollars for new plant, and more billions for annual operating costs. But finding the financial resources will not be the principal difficulty: The greatest problem now and in the future lies in obtaining the talented research scholars, teachers, administrators, and other specialized personnel to permit us to make the benefits of higher learning available to all the young people who want it and would profit from it.

Perhaps the only common denominator of research scholars, teachers, administrative officers, financial managers, public relations experts, investment counsellors, doctors and lawyers needed in our colleges and universities is this: The income realized is not enticing. Why this should be so in a nation that obviously places great faith in education and research I do not know. But it is a fact.

To be sure, there are other values; the level of income must not be the only consideration. One who makes a career in higher education and is truly committed to its great purposes and goals has a genuine sense of fulfillment from serving mankind constructively. He works in an atmosphere of intellectual freedom unmatched in any other line of endeavor. These are among the im-

MARTIN
BALTIMORE

IN THE SECONDARY SCHOOLS

by John Crocker

This article concerns teaching in the independent secondary school with special reference to boarding schools. The need for teachers in this area of the educational enterprise is urgent in the sense that there are never enough teachers of the highest quality. It has always been a fact that the teaching profession in America has failed to receive its due proportion of talent as compared to business and the other professions.

The reasons are fairly obvious and it is well to face frankly the disadvantages which secondary school teaching involves.

1) Like ministers, teachers receive lower salaries than men of comparable attainment in other professions. The situation is not ideal even in the schools with the most resources. To be sure, strenuous efforts are underway in the schools to increase salaries, but schoolmasters are not likely to have much more than decent security unless they have private means.

2) Teaching usually involves a confining life. Except for doctors there are few men with less leisure than teachers during term time, and this is particularly true of boarding school teachers. Moreover, the three months' summer vacation is a time when some married men with more than a few children find it necessary to supplement their income by teaching in summer schools or by being counsellors in camps. It is the minority who are lucky enough to be able to use the long vacation, partly for disciplined study in order to achieve a better command of their subject or in order to grow intellectually.

3) Teachers in boarding schools usually have less privacy for their family life than others. Part of their job often involves dormitory duty and having some meals in the school dining-room. In term there is no definite end to the day's duties. The teacher's wife and family may well find that his evenings are rarely free from interruption.

Following a life-time of academic pursuit and educational training, the Rev. John Crocker became Headmaster of Groton preparatory school in 1940. A native of Massachusetts, he himself studied at Groton and went on to Harvard, where he played football on the 1920 and 1921 teams. After graduating in 1922, he attended Balliol College, Oxford, for two years, and returned to this country to teach English at Andover. Mr. Crocker studied theology, and for ten years was Episcopal Chaplain at Princeton. He is married and has six children and ten grandchildren.

The sacrifices involved in teaching mean that a man properly avoids the profession unless he finds himself laid hold of by an inner compulsion that the disadvantages are minor compared with the satisfaction of engaging in a supremely important enterprise. This is why the proportion of secondary school teachers who are happy and whose families are happy is probably higher than those who engage in more lucrative occupations.

What are the requirements of a teacher in, let us say, a boys' boarding school?

1) Obviously a man needs to be on the way of becoming competent in an academic subject and in having genuine intellectual interest. No doubt there are successful teachers who because of their sympathy with the young and because of imaginative gifts get by without constant extension of their own learning. But the general rule remains that the man who communicates excitement in his classes is one who reflects in his teaching a background of continuing hard intellectual work.

To be sure, it is an execellent exercise for a teacher and not unfruitful for students when a man is asked to teach a subject other than that in which he is a specialist. Knowledge of the problems of a range of subjects strengthens a man in his own specialty. The indispensable matter is the continuous struggle for growth.

Incidentally it is worth mentioning that the opportunities for young teachers are frequently better in subjects other than English or History. Teachers with competence in Mathematics, the Classics, Modern Languages and the Sciences are a rarer commodity, and competition on the part of schools for teachers in the fields mentioned is correspondingly greater.

2) It is an indispensable asset for a teacher to have interests which will enable him to participate with boys in activities outside the classroom. Thus one man may have done some debating and can help with public speaking. Another may be musical and able to train a chorus, or accompany an orchestra, or organize a band. Another may collect butterflies or watch birds, or contemplate the stars or direct dramatics.

The point is that the classroom teaching, however important, is only

NOT A JOB, BUT A VOCATION

continued from preceding page

one aspect of a boarding school teacher's occupation.

Athletics is an area where young men are always needed. Indeed, a majority of the younger men in a boarding school have to be counted on to help with intramural sports, and every school requires a few men who are skillful and knowledgeable enough to coach the first teams. (Only the very largest schools have coaching specialists who do not teach academic subjects.) The proper handling of athletics is so important that men who have had experience and success as school or college athletes are in special demand, other things being equal.

3) An important aspect of the art of schoolmastering is to like young human beings enough to share their interests without becoming juvenile one's self, and for this a sense of humor is almost indispensable.

It is inevitable that older people draw apart from the young to some degree. This is unfortunate unless it is mitigated by genuine interest and sympathy, but even more unfortunate is the case of those who maintain their rapport with the youth but never grow up themselves.

It is exhilarating to find teachers who can be at home with the young and the less young alike. The schoolmaster has to be more than popular; he must have the respect of his younger friends and this means an unconscious drawing of them to a maturer level.

4) Teaching is not a job but a vocation. One's eye can never be on the five o'clock whistle. It includes no small degree of drudgery. There are innumerable details which have to be attended to meticulously. Concern about the apparently trivial is inescapable. Every detail, however, is significant because it has a connection with the well-being of a person. Moreover, it is often the doorway to a personal relationship. The teacher who makes the travel arrangements for a boy going to the dentist, or who works with the dance committee about arrangements, or who commends a haircut to the long-haired is, in and through just these details, establisning a relationship. And when the relationship becomes a friendship the meaning of teaching reaches a new dimension.

5) In the last resort what matters most is the kind of man a teacher becomes. The young are uncanny in discernment and over a period of time the teacher gets the kind of respect he deserves.

This means that any attempt to define a teachers assets is shortsighted. Sometimes the unlikely man turns out the best man because by sheer character he has overcome the obstacles between him and the schoolmastering art.

In one sense the ideal temperament of a schoolmaster is to be naturally calm, cheerful, and unruffled. And yet it may be the sensitive man who has learned to endure irritations who is best equipped to understand and help the temperamental, the unhappy, and the initially difficult boy.

6) Schoolmasters more than most men need a constructive philosophy. Without this it would seem hard for a man to be both realistic and optimistic, and children need to be surrounded with precisely this combination of qualities.

The fact has to be faced, however, that in our culture one cannot assume that fine people will all share the same philosophy, or that they have any philosophy beyond a general attachment to good will. What a school wants is quality and this turns up in uncovenanted ways. The only requirement that must be asked of all teachers is that they be in sufficient sympathy with the school's objectives as to share happily in its life.

In few jobs is there such a favorable context for both the indirect and direct witness than in the independent school. Here the relationship between teacher and pupil is so close that some kind of influence is inescapable. The teacher in an independent school is engaged in the greatest of all tasks. He is not merely teaching but doing what he wisely can to provide a foundation for constructive living. He is engaged in "the removing of the things that are shaken . . . that those things which cannot be shaken may remain."

2. science and technology

Chemistry: Nothing Is Permanent

by B. R. Stanerson

The old adage that there is nothing as permanent as change probably is universal. Judging from the number of patents issued in various fields, it seems to apply most to chemistry. At least there now are as many patent applications relating to chemistry as there are in all other fields put together. Furthermore, there is no indication of a letup in sight.

At the turn of this century there were about 5,000 chemists and practically no chemical industry. Today there are approximately 160,000 chemists and chemical engineers, and the chemical industry in 1957 hit the $25 billion mark in sales. In view of such progress, it is indeed difficult to discuss chemistry and chemical engineering without appearing to be overly enthusiastic. Please bear in mind also, that there are few objects we use which have not been developed through some chemical process which, of course, involves the chemical profession.

These people are located throughout the length and breadth of our country. Since the majority are employed by industry, they tend to be settled more in metropolitan areas than in urban communities. There are approximately twice as many chemists in the United States as there are chemical engineers.

Who do chemists and chemical engineers work for? About 2/3 of of all chemists and 4/5 of all chemical engineers are employed in industry. The government and teaching institutions each employ four per cent to five per cent of the engineers, and others employ still smaller proportions. About 15 per cent of chemists are in teaching and nearly 10 per cent in government.

B. R. Stanerson is a native of Iowa, educated at Iowa State College where he received his bachelors, masters, and doctorate degrees. He has taught chemistry and physics at Dowling College and his alma mater, and worked as a researcher for the Texas Company where his work was in the field of analytical chemistry and the production of butadiene and high polymers from petroleum products. In 1947 Stanerson accepted a position with the American Chemical Society and now is Assistant Secretary of Professional Affairs.

What are the education requirements? A four-year college education is a minimum requirement for employment as a chemist or chemical engineer. Such training is adequate for certain types of positions but for others an advanced degree is almost a necessity. About 42 per cent of all chemists and 12 per cent of chemical engineers have doctor's degrees. Another 20 per cent to 25 per cent of the members of the profession have master's degrees. The proportion who study for advanced degrees is gaining as the science of chemistry becomes more intricate.

The time required to earn a master's degree is usually one to two years beyond the baccalaureate. The doctorate ordinarily requires another two years and sometimes more.

It is significant to point out that students in graduate schools are able to finance their studies through teaching part time or working on special research projects.

What personal characteristics are desirable? Chemistry is a science. Characteristics associated with scientists include a desire for exactness, manipulative ability with apparatus, a high degree of intellectual honesty, curiosity, initiative, and a keen power of observation. In the chemical profession, it is important also to realize that most problems are not solved by the first effort and that patience and a capacity to work steadily on a job are required. Also, since modern research is organized by teams of scientists, it is important to be able to work with others in solving a problem.

continued on page 56

INCREASING DEMAND

ENGINEERING

by William F. Ryan

Many factors control the demand for professionally trained people. The opportunities for college graduates are increasing steadily in all lines of endeavor, but the most rapidly increasing demand during the last two decades has been for engineers. That demand will undoubtedly continue to increase at an accelerated rate for many years to come.

The demand for lawyers and doctors has a reasonably fixed relation to the number of people in a community. The demand for teachers has increased at a more rapid rate than the population because we not only have more young people to educate, but our young folks are staying in school longer. Twice as many students staying in school twice as long require four times as many teachers. The demand for engineers is affected by even more complex factors. We not only have more people from year to year, but all of these people are demanding more goods and services of greater and greater complexity.

To a certain extent every engineer creates a demand for more engineers. Winston Churchill, one of the world's keenest observers and finest reporters, has attributed the high productivity of American industry and our consequent high standard of living to the large number of engineering schools of university grade which we have developed in this country. The engineer then, by increasing productivity and developing new products, puts more money into the hands of each family; they demand more of and a richer variety of goods and services, and the technical complexity of supplying their demands is continually rising.

When we advanced from the horsedrawn vehicle and plow to the Model T and the tractor, we created a demand for engineers. But now our vehicles must have terrific power, automatic drive, power steering and even air conditioning; we need more engineers to design the more complicated cars, to design the machines to make them and to design the expressways for them to travel on. We need more engineers to produce more and better fuel and more and better tires to stand the higher speeds. Finally we need engineers to design and operate automatic factories so that fewer men can make more and better cars at less cost, and have more time to drive them. Thus engineers breed a demand for more engineers and it is difficult to conceive of a lessening of this demand during our life time.

Dr. William F. Ryan is currently president of the American Society of Mechanical Engineers and is the vice-president and Senior consulting engineer of Stone and Webster Engineering Corporation. Ryan was educated at Harvard University and joined Stone and Webster in 1929 as a mechanical engineer. He is active in many professional associations and the author of numerous technical papers in the field of heat, power, and professional ethics.

Many young men, after going through four years or more of engineering education, decide to enter banking, merchandising or some field of endeavor. An engineering education provides a good foundation for such pursuits, but at this particular moment in history the young man or woman with the essential talents, aptitudes, and training for the practice of engineering has extraordinary opportunities. His or her services are sought in every branch of industry, the starting compensation is better than in most other fields, and the opportunity for creative work and for outstanding contributions to the national economy, the defense of freedom, and the welfare of mankind are literally unlimited.

Engineers' Council for Professional Development accredits curricula in 25 different fields of engineering, and our state boards of engineering examiners recognize many others, but the branch of engineering in which a graduate starts his career is of little importance either with regard to compensation or opportunity. Many men who have taken degrees in mechanical engineering are now outstanding in the chemical engineering field, and graduates in civil or electrical engineering may design paper mills or nuclear power plants. The latter is a branch of engineering for which no one was specifically educated until the last few years. While it may seem to the layman that the designer of a highway bridge and the designer of a jet engine have nothing in common, the work of both is based on the same mathematical concepts and on the same laws of statics and dynamics. The particular branch of engineering for which one is educated means less and less as the years go by, and some of our very best engineering schools are offering curricula in "engineering", refusing to differentiate, for the basic preparation, between the several branches of engineering. Specialization, they claim, should be effected either in graduate schools or by actual practice in industry.

continued on next page

continued from preceding page

No college senior should have any doubt whether he has the mental attributes and natural aptitudes for a successful career in engineering. The man who "Can't do mathematics" or finds physics a bore should avoid any thought of being an engineer. Also, even if he is a shark at mathematics, but he has no interest in what's under the hood of a new car "just so the thing goes", and if he is more interested in abstractions than in concrete effects, he probably should turn his attention to pure science and forget engineering. The engineer's aim in life is to produce hardware—things that one can use, but there are many men earning straight "As" in mathematics and science who have no interest in such matters. They are not the stuff of which successful engineers are made.

While the graduate who holds an engineering degree is in greater demand, engineering careers are wide open to any bachelor of arts who has demonstrated his aptitude by earning creditable grades in mathematics and the natural sciences. Graduate work in an enginering school is an obvious intermediate step, but graduates in arts who have been successful in college courses in mathematics and physics can also become engineers through training in industry, particularly if supplemented by extension courses in technical institutions. The latter procedure takes longer, but many engineers who hold no engineering degree have risen to eminence in their profession. Moreover, a broader education in the humanities and social sciences is a major asset in the higher echelons of engineering work.

The high starting salaries offered to engineering graduates has been widely publicized. On the other hand it has been claimed that other professions yield higher rewards in later years. The salary statistics, however, are complicated by the fact that so many engineers move into management and they are classified as executives rather than engineers. Surveys have shown that an engineering education is the high road to management and high executive positions in American Industry. The Bell Telephone System, for example, has published statistics regarding the executive officers of their numer-

The Study of the Earth

by Robert C. Stephenson

The largest laboratory of all is the earth; it is the laboratory of the geological scientist. Not a research center of four walls, the earth to the geologist is an intimate, living thing—a thing of mood and character which, like an old friend, can be gauged and interpreted. It is little wonder that a career in the geological sciences offers many stimulating challenges.

Geology is the study of the earth, the history of the earth since its beginning, and the study of the many processes which have worked to alter the earth. It is the science of minerals, of rocks, and of the history of life as recorded by fossil remains throughout geologic ages.

Robert C. Stephenson has been Executive Director of the American Geological Institute since 1955. He is a graduate of Miami University of Ohio and received his Ph.D. in geology from the Johns Hopkins University in 1943. As an economic geologist, Dr. Stephenson has had varied experience in exploration for petroleum and mineral resources. For a number of years he served as the Assistant State Geologist of the Pennsylvania Topographic & Geological Survey.

In its broadest interpretation, geophysics is concerned with the physics of the atmosphere, hydrosphere and lithosphere, but an area of geophysics may be considered a geological science. Geologists and geophysicists work hand in hand in scientific studies of the physical properties of the earth and of ground water. A large proportion of all geophysicists are concerned principally with exploration for petroleum and mineral resources.

In large measure, our present high standard of living has resulted from the exploitation of our rich endowment of mineral raw materials such as iron ore, copper, coal and oil. Today we hear we are in the jet age, the age of automation, the atomic era, the electronic age, or some other magic era. If we probe the diversified technological advances of our modern age, we find that they are rooted in newly-developed raw materials or in the more diversified use of classic raw materials. Yes, if we were to pull the "mineral raw material rug" out from under our modern research and development structure, the whole thing would tumble like a house of cards. It is essential that we maintain adequate supplies of basic mineral resources. This is one of the great challenges confronting the geologist.

The geological sciences are a young and vital part of the vast field of science. As supply problems of minerals and fuels have become more acute, the profession has grown steadily; geological scientists doubled in number between 1940 and 1950 and their number has continued to increase at the rate of somewhat over one thousand per year. In 1957, it is estimated

Mathematics: Many Paths Are Open

by Harry M. Gehman

Opportunities for a satisfying and rewarding career in mathematics were never better than they are today. For a recent or prospective college graduate with the necessary ability and training many paths are open. Everything indicates that the present demand for mathematicians will continue and probably increase for many years. More teachers of mathematics are needed, as are persons to work as applied mathematicians in industry or government. More statisticians and actuaries are needed; both of these fields require a basic preparation in mathematics.

A native of Pennsylvania, Harry M. Gehman received all his formal academic training at the University of Pennsylvania, where he also taught mathematics for five years. After teaching at the University of Texas and Yale, Gehman joined the faculty of the University of Buffalo. Since 1929 he has been professor of Mathematics and head of that department at Buffalo. During World War II Gehman served with the U.S. Army in England, and since 1948 he has been Secretary-Treasurer of the Mathematical Association of America, an organization of 7,000 members interested in mathematics at the college level.

For many years the chief opportunity for a career in mathematics was as a teacher of the subject. While this is no longer true, many students are still planning on careers as teachers of mathematics, either in secondary schools or in colleges or universities. To many persons teaching is an attractive career, with the opportunity it affords for working with young people and with the security by tenure and pension provisions associated with most teaching positions. Teaching salaries have been low in the past but are now improving. Many of the larger eastern cities have salary scales ranging from $4000 to $7000 for teachers with B.A. degrees. Higher salaries are paid teachers with masters or doctors degrees. College and university salaries are somewhat higher, but more graduate training is expected. Annual salaries of $15,000 or higher are not uncommon in the larger universities.

The necessity for instructing prospective students of the physical sciences, engineering, and even the social sciences, in the basic concepts of mathematics, creates an ever present and growing need for persons who will devote their lives to the teaching of elementary mathematics in secondary schools and in undergraduate colleges. The prospect of a career devoted chiefly to research in mathematics and to teaching of graduate students attracts to the universities those with ability in research. In this connection it should be pointed out that research in pure mathematics continues at an ever-accelerating pace. As is the case in most fields of learning the solution of one problem usually produces a myriad of other problems clamoring for solution. In spite of the recent establishment of several new periodicals devoted solely to the publication of mathematical research, research in mathematics is still hampered by lack of publication facilities and the consequent great delay in publication of the results of current research.

The mathematician in industry is usually closely associated with engineers and physicists, chemists, or geologists. He needs to know at least the fundamentals of these fields and often his work is hardly distinguishable from that of an engineer or a theoretical physicist. But the time of other industrial mathematicians is devoted to the development of mathematical models intended to explain the structure of physical processes or operations. Work of this type requires as much imagination and originality as does research in pure mathematics.

One aspect of applied mathematics has become of sufficient importance during the past fifteen years to be given the name "Operations Research" or "Operations Analysis." Beginning as a purely military activity, the methods of operations research are now applied to many problems in business and industry in an attempt to give a scientific basis for decisions affecting operations and management. Problems of production programming, distribution, sales promotion and advertising have been studied effectively by the application of mathematical and statistical processes.

The growing use of high speed computing machines in business and industry affords additional career opportunities for mathematicians. The effective use of a computing machine in a particular company usually poses a series of problems requiring the mathematical analysis of the factors involved in order that wise decisions may be made. The field

Physics: New Lands To Conquer

by Elmer Hutchisson

Physics is exciting business! The days of new lands to conquer are gone forever, but instead science offers its own endless frontiers to kindle the spirit of adventure and to fire the imagination of today's youth. Physics as a profession offers able young men (and women) an unparalleled opportunity for fascinating work, service to one's fellowmen, and early individual recognition. It is a young man's world; one in which many of the most important discoveries are made by men under thirty-five.

Physics as a subject is the search for new knowledge and for a more complete understanding of the universe about us. With this new knowledge comes great intellectual satisfaction and a new capability of solving the increasingly complex problems that arise in this age of technology. To many, the attraction of physics is the normal human desire of man to know more about himself and his surroundings and to put this knowledge into an orderly structure resembling in beauty a great cathedral or a great symphony. To others, the attraction of physics is also a normal human desire, but one of solving problems and performing important tasks that may add to human comfort and assist in raising standards of health and of wealth.

The broad field of physics may be divided in many ways. Some physicists are primarily experimentalists and add to our knowledge of our physical surroundings by performing experiments under very carefully controlled conditions. Others are theorists and concentrate on the analyzing, classifying, and organizing of experimental knowledge into physical laws of wide applicability. It is through such critical analysis and the elimination of the superfluous that science advances. Contrary to popular belief, few scientists work in an "ivory tower". Progress comes from the complete and very extensive interchange of new knowledge throughout the world. This is accomplished through scientific journals and through meetings of professional societies. Meetings of the American Physical Society and of other societies of physicists are full of friendly debate and good fellowship. They serve to stimulate the young scientist and have much to do with the tremendous pace with which science is advancing.

As an alternative to the division of physics into experimental and theoretical physics, we can break it down into specialized scientific areas. Typical areas of specialization are applied mechanics, attainment of very high or very low temperatures, design of optical systems, noise reduction through acoustic design, or the broad area of electronics. Many physicists consider themselves nuclear physicists and are engaged in trying to understand better the fundamental structure of the universe, or perhaps are trying to design a more efficient nuclear power reactor. Other physicists are primarily concerned with an understanding of the solid-state and the forces that hold atoms together. Usually it is desirable for a young physicist to choose a relatively narrow field in which to make his first contribution, but he should expect to broaden his interests as he gathers experience.

To succeed in physics, one needs a keen imagination and a patient, logical mind. Much of the language of physics is symbolic and an early acquaintance with mathematics is essential. Since the body of accumulated knowledge in physics is large, long study is normally required to become thoroughly familiar with it. Formal study may end with the bachelor's degree, but as with the professions of law and medicine, the true professional usually goes on for the Ph.D. This is, however, far from necessary as opportunities abound at all levels and no one should hesitate because the road seems long or the cost prohibitive.

The principal employers of physicists are colleges and universities, industry, and government. A university or college position can offer a very satisfying career and generally combines teaching with the opportunity of doing independent research. In fact, a large part of the most fundamental research is carried on under university auspices. The contact which provides with keen young minds is highly stimulating and constantly challenging. Good teaching is an art which requires a high mastery of subject and a true interest in learning. The salaries are not tremendous but have increased greatly over the past few years and range today from about $4,500 to $15,000.

Industry provides many oppor-

continued on next page

Now serving as Director of the American Institute of Physics, Elmer Hutchisson has served as head of the Physics Department of the University of Pittsburgh and has been Dean of the Faculty, Acting President, and Dean of the Graduate School of the Case Institute of Technology. He was born in Cleveland and educated at Case, M.I.T. and the University of Minnesota. Hutchisson has served as an editor and advisor to numerous scientific publications and is himself a well-known author in the field of physics and education. He has often been associated with projects of the Federal government.

Here at ADL versatility is a vital factor in professional accomplishment. In this, one of the world's oldest and largest industrial research organizations, it is commonplace for staff members — chemists, physicists, biologists, engineers, mathematicians, technical economists — to reach outside their usual fields in solving problems for business, industry and government.

The diversity of ADL's work — from solar furnaces to investment advice; from new products to inventory controls; from regional development counsel to computer design — reflects the versatility of the ADL staff.

Whatever your scientific field or your outside interests (are you a mathematician with a flair for botany? . . . a physical chemist with a background in the humanities? . . . an electrical engineer with a bent for economics?) perhaps you have a valuable combination of talents that could bring new ideas to ADL in work that would be more satisfying to you.

PHYSICS

continued from preceding page

tunities for physicists, including laboratory research, design and development work, and operating control problems. Much of the research in industry is basic in nature but, of course, is usually related closely to the interest of the company.

Industry today provides exceedingly pleasant surroundings and permits considerable freedom to the individual. Salaries up to $20,000 per year are quite possible and may go much higher if one has considerable administrative responsibility.

Within the past few years, the Federal government has become the largest single employer of physicists. The opportunities that exist in the government are in the various governmental laboratories and in agencies. The work ranges over the entire gamut from fundamental research to design and development, and from research administration to specialized contract supervision. The conditions of employment are excellent and salaries may reach $15,000 per year.

At present, there are close to 25,000 active physicists in the United States. Although the number of students going into physics has increased greatly in the past few years, the demand has increased still faster and an acute shortage exists. There are, therefore, both good initial opportunities and excellent prospects for advancement.

The final question to be considered is "How do I get started?" I would suggest, first of all, that the decision to go into physics should be made as an undergraduate, although there are many examples of outstanding physicists who did not undertake specialization in physics until the beginning of their graduate work. As mentioned earlier, a good foundation in mathematics is essential and a student should take as much laboratory work as possible. Even if the possibility of graduate study seems remote, I would suggest that this be included in the student's planning. In view of the large number of fellowships and assistantships available, the out of pocket expense is likely to be small. If there is the interest and the will, the road should not be too difficult.

3. the law

CONCERN FOR SOCIETY

by Felix Frankfurter

The best reason for going into the law is the same that led Fritz Kreisler to be a fiddler and Gotzun Borglum to be a sculptor—some inner compulsion that selects one's career. Fortunate indeed are those for whom a coercive aptitude or a controlling interest leaves no problem for choice of a calling. So far as the law is concerned, I suspect this inevitability saves less than the majority who are finally won to the law from the painful necessity of choice. Indeed, the probability is that a much large percentage of men turn to the law than is true of other professions in default of not clearly being enticed by some other activity. Men have attained pre-eminent distinction in the law who took it up with dubiety and even with grave misgivings. Thus it was years before Mr. Justice Holmes came to rest in the conviction that "a man may live greatly in the law as well as elsewhere." I assume that in asking us to speak about our respective professions to those who have to make conscious choices, we are addressing men who are concerned with a life and not with a living. Only very rarely, I suppose, does a man decide between law and one of the arts, for, to quote Mr. Justice Holmes once more, "the law is not the place for the artist or the poet." Even so, I have known at least two instances of men buffetted between their love for music and the seductions of the law. And Edgar Lee Masters and Archibald MacLeish attained their fame as poets after they demonstrated high competence at law. But these are rare exceptions. Those who are not fortunate enough to go into the law as a matter of course, in response to an inner call, are likely to be men who have no fierce drive in any other direction, whose abilities are of a diffused or as yet undefined nature. In resolving their doubts and uncertainties, they will appropriately ask what kind of reasonable hopes for fulfillment of one's endeavors and dreams does the profession of the law hold.

Arriving in the U.S. as an Austrian immigrant at the age of 12 and unable to speak English, Felix Frankfurter has become one of the most influential and controversial figures to serve on the Supreme Court. He graduated from the City College of New York in 1902 and gained his law degree at Harvard. Before becoming a professor in the Harvard Law School in 1914, Frankfurter served as an U.S. attorney and as a law officer in the War Department. President Roosevelt appointed him in 1939 to an associate Justice of the Supreme Court. He has written numerous books about the law and lawyers.

Since everything is connected with everything else in the universe, if one only pursues the interconnections, nothing is sillier than to make competing claims of intellectual interest for one profession as against another. But one is surely not guilty of guild parochialism in asserting that the law affords the amplest opportunities for the greediest intellectual appetite. The law has fairly been called a great anthropological document. It reflects and to no small degree embodies perhaps the significant achievements of civilization, putting to one side, of course, the finest flowers of civilization—the great works of poets and artists. The facts that these profounder aspects of law lie beneath the surface of the daily concerns of the men of law make the intellectual adventure to which the law beckons all the more exciting.

These intellectual interests do not center about abstractions. The law's concern is society, men and women. And so, whether in the daily life of practitioners or in the context of the history of institutions and ideas without which law is a grab-bag of unrelated rules and episodes, law throbs with human interest: it touches the fate of man in all his vicissitudes of joy and sorrow, of mean pursuit and high adventure. The pageantry of Anglo-American legal history for nine hundred years is visible to the understanding eye of

What's it like to be with IBM?

The increasing interest of business and industry in electronic computers enables IBM to offer today's college graduates and graduate students many challenging opportunities and rewarding careers. Whether your interest lies in the development or in the sale of IBM products—electronic business machines of wide variety and application—you will find at IBM an atmosphere in which you can develop your abilities to the fullest extent, where achievement is quickly recognized. Among the careers available are . . .

RESEARCH
(Advanced degree in physics, engineering, mathematics or physical chemistry) Dealing with experiments and study in the fundamentals of many physical phenomena, chiefly materials in the solid state and electron emission.

DEVELOPMENT ENGINEERING
(B.S. or advanced degree in E.E., M.E., physics or mathematics) Development and design of new products—electronics, storage devices, pulse shaping and switching, mechanics, dynamics, stress analysis and creation of high-speed mechanisms.

APPLIED SCIENCE
(Advanced degree in engineering, mathematics or physical science) Consultation with IBM customers for the purpose of analyzing business or scientific problems for solution through IBM Electronic Data Processing Machines.

MANUFACTURING ENGINEERING
(B.S. or M.S. degree in electrical, mechanical, or industrial engineering) Analysis, design and procurement of equipment and facilities; plant layout and methods. Much of IBM's work is creative, demanding unique manufacturing equipment.

SALES AND SALES ASSISTANCE
(B.A., B.S., or M.S. degree or major in liberal arts, business administration, engineering, science, mathematics or accounting) Applying IBM electronic business machines to problems in industry, government, science and education.

BUSINESS ADMINISTRATION
(Business administration, accounting or B.A. degree) Financial and accounting operations: corporate, general and factory accounting; internal audit; methods; payroll and taxes—at corporate headquarters, branch offices and plants.

HOW TO APPLY: Consult your College Placement Director and request a copy of our brochure. He can give you the data of our next visit to your campus or refer you to the nearest IBM office for a personal interview. Or write for further information to:

Railroads: Essential and Efficient

by W. A. Johnston

Every now and then I am asked: "Would you recommend having your son follow in your footsteps as a railroad man?" My answer is an emphatic: "Yes, sir!" There is an excellent future for young people in railroading today. I can back up that statement, for my only son has followed me into railroading.

Some people have come to have the idea that the great days of railroading are behind us and the industry is going downhill. Actually, there is no reason for anyone to be pessimistic about the railroads. On the contrary, there are excellent reasons for being optimistic about their future. First of all, railroads are the most essential form of transport in the United States. They are the most essential because they are the most efficient. The simple fact is, railroading is a thoroughly modern industry.

At present railroads are performing approximately half of all the intercity movement of freight. In 1956 railroads carried 38 million carloads of revenue freight. A recent study made by Transportation Facts, Inc., predicts that railroads by 1965 will be called upon to haul 41 per cent more tonnage than is currently being carried.

The efficiency of railroads is unquestioned. Nothing has ever been devised by the mind of man that is more efficient than the flanged wheel on the steel rail. The source of this efficiency is the remarkable low friction of the wheel-on-track principle. For example, a 40-ton boxcar, given a 60-mile an hour shove on a level track, will roll five miles or more before coming to a stop. By contrast, a truck of the same capacity, going at the same speed on a concrete highway, will roll in neutral gear only a mile before stopping. This principle, when combined with the practice of moving many cars in a single train, give railroads the "inherent advantage" that economists talk about. Certainly the giant industries of our economy could not exist without the connecting link of rail lines.

Following his graduation from the University of Illinois, Mr. Johnston went to work for the Illinois Central Railroad as an accountant and later served in the traffic and operating departments. He became president in 1945 at the age of 47 and was then the youngest president of any major railroad in the United States. Active in many civic affairs, Mr. Johnston is a Trustee of DePauw University and of the University of Illinois.

Essential as they are in peace, railroads are even more valuable in war. Perhaps the most cogent statement of this fact has been made by General James A. Van Fleet, who from 1951 to 1953 commanded our fighting forces in Korea. In describing the durability of railroads in warfare, he wrote:

"We dive-bombed and skip-bombed, we shelled with heavy naval guns, we cannonaded with ground artillery, we strafed with rockets and machine guns, we organized sabotage and guerilla attacks. But we never stopped the Red railroads from delivering ammunition and supplies."

Remember in World War II when the Nazis tried to break up the Allied buildup for invasion of the Continent? The Nazis threw a tremendous air punch at Coventry, during which they made 122 direct hits on rail bridges, sidings, junctions and yards. Yet two days later, the British railroads were in full operation through Coventry. Even more significantly, within 48 hours after the atom bomb smashed Hiroshima, trains began rolling into the heart of the city.

In addition to being essential and efficient, railroads are thoroughly modern. More than a billion dollars a year are poured into railroad improvements. This money comes in part from people who expect to earn a good return on their investment, in part from profits made by the railroads. In the last decade tens of thousands of new locomotives were purchased, hundreds of thousands

continued on page 52

Everett Goulard, a graduate of Cornell University, received his law degree from Harvard in 1937 and has been in industrial relations work since that time. He joined the Industrial Relations Department of Pan American World Airways in 1948 and was elected an assistant Vice President in 1954. In September, 1955 he became Vice President. Mr. Goulard served in the Army during World War II and was discharged with the rank of Lieutenant Colonel in 1946.

THE AGE OF AIR TRAVEL

by Everett Goulard

The age of air travel, which in a very few years has revolutionized commerce and human relations in a previously surface-bound world, is still an infant as major industries go.

The first domestic air lines began limited mail carrying operations in the mid-1920's, and my own company flew little tri-motored Fokker F7's between Key West and Cuba in 1927 to inaugurate the vast network of overseas routes which encircle the world today.

From those small and relatively recent beginnings, commercial air transportation has grown to one of our most important industries. And best of all, its potential for future growth is still almost unlimited.

Although the scheduled domestic and overseas airlines of America are already carrying some 900,000 passengers a week, and travel by air has become the common mode of transportation throughout much of the world, I am confident that the real age of air travel is just beginning.

Ahead lies the great period of jet transports to be followed by supersonic, rocket or atomic powered planes. These all mean steady improvement in speed and comfort of travel, as well as faster and more efficient cargo delivery.

These technological advances, aug-

continued from preceding page

mented by a steady increase in population, will give the entire industry tremendous impetus, and should create a substantial number of new jobs for trained people in many areas of skill. A current airlines study issued by a leading investment house states flatly that "the potential market for air travel is enormous."

The study cites a Civil Aeronautics Administration prediction that the number of domestic airline passengers in 1956 would be more than double the 1954 number, then—significantly—points out that the Administration later revised its estimate upward.

The same study also foresees a big potential in international air passenger business, and a rapid growth in air freight. This of course will mean additional new job opportunities.

The Scheduled Certificated Airlines of America fall into six general classifications, and, although all are engaged in licensed commercial air transportation, there are certain differences in their operations which might affect one's choice in seeking a job. These lines all operate under permits specifying certain types of equipment and routes in accordance with provisions of the Civil Aeronautics Act. They are:

1) The Domestic Trunk Airlines, which have permanent operating routes within the United States. There are 12 of these, and their primary objective is to tie together the major cities or hubs within a given section of the United States, and in turn, to link that section to other sections of the country.
2) The International and Overseas Airlines, which include eight of the lines also serving as domestic trunk lines. A total of 18 U. S. Flag carriers now fly more than 112,000 miles of air routes between the United States and other countries.
3) The Local Airlines, which link small and intermediate communities in a given section of the country to one another and to major cities or hubs within the same section.
4) The Territorial Airlines, which serve our outlying possessions in Hawaii and Alaska.
5) The Helicopter Airlines, which operate under temporary certificates between airports, central post offices and suburbs of large metropolitan centers. These lines are a recent development, but in some areas already have substantial operations. They could become very important in the future.
6) The All-Cargo Airlines, which also operate under temporary certificates authorizing scheduled cargo flights. Two such airlines conduct overseas operations.

Airline jobs today fall into many categories, and with continued progress in various scientific fields, they will undoubtedly be even more varied. A recent study by the Air Transport Association of America (ATA) disclosed that the domestic and international scheduled lines in the United States were employing some 11,000 pilots and co-pilots, more than 7,500 stewards and stewardesses, some 29,000 mechanics and 3,400 flight dispatch people, including meteorologists. About 19,000 were in various jobs in hangars and on the ramps, and another 50,000 or so were at work as sales personnel, in airline offices, and at various miscellaneous jobs.

This wide diversity of openings means that many types of skills and training are in demand. Obviously the best jobs with the brightest futures will go to the men and women who are best trained for them.

A high school education is required for all but a very few airline jobs, and college or special technical training is necessary for many of them. In addition, a well rounded knowledge in many fields is essential for real success. An understanding of human psychology, salesmanship, political science, economics, mathematics and the physical sciences will prove of great value to the young man or woman who chooses commercial aviation for a career.

The best paying jobs on the airlines are those of pilots. And, as might be expected, they are probably the most difficult to obtain. Besides requiring very exacting physical and mental standards, pilots and co-pilots must hold CAA certificates. They must also have a good general knowledge of meteorology, navigation and good mechanical aptitudes, and most airlines require at least two years of college, with a college degree preferable.

The majority of pilots hired by the airlines today come from the military services, where it is possible to get flight training demanded at no cost, although it may also be obtained from privately owned and operated flying schools. An approved list of such schools may be had by writing to the Civil Aeronautics Administration, Office of Information, Washington 25, D. C.)

In return for these strict requirements, pilots receive excellent pay and have fine working conditions. For example, the average anuual salary of all pilots and co-pilots on domestic routes in 1955 was $11,375, while those on international routes averaged in excess of $12,500. These figures are somewhat higher today. Many veteran captains earn as high as $20,000 to $25,000 annually, depending on the number of hours and type of equipment flown.

A CAA certificate and at least a high school education are also required for flight engineers, another good paying position. Some lines insist on at least four years of diversified aircraft and engine mechanic experience, and one requires that applicants must have 600 hours solo flying time. Flight engineers usually start at salaries of about $400 to $500 per month, and periodic increases bring this up to $1,000 a month or so, depending on routes and equipment flown.

Earnings in other airline positions, except, of course, those carrying executive responsibilities, generally are not as large. However, they usually compare favorably with similar jobs in other industries. Many require good educational backgrounds or specialized training. Meteorologists, for example, must have four years of college training in their specialty, usually augmented by at least one year of military or Weather Bureau experience.

Flight attendents (stewards and stewardesses) are usually required to have at least two years of college or the equivalent in training and experience, and on international lines they must speak at least one appropriate language besides English.

5. insurance

Wealth of Variety

by Byron K. Elliott

The normal complexities of the human animal demand three things of a job—that it be exciting, that it be rewarding in money and in status and that it be socially productive and important. Any career which omits one of these factors is a compromise—a poor compromise and one which you need not make. You need not compromise because a career in life insurance offers, in just about any proportion that you want them, all of these satisfactions.

Byron K. Elliott is president of the John Hancock Mutual Life Insurance Company, the largest financial institution in New England and the 11th largest corporation in the country. He is a native of Indiana, where he was elected judge of the Superior Court in 1926, after graduating from Indiana University in 1920 and from Harvard Law School in 1923. He is a director of a number of other companies and a trustee of Wellesley College, treasurer of Northeastern University, and a member of the Advisory Board of the Harvard-Radcliffe Program in Business Administration.

Now I don't mean to suggest that many jobs in life insurance combine the excitement of big game hunting, the prestige and financial rewards of theatrical stardom, and the spiritual satisfactions of the ministry. But neither are life insurance companies staffed, in equal measure, by Dickensian clerks who spend their days toting up figures or by agents whose expertise lies in selling you something you don't need all wrapped up in a great deal of legal terminology. I wish I could tell you that the life insurance business is glamorous, but glamour, alas, is too often thought to exist in the other man's job. It rarely survives for long in the intimacy of day to day contact. It is important, then, to make sure that when the first blush of excitement fades, there is something substantial underneath. The Amish are said to give their sons a bit of advice which I pass along to you—advice as pertinent to courting a career as to courting a wife, "Kissin' wears out, but cookin' don't."

I have made three major claims for life insurance jobs. The first is that ours is an exciting business. It is exciting because it is so closely tied to the economy and sociology of America. Our main concern is the adaptation and development of our product to meet the needs and wants and hopes of people. At the turn of the century, life insurance might have been more aptly called burial insurance. Its primary purpose was the financing of a last illness and a decent burial and, at best, it left the widow and the children a little to tide them over. Now life insurance is involved in the financial planning of every major event in a man's life. He can count on it to see that the mortgage is paid, the children are educated, the time payments are completed, the business is properly looked after, the family is adequately supported, his own retirement is financially possible. Life insurance is involved in labor negotiations, in estate plans, in tax programs. All of this development took a great deal of imagination, ingenuity and perception. It was very exciting to be constantly aware of changes in our nation and to see how we could grow with them. This growth involved innumerable questions to be asked and answered, problems to be perceived and solved. And the growth has barely begun. There is another aspect of our relationship with the American economy which I ought to mention. As custodians of large amounts of money, life insurance companies are major sources of capital for industrial expansion, housing, and agricultural development. We have ringside seats for the panorama of an immense and developing economy, and in many scenes in that panorama, we have a leading role as well.

We know that a career in life insurance potentially offers substantial rewards in money and in prestige. I might add that it can also offer a high degree of job security. If you reflect a little on the nature of our business, you will see that these things follow logically from it. The most important asset we have is our people. To varying degrees, this is true of all businesses. But life insurance companies do not manufacture a product—they sell and service security. The creation, marketing and servicing of that security are essentially human operations and they can only be done by loyal, competent people. The competence and resulting responsibility carry with them

6. accounting

"The Fastest Growing Profession"

by John L. Carey

During every one of the twenty-six years I have been executive director of the American Institute of Certified Public Accountants, I have written at least one article or given at least one speech about accounting as a career. Today, taking stock of what I have put down and said, I can see that I have consistently understated my case.

Most young men who listened to me and became certified public accountants probably observed within a few years that they had joined a profession with an importance in the economy that surpassed my description. Certainly they found more complex and challenging work and higher rewards than I had indicated.

I make this admission to emphasize that while I can point out what the public accounting profession is today, I must try to project what it will be ten, twenty, and thirty years from now in order to show those who choose it as a career how they will spend their working lives. Since public accounting is the fastest growing profession in America, and since its development is closely linked, with the evolution of our whole economy, such projection is difficult, to say the least.

Right now, the most urgent problem of accountancy is lack of trained manpower. And it looks as though this problem will become even more serious in the immediate future.

Consider the nature of the swelling demand for certified public accountants' services. "CPA's" now count among their clients only about one-third of American business—in general the best managed third.

Upon his graduation from Yale in 1925, John L. Carey joined the staff of the American Institute of Certified Public Accountants. Five years later he became the Institute's chief executive officer, a position he still holds. During the period of his administration, the membership of the Institute has grown from 2,000 to 30,000, and its staff now numbers 120. Mr. Carey has written two books on the professional ethics of certified public accountants, and dozens of articles on various professional subjects.

However, recognition that they are needed by the other two-thirds is spreading. For example, fiduciary-type institutions (like insurance companies, pension and welfare funds, and credit unions) have not availed themselves extensively of the CPA's services in the past, partly because they have been subject to governmental examination. But there is now a visible trend toward independent audit of any enterprise that handles other people's money. Looking into the future, I believe that increasing emphasis on management planning and control will put another premium on CPA's. Better management decisions will naturally require better accounting data and more professionals with trained judgment who can present and interpret it.

During the past ten years an expanding economy, with more "scientific" business operations, has doubled the number of American CPA's. In the next ten years—if the requirements of the business and financial communities are to be met—the number should double again.

Furthermore, modern accountancy is constantly expanding in depth as well as in scope and volume, and it seems to me that this fact greatly enhances the quality of opportunity in the profession. Today CPA's work mainly at designing accounting and cost systems; giving tax advice, preparing tax returns and representing taxpayers; preparing bud-

continued on page 51

Mass millions have moved up into new, higher income groups. They now have the *means* to live better—in time they *will* live better

Economists substantially agree—

The American standard of living *will rise* by 50% *in the next ten years*

A career that can help in this tremendous surge forward

To reach this new high level, *production* and *consumption* must rise *together*.

Today, mass millions are moving up the income scale. However, they do not *at once* raise their standards of living, do not *automatically* consume more.

To cut down the *time lag* which normally exists in adapting to a higher standard of living, the work of interesting this vast, growing segment of the population in the new products and services which now are available to them must continuously be enlarged and improved.

Advertising, through the economies of high-speed presses and broadcasting systems, will have an increasing role in cutting down this time lag *and so making an expanding American economy possible.*

This is the challenge to advertising. It will require creative people of sound judgment in such fields as copy, art, merchandising, radio, television, films, research, international trade.

If you are interested in a career in any of these fields, we shall be glad to discuss with you the opportunities in them.

Write Mr. Robert Hawes, J. Walter Thompson Company, 420 Lexington Avenue, New York 17, New York, or call Murray Hill 6-7000.

7. industry

STEEL: BASIC TO INDUSTRY

by Roger M. Blough

Men in the steel industry are usually ready and willing to talk about their chosen field as long as anyone will listen. If I set out to describe all the carer opportunities in steel, I might never get through—there are just too many.

A list of only the major activities in the steel industry would have to include exploration; mining; transportation; production of steel, coke, and chemicals; construction; and marketing. These activities are backed up by fundamental and applied research, metallurgy, several kinds of engineering, commercial research, market and product development, accounting, industrial relations, law, public relations, and a number of other functions.

Rather than try to describe all the careers in steel, I would like to discuss what a man wants from his career, and what he will find in the steel industry. Most men want several things, including pay, security, respect, and a chance to use their education. These are the basic requirements, and you will not find them lacking in the steel industry.

But these things alone, to my mind do not make a career worth the work of a lifetime. When a man devotes his time and energy and ability to a career, he wants to know that he has a chance to accomplish something. He wants to know that there is an important job to be done; that the job is not just a matter of following routine procedures, but requires thought and work; and that if he succeeds, things will be better than they were before.

The men who want these things are the men who will find the greatest opportunity in steel. The industry will seek out such men, and help and urge them to accomplish as much as they can.

It is a commonplace in the industry that we will have our work cut out for us, in the next decade or two, to expand steel capacity fast enough to keep up with the demands. Population is increasing at a rate which has been called explosive; and the use of steel per person is also rising. Meanwhile, indications are that the available working force will not grow at the same rate as the total population—we will have to produce far more with relatively fewer men. I'm sure that the industry is going to meet these demands, but we cannot meet them without the help of people who have a compelling desire for accomplishment.

Roger M. Blough is Chairman of the Board of Directors of the United States Steel Corporation. Born in a small farming community in Pennsylvania, he attended a one-room grade school and did his college work at Susquehanna University. He also graduated from Yale Law School, where he was editor of the Yale Law Journal. Blough became associated with U. S. Steel in 1940 when he acted as an associate counsel for the Corporation. He then rose to Executive Vice President in 1951 and finally to the position he now holds as the head of the largest steel company in the nation.

Expansion is not our only problem. The steel industry is basic to most other modern industries, and as these grow and change, so must steel. For example, the industry is now trying to develop new steels to be used in nuclear reactors. The aircraft industry offers another example. A modern jet airplane might shatter or melt without new steels which can withstand the stress and heat of supersonic jet flight. Having penetrated the sonic barrier, designers are now making plans to attack the thermal barrier, and I assure you that the steel industry will be deeply involved in their efforts.

Steel not only keeps up with changes in other industries; it makes its own changes. The new high-strength steels now being produced have led to improvements in several fields. Looking to the future, some of our scientists believe that when iron atoms can be arranged in essentially perfect crystals, the resulting metal will be more than twice as

Challenging and Rewarding

PETROLEUM

by Robert E. Wilson

When I left the academic cloisters of Boston 35 years ago to cast my lot with the petroleum industry, my first assignment took me to one of the nation's largest and most modern refineries at Whiting, Indiana. There, in 1922, some 35,000 barrels of crude oil were being processed daily into products.

I thought of this earlier this year when we dedicated a new refinery at Yorktown, Virginia. Here, too, the capacity was 35,000 barrels a day. Yet the refinery's vastly superior products were being turned out by four units instead of the 416 used at Whiting in 1922. And the number of employees required to do the job at Yorktown was only 325 as compared with 3,300 at Whiting.

Does this then indicate shrinking career opportunities in the petroleum industry? Quite the contrary. In expanding our capacity to serve, technology has created many more new channels for educated men than it has closed. And the positions available have become far more important, far more challenging, far more rewarding.

Technological progress, once feared, is now commonly and rightly regarded as man's best servant. The blacksmith and carriage-maker of yesterday are largely gone, but millions have found better career outlets in the automotive industry that rendered them obsolete. Man's dreams are harnessed to his capacity to achieve; as his capacity grows, his dreams expand. In petroleum, although we have learned to do far more with proportionately far less, our over-all employment—some 1,650,000—is far greater than it has ever been.

If the contrast between the refinery of yesterday and today has a point, it is to emphasize that technological progress in itself offers a good career guide. New refineries, new processes, new products, new ways of doings things come into being only through man's efforts. An industry marked by achievement necessarily must be one in which individuals have found themselves free to evaluate, to create, to grow.

The doorway to the future remains open in the petroleum industry today. We are eager bidders for the services of chemists and engineers, physicists and geologists—indeed specialists in every field of scientific endeavor. We offer them challenging posts on the frontier that lies between the known and the unknown and the chance to blaze new trails into the still unexplored. Especially exciting possibilities exist today in the rapidly developing area of petrochemicals. Yet everywhere there is room for new advances, and the intent to seek them out is evidenced by petroleum's research and development budget of about $200 million annually, one of the largest of any industry.

Chairman and chief executive of the standard Oil Company (Indiana), Dr. Robert E. Wilson is internationally recognized as one of the country's outstanding figures in both business and science. Born in Pennsylvania, Wilson attended the College of Wooster (Ohio) and did graduate work at Massachusetts Institute of Technology. After World War I, he returned to M.I.T. where he became a member of the faculty. In 1922 Wilson entered industry and rose to the chairmanship of Standard Oil in 1945. He has served many times as an advisor to government and has published more than 100 technical papers.

Attractive career openings, however, are not limited to the scientific and technical areas. Some 2,000 different kinds of jobs are required in finding and transporting crude oil, in processing it, and in marketing products. The professional skills long associated with business—in finance, in accounting, in legal work, in marketing—find outlets here. We need also the newer professional skills—in such fields as human and public relations, in employee counseling, in motivation and market research, in electronic data processing.

Especially, it seems to me that, in the years ahead, our industry will need not only specialists but men with a broad gasp of over-all problems and the ability to administer and direct a whole complex of activities. No industry that I know of deliberately recruits young men for high executive posts, yet one of the primary concerns of every company—especially in our industry—is to atract young men with executive capacities to be developed. We are looking for young men who want to be chairman, provided they are willing to work and learn their way to the top.

I will dismiss quickly some of the more obvious factors in job-seeking. Employees in our industry are well paid. Salaries in each classification are usually higher than the average paid by other industries. Petroleum companies generally offer benefit plans that are among the finest in the country. There is a high degree of job security. There's room for advancement.

I should like to emphasize at somewhat greater length that ours is an industry in which individual enterprise can aggressively function. Many a crude oil producer has started out on a shoestring. There's more than one independent service station operator who nets more than

continued on page 42

Aircraft Manufacturing

by Donald W. Douglas

Donald W. Douglas, founder and president of the Douglas Aircraft Company, attended the U.S. Naval Academy at Annapolis, but resigned after three years to study aeronautical engineering at M.I.T. After serving as chief engineer for the Glenn L. Martin Company, he started his own airplane manufacturing company. Though not yet 30, and with assets less than $600, Mr. Douglas moved his family to California. His company became a multi-million dollar enterprise, supplying the country with both military and commercial aircraft. Mr. Douglas, recipient of numerous awards and honors, is an active sportsman, and the father of six children.

As a young man selecting a career, I was attracted to aircraft manufacturing because it was a young and challenging activity—hardly an industry at that time—with a tremendous potential for growth.

Today, more than 40 years later, my attitude is unchanged. The aircraft industry, and the whole field of aviation, is still young, dynamic and filled with promise for the future. We have only begun to achieve many of our goals and there remains abundant opportunity for those just entering upon their careers.

In expressing such faith, I am not unmindful of the ups and downs to which our industry has been subjected. These undoubtedly will be considered by any one who may be interested in an aircraft career. During the past year in particular we have been forced to absorb some heavy blows as the result of curtailments in defense expenditures.

Despite such temporary setbacks, our great need for qualified personnel at the college graduate level continues. There has been a steady upward trend in the proportion of engineering personnel to the total number of employes, both in our own company and throughout the industry. In our own case, it now stands at a ratio of one in ten.

As evidence of our constant need for such trained personel, let me point out that we shall expand our company's 1958 recruiting efforts to 150 colleges throughout the nation, the highest number in our history. Significantly, ours has been a steady program for the past 18 years. Throughout that time there has never been an over-abundance of properly trained engineering graduates.

Total employment undoubtedly will show a downward trend in the aircraft industry, not only because of current retrenchment, but because certain basic changes in the character of the industry are taking place. One of the most important of these is the growing emphasis on missile development.

While it is true that fewer people will be needed to assemble these weapons, the far frontiers of technology into which they take us make the need for highly trained college graduates even more acute than ever before.

The emphasis in our industry, of course, will continue to be on engineering graduates but there are many opportunities for specialists in other fields. The science of metallurgy, for example, meant little to us in the days when airplanes were made of wood, canvas and wire. Now, supersonic and hypersonic speeds make research in that field increasingly important.

The study of human factors has received more and more attention as performance and environmental characteristics of advanced aircraft tax the physical capacity of pilots and crew members. Specialists in aeromedicine and psychology therefore are examples of the trained personnel needed in the aircraft industry.

Skills more common to all industry, in such fields as law, finance, accounting, economics, and taxation, also are needed.

Numerically, the industry's greatest requirement naturally will be in the engineering and technical fields. This comes about as the result of the technological explosion brought on by World War II. The pressing need for swift development of new weapons and techniques, and the availability of funds, enabled us to score breakthroughs which might have taken many years under normal circumstances.

Now, with such developments as automation and the application of atomic energy just beginning, there is every reason to believe that the long-standing shortage of technical men in all industry will extend for at least another decade.

In fact the complexity of modern technology is such that the aircraft industry needs more and more men with advanced degrees to cope with the highly theoretical problems that arise. We cannot proceed on a trial and error basis as the Wright brothers did. The cost is too great these days so mathematical calculations must take over the job insofar as possible.

While stressing the need for highly trained men in the aircraft industry, I would like to inject a word of

continued on next page

Executive Positions for Engineers

continued from preceding page

caution against restricting one's interests permanently to one specialized phase of work. There also is a need for technically trained but broad-thinking men who can see and understand the bigger picture.

Engineering graduates who have a desire to assume such management responsibilities do well to go to work for large, fully integrated companies which are engaged in actual production. Sometimes the highly specialized positions in research-type companies yield more immediate financial rewards but do not offer as much in the long run.

The nature of modern industry is such that more and more top management jobs are going to trained engineers. There is an example of this in our company where the three top-ranking executives are all graduate engineers. Those who aspire to management positions must take steps early in their careers to broaden their training and experience to include such subjects as production, costs and markets, to name only a few.

Whatever path he follows, however, I am convinced that a well-trained young man who enters on a career in the aircraft industry will find much to challenge his imagination. While pecuniary rewards are important, one must also consider the satisfaction that comes from being a part of a fascinating industry, which guards our national security and promises so much for the peacetime development of the world.

NEW DEVELOPMENTS IN STEEL

continued from page 23

strong as any now on the market. Extremely small quantities of such a metal have already been created.

No one can estimate what such a material might mean to the industry in the next decade or two. But this much can be said: Every time we develop a new product, there are opportunities for many men to accomplish things. In addition to research, here are some of the jobs that have to be done: Find out in what form the product will be saleable, to whom, and in what quantity; decide how much money we can invest, and where the money is coming from; plan the most efficient use of raw materials to produce the product; work out specifications, tests, and controls; plan production methods, and perhaps design machinery to do the job, and train men to operate the machinery; look into patents and other legal matters; establish labor standards and incentives; develop markets; and sell, in competition with other companies which have been developing their own products.

Still another kind of change has been going on in the steel industry for some time. We are changing the way we operate. New processes are being developed for the production of steel and steel products. Electronic data processing and electronic controls are only beginning to show what they can do. Radioactive materials are being used in testing. Probably the most publicized change is more automation in production, which may conceivably bring degrees of obsolescence not only in our present methods of production, but in our present concepts of purchasing, marketing, accounting, finance, and operating management.

It is too early to say in detail how these new developments will change the steel industry, but I think two things are clear. First, we may have to make fundamental changes in the way we operate our business; second, we are going to need the very best men that our country can produce, and we will have to give these men every opportunity to do the best work of which they are capable.

For these reasons I can say—not in an attempt to inspire, but in a spirit of sober reflection—that I don't think has ever before been a time when the steel industry offered such a wealth of opportunity to men who want to accomplish as much as they are able, and to go as far as their ability will carry them.

MATHEMATICS

continued from page 12

of numerical computation is a new field offering great opportunities for rapid advancement for a person with the requisite mathematical training.

Opportunities for mathematicians in government are similar to those in industry. The federal government operates laboratories carrying on research programs related to its special needs. Many of these laboratories employ mathematicians or mathematical statisticians in research projects. Other mathematicians are employed in executive branches in connection with contracts for research which may be actually carried out by industry or by universities. The mathematician in a government position has civil service status with all the advantages and disadvantages associated with such appointments. Salaries for professional mathematicians in government employment range from $4500 to $9000 depending on training and experience.

I will not attempt to describe the opportunities for careers in statistics or in actuarial science. It will be sufficient to say that for statisticians there is an even wider range of opportunities in industry and in government (local and state, as well as federal) and in teaching, and that salaries are perhaps higher than for the pure mathematician. To succeed as an actuary requires training in economics and insurance as well as in mathematics and statistics. There are fewer employment opportunities but the financial rewards for those succeeding are correspondingly greater. Annual salaries of $20,000 or more for actuaries are not unknown.

In conclusion I should point out that most of the career opportunities mentioned above are open to women as well as to men. It should also be noted that graduate training in mathematics leading to the degree of M.A. or Ph.D. are needed in most cases for advancement beyond the lower levels. But for a person who is willing to continue his study of mathematics and its allied fields, there is every reason to look forward to a future of promotions, salary raises, and increasing satisfaction with his own accomplishments in his chosen field of mathematics.

Chemistry: Rapid Change

by Morse G. Dial

President of the Union Carbide Corporation since 1952, Morse G. Dial has been associated with the chemicals industry for almost 30 years. He is a graduate of Cornell University, where he received his degree in mechanical engineering. He started with Union Carbide in 1929 as a sales supervisor for the marketing of Pyrofax gas, and became manager of that division the following year. He subsequently managed the company's Vinylite plastics operations, and then moved into the administration and finance end of the business. He was elected Vice-President and Director of the Corporation in 1949, and Executive Vice-President in 1951.

In the chemicals industry we operate on the frontiers of the scientific knowledge of our age and the industry's great challenge is to push these frontiers ever forward.

The chemicals industry needs young men and women trained in engineering, business, the sciences, the arts, and law. We need scientifically trained men to staff our growing research establishments. We need engineers and others in our rapidly expanding production facilities. We need people interested in marketing to keep pace with a market that has increased fivefold since 1939. We also need people in our staff activities: accounting and finance, law, patents, industrial relations, advertising, and public relations, purchasing, and the many other activities that are essential to the operation of firms in today's complex chemicals field.

As one of England's great statesmen once wrote: "The Youth of a Nation are the Trustees of Posterity." Down through the ages each succeeding generation of youth has faced the same challenge—to better themselves and speed the progress of their society. In all cases these high ideals were not realized, but we know where we stand today that many were realized—enough certainly to have brought mankind ever forward. This progress, slow at first, has now reached so rapid a pace as to be bewildering to many.

Looking back on the last quarter century, with all of its unrest, it is evident to many of us that the strides that have been made are a result of a revolution in technology and industrial methods. It is also evident that this revolution has opened vistas that are unlimited. In the short span of your lifetime, you have seen incredible feats performed and probably have come to accept them as commonplace. Many of these have resulted from advances in chemistry and its related sciences, for it is our task to take the materials of the earth and create from them the thread from which a fuller life can be woven. In this period man has created synthetic products to rival, or even improve upon, those of nature. Man has developed gems identical in beauty and physical structure to those found in nature. He can create synthetic fabrics that are better for some purposes than those made from natural materials. Plastic materials have taken over more and more of the jobs once performed by other materials. Only in the last few years we have seen man develop forces of destruction greater than any found in nature and then harness that destructive force to create useful power.

The chemicals industry has played a basic role in these advances, and because of this, it has expanded at a fast pace. The facts show that the chemicals industry has grown at a rate of nine per cent per year since 1929, as compared with three per cent per year for the economy as a whole. It is an industry of rapid change where the products of today may be obsolete tomorrow, and where the major products of tomorrow may now be only a gleam in some chemist's eye.

For example, let's look at the plastic polyethylene. First discovered in the late 1930's, this material was important during the war as an electrical insulation material, but when the war ended, it had scarcely any commercial market. Now, you can hardly go through a day without having seen or used polyethylene many times. Its uses range from "squeeze" bottles to stratospheric balloons. Even with the broad application today of polyethylene and other plastics, in total they are about in the stage of the metals industries in 1900.

But polyethylene is only one example. Chemicals in one form or another are changing our very lives. They are improving the quality of our food as additives and its quantity as fertilizers; strengthening the clothes we wear and the tools we use; and, in the form of drugs, even lengthening our lives.

We in the chemicals industry are convinced that we have only scratched the surface. We are convinced of this because we are a relatively young industry, because we are spending ever increasing amounts on research and lastly because our industry is basic to the economy.

The chemicals industry is a real youngster as compared to other bas-

"A GLOBAL ENTERPRISE"

by Harvey S. Firestone, Jr.

Any general discussion of the rubber industry as one in which a person may seek a career requires a description of the activities of the industry.

These activities are not restricted to rubber. To the contrary, the larger companies have entered many fields: chemicals, metals, textiles, aircraft, guided missiles and other weapons, retail merchandising, and various other areas of activity.

Even that part of the industry concerned with rubber products is divided into many sections: tires, industrial rubber products; foamed rubber for cushioning; rubber paving material, to mention only a few

Some rubber companies have their own rubber plantations. We for some time have had 90,000 acres in production in Liberia, West Africa, and we are developing plantations in Brazil and the Philippines.

The scope of the industry's enterprise is global. As an example, we have 38 plants in the United States and 34 in foreign countries.

For all these reasons, it can be said that the variety of opportunities is extremely great, and that many of these opportunities are open throughout the world.

Like almost all industry today, the rubber industry needs men and women who have specialized educational backgrounds. The agronomist and rubber chemist are key persons on our Liberian plantations. The physicist, chemist, mechanical and agricultural engineer, the metallurgist, each plays a vital role in our research and development laboratories. In our engineering and production divisions, mechanical, chemical, electrical and industrial engineers and graduates with training in industrial management fill posts of importance.

On the other hand, in such major divisions of business as sales, purchasing, advertising, personnel and finance, the graduate in liberal arts or business administration is thoroughly qualified.

The larger companies in the industry and some of the smaller ones have training programs for new employees, designed especially for those recently graduated from colleges and universities. In our College Training Classes, which were organized in 1923-24 at my suggestion, experts, some of them the acknowledged leaders in their fields, conduct programs of indoctrination and training for sales, technical and non-technical positions.

In such a manner a young person is helped to get off in the right direction in the line of work for which he is especially well suited, in that department or division of the business where his chances of success are best.

Throughout the industry, the leaders of today are, for the most part, those who went successfully through a training class at sometime in the past. Many of tomorrow's leaders are in our classes now or will be in the near future.

The financial rewards as well as those of the spirit, especially that of personal satisfaction through achievement, are very atractive in the rubber industry.

Rubber, the industry's basic product, is as fundamental to our economy as food and steel. The history of the industry is marked by imaginative competition, bold venturing into other fields many of which are related to the basic product, some of which are completely new.

While industry in the United States has been growing at the rate of three per cent a year, the rubber industry has been growing at the rate of four per cent. Numerous other fields into which the rubber industry has ventured are expanding. New areas of endeavor are opening up.

These aspects of an industry's record emphasize its prime characteristics, stability and growth. The future of the industry is cast along the same lines.

To a young person interested in the long haul as well as the short pull, the rubber industry today stands with its doors open to opportunity.

Chairman and chief executive of The Firestone Tire & Rubber Company, Mr. Firestone joined the organization upon his graduation from Princeton University in 1920. A leading business magazine has called him one of the twelve most outstanding businessmen in the United States. A man of wide interests, he has served in many civic, religious, educational, and humanitarian causes. He is especially interested in the training of young persons for positions of leadership. In 1923 he organized his company's College Training Classes where many Firestone executives started their careers with the company.

8. advertising

"NOT ALL BEER AND SKITTLES"

by Norman Strouse

If you are a man who has the imagination to look at the opportunities ten years ahead, and the practical patience to accept the hard work of learning thoroughly the essential principles of a highly complex but exciting business, you meet the first qualification of the advertising business.

If you are genuinely interested in how goods and services move from their source to the consumer, and believe that a free, fair, and competitive relationship should exist among men and business firms, you have met the second qualification.

If you have an insatiable curiosity about people and their motivations and an honest respect for peoples ability to respond to incentives which are in their genuine self-interest, you are almost home.

And, finally, if you are challenged by things which can be accomplished by communications—by the use of ideas, words and pictures, and feel a need to use these tools to help move people in constructive directions, then you may very well be right in thinking that a career in advertising is the best for you.

You have noticed, I am sure, that I have said nothing about the financial rewards that may flow from a successful career in advertising. Now, obviously, these rewards exist, and they are attractive. If I have not mentioned them it is not because I propose to present our business as one which disdains profit as a legitimate incentive, but because, however surprising it may seem to you, men governed by money incentive alone have never, to my knowledge, succeeded in this work where enthusiasm, ability, and conviction of the importance of our work are the essential staples of success.

You may wonder why I am not trying harder to convince you that, come what may, you should select advertising rather than one of the many other attractive fields to which a man may commit himself. Why is it when there are so many professional recruiters painting pictures of high initial pay and rapid advancement that I choose to weight my picture of the advertising business on the side of the demands it makes on *you*? The reason is this. We quite frankly do not want men to come into advertising with the mistaken idea that it will be all "beer and skittles," that all one need do is concentrate on being a charming "customer's man," key oneself to the group mind, hold tight, and ride a magic carpet to the skies.

The real rewards of advertising are found in the opportunity to use one's intelligence and imagination in a fully *active* situation. Men are successful in advertising because they have used individual intiative, original, sound thinking, have been impatient with stereotypes, have shown an inordinate curiosity about people and the often unpredictable course of human actions.

If you have these qualities and utilize them with integrity, the advertising business can bring you into human contact with some of the most interesting people in the world;

continued on page 32

Norman H. Strouse has been President of the J. Walter Thompson Company—the world's largest advertising agency—since 1955. He has been with the Thompson Company continuously for 28 years, with an interruption for World War II military service in the Pacific. His responsibilities have included those of space buyer, account representative, Assistant Pacific Coast Manager, and Detroit Manager. In November, Mr. Strouse received a Forbes award as one of the 50 foremost business leaders of America. He is the only advertising agency executive to be so honored over the three occasions during the past 40 years that Forbes Magazine has made its awards. Mr. Strouse has long been active in civic and professional organizations, and is well-known as a bibliophile.

" . . . to bring management and capital together in the right combination and to provide investors, whether individuals or institutions, with opportunities to put their money to work."

Smith, Barney & Co.

Members New York Stock Exchange • 20 Broad Street, New York 5, New York

SMITH, BARNEY & CO. is one of the largest firms offering complete financial services as underwriters, brokers, dealers and advisers in investment securities. Our functions are to bring management and capital together in the right combination and to provide investors, whether individuals or institutions, with opportunities to put their money to work.

The continuing economic growth of America with its accompanying advances in our standards of living depends on the financing of industry to provide expansion and improved production equipment. This applies both to old products and to the creation of new ones. As money is put to work, jobs and income are produced.

The methods of putting money to work consist of the underwriting and distributing of securities, either to raise new capital or to effect advantages by refunding previous issues. In addition, there must be available markets for the convenient purchase and sale of securities, either through stock exchanges or through providing facilities for dealing in unlisted securities.

It is also part of our business to advise and help corporations and municipalities with their financial plans.

The Organization of the Firm

Smith, Barney & Co. is a partnership. To carry on our business, we have several departments headed by partners. The principal departments are:

Buying Department

The work of this department is to study carefully the business of the prospective issuer of securities. Analysis of current and future operations is required to create an appropriate financial plan to cover both present and prospective developments. Considerable technical work with lawyers, engineers, and accountants is usually necessary to "set up" the issue of securities. The offering price is determined by careful consideration of market conditions and may be established by negotiation or by competitive bidding. The securities are sold at retail through the Sales Department and at wholesale through the Syndicate Department.

Sales Department

We are members of the principal stock exchanges and have branch offices in Philadelphia, Chicago, Boston, Albany, Allentown, Pa., Cleveland, Hartford, Milwaukee, and Minneapolis. We do a general commission business in the purchase and sale of stocks and bonds, and also are registered dealers in unlisted securities. Our customers include individual investors, institutions, banks, trust funds, insurance companies, and others.

Syndicate Department

The underwriting of securities consists in purchasing from the issuer (either a governmental unit or corporation) securities for resale to the public or the underwriting of an offering a corporation makes to its shareholders. Generally the size of the issue requires the formation of a syndicate, a group of firms jointly undertaking to purchase or sell the securities, or do both. It is the responsibility of this department to form the underwriting and selling groups and to handle group and wholesale sales.

Municipal Department

Smith, Barney & Co. has a long record of financing American and Canadian cities, states, and provinces. We are also active in the underwriting of special purpose and revenue bonds for various governmental subdivisions. Constant research in comparative municipal credit is maintained for buyers of municipal bonds.

Trading Department

Most bank and insurance company shares and a very large number of other securities are not listed on any of the national exchanges. As a consequence the over-the-counter market has assumed importance and large proportions. The Trading Department is active in this market and maintains close contacts with other important dealers throughout the country.

This department supplies to banks, insurance companies and other large institutional clients current market information for their day-to-day operations.

Research Department

This department is engaged constantly in the study of individual companies, industries, and market and economic trends. It undertakes to maintain a considerable flow of current information to our organization and clients. Out of this research it is the purpose of the department and all staff members concerned directly with in-

vestments, to determine opportunities that may be presented to clients for their consideration. In the corporate research group there are well-known specialists in oil, aviation, chemical, paper, railroad, and other industrial and public utility securities.

Investment Advisory Services

The firm is registered under the Investment Advisers Act of 1940. In our Philadelphia office we maintain the Account Supervision Department and in our New York office we have a Planned Investment Department. They serve trustees, managers of endowment funds, hospitals, charitable and educational institutions, and individuals of many kinds who have neither the time nor the facilities to adequately manage their investments. The personnel in this department are trained and experienced in this field and call upon our entire organization for information and advice. We also have a Pension Fund Investment Department specializing in the investment problems of pension and welfare funds.

★ ★ ★

Frequently several departments are involved in providing specialized financial services, such as the private placement of securities, the sale or purchase of large blocks of securities, appraisals, and the purchase or sale of entire businesses.

A Career In Our Business

A very limited number of carefully chosen college graduates are selected each year for training. The training course covers all phases of our own operations as well as the background of the business as a whole. During this period additional academic work pertaining directly to our business is usually required.

At the end of the training period, which lasts about eight months, the trainee is assigned tentatively to a department of the firm. This assignment is worked out in conference with him and takes into consideration the following:

(a) desires of the trainee;
(b) department for which he is best fitted;
(c) department in which greatest opportunity for future advancement appears to lie.

Trainees are paid at a rate commensurate with their education and experience.

In selecting from among the candidates for our training course, the primary considerations are:

(a) aptitude for the business;
(b) motivation, including interest in the business;
(c) indications of potential ability.

A physical examination, psychological tests and interviews are required.

Because an important part of your working life will be spent in dealing with people, an ability and liking for getting along with others is a necessary aptitude. An aptitude for working with numbers and their use in analysis is also helpful. The chances of success in our business are not too good for the extreme introvert who prefers to work alone, nor the extreme extrovert who has little interest in or aptitude for analysis and study of intangibles.

One indication of your interest in the business would be if you had taken courses in corporation finance, investment management, financial accounting, or economics. Although these are not absolute requirements for selection, they are important background aids.

Opportunities for advancement appear to be good. During the years from 1929 to 1946 not many young men entered the securities business. As a result, the average age of those now in it is high. It is our policy to give responsibility to juniors as fast as they are able to accept it. Nearly all of our partners have grown up in our firm or one of its predecessors. Salary advances keep pace with advancing responsibilities.

Our firm provides its employees with the following assistance to security, some of them on a contributory basis:

(a) group insurance;
(b) medical, surgical and hospital insurance;
(c) annual cash profit sharing;
(d) vacations, two weeks each year, three weeks after 5 years;
(e) annual physical examinations;
(f) deferred profit sharing for retirement income;
(g) employees' savings plan.

You should know, however, that the investment business is one which appeals primarily because it offers opportunities rather than personal security. Generally speaking, it has not had the stability of, for example, commercial banking or the insurance business. Its appeal is to the young man who is interested in advancement and would prefer working in a smaller organization.

Although one of the largest firms in our business, we employ a few more than 400 people. Our firm and its predecessors have been in business since 1873.

★ ★ ★

If you are interested in a career with Smith, Barney & Co., you should review your interests and training with your vocational counselor. Then if you feel that you have the required abilities and interest in our business, write to our main office, 20 Broad Street, telling us about yourself. We suggest that you do this soon so that we can consider each other and reach a decision by the time you graduate. You will, of course, want to know a great deal more about us and our business than we can tell you in this short write-up.

THE ART AND SCIENCE OF MASS SELLING

continued from page 29

artists, writers, people of the theatre, researchers, educators, engineers, authorities in every field of science, leaders in the communications industry (magazines, newspapers, business papers, television, radio, motion pictures and so on), and the executives who so successfully man our industries, service and government organizations.

One of the great satisfactions to me is my knowledge that advertising, the art and science of mass selling, is one of the dynamic forces which keeps our rapidly growing economy moving toward the goal our nation has set of a 600 billion dollar gross national product by the late '60's. If you are qualified to be a part of advertising, no small part of your compensation will be the knowledge that progress in your career will come as a direct result of the contributions you make toward a strong American and Free World economy. You can, in fact, contribute substantially to the security and happiness of hundreds of millions of people spread across this and other free lands.

To keep pace with this continuous growth and its attendant increase in advertising volume, agencies are faced with the need to add over 2,000 non-clerical staff members a year. These must be men and women of such high caliber that they will quickly outgrow their initial developmental assignments and move on to senior business positions. Some of you may be surprised to learn that while any agency must have of course, artistically creative people, it depends just as much on specialized staff members who are imaginative and inventive in the ways of business. You may hold the view that there is little variety or adventure in business, but consider if you will, the implications presented by assignments as diverse as these: account management, market research, media planning, radio-television and motion picture producing, writing, art, public relations—both on a national and a world wide scale.

During the next ten years the opportunities for personal development for those who have the qualifications required in this business are almost unlimited. How would I sum up the personal qualications required to take advantage of these opportunities? I believe I can do so in no more appropriate words than those Judge Learned Hand used in describing the qualities which clear the path to truth: ". . . skepticism, tolerance, discrimination, urbanity, some—but not too much—reserve toward change, insistence upon proportion, and above all, humility before the vast unknown."

The Securities Business
IS A GROWTH INDUSTRY

The Securities Industry offers one of the most wide open careers that a young man can imagine.

Our organization, which has a history of over 50 years, has a good cross section of careers open for the future.

POLITICS:

Elephant Hide and Butterfly Antennae

by Wayne Morse

A career in politics is indicated only if the candidate can successfully combine the hide of an elephant and the sensitivity of a butterfly's antennae. The thick hide is necessary for protection against invidious attack, and it is always open season on a politician; the antennae are indispensible to sense the small signs and portents that give warning of the shape of future events. I have found that the best device to thicken the hide to the necessary degree of impermeability — and paradoxically enough it serves also to sharpen one's sensitivity — is reliance upon a well thought out system of political principles based upon moral considerations.

I subscribe to the concept of representative government set forth by Edmund Burke in his speech to the electors of Bristol on November 3, 1774, when he said:

"It ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence and the most unreserved communication with his constituents. But his unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to you, to any man, or to any set of men living. These he does not derive from your pleasure; no, nor from the law and the constitution. They are a Trust from Providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion . . . To deliver an opinion is the right of all men; that of constituents is a weighty and respectable opinion, which a representative ought always most seriously to consider. But *authoritative* instructions; mandates issued, which the member is bound blindly and implicitly to obey, to vote and to argue for, though contrary to the clearest conviction of his judgment and conscience,—these are things utterly unknown to the laws of this land, and which arise from a fundamental mistake of the whole order and tenor of our constitution."

Let me assure you that keeping faith with that basic principle of representative government many times is not the best way to make political friends and influence your political party. Yet I hold to the view that unless one keeps faith with that ethical principle, he will time and time again sell his constituents short in the matter of ethical standards and values. Why do I say that? I say it because frequently public opinion is wrong, frequently public opinion is based upon misrepresentation, misinformation, and misunderstanding of the facts. One of the obligations of statesmanship, as I see the problem, is to sit in the Congress of the United States and exercise an honest independence of judgment on the merits of issues in accordance with the facts as one sees them and vote accordingly, even though at the time a wave of public opinion in one's State and throughout the country seems to hold to a contrary point of view.

However, if one is right on the facts and will keep faith with his duty of political leadership, he need have no fear as to what the final decision of the people will be once they come to understand the facts which form the basis of their representative's vote and action. How-

continued on page 58

Senator Wayne Morse has long been an active figure in American politics. While attending the University of Wisconsin, he began his first political campaigning on behalf of "Fighting Bob" LaFollette. Morse attended the University of Minnesota Law School, and at the age of 30, he became the Dean of the University of Oregon Law School. He served under President Roosevelt, and actively supported the New Deal as a member of the National War Labor Board. Elected to the United States Senate in 1944 as a Republican liberal, Morse left the party in 1952 to become an Independent. In 1956 he was reelected as a Democrat by a decisive margin to serve his fourth term in the Senate.

FEDERAL SERVICE

by Harris Ellsworth

What do you, the college undergraduate, seek most in a career? Job security? Opportunity for advancement? Financial rewards? Opportunity to serve your fellow man? Very likely all of these are important to you, but in what order do you rank them? A Carnegie Foundation research team asked these questions of 13,000 college undergraduates. The survey results disclosed that the overwhelming majority of these students felt that what they wanted *most* in a career was an *opportunity to serve*.

Career opportunities are plentiful and widespread this year in industry and government. This, while making your choice more confusing, makes it even more important for you to choose wisely. You must carefully weigh the considerations that are important to you, and if serving your fellow man is one of them, I urge you not to overlook the challenges, rewards, opportunities, and satisfactions of public service.

Every year thousands of young people join the ranks of the more than two million Federal employees who provide the many services that we, the American people, require of our government. These employees work for you, and, like you, are taxpayers. They are at work all over the United States, in the territories and possessions, and in most foreign countries. They enjoy the dynamic nature of public service; the excitement of being in the midst of important events and distinguished personalities; and the satisfaction of playing a role in work that is vital to our national well-being and position of world leadership.

Government is indeed big but the individual employee and his accomplishments are all-important. First, the prospective employee is carefully selected through competitive examinations, such as the Federal-Service Entrance Examination. In other words, you get your job on your own merits. Once appointed, the new employee comes in line for excellent training and career development assistance to fit him for more responsible assignments. His highest potential is sought in a modern setting of resources and research facilities that are among the world's finest. If he fully measures up to his responsibilities and keeps stretching his potential through application on the job and self-improvement, he will go far in the career service. In government, as in industry, you cannot expect to reach the higher level positions without real effort and continuing preparation.

Harris Ellsworth is Chairman of the U.S. Civil Service Commission, which is responsible for the direction of government-wide personnel programs that affect more than two million civil service employees. A graduate of the University of Oregon, he is a former professor of journalism and newspaper publisher. For 14 years he represented Oregon's fourth Congressional District in the United States Congress. In April of 1957, President Eisenhower appointed Mr. Ellsworth Chairman of the Commission.

The young college graduate entering through the Federal-Service Entrance Examination is placed immediately in work of obvious importance. As a new man in the Bureau of the Budget, for example, you are at once associated with a senior examiner in reviewing plans and operations of assigned agencies, where you may contribute to fiscal and program judgements affecting nation-wide activities and the expenditure of billions of dollars. Or if you choose, you may play a part in the management of the new Navy, with its programs for guided missiles and atomic submarines. In the Air Force you may be engaged in the world's largest procurement and maintenance operation or at the frontiers of scientific research and development. You may enter the Army's far-flung industrial organization through a scientific or administrative position in research, manufacturing, or distribution, leading to executive posts at the highest levels of the Army's civilian career service.

The Federal service offers an almost unlimited variety of program opportunity, in the small agencies as well as in the large ones. You may help to promote and protect the health of the national economy through the activities of the Securities and Exchange Commission, the Small Business Administration, or the Tariff Commission. In the Housing and Home Finance Agency you may assist in building better housing and better communities for America. And let's not overlook the Civil Service Commission, whose responsibility for providing government-wide leadership in personnel management directly affects more than two million Federal employees, and whose success in securing a high-quality career work force is a vital factor in the successful operation of every agency of the executive branch.

Regarding government pay, I do not want to create false impressions.

continued on page 53

LIFE IN THE FOREIGN SERVICE

by John M. Cabot

So you are thinking of going into the Foreign Service?

You must of course be physically fit and able to pass the examinations. But you should also be prepared to face all of the disagreeable features of the Foreign Service:

You must be ready to serve in the frozen north and in the hottest tropics, at the highest altitudes, in deserts and in places where the rain practically never stops and your shoes grow whiskers overnight.

You are likely in your career to face earthquakes, hurricanes, floods or other natural disasters.

You and your family will be exposed to diseases now practically unknown in the United States—malaria, typhoid, hepatitis, smallpox, cholera. You are likely sometime to get amoebas—and when you have them it's no fun sitting through a dinner or official ceremony!

You will certainly encounter a variety of insects from the lowly ubiquitous flea to the scorpion you shake out of your shoe—if you're careful.

You will at times live in ugly, inconvenient, uncomfortable housing —even, as Secretary Dulles once remarked, where the only water in the house is that on the floor. You will live where the water is unsafe, the food often contaminated, and servants are frequently carriers of disease.

You will have prolonged separations from your family. Your wife will have to put up with innumerable local inconveniences and idiosyncracies. Your children's schooling will at times be difficult.

With regard to your cherished possessions, you must remember the old Service saying that three transfers equal one fire.

You may be hit with a cut in allowances, an expensive transfer, or a disallowance just when you're hard up.

You should be prepared to learn weird languages, to accept strange customs imperturbably, to be tolerant of the assorted foibles, follies and impositions you will encounter.

You must be prepared at irregular intervals to pull up stakes, often with little notice—to leave friends, familiar surroundings and established work patterns, and to go to some unfamiliar land where all must be started over again.

You will probably run into one or two mean chiefs, and uncooperative associates.

You will at times see your good work unrewarded, while apple polishers and people with the right connections are promoted.

You must be prepared to go to countries where the official attitude is one of cold implacable hatred, where no native dares to speak to you, where you feel yourself eternally surrounded by spying eyes and listening devices.

You must be prepared to fight your way through masses of red tape, the inertia of bureaucracy, the paralysis of conflicting policy, the incomprehension of the man at the other end of the line, the tangled web of politics. You will occasionally have to carry out with all the skill and tenacity you possess policies with which you disagree.

In your career you will doubtless see rioting and shooting in the streets. You may yourself be the objective of physical violence. You are likely at times to have to traverse perilous seas or skies.

You must be prepared to go to social affairs whether you choose to or not, to smile till your jaws ache even though you'd like to snarl, to eschew the wounding wisecrack or the bit of juicy gossip which may boomerang, to go on till you're ready to drop, to seek useful contacts rather than enjoy yourself, to eat indigestible foods and drink appalling drinks—yet never to let yourself

continued on next page

Currently United States Ambassador to Colombia, John M. Cabot began his career in the United States Foreign Service following the completion of his education at Harvard and Oxford Universities. His first assignment was Vice-Consul at Callao-Lima in 1927. Since that time Cabot has served in numerous diplomatic capacities, including Chief of the Division of Carribean and Central American Affairs, technical officer for U.S. delegations to the United Nations conferences at Dumbarton Oaks, Mexico City, and San Francisco. He has also served as an Envoy Extraordinary and Minister Plenipotentiary to Finland, Ambassador to Pakistan, Assistant Secretary of State for Inter-American Affairs, and Ambassador to Sweden. Cabot is the author of The Racial Conflict in Transylvania *(1926) and* Toward Our Common Destiny *(1955).*

SATISFACTIONS IN THE MIDST OF IRRITATION

continued from preceding page

go—to remember that as a representative of the United States many eyes are on you, and by no means all are friendly eyes.

You must be prepared to work hard and at any hour as emergencies arise. There is no standard working day in the Foreign Service.

Do not think that these things cannot happen to you. In the course of thirty-one years service most of them have happened to me, in many cases many times. You should not enter the Foreign Service unless you are prepared to face them—and your family is, too. However, you should bear in mind that you can do nothing worthwhile in this life that does not have its disadvantages.

But if you *are* prepared to face them, then the Foreign Service offers great rewards.

You will probably participate in some of the historic events of your time, and you will have an inside view of many others. You may make, or at least influence, history. You may participate in history which can never be written.

You will meet many of the greatest men of your time, and some you may come to know intimately.

In this ever narrowing world with the increasing impact on every nation of events beyond its borders, you will have widening opportunities for valuable public service. Diplomats are the lubricating oil which is designed to prevent the increasingly formidable machinery of international relations from burning itself out.

You will get to know a number of foreign peoples, with their virtues and faults, their achievements and problems, their culture and history, their capacity to delight, confuse and irritate.

You will work with a procession of interesting, important ever-varying problems. The happiness of millions, the progress of humanity, the peace of the world may be affected by the skill and understanding with which you do your tasks. You will have an unrivalled vantage point to observe and understand humanity's problems, and to contemplate the folly of men's quarrels in this day and age.

At many posts your life will be easier and pleasanter than at home, if only because your government must provide you (but sometimes doesn't) with adequate allowances and facilities for your representational needs.

You will be a prominent member of any community to which you go. Many distinguished doors will be open to you, and most will be, potentially. You will live in an aura of distinction and publicity.

You will have unequalled opportunities to see the world, to view its great art, to hear its finest music, to visit its most famous buildings, its historic places, its finest scenery.

You will have privileges such as diplomatic immunity and free entry enjoyed by no others.

These things too I have personally experienced.

If there are material disadvantages in the Service today, they are vastly less than in the past. Living conditions, housing facilities, availability of foods and supplies, health, schooling, transportation allowances have greatly improved.

Air conditioning has taken much of the sting out of the tropics and insecticides much of the sting out of the insects. Modern medicine has vastly extended the means of preventing and curing exotic diseases.

Riot and revolution may be dangerous, but they are certain to add both zest and responsibility to a diplomat's task. An atmosphere of enmity should be stimulating as well as disagreeable to a diplomat, and there is no more colorful challenge than absolute enmity. As for living in the shadow of a tyranny, no one can truly appreciate liberty who has not had that experience.

If in the Foreign Service you will run into an occasional so-and-so, your usual experience will be quite the reverse. Most of your chiefs will probably be men of ability, understanding and character whose inspiration you will long and gratefully remember. And in few other institutions will you find such mutual loyalty and devotion to a common purpose—the nation's interest—as in the Foreign Service. You will also find that in the long run promotions go to those who deserve them—the teacher's pets and the wirepullers fall by the wayside.

In short, the Foreign Service has perhaps more than its share of drawbacks. But if you are prepared to face these drawbacks, then it can also be a fascinating and richly rewarding career, not only in the mundane satisfactions it gives but also in the opportunity it offers for constructive service to your nation and to humanity. Certainly the fact that, if they have survived the first shocks, few officers leave the Service voluntarily is a pretty clear criterion of the inner satisfactions it affords.

ENGINEERING

continued from page 11

ous affiliated companies. 40 per cent were educated as engineers, 25 per cent were university trained in other disciplines, and 35 per cent had no college degree. A sidelight on the effectiveness of engineering training for management responsibilities was disclosed by a questionnaire circulated to a Harvard Business School class on the occasion of its 25th anniversary. To the question "What change would you make in your undergraduate work if you could do it over again?", nearly 40 per cent replied that they would take more courses in engineering.

Money is important to the young American planning his career, but it is far from being the most important consideration. If it were we should have few teachers and no clergymen. Not only under present conditions but under the conditions which the dynamic nature of our industrial progress seems to insure for many decades to come, the competent engineer can count on adequate compensation. In addition, the very nature of his work is a source of deep satisfaction to the engineer. He is always concerned with the production of structures, machines or products that affect the well being of his fellow men. He recognizes himself as a creator of wealth and a contributor to the national economy and he is often a major factor in the national defense. Engineering offers a truly rewarding career to any man or woman endowed with the easily recognized talents and aptitudes the calling requires.

10. packaging and retailing

A NEW INDUSTRY

by Lucius D. Clay

General Lucius D. Clay, the son of the late U.S. Senator Alexander S. Clay, was born in Marietta, Georgia. He received his B.S. Degree from the United States Military Academy in 1918, and after serving in the Corps of Engineers, returned to West Point in 1924 as an instructor in civil engineering. He served briefly on General MacArthur's staff in the Philippines in 1937, and during World War II was Director of Materiel for the Army. In 1945 he worked with General Eisenhower to establish the U.S. occupation government in Germany. Several years later he became U.S. Military Governor of Germany, and served in that capacity until his retirement in 1949. Since 1950 General Clay has been Chairman of the Board of Directors of Continental Can Company.

Packaging as an industry is new to the American economic scene. Only in the past few years has it been thought of as an industry. Before that there were companies making cans, others making bottles, still others making paper, barrels and other forms of packaging—but they were all separate and almost completely unrelated.

There was a reason for this. Until recently packaging was used only for protection or for those products which required a container. It made only a minor contribution to people's lives. Most of the industries that used packaging required it in only one form; they needed cans, or folding cartons, or barrels—but seldom in combination. As recently as 1939, when World War II started, there were relatively few supermarkets, frozen foods were a rarity, and there were no pre-packaged vegetables or read-mixed bakery products. Packaging had only begun to be a selling aid.

When the War ended, and these new developments sprang to enormous statute almost overnight, the companies that made packages had to adapt to this new and greatly increased demand. Increasing their capacity was not too hard, but they also had to increase their flexibility. If a packer decided there was a greater market for frozen peas than for canned peas, for example, his packaging needs changed. To avoid losing business, the companies that had made only a single line of packaging had to diversify, and thus a packaging industry took form.

Today packaging is a $10 billion industry—and every indication is that the growth and cohesiveness it has seen in the past two decades will be greatly eclipsed in the next 20 years. Packaging sales have increased fivefold since 1939. Part of this sales growth, of course, represents the effects of inflation. But actual volume of packages sold has probably tripled in the past 20 years.

True, there are more people to be served by packaging now than there were in 1939. The country's population has grown about 28 per cent in these 19 years. But by contrast, the amount of money spent annually for packaging has increased at ten times the rate of population growth since the beginning of World War II.

This rapid growth has resulted from a combination of our rising national standard of living, a revolution in merchandising methods, and some very considerable efforts toward package improvement which both the producers and the users of packaging have made.

The first of these factors—the rising standard of living—has contributed to each of the other two and so has probably been the greatest single factor in this growth. Most Americans today have incomes sufficiently high as to justify a living standard that only the well-off could afford a few years ago. But because most Americans have shared in this rise of living standards, there are few people left to perform the menial functions that maids, cooks and gardeners performed for the well-off a scant generation ago.

This means that the housewife has to perform a number of tasks which in her grandmother's day may have been performed for her. But though she can't afford a maid or a cook, she can easily afford to buy the great variety of hidden services that have been built into almost every packaged product on the market.

This means that the production line in food processing plants has taken a large part of the drudgery out of her life. Thanks to the package, ingredients can be mixed and weighed for her, in exact proportions, by somebody she never sees—somebody whose service costs her as little as a penny a package. In many instances they are ingredients that are too complex for her to use with-

RETAILING

by Edward R. Mitton

Those of you who read this have arrived at what is perhaps the most important stage in your lives. You are considering the choice of a career. Within the next few months, you will make a decision that will affect your entire future. As an undergraduate, more years ago than I like to think of, I was faced with the similar decision. Although my father and grandfather before me had been retailers, I thought long and carefully about the wisdom of following in their footsteps, and ran the mental gamut as most of you will do. But once you are privileged to glimpse the excitement behind the footlights, as it were, your decision is virtually a foregone conclusion. I chose a career in retailing, and I have no hesitation in saying that it has brought rich and abundant satisfaction such as I never dreamed of.

Edward R. Mitton was born in Brookline, Massachusetts, is the son and grandson of prominent merchants who were leaders and developers of Jordan Marsh Company, Boston. Following his schooling at Milton Academy and Harvard University he served in the U.S. Naval Reserve in World War I. He became associated with Jordan Marsh Company in 1917, working in various departments as part of his training until he was appointed Assistant General Merchandise Manager. In 1931 he became Merchandising Vice-President and in 1937 succeeded his uncle as President of the company.

What is this alluring quality that retailing possesses? Perhaps the keynote in retailing is *change*. It is hard to express in words the excitement and stimulation of a world in which every moment brings a new challenge. It is a field where split-second timing is essential, where thousands of dollars may hang in your decision. Retailing offers possibilities for rapid advancement unmatched favorably with other fields (contrary to general impression!). In retailing, a fresh, imaginative outlook is essential. All your creative abilities and mental resources are called into constant play. There is unlimited opportunity for personal expression, for genuine responsibility—and the constant knowledge that your work does not escape the notice of top management. A good performance speaks for itself in retailing, and compensation is both prompt and generous.

Just as the retailing industry includes everything from the small specialty shop on the corner to the vast department store that is a city in itself, it needs executive material with an equal diversity of talents. Opportunities are numerous and varied —in merchandising, sales promotion, personnel, finance, or operating. Whatever your own forte, it can find satisfying expression in one aspect or another in retailing. There is a niche for each person, particularly suited to his own aspirations and aptitudes.

If you have pursued a specialized program of vocational education, your learned skills and inherent abilities are valuable to us. If you are a student of liberal arts, your wide range of knowledge and your ability to understand a problem in its complexities and ramifications, and to think your way through to an intelligible solution, will also see you far.

Once you decide to make retailing your chosen career, there are several choices open to you.

You may decide to join a small business—a course which has the advantage of giving you perhaps more varied, though general, experience. However, I strongly feel that a solid foundation in practical knowledge and experience essential to the successful retailer is best gained by an in-store training program that is designed to help you meet and surmount any difficulty you encounter. Most large stores today have followed the example, first set by my father, of offering an Executive Training Program, in which classroom theory is supplemented by practical experience in the various divisions of retailing. Such a program gives you a chance to meet the store's top executives and to learn from them the "tricks of the trade" which they have utilized to achieve their present positions. In addition you are already knee-deep in your chosen field—the distant aura of glamour has given way to the thrill of participation in what is surely a field unparalled in its constant excitement.

After this intensive training program, what can you expect in the nature of advancement? Let me state without reserve that the doors are wide open. Positions are opening faster than we can fill them. Our store, like many others is currently engaged in a vast program of suburban expansion. Two branch stores are presently in operation, another is under construction, and plans are being formulated for yet another. Your opportunity is truthfully greater than it has ever been in the past. Rapid advancement is the rule rather

continued on page 52

11. creative writing and journalism

Expected Income - "Not Much"

by Vardis Fisher

It seems to be the fashion for professional writers to be facetious when they are asked if writing is a good field to enter. It's as if writers in general feel a little ashamed of their work and more than a little apologetic. One of them, for instance, has said that writers "at best are nervous, sleepless and egocentric. Like Cassius they have a lean and hungry look . . ." I for one don't see that look on such as Wouk, Steinbeck, Caldwell, Waugh, Shaw, O'Hara and a host of others. They look well-fed indeed.

The same author tells us that writing "at its best is an arduous, lonely and frustrating pursuit beset by constant pitfalls of discouragement." What profession isn't? It is true that we are an egocentric tribe, but I suspect that we have a lower ulcer rate than advertisers and that we are less lonely in this electronics age than clergymen. We do have a high psychomatic coloring. We are beyond question emotionally immature and over idealistic. We are in fact what I mean in a forthcoming novel by the 'orphan'.

I imagine that what most young people reading this page are interested in knowing about the profession of writing is how it compares with other fields in its competitive position, spiritual satisfactions, public esteem, and monetary rewards. In regard to spiritual nourishment this field ranks high for the writer more interested in art than in money. In regard to the other three factors it ranks incredibly low. In this country writers, like college teachers, are not held in the high esteem they enjoy in Europe. In this respect they simply don't rank at all with the designers of automobiles, the winners of quiz tests, or Hollywood actors. Their level, I would say, is about that of clergymen—and in this nation that's a pretty low level.

Born of pioneer parents on one of the last American frontiers, Vardis Fisher was educated at the University of Utah, and received his Masters and Ph.D. from the University of Chicago. He taught for ten years in various American universities and served in the First World War. Mr. Fisher is the author of about 25 books, almost all novels. He now lives in Idaho's Thousand Spring Valley, where he has built his home on ten abandoned waste-acres which he landscaped himself.

In regard to earnings the truth is even more depressing. A few years ago I published a book called *God or Ceasar?* which presumes to advise young writers. On page 242 appears the question, "How Much Can I Hope to Earn?" The answer is, "not much". A number of persons have polled writers in regard to their earnings and reported the fantastic results. It is fantastic, I mean, that a short-story writer and poet who has published twenty-five books has earned an average of $160 per book. It is fantastic when William Carlos Williams reports only $100 a year from his publications in magazines and only $300 a year from his many books. Is it not incredible that professor-poet Mark Van Doren's books, including textbooks and anthologies, have accounted for only two per cent of his earnings?

People read of the exceptions that make the headlines—of the huge sum paid to the Duke of Windsor or to Truman, to Eisenhower or Wouk, for just one book, and I suspect that a lot of them then conclude that writing is a pretty lucrative profession. It is for only a fraction of one per cent. A Gallup poll has revealed that Americans are voracious readers—of comic books and road signs. Most of those who write know darned well they don't read them.

continued on page 48

JOURNALISM

by Virginius Dabney

Virginius Dabney began his career as a reporter with the Richmond News Reporter *in 1922. In 1928 he switched to the editorial staff of the Richmond* Times-Dispatch *and became its editor in 1936. In 1947, he won a Pulitzer Prize for editorial writing. Dabney has been a lecturer on the "New South" at Princeton University and is the chairman of the board of the Southern Educational Reporting Service. He is currently President of the American Society of Newspaper Editors.*

For those who like journalism as a career, it is an endlessly fascinating adventure. For those who don't, it is a crashing bore.

Be sure that you find it fascinating before you enter it. If you are thinking of becoming a newspaperman for lack of anything better to do, you'd better go in for plumbing or politics.

I'm not trying to be stuffy, but journalism is something like teaching, or even the ministry — although the latter is in a different and higher category. The similarity between newspaper work and education or the church lies in the fact that you must have a certain amount of inner urge to be happy in each of them. You'll never get rich covering fires, doing the City Hall beat, writing headlines on a copy desk, directing a news staff or writing editorials. But you'll find stimulus and excitement in any or all of these things, provided newspapering is for you.

To repeat, you have to be temperamentally suited to this work. First and foremost, you have to like to write, if you want to go into the writing side of the business. Good writing is hard for anyone, and requires much application of the seat of the pants to the seat of the chair, as somebody put it. But there is a vast difference between liking to write and wanting to write—even though the process is sometimes a laborious one—and shuddering at the thought of sitting before a typewriter. Those to whom the very idea of composition is abhorrent should never think of entering newspaper work.

If you aspire to an executive job on the news or editorial side in which you do little or no writing, you have to write a good deal in the lower echelons to fit yourself for this responsibility. So there's no getting away from the necessity that you learn to write clearly and accurately. On afternoon papers, in particular, you must also be able to write rapidly.

On the business side of a newspaper there are many opportunities of an entirely different character. These include the management of the paper's business affairs, the writing and selling of advertising, the distribution of the paper, the overseeing of its mechanical production, and so on. Each of these will have its particular appeal, but those who prefer this side of the operation do not generally take primary interest in the news and editorial side. Special types of business training are often useful here.

For news and editorial work the best foundation is a good liberal arts education. If added to that is experience on a college newspaper plus training in a *good* school of journalism, so much the better. I emphasize the word "good", for there are so-called schools of journalism whose courses are of little or no value. Better to get practical experience on a newspaper than to waste time with one of these.

It should be noted that there are various ways of beginning a career in journalism. I myself was not on the college paper—although I was on the annual—did not have a course in journalism, and began as a grass-green reporter with an M.A. degree and one year of teaching in a prep school. Others might find this an unsatisfactory method of approach, and I shouldn't blame them. The more you can learn about your job in advance—without sacrificing your acquaintance with English, history, languages, literature, economics, government, and related subjects—the better. If I had had more journalistic seasoning, I wouldn't have got my paper into a near libel suit because of my gross carelessness in writing a story about a bank failure. That early experience taught me a lesson I'll never forget, but I got my lesson the hard way.

It is often helpful nowadays for the beginner to get a reportorial job on a small paper before applying for work on a larger one. Executives who hire reporters prefer to take on young men and women who have learned the basic rules and who don't have to be trained in the elementary principles of news writing.

Many will want to enter journalism with the idea of making it their life's work, but for those who regard it as a stepping stone to certain other lines of endeavor it will be found valuable. A large percentage of the successful free-lance writers of both fiction and nonfiction worked on newspapers before they made their mark with novels, biographies or whatnot. Others with

continued on page 51

12. electric utilities

"Stability, Growth, and Excitement"

by Harland C. Forbes

Before investing a lifetime in any company, it is prudent to investigate the company's prospects and those of the industry to which it belongs.

Some business have stability. Other industries offer growth. There are some which promise excitement. But comparatively few industries are in a position today to provide the job hunter with all three. The organizations which provide America with electric light, heat and power belong to this select group.

The electric utility industry as we know it today began seventy-five years ago. In spite of the now-obvious advantages of electricity, it did not spring into full bloom overnight. However, since the 1880's the homes, factories, farms and businesses of America have become increasingly dependent on energy provided by the utilities.

This dependence seems destined to increase. The flexibility and cheapness of energy in the form of electricity combined with the growth of electronic and automatic operations means that utilities must constantly expand to meet the challenge of energy hungry Americans.

The history of utility service has been one of a constant search for better ways to do things at less cost. Automation has been developed in both the generation and distribution of electricity. Electronic data processing lends itself to the mass production characteristic of utility accounting and to the intricate calculations required in the design of transmission and distribution systems. Atomic energy will have incalculable impact on the entire art of generation of electricity.

While utility men can look back with pride, they are too busy for that. They must look forward with determination to the problems still ahead. Stability in the past has been achieved only by innovation and by constant adaptation to current conditions in order to serve better in the future. Work in a utility is a never-ending challenge.

Tomorrow is always described as being different. Some say it will be a world of new metallic alloys and new industrial processes. Others claim it will be a world of better social adjustment and more ethical human relationships. In our industry, we see tomorrow as a time when homes, offices and factories will use considerably more electricity. We see it as our responsibility to supply this energy.

While capital resources, modern machinery and business management methods are all necessary in accomplishing this, manpower is essential. Without manpower, electricity would still be nothing more than an occasional uncontrolled flash of lightning.

The challenges to utility manpower today cover a wide spectrum. The expansion that must be made calls for business judgment of a high order, judgment which is honed to razor sharpness on the infinite variety of experience within the industry. The search for men with the necessary qualities always goes on within every utility in line with a traditional "promote our own" policy.

No matter how brilliant the judgment, it cannot rise above the ability of the organization to carry out management's decisions. In a utility where employment in one department may total 3,000 persons, administrative and supervisory skills must be tuned to a high pitch. The administrator who can grasp the im-

continued on next page

Board chairman and chief executive officer of Consolidated Edison, Mr. Forbes received his B.S. degree from the University of New Hampshire in 1921 and an M.S. from Massachusetts Institute of Technology in 1923. He joined the former New York Edison Company, now a part of Con Edison, in 1924, and has been associated with the business of supplying New York City with electricity, gas, and central station steam ever since. Active on many committees of various electrical associations over the years, Mr. Forbes is the author of a number of technical papers.

A FRANCHISE TO SERVE

continued from preceding page

port of a policy decision and can lead men to carry it out is indispensable to the utility.

The technical aspects of utility service are inevitably tied to engineering. Whether it is a nuclear engineer evaluating a reactor design, a chemical engineer seeking to develop a better method of water purification, an electrical engineer concerned with problems of distribution in highly congested areas, or a mechancial engineer designing a power plant, his work must be of the highest order. His choice must do the job at an economic price.

The need for men of ability is not exhausted when a utility has astute leadership, competent administration and imaginative engineering. The utility industry is one of the few basic industries that deals directly with the ultimate consumer. To a utility company the "public" is not an intangible body, but a group of individuals, most of whom are direct customers of its service. A utility is manufacturer, middleman, retail outlet, delivery service and bill collector rolled into one. In commercial relations, selling, advertising and public relations each day brings new challenges as utilities seek to serve their publics.

Utilities use truly fantastic quantities of fuel, materials and equipment. Where the difference of a penny in the price of a ton of coal can mean, as it would in my company, either a saving or a loss of $70,000 in a year, purchasing is a highly develop art, an art requiring a sure knowledge of markets and sources, whether you are buying turbines or carpet tacks.

It is said that utilities generate almost as many statistics as they do electricity. In part this may be laid to the extreme cost consciousness of utilities and in part to the requirements of state and federal regulation. Regulation introduces a challenge to utility operations that non-regulated industries cannot provide. A utility's prices for its services cannot fluctuate with every rise or fall in the business barometer. Utilities must live with a set rate schedule. In a period of rising cost there is a real challenge to fulfill the obligations of electric service while keeping costs down to avoid expensive, time consuming rate hearings.

An industry that spends billions of dollars every year for expansion of its physical properties must be alert to the changing techniques of construction. Crowded urban areas offer daily obstacles which require all the ingenuity construction men can command to overcome them. The challenge to do it better for less follows at the heels of the construction man.

The need for alert, imaginative, aggressive manpower in the utility industry has never been greater.

For the first time since the 1920's electric utilities serving urban centers can offer opportunities to large numbers of job-hunters. The early 1930's were years of retrenchment. Improved efficiencies both in the plant and in the offices slowed recruitment during the late 1930's. The war years found young people with more urgent chores to do first.

And in the post-war years, college graduates have only come into the electric utility industry in small numbers. Since individuals hired in the 1920's and now in responsible positions throughout the industry will retire in the 1960's, an unparalleled opportunity exists for those graduating in the next few years.

This certainly does not mean that they will be offered vice-presidencies in the industry during their first interview. It takes time and effort to work up any corporate ladder. My only purpose is to point out that in many corporations in this industry the ladders are less crowded.

During the years that the young man is making this climb, he is also establishing lasting roots in a community. Any electric utility operation is woven into the very fabric of the communities it serves and is generally local in character.

Utilities hold a franchise to serve a given area and, knowing that they rise or stagnate with that area and no other, they are promoters and boosters in their own right. Electric executives are on chambers of commerce, Red Cross committees, and planning commissions from coast to coast. They take an active interest and play leading parts in their communities, and it is sometimes hard to tell where the job ends and the man's own interests begin.

This is a way of life to those who make a career in the utility industry. There is a blending of service and friendliness in contacts, whether they are made in New York or Piqua, Ohio.

This way of life is combined with broad opportunity for individual development within each utility. Utilities do not pigeonhole the man. Progress is something which is always up to the individual.

PETROLEUM

continued from page 24

his town's banker. Many a small marketing organization, opened with a small capital investment, is competing successfully with much larger companies. In short, the entrepreneur who wants to be his own boss can be in petroleum if he is willing to take the normal risks.

There are basic questions, of course, that anyone entering an industry naturally wants answered. Is it a thriving industry? Is it an expanding one? Is it important?

To all of these questions, the answer for the petroleum industry is yes.

Today oil and natural gas supply two thirds of the nation's energy requirements. The industry's history has been one of continuing growth, and far greater growth seems assured in the years ahead. Energy requirements for the nation, taking into account population and economic trends, are expected to increase another 45 per cent by 1965. World demand will increase even more rapidly. Liquid fuels are likely to remain our most useful source of energy in the foreseeable future, in view of the magnitude of the tasks ahead. Other forms of energy, as they become competitive in some fields, will be welcomed as burden-sharers rather than competitors.

Next year I shall be retiring after more than 35 years in petroleum. I can sum up my feelings about opportunities in my industry simply by saying that if I were a young man looking for a job today, it would be one of the first areas I would explore.

13. medicine

Financial Rewards: A Remote Objective

by Charles W. Mayo

It is not the size of the institution you attend, or have attended, that will govern your degree of success in life; rather, it is the quality of the teaching staff of the institution which is all-important. Scarcely less important, however, is the factor of continuing effort on the part of the individual student.

Most students mature slowly during their four years at college, and if the desire develops in them to pursue postgraduate study in any given field or profession, too often and too late they are faced with the agonizing fact that they cannot meet the necessary standards for acceptance for such study. The excuses for failure to meet these standards do not alter another fact, namely, that we all live in a competitive world.

Physicians are proud of their profession, its heritage and its ideals. They have worked long hours and hard to make it the justly respected profession it is. Those who are concerned with administration and teaching in our medical schools are charged with the complex problem of maintaining a highly selective system in choosing students who desire medical training, so that all fields of medicine may continue to advance in specialized services for the welfare of man.

You are as aware as I am of the ling time it now takes to complete the educational requirements for the authorized practice of medicine, independently or in a group. Undergraduate and graduate schools were much different in my grandfather's time, in my father's time, and even in my time, than they are now. As a matter of fact, I have—secretly, of course — wondered whether or not I would be admitted to medical school in our present age, or, once admitted, whether or not I could stay in. Nonetheless, this much I can say: that after having spent the greater part of my life in medicine, and knowing by intimate experience the hardships as well as the spiritual rewards of medical practice, I unquestionably would select medicine as my career if I were a young man faced with such a decision.

Dr. Charles W. Mayo is a distinguished surgeon and chairman of the Association of the renowned Mayo Clinic in Rochester, Minnesota. He was graduated from Princeton University and studied at the University of Pennsylvania Medical School and the Graduate School of the University of Minnesota. Mayo has served as Surgeon to the Mayo Clinic and a professor of Surgery at the University of Minnesota. Among his other activities is the chief editorial position for the periodical, Postgraduate Medicine, *and close association with the World Health Organization. Mayo was a delegate to the Eighth General Assembly of the United Nations in 1953.*

There are now far more married students in colleges, medical schools and postgraduate schools than there were when I was obtaining my education—perhaps today the sex urge is taking more definitive shape than it did then. Lacking the wisdom of Polonius, I advise neither in favor of marriage nor against it in these stages of a man's career; only the two people concerned can make such a weighty decision. Certainly, however, the problem is not purely financial, although that factor may well delay or prevent the postgraduate education of many who otherwise would have continued an education uninterruptedly. In my own case, I was married after my internship, and I then proceeded with graduate medical education.

A good and honest physician unremittingly devoted to his patients will always make a good living, and he deserves it. Yet, hope of financial reward inevitably is among the most remote of the objectives of such a practitioner. For the profession of medicine is more akin to the ministry than is any other, as far as human relationships and financial rewards are concerned.

Some students decide, before they enter medical school, which branch of medicine or surgery they wish

continued on page 55

DENTISTRY IS FUN

by Roy O. Greep

Dentistry is rich in opportunities for the gifted and enterprising student. Today's dental student faces a future as challenging to his pioneering spirit as any of the scientific frontiers. Through a resurgence of interest in academic development, dentistry is now recognized as a true health profession and one of major importance to national health and welfare.

In the past half-century scientific development has resulted in spectacular progress in the conquest of human disease. Dentistry has both shared in and contributed to the fruits of these great advances in knowledge. Dentistry is strongly encouraging continuing efforts to seek understanding of the causes and to find cures for the many complex ailments and discomforts that afflict the mouth. Under the stimulus of able men and greatly increased financial support, research activity in dentistry is building up in crescendo fashion. Research is constantly bringing change in the character of dental practice, enriching the profession and attracting to it able young minds.

These advances have been accompanied by remarkable progress in dental education. There was a time when training for the profession of dentistry meant little more than mastery of the technics of restoring lost tooth structure. Prior academic preparation was slight. In the early twenties students could enter dental school directly from high school and in the early thirties the requirement was raised from one year of college work to two years. Though the two-year requirement still stands on the books, it is little more than a reminder of the great changes that have taken place in the dental schools. The trend for the past decade has been strongly in favor of a full four years of college work as a preparation for dentistry. Well over half of the present entrants are so qualified and an increasing number of candidates already hold the master's degree.

Dental students receive rigorous training in all the major biological sciences, such as anatomy, histology, physiology, biochemistry, pharmacology, bacteriology, pathology and laboratory diagnosis. The dental student has the opportunity to understand his patient equally as well as the student in any other health profession. By modern standards, it is expected that graduating young dentists, in addition to their ability to care for the teeth, will be expert in soft tissue pathology, the reaction of the patient to drugs, the reaction of tissues to injury and infection, bone disorders, oral cancer, blood clotting, speech mechanisms, swallowing mechanisms, and glandular disfunctions. They are, in fact, expected to be knowledgeable, though not necessarily competent, in any subject which relates to an oral disorder such as heredity, heart disease, high blood pressure, pregnancy or the diseases of aging.

Dean of the Harvard School of Dental Medicine and Professor of Anatomy, Dr. Roy O. Greep has been influential in strengthening dental education through more thorough grounding in the sciences basic to human biology. He is Chairman of the Committee on Dentistry of the National Research Council and Managing Editor of Endocrinology Magazine. His research has dealt with the role of the endocrine in growth and development. Dr. Greep received an honorary Masters degree from Harvard in 1946.

Dental graduates find a variety of stimulating opportunities awaiting them. Many choose immediate general practice. Others in increasing numbers look to internship and residency at a hospital dental clinic. Still others enter graduates or postgraduate studies to qualify for a career in academic dentistry or for practice in a more specialized field such as orthodontics, prosthodontics, oral surgery, or pediatric dentistry. Last year, the Department of Health, Education and Welfare through the National Institute for Dental Research made funds available to selected dental schools for the purpose of providing promising young graduates with extended opportunities to prepare themselves for outstanding service in the triad of dental education: teaching, research and patient care.

Young dentists will find no difficulty in establishing a thriving practice. The effective present demand for dental service is tremendous and far in excess of what the present dentist population can care for. This situation will almost certainly persist for another generation at least.

The monetary rewards of dental practice are attractive and compare favorably with other professional pursuits. A deeper satisfaction comes, however, from rendering an important health service to one's fellow man and enjoying the gratitude of appreciative patients. Many dentists lend a hand in teaching on a part-time basis in one of the nation's forty-five dental schools. Though the material rewards of teaching and research may not equal those of practice, the returns in enduring personal satisfaction and lasting accomplishment are incomparable.

Dentistry combines to an unusual degree opportunities for intellectual and humanitarian endeavor with skillful and creative use of the

14. finance

Opportunity In "The Street"

by John L. Loeb

If you put opportunity before security and have initiative and imagination, investment banking and brokerage offers one of the most interesting and rewarding of careers. There is always room for able men in Wall Street, and this is particularly true at the top, so I would say that the size of the field is unlimited. In the breadth of its operations and its opportunities Wall Street differs from other more specialized segments of our economy as, working with all industries, success does not depend on the fortunes of any one. Wall Street can and should afford ample compensation in a financial sense, but it is also satisfying as an opportunity of wielding a constructive influence in our country's industry for which the securities business provides the life blood.

The attraction of a Wall Street career is that you can make it what you want it to be. It is one of the least bureaucratic places in the world and there is little, if any, seniority. There is a place in the financial community for all types of background and training and nothing you have studied or learned at college will be wasted. Brains are at a premium. You can be a success as a salesman or an administrator, a research analyst or a trader, an underwriter or negotiator of new deals, an expert in one or several industries, or as a jack of all trades. I believe business school training is probably the best investment a college graduate can make before entering Wall Street, but it is not absolutely essential. Horse-sense is. Personality and general aptitude are important and, by and large, the people in "The Street" are a cultivated and civilized group who develop many outside interests. These include the arts, education, hospitals, government service, and other charitable, civic, and communal activities.

A graduate of Harvard in 1924, John L. Loeb began his career with the American Metal Company. After several years he formed with his father the investment house of Carl M. Loeb, Rhoades & Company. He is now senior partner. Loeb's other activities include chairmanship of the Cuban Atlantic Sugar Company and directorships of numerous other companies. He has served on the Overseers Committee to Visit Harvard College and is a former Governor of the New York Stock Exchange. During World War II, Loeb served with the Lend Lease and Surplus Property Administrations in Washington.

To do our jobs well we need a working knowledge of industry, management, markets, commodities, finance, accounting, taxes, economic trends, and fiscal policies. This is what makes our work so interesting. As any number of variables go into each decision there is some established technique but little routine, and every new problem presents its own challenge and reward. The many facets of our business permit you to apply yourself where your talents and skills can be used to the fullest. As you acquire a broad picture of the interlocking elements of our economy you may even consider your years on "The Street" an apprenticeship qualifying you for important assignments in other fields.

The task of the financial community is to provide industry with needed funds and investors with an opportunity to employ their savings profitably. Although internal cash generation and loans provide a large portion of the requirements of our great industries and corporations, expansion at the rate needed to support a growing population with rising living standards also presupposes substantial additions to equity capital. Our task is not only to provide money, but to channel it properly. Lest the saver squander his funds, they must be directed toward sound investments. In this process we not only aid our clients in preserving and increasing their assets, but we fulfill an important function in the life cycle of our corporate economy.

You will also learn to invest your own funds. That does not mean that you have to be rich to make Wall

continued on page 57

DENTISTRY

continued from page 44

hands. Whether the treatment requires surgery, or repair, restoration or movement of teeth, deftness is essential. Such skills are for the most part acquired through training and practice. Students entering the profession need to know only that they possess a reasonable degree of inherent dexterity on which to build. In dentistry as in many other pursuits such as music, art or engineering, the hands are to be looked upon as the instruments of the mind. Through them the creative and imaginative workings of the mind are translated into reality. Hands have wrought much of man's civilization and his cultural heritage. It is small wonder that dentists derive satisfaction in being able to bring skills as well as insight and understanding to health problems of his patient.

A further attraction of dental practice and one which, though incidental, may actually be decisive in the minds of many potential candidates is the fact that the dentist may determine his own office schedule. He has, therefore, the advantage of a normal home and family life, free hours for the pursuit of his avocational interests and the opportunity to contribute effective leadership in community affairs. He will also find time to meet with his colleagues on matters of mutual professional interest. Through a variety of contacts he will enjoy a warm feeling of inward pride in the fellowship of the dental profession.

Finally, a striking feature of the new look in dentistry is that the modern practitioner is deeply concerned with the prevention of dental disease. His primary objective is the maintenance for his patients of good oral health from childhood onward. To achieve this effective and mutually satisfying professional service, it is necessary, because of the now widely recognized relationship of oral health to systemic well-being and vice versa, for the dentist to understand and to treat mouth disorders from the viewpoint of the patient as a whole.

In this new role dentistry is an important, satisfying and rewarding health service—which also is FUN.

At the Heart of Business

BANKING

by Lloyd D. Brace

Name any business which comes to your mind and then realize that some of banking's many phases have determined this firm's past accomplishments and will influence its future progress. Business and banking depend on each other for success, one can not exist without the other. It's this close alliance which enables banks, operating at the heart of our economy, to offer an extra advantage to college graduates considering a financial career—a broad yet detailed knowledge of the business world.

Banking has services and facilities which help other businesses operate more efficiently. Within the last fifteen years there has been rapid growth and change in the financial world, creating new banking services to meet these new conditions. And banks have not overlooked the many ways it can help the individual. Checking accounts, savings and loan services have been revitalized, made more appealing and flexible. All of this expansion has made it possible for men to find immediate and long-range opportunities in banking.

As you know, banks vary in size, based on their deposits and the amount of money they have available for loans and investments. In a smaller bank, you can become familiar with many bank functions. This is also true in the branch office program of a larger bank. After general training in bank procedures in a larger bank, there is emphasis on specialization in one of a few phases of banking, perhaps in the field of credit-loan, bank operations, accounting and auditing, administering trusts and estates, foreign assignments, business research, personnel administration, advertising and public relations—or banking's newest field, electronic data processing.

Banking employment has risen 65 per cent from 1940 because of increased activity in volume, creating a compeling need for executive leadership. Many officerships open up each year in banks, and the pay for such positions has been considerably increased since the war. Officer positions in banks vary greatly as to pay, but in general compare favorably with other industries. In addition, banks as a group offer more fringe benefits than any other industry. In short, banking offers excellent opportunities to business or liberal arts graduates. You can choose a banking or trust career with confidence and know if you have the interest and the ability, you can go far—with advancement and growth, varied and rewarding assignments, and an exciting insight into business activity in general.

President of the First National Bank of Boston, Lloyd D. Brace was born in Lincoln, Nebraska, and educated at Andover and Dartmouth College, where he was graduated in 1925. In the same year he joined the First National as a bank clerk. Mr. Brace is a trustee of Andover and is active in civic work.

Your Career in Finance...

A decision which will undoubtedly be of the utmost significance in your life is that of your choice of a career. Worthy of careful consideration is a career in Finance.

Many of our leaders in government and industry, advisors on American economic policy and successful men and women who hold key positions on the American scene owe much of their success to their early careers in the Financial world.

The extensive expansion of industry in the post war years has led to a need for young men in the field of Finance. Every day, more and more people from all walks of life are becoming aware of the advantages and opportunities of investment in American industry.

There are many opportunities today for the young man embarking on a career in Finance. And there are few careers in which he can be of greater service to his fellow man.

THE ODDS ARE 3500 TO 1

continued from page 39

Richard B. Gehman, who teaches creative writing in New York, estimated, after a survey, that in 1949 there were in this country 350,000 persons trying to become professional writters. Some other pollsters put the number higher. "South Pacific" Michener thinks there are at least half a million trying to write novels. He tells us that a typical publisher has reported that in a year he receives about 2,000 book-length manuscripts, of which he publishes 100. Of the hundred, 95 come from established authors. Michener surmises that for every first novel published, 450 are written.

Does the lucky one get reviewed? About 1200 novels are published in this country each year, of which *Time* will notice not more than 150, *The New Yorker* not more than 50 or 60. Does the lucky one find a publisher for his second novel? A lot of them don't. I have friends who have published first novels but haven't been able to find a publisher for the second, not because it isn't as good as the first but because the first was a sales flop. I almost didn't find a publisher for my second novel: even so, I had to waive all royalties on the first 2,000 copies, and since the novel has not sold that many in all these years I have received nothing from it.

I put it this way in my book: "If we take Gehman's conservative estimate of 350,000 persons trying to become professional writers, and assume that a hundred of them in five years will be making a living by their pens, the odds are 3,500 to 1 against you. In no other profession would a person deliberately go up against such odds."

I'd not do it again. The truth about me, for what it is worth to you, is this: I have published about 25 books. Setting aside the Harper Prize novel which sold about 42,000 copies, the record on the other 24 is an average of about $1,000 per book. This obviously means that I have not earned a living with my typewriter, though the most and the best of my time for over 30 years I have given to it. I have just figured it out for you: including all the time spent in reading and research for historical novels I have the past thirty years earned from my writing not more than 40c an hour.

If I had it to do over would I do it again? Frankly, no.

All this, I am well aware, is discouraging to the young person who wants to be a writer. Bear in mind that I've been talking about *belles-lettres,* if it can be said that there is such a thing in this country any longer. Vast fields are opening up, such as TV, to those with a talent for writing stuff that in taste and intelligence is pretty low on the totem pole. But I am no expert here. In my own field, that of the short-story and novel, the chance to break in does not grow but shrinks: I think there are a number of us who broke in twenty or thirty years ago who might not be able to now. The demand for our sort of thing has decreased, the cost of publishing it has gone out of sight. A novel used to break even on a sales of two or three thousand: today, publishers tell us, the break-even point is ten thousand. The overwhelming majority of novels published don't sell that many.

So in all honesty this is the best I can say to you: come on in, if your heart is set on it, but be aware from the very first of the odds against you, and of the discipline and self-denial that will have to be with you always if you are to come through.

CHEMICALS

continued from page 27

ic industries. In fact, its major segment — petrochemicals (chemicals made from oil and natural gas)—is only slightly older than those of you who are reading this article. The number of petrochemical products now produced is large—my own company produces more than 400 —but the number and variety should increase many-fold as the industry grows to its maturity.

In the chemicals industry, research leads to new products and new products to more sales. With the world's supply of conventional raw materials limited, we must depend to an increasing extent in the future on this research to make things we need and want from those materials we have in abundance—air, water, salt, petroleum, coal and the like. Recognizing this, the chemicals industry invests heavily in research. The industry is now spending over $400 million each year on research and development and it employs about 13 per cent of all the nation's industrial research and development people.

The third, and perhaps most important, reason that we feel this industry is only beginning to get its feet wet is its diversity. It is diversified in its research which covers the fields of organic and inorganic chemistry, biochemistry, metallurgy, and physics. It is diversified in its products, which include chemicals, plastics, gases, alloys and carbon products. By its very nature our industry has the resilience and strength that comes from diversity, for we are primarily a supplier of raw materials to other industries. Very seldom can you identify one of our products in what you see and use, and yet there is scarcely an item in everyday use—from the clothes you wear to the gasoline that powers your car—that does not either contain chemical products or has not been improved by chemical processing. There is hardly an industry—from the basic steel industry to the perhaps not so basic cosmetic industry—that doesn't in some way rely on chemicals. Thus, the chemicals industry has the stability and the predictability of growth which comes from being at the heart of the economy. It is not dependent on any one segment of industry or population or on any one geographic area.

This diversity also leads to decentralization of management. Though many of the companies in our field are large, they are in reality made up of many individual businesses and are run as such with a minimum of decision making and control at the corporate level. For this reason, management responsibility and independence of action tend to come at a lower level and an earlier age than in many other industries.

I am certain that those of you who do join our industry will find it a challenging and rewarding experience, for it is a sound and growing industry that is just beginning to contribute its potential to the betterment of our way of life.

15. the ministry

DEPRESSING LIABILITIES, GLOWING ASSETS

by Austin Pardue

There is probably no vocation that can be more depressing and full of disillusionment, or more uplifting and thrilling than the Ministry. Personally, I would not consider any other calling were I to start over again in planning my life's work. I owe an unpayable debt to my vocation and my Church. However, it has not always been an experience of joy and it might have turned into a personal disaster. The men in the ministry who are happy are the most happy people I know, but the same can be said for those who are miserable. Thanks be to God, the former are in the majority. But, to be honest, let me briefly point out some of the depressing liabilities first, and then some of the glowing assets.

As St. Paul says, "lest I myself become a castaway" I would not mislead you into thinking that I have achieved the points of guidance herein suggested. What we write about are goals and insofar as we seek them we will be rewarded. I am somewhat of an authority on the weaknesses and mistakes of the Ministry because I have been so deeply involved in committing them. But if the goals are clear, we can make continued mistakes and corresponding recoveries because "His property is always to have mercy".

The clergyman's salary will never be large and most of the time he and his family will be living under financial strain. In case of a crisis he may go into debt and possibly never quite catch up with his bills. For a professionally trained man whose tastes have developed beyond his salary it is hard not to tend to become embittered. His wife and children will have certain requests which he may not be able to meet and this can be the source of a nagging concern.

The Rt. Rev. Austin Pardue, Bishop of the Episcopal Diocese of Pittsburgh, was born in Chicago and attended Hobart College and the General Theological Seminary. Pardue is known for eight books on religious subjects and has been a frequent speaker on national radio broadcasts. He has also made numerous preaching tours for the United States Air Force. Pardue became Bishop of Pittsburgh in 1944 and has long been active in civic activities.

Furthermore, it often takes far greater talent to run a church well than a business. The Clergyman will be called upon to be a pastor, counselor, social worker, scholar, organizer, executive, money raiser, youth worker, educational expert, popular speaker, arbitrator, and civic leader. He will certainly be asked to make decisions which will create enemies within his ranks, who in turn may organize factions that can sometimes ruin his work. A powerful layman can dominate his people so that he must either give in to pressure and defy his own conscience, or fight a battle that will permeate his work, study, and family life with the poison of the controversy.

He is in a position where he and his family may be watched and criticized in a way that occurs in no other work. The rectory, his private dwelling, is often looked upon as the public property of the whole parish. Also, he is paid by the people whom he is called upon to criticize. In business he would be the employer and the salary would be flowing in the opposite direction; he would be paying those he admonishes. He would often be terribly frustrated over the fact that his message is so idealistic while the hearers can be so petty, provincial and quarrelsome. These problems and many more are potential in every church.

True, he may be blessed and called to one of those cultured parishes where all is peaceful, but there are not many such and he had best be prepared for the worst if he is a realist. He had better be sure that his wife knows the facts of the pastoral life before they get married or they may soon drift into a home situation which is a continuous wrangle.

Unlimited Opportunity In Accounting

continued from page 21

gets and similar aids to management; and auditing financial statements for credit purposes or reports to stockholders. All these technical jobs are basic to the communication and planning that business lives by, and every one of them tends to become more complicated. Doing this kind of work often gives the CPA information and insight that can make him his client's most valued advisor. Thus there is literally no end to what he may find useful to know. Like physicians and engineers, he must "keep up" with his technical literature as well as learn from experience, so that his work reflects an ever-increasing depth of knowledge.

Financial rewards for CPA's are ordinarily regarded as good, and it is my belief that they will become still better as the importance of the services they render becomes more widely recognized. A recent study made by Northwestern University of 200 companies, including six public accounting firms, showed that accountants who graduated ten years ago are today earning more than business men and engineers ten years out of school, although they earned slightly less just after graduation. The study, which was published in November, 1956, also showed that 1957 accounting graduates were expected to be offered an average of $389 a month during the recruiting season. However, I know of both large and small firms that were offering $5,200 a year during the summer of 1957 to college graduates with a major in accounting and slightly more to those with a graduate degree.

A committee of the American Institute of Certified Public Accountants, the national professional society, recently estimated that the median income for principals over 35 years old in accounting firms is $12,500—$15,000. The mean average would probably be higher, since quite a number of CPA's earn much more.

If you ask any senior partner in an accounting firm, or any experienced sole practitioner, what qualities a CPA needs, he is almost certain to reply, "First and foremost—integrity." I am aware that such a candid emphasis upon a moral quality may provoke a certain skepticism. Nevertheless, it is a fact that the very nature of the CPA's work is such that a lack of integrity can easily destroy his reputation and therefore his career. Even a young CPA of limited experience is often given business confidences that are not entrusted to old employees. And it is understandable that in situations where hundreds of thousands or millions of dollars are involved, there are pressures against the professional independence of a CPA in stating his opinion as to the fairness of financial statements. Once we understand the nature of a CPA's work, it is easy to see why senior partners are apt to feel that the reputation and the future of their firms depend to an important degree on the integrity of the young men they hire.

Over the years, I have observed three other qualities in CPA's that deserve special mention.

They generally like to deal with figures, but I believe this attribute bulks too large in the public's conception of what a CPA is. Business machines have abolished a lot of monotonous clerical work even for neophytes. Within a few years the accountant generally hands almost all the arithmetic to the machines or to subordinates.

It is much more important that a CPA be the kind of man who has his feet on the ground and a head on his shoulders. An Army test in "general intelligence" rated accountants the highest in a group of fifteen common professions and vocations, and did not distinguish between accountants in general and CPA's, who are the cream of the profession. This Army rating indicated a median I.Q. for accountants of about 126. Analytical judgment—which is the particular quality of intelligence that a CPA needs—was not specifically checked.

Finally, a CPA should like people. He spends most of his time working with people—not with columns of figures. Even when he is dealing with figures, I believe that the most talented kind of CPA sees people in his mind's eye—buying, selling, producing, servicing, planning.

The vocational psychologist, Dr. G. Frederic Kuder, made a study which disclosed that CPA's apparently do like people, for they show a marked preference for group activity. This certainly squares with my experience. I have probably made something close to a national record in attendance at accountants' professional meetings; and I have found a consistent zeal for thrashing our problems through group action, inexhaustible sociability, and unusual warmth and friendliness.

By some standards, the CPA's career may appear to lack glamor. But CPA's occupy top posts in government, educational institutions and business corporations. To be sure, few CPA's become millionaires; and when they do, it is probably more through successful investment—in which their training helps them—than through fees for their professional services.

Yet accounting provides a rich and useful life for the man with the appropriate ability and inclination. It is unlimited in opportunity for service, challenging in presenting ever-changing problems, and quite generous in rewards.

JOURNALISM

continued from page 40

similar ambitions have stayed on their papers to make certain of paying the grocer, and have continued to write books or magazine articles on the side. Of course, newspaper work is often a way station to higher paying posts in the public relations field, if that appeals to you.

To sum up, if you have the itch to get on a newspaper, the desire for such a lifetime career, and the willingness to work at it, by all means "obey that impulse." And if I don't sound too much like a commencement orator, I'll say that the world is in a mess; we of the older generation probably did a lot to get it that way, and you of the younger generation will have to get us all out of it. There isn't any more promising approach to our global ills than through hard-working and sound-thinking journalism on courageous and dedicated newspapers.

A COMPLETE INDUSTRY

continued from page 17

of cars. Giant new freight yards are being built all over the United States, yards that use radio and television and even radar to speed the handling of freight. Electrical signaling, piggyback movement of trailers on flatcars, revolutionary streamline trains, welded rail, giant electronic computers—the list of new machines and techniques used by modern railroads is too long to be ennumerated.

A railroad is a complete industry. It owns its own land, builds its own tracks and bridges, constructs freight cars and installs its own signals. A railroad needs every type of educated person—engineer, accountant, lawyer, doctor, business specialist, and the broadly trained bachelor of arts. Hundreds of separate job classifications are open to young people. Railroads use foresters, chemists, geologists and numerous other specially trained graduates of our colleges and universities. No industry in America is broader in its need of separate human skills than the railroad.

Transportation today is intensely competitive, with railroads vying against trucks, barges, pipe lines, buses, and airplanes. This keen competitive situation has stimulated railroads to launch bold and imaginative programs of progress.

Today, young people with the right combination of skills and attitudes are moving ahead in railroading faster than ever before. In my opinion, there is not a single industry where the graduates of our universities and colleges can more surely show what they are worth. True, railroading is not for the "get-rich-quick" youngster. It is, however, an industry where good salaries and good working conditions prevail and an industry with an assured future. Best of all, railroads offer to the young college graduate a career in one of the most fascinating of all businesses.

RETAILING

continued from page 38

than the exception. Illustrative of this point, three of our fourteen merchandise managers (definitely in the high-level executive bracket) began their retailing careers with us less than ten years ago! A responsible position, at a high salary, awaits each of you who wish to meet the challenge of a retailing career. But more important than this, retailing is a business that is alive to current trends and new ideas. We thrive on an expanding economy, on technological progress, on youthful creativity. We recognize the invaluable assets of youthfulness and a willingness to build for the future, and we are quick to reward their possessors. If the chance to develop your potentialities to the fullest appeals to you —if you have a sense of imagination—if you are forward-looking and enterprising in your outlook—then I sincerely urge you to join forces with us in the retailing industry. You will never be sorry you did.

An Opportunity In Finance

WERTHEIM & CO.

Members New York Stock Exchange

120 Broadway, New York 5, N. Y.

THE LAW IN U. S. SOCIETY

continued from page 15

the law of today. Whether in the heavy-carpeted suite of a big New York firm or in a small-town office, the lawyer is afforded the satisfactions that come to those who help guide others through the complexities and hardships of life.

But when one speaks of these human satisfactions of a lawyer one must quickly add the variety of men of law that there are, the divers ways in which one may vent one's powers in the law. Predominantly, of course, there are the practising lawyers—the men of whom I have just spoken, the men who counsel others in the wise conduct of their affairs, the men who defend and protect life, liberty, and property and thereby further the pursuit of happiness. Then there is the increasing number of law teachers, experiencing the happiness that their function brings. We do not in this country, as is true in continental Europe, train men explicitly to become judges. But lawyers do become judges by the thousands in this vast land with the deep satisfactions that the judicial office implies. Again, an increasing outlet for lawyers are the administrative agencies, in the forty-eight states and the nation, at a time when legislation and therefore administration have some say in the lives of men, from the cradle to the grave.

The extensive utilization of lawyers in governmental affairs is due not merely to the fact that we are predominantly a legal society, that our society moves within legal frameworks—the United States and the state constitutions. The reason, I believe, is deeper. Fundamentally it is the same reason that men of law often become the guiding heads of great enterprises and predominate in politics. The reason was thus put the other day in accounting for the fact that Great Britain selects for the chairmanship of governmental inquiries into perplexing problems the best exemplars of the legal profession:

> "This country, more perhaps than any other, is in the habit of using its eminent lawyers and judges in capacities seemingly far outside their profession, as chairman of Royal Commissions or similar bodies, for purposes not only of investigating facts, but of the weighing up of the state of argument in major political or economic controversies, and the preparation of long-term policy decisions.
>
> * * *
>
> "The reasons for such extra-mural appointments of judges are not only that judges can naturally be supposed to be 'judicial' in the sense of being impartial when faced with contending interests or arguments. It is rather that the legal profession at its highest level does, as probably no other, develop the absorptive and analytical capacities of the human mind." (The [London] Observer, Aug. 25, 1957, p. 5.)

I should deeply regret if the claims I have made for life in the law sound vainglorious or exclusionary. A far better insight than any words of mine can convey into the potentialities of a lawyer's life is to be gathered from the biography of those who have lived such a life and have revealed the relation of the legal profession to a life of deep satisfaction. I have in mind some such account of a career as that of Henry L. Stimson, as disclosed in Stimson and Bundy, *On Active Service*. But the most important thing for any generous and eager young spirit to remember is that any profession affords opportunities for a full life if pursued in the grand manner.

Federal Service Offers Variety

continued from page 34

The pay of the top executive in Government does not approximate the salary of the business executive who, in many cases, earns well over $25,000 a year. The top career grade in Government, GS-18, pays $16,000 a year. Government is not a place to get rich except in terms of the many satisfactions that come from serving 170 million fellow citizens. In the lower grades, however, salaries are more comparable to those paid by private industry for similar work.

Pay, training, and career development are only a part of the story. Throughout his career, or period of service if he does not seek a full career in Government, the employee is offered special recognition and cash awards for superior job performance and suggestions that will save time, money, materials, and employee resources. During 1957 fiscal year alone, more than 41,000 employees were individually recognized and honored for superior job performance and more than 86,000 employee suggestions were adopted. For their accomplishments, which resulted in multi-million dollar benefits to the Government, the contributing employees received personal recognition and over nine million dollars in cash awards. These figures reflect the employees' keen interest in providing better government at less cost.

The Federal civil service is a true career service now celebrating its 75th anniversary. A continuing supply of well-qualified employees is needed. The search for talent is focused primarily on young people such as you who are entering the labor market for the first time and have real potential for successful careers. Tomorrow's managers, high-level technicians, and professional leaders must be found today in those who have the potential to grow, develop, and aim beyond the horizon.

You would do well to become acquainted with the broad career opportunities in the Federal service. The Civil Service Commission and other agencies issue factual information on the subject. Your own college placement office can help you get further information and let you know of campus visits by Federal recruiters.

As a final word, let me quote an admonition of Paul M. Herzog, Associate Dean of the Harvard Graduate School of Business Administration:

"Unless a large number of educated, conscientious and dedicated men born since 1930 soon decide . . . to devote their lives to the public service, they will find those lives impaired, and perhaps destroyed, by the decisions of others, less well-equipped than they, who have seized the places of power that should—and could—be theirs . . ."

REWARDS IN MONEY AND PRESTIGE

continued from page 20

increased salary and prestige (by and large in American industry compensation is in proportion to contribution.) Since insurance is a big and growing business, there is always plenty of room at the top, and on the way up, for bright people who are willing to work.

My third contention—and the one which really distinguishes the life insurance business from some other important businesses—was that our industry performs a socially vital function for which there is no real substitute. We are concerned, not with the value of comfort or convenience or efficiency—we are concerned with the value of life. I do not mean to minimize the contribution to our high standard of living made by men who manufacture and market cars or refrigerators or television sets. Nor would I minimize their effectiveness—they are our biggest competitors. But no material possession on earth is worth more than the knowledge that, whatever unexpected contingency may arise, the really important things—food, a home, and education—will be taken care of. And few satisfactions in a job can match the feeling of having done something *really* worthwhile that comes with the realization that *you* have been instrumental in making that security possible for someone.

Because of the breadth and complexity of the insurance business, it is difficult to outline in a short article, in any detail, the varying kinds of jobs available. The list literally runs from "A" for actuary, agent, auditor or ad-man to "U" for underwriter or Univac. It includes doctors, lawyers, financiers, writers, experts in data processing, cost accounting, sales promotion. Jobs may be roughly divided into two classes —Field and Home office.

In the Field, we have agents, agency management people, investigators, and auditors. Particularly in the case of agents, the jobs provide considerable room for unusual individual initiative and virtually limitless opportunity both for doing good and for making money. The life of a successful life insurance agent is a rewarding one indeed.

At the Home Office, the work is done which makes it possible for the agent to have a service to sell. We write contracts and explanatory material, employing in the process underwriters, contract writers, lawyers, and advertisers. We collect money, invest it, and eventually pay it to policy owners and beneficiaries, requiring the skills of accountants, investors, actuaries, and claims experts. Recent developments in electronics have opened up a fascinating field for men with mathematical aptitudes who are interested in learning about the use and potential of electronic data processing equipment. New uses of life insurance have posed challenging problems to the field of actuarial science—another worthwhile consideration for mathematicians.

I hope that you do not find this wealth of variety discouraging. Many of you honestly do not know with any certainty what you would like to do or what you will do best. Joining a life insurance company may well be a constructive answer to your dilemma, because the breadth of its operation enables you to postpone the final choice until you have had some actual experience. In an insurance training program, you will have a chance to see whether you are really qualified to do data processing, or selling, or investment. Should you find your first choice was wrong you have an opportunity to try the second, and the experience, far from having been a waste, will serve to broaden your over-all understanding of the business.

Uncertainty about what you want is one of the problems; another is feeling that there is yet more to learn to be prepared to do any job. We could not hire you today and send you out with a rate book tomorrow, or give you a desk and say, "Go ahead and write a contract." But we ask no more than you already have— a broad education and a desire to learn. Here, as in many good businesses, you are about to get *paid* to learn.

I hope, as you consider the wealth of opportunities open to you in many wonderful businesses, you will look thoroughly into the life insurance industry.

COMMERCIAL AIRLINES

continued from page 19

With the growing competition on practically all routes, airlines will be fighting harder for business, and good job possibilities will certainly develop for young people who possess the ability to sell passenger and cargo space.

Traffic and sales personnel must demonstrate tactful and effective sales technique and good personalities. Usually, two years of college or at least two years of successful sales experience are required for applicants in this category. Specific training in English, public speaking, psychology and salesmanship are valuable. A knowledge of foreign countries is desirable for those interested in jobs relating to traffic activities outside the United States, such as foreign tours. Similar college or equivalent experience are required for traffic and sales managers and station agents or managers.

Other specialized fields offering good opportunities are public relations, personnel, statistical research and various professions. The latter include: architects, aeronautical research specialists, scientists, engineers, draftsmen, doctors, nurses, lawyers and instructors.

Many in this group require periods of intensive education and specialized training, with educational qualifications in the professional job categories the same as those required of professional people in other fields.

I have named only a few of the more interesting jobs offered by the commercial airlines. There are others, of course, and most offer good wages, working conditions and opportunities for advancement.

It is only fair to point out that, despite the current and expected growth of air travel, the total number of new jobs is relatively small compared to the number of applicants each year. This means that the best qualified and trained young men and women will be the ones chosen.

Full information on available jobs in the airline industry and how to apply for them may be obtained from the Air Transport Association of America, 1107 Sixteenth Street, Washington, D. C.

EFFECTIVE MINISTRY DEPENDS ON BASIC ATTITUDES

continued from page 49

His wife is as important as he is in the Ministry, and she should be fully prepared for criticism, fatigue, and heartbreak.

Should he become so consecrated to his cause that his convictions lead him to deny himself and live like Christ among the most despised of peoples the minister might even bring about his own martyrdom. The first advice then, to men contemplating the Ministry, is to stay out of it unless they are compelled by motivations bigger than themselves.

An effective ministry depends upon a few basic spiritual attitudes. Certainly no man can have all the talents and abilities that he may be called upon to exercise. Yet, if he seeks certain fundamental qualities he can do fine work and lead a constructive life.

1. He must desire to have a genuine love for all types of people and children. The candidate for the Ministry should first know his own heart and if people are not the basic interest he had best stay away from the ministry in pastoral capacity. He must love the unlovable as much as possible and try to forgive his enemies readily. Too many men have been intellectually capable but humanly intolerant with the result that they become unhappy and cynical.

2. He must be a man of prayer if he is to learn to love his enemies. He must believe that the grace of God is sufficient for every crisis and that it is obtainable through worship and Sacrament. Otherwise he may be unable to meet many of the demands that are made upon him, regardless of his intellectual achievments.

3. He must seek to be teachable and above all to want to know the whole truth about himself, unpleasant and otherwise. Again, this takes grace, for by man's own will he is quite incapable of deep self examination and continuous criticism.

4. He ought to be able to communicate in language that people can understand. He must study to translate theological jargon into the experience of the people. What has impressed me most in private conversation with Paul Tillich is his simplicity of expression. I was afraid to talk with him at first, lest I should seem too stupid, but he was so humble that he made me feel so at ease. His very attitude communicated what he was and is, as much as did his words. He communicated in both media, word and deed, which is the essence of effective message delivery.

5. The Minister must decide whether he is in the Church to please God or man. Of course he does not fully achieve his decision on this earth but at least he can decide to slant his life in God's direction: this will save him untold worries, fears and bad compromises. If his life's emphasis is on the side of being a "man-pleaser" he will suffer accordingly. Yet, in seeking to do the Will of God he must seek Wisdom and develop the spiritual art of timing, knowing when and where not to speak, act, and admonish.

Finally, the Ministry brings joys and satisfactions that can hardly be compared with anything I know. The privilege of entering into people's secret joys and sorrow of helping them to be freed from guilt, of teaching them the security that comes only from knowing God and of fighting a righteous cause for the persecuted defies all other types of reward. That is not our motive for entering into the Ministry but he cannot deny it as an automatic byproduct. The sacrifices are so amazingly compensated that the calling almost becomes selfish by comparison—providing the goals are kept clear.

POPULATION INCREASE NECESSITATES MORE DOCTORS

continued from page 43

eventually to embrace. Some decide while they are in medical school; some during internship; others, during a period of general practice and still others, during postgraduate education. The time when the final decision is reached is not the important point. It is more important that eventually a final and happy decision be made, because no one can do his best work in an occupation which does not satisfy the spirit. The great number of callings in the medical, surgical, educational, and research spectra of this great profession are almost limitless; the opportunities for service to mankind are unbounded.

Anyone who thinks that nearly all contributions to medicine have already been made, or who regards the practice of medicine as more or less routine, or who believes that vital problems are few and far between, should take the time to follow the daily practice of an active physician. Any physician known to you or your family will be more than happy to show you the truth of these words. Actually, we still know much less than we should, and surely much less than we will know, but assured progress will be dependent on a constant stream of younger, better-trained physicians following more capably in our paths.

It is folly to generalize about what makes one select any given career. Yet the thought does occur: what a horrible state of affairs it would be if all persons selected the same career, and so we have to be thankful for whatever motivating influence does exist. Certainly, a man does not simply drift into a career in medicine. I am sure that heredity is a minor factor; what the youth sees, hears, reads and observes must be dominant influences.

I have yet to hear a doctor of medicine express regret that he chose medicine as a career. But I have many times heard, directly and indirectly, persons in other fields express the wish that they had entered medicine.

To those who, for whatever reason, choose or have chosen medicine as a career, my congratulations. May true success follow you all your days. Our population is ever-increasing, and there is a mighty need for you. Do not be discouraged. What a man wills, he can do, and any of our recognized medical schools have more to offer than was ever before placed before the young man about to choose a career.

CHEMISTRY PROMISES DIVERSITY OF ASSIGNMENTS

continued from page 9

What is the nature of the work? Chemists and chemical engineers are a team within the profession. Chemists ordinarily work in laboratories with relatively small quantities of material and chemical engineers specialize in industrial scale processes. Those who receive advanced degrees specialize in some area within the field such as organic or nuclear chemistry.

A chemist or chemical engineer may be employed in research, development, analysis, testing, teaching, production, management, sales, technical service, and various other assignments. As a matter of fact, one of the strong talking points about a career in the chemical profession is the diversity of assignments open to those who are interested.

What about income? It is important to remember that most members of this profession will be salaried employees. There are a few, but relatively few opportunities for self employment. The income of chemists and chemical engineers has always compared favorably with other salaried groups. The table below gives the median starting salaries in the spring of 1957 for chemists and chemical engineers with various amounts of training. Because of the preponderance of industrial employees in this sample, the figures represent mainly salaries paid by industrial firms. Government paid somewhat lower salaries and educational institutions still lower.

Starting Salaries,
Dollars per month

	Chemists	Chemical Engineers
B.S. Graduates	435	460
M.S. Graduates	485	525
Ph.D. Graduates	650	675

Salary increases generally are about $15 to $25 per month for each year of service. These raises are not automatic and do not continue indefinitely. They usually continue for two or three years; thereafter great differences occur because of variations in individual abilities.

What about advancement prospects? Since chemistry is such a growing profession and because of the variety of opportunities available, advancement prospects are generally good. It is, of course, unrealistic to assume that everyone in the chemical profession advances as rapidly as he or she would like. As in any other field, differences in ability account for differences in rate of advancement. Furthermore, because of the changing nature of chemistry, it is necessary to keep abreast of recent changes. Those who fail to do so usually find themselves left behind when advancements are assigned.

What are the demands for chemists and chemical engineers? There always has been a good demand for well qualified chemists and chemical engineers. During the past few years the demand has been unusually high. While it is difficult to determine whether it will remain at a level comparable with the past couple of years, there are good reasons to believe the chemical industry will continue to grow at a rapid rate and that the demand for qualified people will continue high.

The sound growth of the chemical industry and the profession during the twentieth century and the prospects for a still greater growth in the future indicate that the demand for chemists and chemical engineers will remain at a high level. Those who wish to enter the field should prepare for it carefully because the best trained and most adaptable persons will be most satisfied and will be the leaders within the profession during the next generation.

PACKAGING

continued from page 37

out expert help, or too expensive to buy as separate items. They reach her in such form that they need a minimum of processing on her part. Often they don't even need cooking.

Of course, everything I have said about the housewife applies also to working girls, men with hobbies, or boys building model boats. Almost everyone now has more time and more money and consequently more things he wants to do. Modern packaging has made it easier for them to meet their needs and indulge their interests, using the same methods it has put to work for the housewife.

The same factors—high-income and full employment — have also been directly connected with the development of the supermarket and the related forms of convenience and efficient selling. Full employment has compelled retail stores to seek solutions to the problem of securing qualified help. The supermarket for example has been a partial solution — very few people are involved. However, they couldn't be successful without modern packaging.

The self-service operation would fail unless the goods it sells are packaged to satisfy at least three requirements. First, they must be easy to handle and put on the shelves and they must be designed to fit the shelves without wasted space—since space is at a premium. Second, the goods must be packaged in sizes and forms that the purchaser can use as they are offered. Weighing and measuring on the scene would defeat the whole purpose. And, third, specific packages must sell themselves, because there is no one around to do the job.

The third factor in the packaging industry's growth has been its own development of new and more useful forms of packaging. Recognizing the willingness of the consumer to spend extra pennies for built-in services and conveniences, both makers and users of packaging have taxed their ingenuity to develop completely new packages, and packaging techniques.

Of course, today's college men and women are more interested in what lies ahead than in past accomplishments. Has the packaging industry "arrived," and will it stop growing? My answer is that the prospects of future growth are greater now than ever. We're standing on the thresholds of such exciting new fields as radiation preservation of foods, extrusion of aluminum containers in many sizes and forms, and packaging products that never before have been packaged. Some of these products haven't even been conceived—but we in the packaging industry know they're on their way.

continued from preceding page

My company, like other progressive companies in this new packaging field, is in need of technically qualified men and women who have the vision and foresight necessary to develop and produce the new packages of the future which will maintain our position of leadership in this expanding industry.

WALL STREET

continued from page 45

Street worth your while. Even a modest patrimony or small savings can be built up handsomely through intelligent investment, and we believe your judgment will be much improved if you occasionally taste the medicine you prescribe for others.

Naturally you will want to have some idea of the salaries for various jobs. The current starting salary for a trainee who is a business school graduate is about $5,200 or $6,000 annually. This may be less than is offered by some businesses, but is more than offset by the chances for rapid advancement and the opportunities to augment it. Junior analysts make between $6,000 and $8,000 a year, senior analysts, administrative assistants and executives earn up to $25,000. This does not include bonuses, which in good times are substantial, or the rewards for special initiative and creative ability. It is also the usual practice in Wall Street to allow employees to share in the profits which they produce, whether in security sales, underwriting, or special ventures. Finally there are the prerequisites, if also the added responsibilities, of a partnership —but this is a few years away.

A career in Wall Street is one of the few which, within the framework of the most up-to-date features of the peoples' capitalism, offers ample reward for outstanding individual performance. The rate of promotion and the extra remuneration which comes from individual effort and contribution follows no standard pattern. Individual progress is not hemmed in by any fixed scale, nor is it subject to an arbitrary ceiling.

EDUCATION

continued from page 5

portant non-pecuniary rewards of academic life. If one is to find the life congenial and deeply satisfying, he must have a pervading sense of dedication and must be motivated by a keen awareness of the manifold ways in which higher education contributes to individual and social welfare.

Most young people contemplating a life devoted to higher education think primarily of creative scholarship and teaching, and it is well that this is so, for in those two areas the threatened shortage of talent is most crucial.

In a university, the three interdependent functions of research, graduate guidance and teachings, and undergraduate instruction, are paramount. All other specializations exist to serve these three, for it is the university's purpose to preserve, create, and impart knowledge in a continuous process.

The creative scholar contributes mightly to this purpose. By systematic exploration, he helps constantly to push back the dark walls of ignorance. He is imbued with an insatiable hunger for truth. He has a profound love of learning. Early in the history of the true university in this country, it was realized that the first task of a community of scholars is to advance knowledge. "Investigation," said Daniel Coit Gilman, "is the duty of every leading professor." Nicholas Murray Butler emphasized this later when he said that universities were "brought into being primarily to satisfy . . . . the restless search of the human spirit for truth."

Most of our distinguished research scholars, knowing the thrill and value of learning, also benefit from association with promising young graduate students who are exploring the higher realms of learning. They find real joy in helping fertile young minds expose themselves to the dis-

EDUCATION

continued from preceding page

cipline of creative study—to what Whitehead called "intellectual adventure."

Gilman extolled the scholar-teacher: The best teachers, he said, are those who are willing to make original researches in the library and the best investigators are those who also engage in instruction, and are thus not only stimulated by their colleagues but encouraged by the curiosity of their students.

The undergraduate teacher, too, must have an unswerving love of learning. He must also have something more: a sincere enthusiasm for helping less mature minds seek knowledge and wisdom. It was a distinguished Harvard professor, the late George Herbert Palmer who, in discussing the ideal teacher, wrote: "A teacher does not live for himself but for his pupil and for the truth which he imparts."

Professor Palmer set interesting standards for teachers. A teacher must have first, he said, an aptitude for vicariousness; second, an already accumulated wealth of intellect, personal power and wisdom; third, an ability to invigorate life through knowledge; and fourth, a readiness to be forgotten. We may permit Professor Palmer some poetic license in his thought, but I am sure he did not intend to be whimsical, for he went on to say that "having these, any teacher is secure; lacking them, lacking even one, he is liable to serious failure."

Certainly we can all agree with his view that teaching is a high and serious calling. And there indeed must be for the undergraduate teacher a sense of dedication which transends more material desires. He, more than others, must be aware of the fact, mentioned by the founder of the university where I serve, that: "The object of a university is to develop character . . . for it misses its aim if it produces learned pedants or simple artisans or cunning sophists. Its purpose is to . . . whet the appetite, exhibit methods, develop powers, strengthen judgment and . . . invigorate the intellectual and moral forces."

The true teacher finds deep satisfaction and real adventure in performing this important task.

Obviously, whether you prefer creative scholarship or teaching or, ideally, both, you must be a person possessing depth and breadth ot knowledge and true wisdom. You must have an educated mind, which, to my way of thinking is one that is able to reason critically, objectively and creatively within a framework of moral commitment. This is the essence of education.

It is impossible for me to be more specific than I have been, for each individual will find his own desires and talents coming into play as he seeks to make a decision about a career. I can only say that in higher education, for me, the work is hard, but completely satisfying. More than that, one cannot ask from a career.

POLITICS OFFERS SATISFACTION OF FIGHTING FOR IDEALS

continued from page 33

ever, too many of our politicans act and vote on the basis of government by Western Union and Gallup Poll. Too many of them sit in municipal, state, and national legislative bodies representing not the public interest primarily, but the interests of selfish pressure groups, powerful enough to determine to a great degree—so at least too many of these politicians think—the results of the next election.

Let me enter a word of warning. Do not, I beg of you, if you decide to seek public office, be afraid of defeat. Never let the thought that your re-election is more important than the public interest color your judgment. If you do, you will cease to be a true representative. It is this type of representation in public office, that weakens the ethical standards of government because it constitutes placing politics above principle. There is no virtue in political expediency, and intellectual honesty can never constitute a handicap to you.

When I first ran for the Senate in 1944, we started a political experiment in keeping with the principles of political science which I not only studied as a law student, but tried to put into application in my teaching of law. Thus, I said to the voters of my State in 1944, and I repeated in 1950 and 1956: "Do not vote for me for the Senate unless you want to send me to the Senate a free man."

By a free man, I mean free to exercise an honest independence of judgment on the merits of issues. Also, I said to them in that first campaign: "Remember if you elect me to the Senate from Oregon, I want to sit there not as a Senator from Oregon for Oregon, but I want to sit there in keeping with the true meaning of representation in the Senate of the United States intended by the writers of the Constitution, namely, I want to sit there as a Senator from Oregon for the Nation. I want to be free to put into practice the sound principle of political science that one best represents the people of a State when he places the national interest first."

By the same token, if you want to enter the great arena of politics as a contestant, and there is no more important field of service to which you can dedicate yourself, no other arena in which you as an individual can have a greater impact for good or evil, then I urge that you go in as a free man and do the best that lies within your powers. It is not an easy life. Among the high professions it takes perhaps more in energy and time than any other, but the benefits are rewarding—benefits that are not money and the things that money can buy, but the true rewards of an easy conscience, and the satisfactions of having fought and fought effectively for the ideals you hold to be right.

You will have walked with great men in history and you will be conscious of their unseen presence in debate. You will weigh your words against the standards that have been set over the centuries from Pericles through Cato to Hampden, Burke and Webster. Lincoln and Churchill were legislators—men who molded the history of their times. Should you come into the arena you also can fight the good fight and at the conclusion look back upon a full and fascinating life.

U.S. Government Employs Most Geologists

continued from page 11

that there are more than 25,000 geological scientists.

Let us take a geologist apart to see what makes him tick—To understand geological problems, he must be thoroughly schooled in the basic sciences and mathematics, for geology is the application of chemistry, physics, biology and engineering principles to the study of the earth. He has probably gone on to obtain a masters or a Ph.D. degree in geology or geophysics, for nearly half of all geologists hold advanced degrees and the trend continues upward. He could be a graduate of one or more of more than 200 colleges and universities granting degrees in geology.

Assuming that our geologist has these academic prerequisites, what are other traits and capabilities which contribute to his career? Geology is primarily an out-of-doors science, so the geologist should have a love for nature. It is a science of observation, so he must be an alert and accurate observer. Geologic thinking must continually project beneath the surface of the earth and millions of years into the geologic past in dealing with problems of the science. In this connection, the geologist has been viewed as a scientific Sherlock Homes who fits the often tenuous clues of geologic evidence together in order to solve his geologic problems.

There are many specialized areas in the geological sciences, and most geologists, rather than being specialists in a limited area, draw on interrelated knowledge of a number of geologic subjects such as structural geology, stratigraphy, sedimentation, petrography, and others. Statistics indicate that over 60 per cent of all geologists are engaged in exploration for petroleum and another ten per cent are employed by the mineral industries. There are relatively few engineering geologists, but there is a growing recognition of the importance of geology in various engineering fields.

The largest single employer of geologists is the U.S. Geological Survey. State and federal government agencies employ about 20 per cent of all geologists, while about 10 per cent are engaged in teaching and research in our colleges and universities.

The geological scientist is a man of the world. His work may take him to far corners of the earth, where he must adapt readily to strange surroundings, customs and people. It is not uncommon that one week he may be in the field sharing humbly the meagre bill of fare of a poor, isolated native family and the next week be equally at home in top executive offices as he reports to management on his geologic investigations. The geologist with good scientific background and capabilities, the appreciation of the investment dollar, and a certain taste for travel and adventure will find before him a fascinating world of unique opportunities.

A large number of geologists and exploration geophysicists are engaged in exploration for petroleum and minerals to meet the needs of our industrial economy. These resources are vital to industry, so it is not surprising that there are many geologists and geophysicists in the top executive ranks of industry. There are geologist-presidents of about ten major U.S. oil companies and geologist-vice presidents of oil and mining companies too numerous to mention.

Salaries of the geological profession rank near the top among all scientific disciplines. And, as one might expect, geologists who attain top positions in industry are paid commensurate with the high responsibilities of their work. Geologists and exploration geophysicists outrank all other scientic groups in the $25,000 and over salary bracket. Starting salaries for raw recruits are in line with average salaries prevailing in the sciences. The 1957 graduating senior entered the petroleum industry at an average salary of $442 per month. The entering salary for the inexperienced 1957 Master's graduate averaged $483 per month and the Ph.D. $612 per month.

As our population grows and the raw material demands of our great industrial economy continue to mount, the need for geologists may be expected to rise. The geological sciences will afford career opportunities in basic research and applied science. The American Geological Institute, 2101 Constitution Avenue, N. W., Washington 25, D.C., can supply additional information upon request concerning careers in the geological sciences.

Yes, we want engineers,

BUT

. . . we don't want just any engineer. We want engineers with ideas, engineers with drive, engineers who can stick with a job and work with other people to get it done. Scientists, business and liberal arts graduates, too.

Union Carbide has a marvelous potential. It's a top producer of many things, from petrochemicals to titanium, from molecular sieves to flashlight batteries. Its sales have soared from a half a billion in '47 to one and a third billion in '56.

And we plan to keep on growing. That's where you come in.

We need creative people. We spend a good portion of sales profit on research, but it takes creative people to make research effective.

We need people with initiative. They are the key to opening up new markets and to get production rolling. We introduce new products at the rate of two a month, and the rate is accelerating.

Representatives of Divisions of Union Carbide Corporation, listed below, will be interviewing on many campuses. Check your placement director, or write to the Division representative. For general information, write to V. O. Davis, 30 East 42nd Street, New York 17, New York.

BAKELITE COMPANY Plastics, including polyethylene, epoxy, fluorothene, vinyl, phenolic, and polystyrene. J. C. Older, River Road, Bound Brook, N. J.

Levy, Rev. Wm T.

February 10, 1958

Dear Sir:

Thank you for your very nice letter of January 24th.

Your idea for a television program may, perhaps, have merit, but I am sorry to have to tell you that I have no authority or control over any programs other than my own.

If you care to pursue this further, I suggest you write a letter to Mr. Irving Gitlin, Director of Public Affairs' programs.

Thank you again for taking the time to bring it to my attention.

Sincerely yours,

The Reverend William
Turner Levy
3103 Fairfield Avenue
New York 63, New York

24.i.58

My dear Mr Murrow:

Ever since your brilliant attack on the late Senator McCarthy I have — myself having valliantly essayed the same from the pulpit — had a sense of personal indebtedness to you.

I am 35 years old, an Episcopal priest (All Angels' Church) and an instructor in English (The City College). My first book, on William Barnes, the Dorset poet, is to be published in England this year, and I am working on a book on F.D.R. as churchman. I write monthly for The Churchman, etc.

Watching Person to Person last week I got the idea that perhaps a more interesting and vital and — oddly enough — more important and popular show could be done by selecting "unknown" persons! It might be a second show, or you might alternate from week to week, or have one known person, one unknown each week.

My reason for saying this is that you have, I believe, judging from my friends and colleagues, lost the eggheads. Of course, numerically, that is no loss! But I think you may feel otherwise.

The truth as I see it is that many persons I know are far more exciting to talk with than the guests you have. My students, for example, have long maintained that a visit to our apartment (with its collection of F.D.R.'s miniature books, etc.) is far more interesting than seeing the Windsors play jacks! Among my own acquaintance: Frederick Mortimer Clapp, Padraic Colum, James Johnson Sweeney, Guy Emery Shipler, and several teachers, clergymen, and even students, would have something perceptive or biting or important to say about either their work or America as they see it. You need persons with less at stake, with both ideas and the courage to express them. That cross-section of our people would be exciting and accurate and reveal the strength still operative in our society; your present approach gives us what we already know, and it generally is bland and therefore — in 1958 — depressing.

Because of my dear friend Mrs Roosevelt's high regard for you I have taken the liberty of writing a frank letter. If it has no value, please ignore it. If it has merit, I'd be glad to talk it over with you.

With real thanks, sir, for all you do,

Faithfully yours,

William Turner Levy

It occurs to me 1.) that many persons who do not tune in when the name listed has no interest for them, might do so if every program contained its element of originality 2.) viewers might well feel sympathetic toward the 'unknown' — thus gaining for you some of the advantages of Matt type of appeal.

Levy, U.

ACCOLADE TO OAK OF AGES

By Undine Levy

Thus spoke yon oak,
To our delight, as a bright zoetrope:
Live thy life, young and old,
Earth-rooted, crown-fruited, manifold."

The oak that lifts spires of inspiration
Is now a CHAMPION OF THE NATION,
Thriving- thrilling the watchers of space,
This old oak wins with vim his race.-

A dash from "Dark-Age" to "Sun-Embark" stage.
After centuries of turning leaves, a new page-
Today he stands, best serving, awaiting
Incorporation in the "City of Good Abode", anticipating -

Anti-dating Memphis, this pilgrim tree,
A new wide street, complete, does he foresee.
"To thee, Fair tree, strong, full of song and shade,
We, Memphians, tender thanks and offer accolade."

I wrote this poem and dedicated to The President. Sent him, got a letter from the White House, so his birthday brought me joy also.

ACCOLADE TO OAK OF AGES

By Nadine Levy

Thus spoke you oak,
To our delight, as a bright aestrope:
Live thy life, young and old,
Earth-rooted, crown-fruited, manifold."

The oak that lifts spires of inspiration
Is now a CHAMPION OF THE NATION,
Thriving- thrilling the watchers of space,
This old oak wins with vim his race.-

A dash from "Dark-Age" to "Sun-bmbark" stage.
After centuries of turning leaves, a new page-
Today he stands, best serving, awaiting
Incorporation in the "City of Good Abode", anticipating -

Anti-dating Memphis, this pilgrim tree,
A new wide street, complete, does he foresee.
"To thee, Fair tree, strong, full of song and shade,
We, Memphians, tender thanks and offer accolade."

Insert this poem and dedicate it
to the President. Start from out
a tree from the Jackson Purchase to his
birthday through the Jay color.

Merry Christmas

and a

Happy New Year

—Photo by Tom Anderson, Collierville.

This age-mellowed building is the "Old Anderson Home" at Dumas, Miss. It was built shortly after the War Between the States.

Full lives, upon the rim of distant years,
Graced this old house, and loved familiar fields
From spring to harvest, with its well-won yields;
Knew family tales soft-footed Time endears.

And when bone-hungry winter winds awoke and gnawed
At frost-rimed rafters, all the kissing-kin
Drew close around the blessed fire within
Or dressed the tree and hung the Christmas gaud.

All seasons knew that close-drawn priceless love
That walks with duty, well and ably done,
That rests with homefolk with the setting sun,
Does not forget to honor Him above.

Cement that makes a well-loved Nation stand,
Staunch in its bastions, came from homes like these.
Here grew a people noble as their trees,
Their souls forever bonded to their land.

CHAIRMAN OF THE BOARD

April 21, 1958

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, N. Y.

Dear Mr. Murrow:

I was very delighted to have your letter of April 10 following your reading of my speech on the subject of the advertising man.

I am endeavoring to set up a meeting to cover the subject with a few people like Rosser Reeves, Chairman of the Board at Ted Bates & Company; and Rolland W. Taylor, President of Foote Cone & Belding, and perhaps a few other advertising agency principals who expressed interest in organizing a better public relations job for the advertising man.

If any new ideas flow from this meeting that could interest you in any way, I would like the privilege of bringing them to your attention.

Sincerely,

Al Lewin

AWL:hf

April 10, 1958

Dear Mr. Lewin:

I found your speech most interesting. It may be that we will one day be trying our hand at a piece on the whole subject of advertising.

The SEE IT NOW schedule is committed for the remainder of this season, so we will have to put off active consideration of it until the summer.

Thank you again for sending me your stimulating speech.

Sincerely,

Mr. A.W. Lewin

A. W. LEWIN
CHAIRMAN OF THE BOARD

April 4, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, N. Y.

Dear Mr. Murrow:

I hope you will have an opportunity to read this speech which I gave to the Kiwanis Club of New York a few weeks ago. It stirred up quite a bit of interest. Whether you saw the editorial comments on it or not, I can't say.

My purpose in sending this reprint to you, however, is to point out that in this speech I mentioned your name, and, I hope, without too much presumption. I am quite serious about this proposal, and if you feel that you would like to pursue this approach, I think there are very many of us in the advertising agency business who would be deeply grateful to you for the illumination which you can bring to a subject.

I will be meeting with Mr. Rolland Taylor, President of Foote, Cone & Belding, and several other principals in an endeavor to establish a committee, and at the present time some ideas are beginning to focus, at least in my own mind.

If I can be of any further service to you, I would be most happy.

Sincerely,

AWLewin

WHO IS THE MAN IN THE GRAY FLANNEL SUIT?

A Speech Given by
A. W. Lewin, *Chairman of the Board*
LEWIN, WILLIAMS & SAYLOR
To
The Kiwanis Club of
New York City, Inc.

GENTLEMEN, I AM DELIGHTED to be here. I am an old friend of Kiwanis, both here and throughout New Jersey, and to continue this acquaintanceship is indeed a pleasure.

I think I should warn you at once, however, that I am going to speak English today, as opposed to the jargon which advertising men reputedly use.

I hope I won't disappoint you if I do not use such phrases as "Let's run it up the flag pole and see who salutes", or "Let's bait it and see what we catch", or "Let's toss the sponge out the window and see if it gathers humidity". Frankly, gentlemen, the only time I have ever heard these remarks is in fictional stories or in news columns, and never at meetings of advertising men—but perhaps I don't get around enough.

Columnists say we advertising men talk gobbledegook, novelists say we talk in words of burning passion, while the movies film us as wolves in gray flannel suits.

Well, let's see what this is all about.

On the 5:25 to Westport one day last week, I sat down with three advertising men I know. Conversation was brief, and before the train was out of Grand Central, everyone of us had his briefcase open and was hard at work. I glanced up once and found my three friends shared an air of studious concentration. Widespread opinion would have had us six cars ahead in the bar car, tossing down the bourbon, comparing our neuroses and the little blonde we met the week before in Chicago.

But no, my companions, mature, seasoned professionals, were working on such mundane business problems as drafting a market research report on a new machine tool, and studying a confidential analysis of the pulling power of test ads for a new $2,000,000 campaign, and another was working on a client's advertising budget for next year, seeking ways to insure that the client will get the best results of his invested dollar.

Hardly the popular image of the Madison Avenue type. Hard-working instead of hard-drinking, they were dealing with decisions and problems affecting the future of some of the biggest business firms in the nation.

And they are all family men returning to wives and children, homes with faucets needing attention and TV sets requiring repair. They are, as Mary Martin sang in "South Pacific", "normal as blueberry pie."

Few businesses suffer from so many misconceptions. It almost seems as though advertising sells everything but itself. Advertising over the years has done great community and civic service. It has helped encourage saving; it has helped to make our country insurance-minded; it has immeasurably bettered our housing and health standards; it has made us a better-read nation. And at the same time, of course, it has contributed to better products through the competition of brand names and brand advertising.

As an advertising man for 30 years, I believe I know something about research. So I took the first step to find out who is the man in the gray flannel suit.

I wanted to check the observations I've personally made in the past three decades.

I was interested primarily in the adman as a human being, not in statistics about his spending habits, cars owned, number of radios in the house, and so forth. I wanted to fill in the personal details of a profile to make the picture clear and completely true to life.

What did I find? By and large, this study produced a picture of a man with extraordinary diversity of experience and talents. We found experts in everything from art to atoms, men who have written books, sailed ships across the ocean, managed factories—yes, men like McElroy, who now heads our vital Defense Department.

The advertising executive serves the PTA, the Boy Scout Council and the Community Chest Campaign Committee. He is a member of Kiwanis, Rotary and the Lions. In short, he is a joiner.

To give a few among hundreds of examples—our survey showed the advertising man is qualified in department store merchandising, industrial design, automobile styling, public relations, stockholder relations, banking, packaging, investment counseling, food display, electronics, plastics, utilities, all types of research. We found men who are expert at running a furniture manufacturing company, a savings and loan association, a mail order house . . . men who have recruited and trained a large staff of salespeople, who have been personnel directors, who have been professional management consultants.

In addition, the survey turned up other advertising men who were skilled in promoting the use of

electric power, the sale of frozen foods, industrial supplies, metal alloys, shoes, office equipment, electronic instruments, synthetic yarn, plumbing, printing, photography. There were still others who were virtuosos at mass selling of proprietary drugs, cigarettes, apparel, jewelry, home furnishings, home appliances, garden supplies, liquor, soft drinks, cosmetics, musical instruments, paint, silverware, sporting goods, toys, airplane equipment, farm equipment, fertilizer, automobile parts, dairy products—the list is almost endless.

What impressed me just as much was the huge sum of money these executives of advertising have managed in behalf of their clients. I thought I knew this business, but I was honestly astonished. When I looked over the reports from these men, I thought: These aren't advertising men; they're investment bankers.

For in cold fact, many of them manage more money for clients than the average investment man. Here's one man, in the advertising agency business 28 years, who has kept a careful record of the spending he's supervised and it comes to $141,500,000. All invested for his clients, and the position he holds today is proof that he invested wisely.

Here's another, a younger man who has specialized in proprietary drug accounts during his 16 years in the business, and he has been responsible for some $100,000,000. The figures run anywhere from $5 million, for the young men coming up, to almost $200 million for those who have been in long enough to remember the advertising business in the twenties.

We've come a long way since those days, and the facts shown by the Lewin, Williams & Saylor survey prove it. In the twenties, some of you may remember, an agency man did little more than write copy and place it in some publication. But today, this advertising man is an all-around management consultant. He is highly skilled in sales promotion, in direct mail promotion, in merchandising, in marketing research, in marketing strategy, in media, in public relations, in diversification—in the whole broad range of mass salesmanship. The survey points up what we've long suspected: that the advertising executive has become a diagnostician and ranking problem-solver for business and industry.

And frankly, we are pleased with this role. We are flattered that the client brings us his latest problems of personnel policies, community relations, diversification plans, and so on—along with his bedrock problems of sales and merchandising. And there's a good reason for this. It's experience—

people with experience. Any good agency in this country is brimming over with experience. These men sell a product because they've been selling products all their lives. They are experts on merchandising because they've been working at it and working at it.

Among the advertising people we questioned was a man who had been an executive in one of the nation's biggest department stores. His specialty is, sensibly, products sold in department stores. Another was a magazine publisher, another a chain store marketing executive.

But whether he's ever run a business before or not, the survey shows that the advertising man is fully capable of handling the responsibility now.

We asked them to list the business in which they felt, with a little boning up, they could take over the top executive position. All but one named at least one top job he could handle. The background of each of them is solid evidence they could succeed. When you learn how to advise a corporation president on how to invest his money to make his business bigger and better, then you have gone a long way toward knowing how to run his business.

Let's stand back for a moment now and look at what we have sketched, so far, of our advertising executive's portrait. He looks like a solid, respectable citizen. Responsibility has given him something of a grave and studious look. Maturity shows in his face. If there is a suggestion of inner tension, it comes from concern about the success of the client he serves. Remember, most of his working hours are devoted to helping his client.

Suppose we sketch some of the personal details into our picture. It may come as a surprise to you that the advertising man is often a teacher and a student. Almost half of them have taken university courses in marketing, advertising, public relations, personnel management, and the like since they left college. Some have taken part in seminars on such diverse subjects as nuclear energy, psychology and economics. And the majority of advertising executives in our survey have done some post-graduate teaching. They have lectured at Rutgers, Columbia, City College, the Wharton School, N. Y. U., Radcliffe, George Washington and at other universities. They are, moreover, constantly speaking to civic groups, trade associations and business meetings. In this connection, ADVERTISING AGE recently carried a story by a friend of mine, Harry E. Foster, which showed that in Canada there is only one advertising man per 4200 of that country's population. But advertising people are 1 in 10 on the

active committees of Canada's biggest charitable organizations. I believe the percentage is even greater here in the United States.

Don't get me wrong: I'm not for a moment trying to picture the advertising man as without faults. Like every other business, we have our share of those who don't measure up. And, as in any other business, those who don't measure up get the notoriety. Advertising men, despite the lampooning and lambasting they take, are proud of their profession. Proof of this is the fact that every single executive in our poll would be happy to have his children go into advertising, if that proved to be their bent. Some were eloquent about what their profession means in economic and social worth. One told us: "Advertising is an absolutely essential part of mass selling, which is in turn the vital element that makes mass production possible—and without the low costs made possible by mass production, our entire standard of living would be impossible."

The more I find out about my colleagues in advertising, the more highly I regard them—and the more fed up I get when I hear them called hucksters. But I didn't come here to stand in front of a wailing wall for my allotted time and then depart —there's been enough of that already. No, I have a positive, constructive suggestion to make to my colleagues in the advertising agency business. Action is called for. I therefore propose the formation of a volunteer steering committee, composed of all interested advertising men in New York or elsewhere. This committee would be charged with these specific duties: First, it should map out a plan of action—a precise goal of what we think could be accomplished; 2) it should pledge among its members and among other firms a campaign chest to carry on this campaign thousands and thousands of dollars in services. I see this committee as a catalyst only, for I would hope that it wouldn't need to work longer than two or three months. Others would then carry on the job. But I think we owe a responsibility, not only to ourselves, but to our profession, to stir ourselves and take action now.

We advertising men should invite the public in to look at us. Two years ago, before Hollywood made the movie, "A Face in the Crowd", Budd Schulberg and Elia Kazan did spend a great deal of time in several agencies here in the city. But they were disappointed. They told Sigurd Larmon, president of Young & Rubicam, that in all their lunches they hadn't met a single three-martini man. The conferences they sat in on were interesting, but nobody pulled any crazy stunts or said "let's football

it." The moviemakers' biggest complaint was that the advertising people were too serious, too business-like. I say let's welcome others into our offices, let them see how we work and what we do. Let's persuade someone like Edward R. Murrow to do a TV documentary on the advertising industry. The advertising profession should bury, once and for all, the hard-drinking cynic in the gray flannel suit. We should make certain the public knows the truth about us.

I say to my colleagues that advertising must tell its own story! Advertising must improve its own public relations. There was a time when we looked on public relations as a stepchild. But now it's our ally, and I think we ought to ask our PR allies to come to our aid. Together, we should build this new image of the American advertising man.

The advertising man is, above all else, responsible. The sheer burden of the money he is called on to manage makes him responsible. His constant worries about a client's success or failure make him so. He proves his responsibility by the extra hours he spends on that train with the briefcase—finding out everything there is to know about his client's sales and merchandising. He proves it by going far beyond the call of contract clauses to help industry grow and prosper.

You hear a lot of talk nowadays about "The Hidden Persuader." I don't want to be a hidden persuader; I want to be an open persuader on the merits of the advertising man. He is performing a service for every citizen of this country. The fact that this has been said often does not make it any less true.

Our higher standard of living is measured by more than modern conveniences—it means healthier children, more leisure for adults, longer lives for us all. It means better homes, more jobs; it means prosperity and progress.

Let me leave you with this thought:

Life itself is a process of constant communication. Without communication we die, we are meaningless. Advertising has done more than improve the communication between seller and buyer; we have, in our totality of effort, helped every American to better understand his neighbor.

Because of advertising the neighbors who live in Canton or Peoria or Westport have more understanding, one for the other.

It pays to advertise. We should learn our own lesson. And I hope that my talk here today may be the start of a chain reaction to help us, in our business, to better communicate ourselves to you.

Dear Ed:

I have been on pretty much of a merry-go-round since my Person to Person appearance, which my family and I enjoyed tremendously.

I do want to remind you of your very generous offer to help us with the Muscular Dystrophy telethon which takes place in New York City on November 29th and 30th. A personal appearance by you, I am sure, will prove to be important.

Ernest Glucksman, my producer, will contact Jesse Zousmer within the next two or three weeks just to double check. By the way, I was just kidding when I asked if you would dance on the show...I really expect you to juggle.

With warmest personal regards, I am

Sincerely,

Jerry Lewis

March 23, 1959

Dear Judge:

Thanks for yours of March 4.

I hope to spend some time traveling in the South during my year off, and I am determined to spend the time "receiving rather than transmitting". And in any event, I will be somewhere in the Middle East or in India during November of 1959.

Would you please say my thanks to the Virginia Women's Forum.

At some point, when I don't know, I want to spend three or four weeks just driving around the South, listening and talking to people who are wise and tolerant. Would there be any chance at all of your joining me for at least part of the time?

As ever yours,

Mr. Lewis Powell

PERSONAL

Dear Ed:

Your program was superb!

I understand that some of the "extremists" on both sides, think that the presentation was objective. I believe it will do considerable good in any event, as it dramatized the seriousness of closed schools.

I have been keenly disappointed that the Governor is still waging "war" against the Supreme Court decision. It would have been smarter, even from his own viewpoint, to have taken advantage of the decision of the Supreme Court of Appeals of Virginia to abandon the hopeless posture of defiance.

I appreciate so much your telephone call.

As ever,

Lewis

Mr. Edward R. Murrow

January 9, 1959

PERSONAL

Dear Ed:

It was indeed good to have a brief glimpse of you on Wednesday. I am only sorry that my evening commitment prevented me from extending the pleasure to having supper and seeing you off.

Having in mind the exhortations of Kilpatrick to be fair to the "massive resisters", I would like to make the following brief and possibly obvious comments:

Jack is right in saying that an overwhelming majority of the people in Virginia oppose enforced integration. I personally do not think he is right in believing that a majority of our people, if given a fair choice which they understood, would abandon the public school system rather than have some integration. I hope that your important program will help clarify opinion on this latter issue.

Only one point of view has been effectively presented in Virginia -- that of bitter-end massive resistance linked with calumny of the Supreme Court. The political leaders whom a large majority of the people follow (Byrd, Almond, the entire Congressional delegation, etc. -- most of whom are my long-time personal friends), and nearly all of the influential newspapers (paced by Kilpatrick), have led a majority of Virginians to believe that it is possible to evade the Supreme Court decision and also continue public education. Thus, the vote in Norfolk was not a clear-cut test in any sense between public education and acceptance of some integration. It merely reflected the indignation of the majority and the continued hope that massive resistance will somehow cause the Supreme Court decision to "fade away".

A climate of intolerance now exists in the South which, in my opinion, far exceeds, both in intensity and danger to our country, the type of intolerance which came to be known as McCarthyism. You made a major contribution in restoring perspective and balance in the latter situation, and I hope your forthcoming program can help to some extent to solve the present, and much more acute, problem in the South. I fully appreciate the difficulties in accomplishing this. Criticism would only arouse resentment. I am sure that most of our people are deeply conscientious in their views and do not consider themselves to be intolerant. The problem, obviously, involves elementary emotions and these make reasoning very difficult.

LEWIS F. POWELL, JR.
ELECTRIC BUILDING
RICHMOND, VIRGINIA

But I do think you could help a great deal by clarifying the basic issue which Virginia is about to face. This issue is whether the public school system will be abandoned or emasculated (with catastrophic results in my opinion) or whether there will be some integration, such as has occurred in every state which borders us (North Carolina, Tennessee, Kentucky, West Virginia, Maryland and Delaware). Our people will regard this as a choice between "evils", but up until now they have not been told by the political leaders or the press that actually this is the only choice.

Thus, the first problem is to bring out the truth and dispel the illusion that the Court decision can be circumvented. The second, and more difficult problem, is to restore reason to the point where we do not in effect abandon public education for most, if not all, of our children.

As you heard Jack Kilpatrick say, he favors abandonment of the public school system rather than have any integration; the organizing of private schools by the whites; and the leaving of the Negroes to shift for themselves. The obvious result of this will be serious deterioration in the education of the whites, and virtually no education of the Negroes, with consequent major increases in crime and in the economic burden resulting from illiterate and unskilled Negroes.

In short, the South is in deep trouble -- at the very time when the entire Nation should be united against the Soviet enemy. One who lives here feels quite helpless to do much about this, as all citizens are arbitrarily classified into only two groups: "Massive Resisters" or "Nigger Lovers" -- neither of which actually fits thousands of us who in a sense have been forced "underground". As your roots stem from the South, I am sure you understand this situation better than most.

As ever,

Lewis

Edward R. Murrow, Esq.
580 Park Avenue
New York, New York

My best to Janet and Casey.

March 20, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Mr. Murrow:

I heard "The Day Called X" the other night and I thought it was very good. This type of coverage is very important to the civil defense effort and I wish we could have more of it. There were several points referred to briefly which are so important that fuller coverage would be desirable if it could be managed.

One of these is to discuss the practicality of one's making a fallout shelter in one's own house and to give some details about how to do it. We now believe that a very great deal can be done to protect people in this way and one immediate matter of considerable importance is that the new houses now under construction should have fallout shelters built into them. We think this can be done at the minimal extra cost.

Another point is that if we can get transistorized equipment with a cheap meter everyone can have a combination radiation meter and communications instrument for a small additional cost. People are buying transistor radios in great numbers and the Office of Civil and Defense Mobilization and the Atomic Energy Commission are working here to try to develop a radiation instrument which will be a cheap enough accessory.

It was a pleasure to hear another of your excellent programs. It has been nice to know you and I hope you have a good and profitable trip next year.

Sincerely yours,

W. F. Libby

Fellow-citizens of America and the World:

On October 4th, 1957 I directed a lengthy letter to my Fellow-Americans, addressees above, hoping that it would help to curb what our press likes to call "foreign gestapo methods" applied to the Sovereign Dignity of honest citizens of the Democracy -- so-called.

On this Abraham Lincoln's Birthday, this blood of Lincoln is driven to address the Secretary-General of United Nations, to inquire what it would cost me to have this letter and my previous letter printed in the UNITED NATIONS BULLETIN. This might give people throughout the world and America a good deal more accurate picture of present-day so-called "democracy in America. Someone may suggest or propose a plan to curtail our poppy-cock advertisements about democracy until we abandon the pattern of this Republican Oligarchy with all of its duplicity and actually apply our heritage from our high heroic forebears of true democracy in America. Perhaps we should drape our magnificent memorials in black crepe until some corrective steps are taken.

About two weeks ago my sister, with whom I shared the apartment then, received a telephone call for me to report in the Internal Revenue about 10:00 a.m. Of Course I was there and was ordered or asked to sign a form that I owed an additional $109.90 -- after I had been in for their professional guidance, and had declared double what I believe other cabdrivers declare on tips, so I was surely not criminally attempting to evade anything. They said only the Auditing Department could disclose the basis and I was not permitted to inquire there, so I asked for a letter of explanation , and said I would then pay it. Today I received notice from my bank that my bank account had been closed out to meet this Notice of Levy, of the Internal Revenue Department.

When we read Harvey O'Connor's lovely book: THE EMPIRE OF OIL, and see how our present Administration rolls out the red velvet carpet for the International Oil Cartelists, this practice to cabdrivers is INTOLERABLE!!

John Lincoln

Lincoln, Murray D.

AMERICAN BUSINESS AND WORLD LEADERSHIP

By MURRAY D. LINCOLN
President
Nationwide Insurance

Lincoln

NATIONWIDE INSURANCE

CALVIN KYTLE
VICE PRESIDENT - PUBLIC RELATIONS

COLUMBUS, OHIO

This pamphlet is based on an address delivered to the Office Management Conference of the American Management Association in New York City, October 24, 1958.

Besides being president of Nationwide Insurance, Mr. Lincoln is chairman of the board of CARE (Cooperative for American Remittances to Everywhere) and president of The Cooperative League of the USA.

American Business and World Leadership

By Murray D. Lincoln

IT WAS A fellow New Englander of mine, Calvin Coolidge, who said, as I recall it, that the business of America is business.

And it *is* true that America's is largely a business or industrial society. The American corporation probably exerts more influence on how Americans live—on their economic, political, social, and ethical customs and habits—than any other single institution, including even the church.

A Cornell University professor of government — Andrew Hacker — declared the other day that the corporation is changing the basic structure of American politics. "Corporate citizenship", he says, "is arising to replace local or regional citizenship. The middle-class employee is in no position to be active in politics. He is dependent on his corporate employment; and independent political behavior, he is led to believe, might jeopardize his corporate career."

Adolf Berle, corporation specialist and former State Department official, points out that insurance and financial executives control vast billions of what he calls "masterless" money—money that belongs to other people—and that the way in which those executives use that money can well determine the fate of this nation, if not of civili-

zation itself. Investments in the Middle East are a case in point.

And let me read you a few challenging statements from an article in the September issue of Fortune magazine:

"The U. S. businessman is preoccupied chiefly with gain, coasting on the spiritual momentum of the past . . . History shows that when we become success-dominated, we lose sight of our real reasons for living."

"No institution", the article continues, "will survive if it is dedicated *only* to self-preservation. A business is not a biological organism whose survival is a virtue in itself. Rather, it is a man-created institution, an integral part of our culture, and as such must make a contribution of service to society (as well as a profit for itself) if it hopes to survive. It cannot do this out of a focus on self-gain or pride."

Those words were written for Fortune magazine by a Jewish rabbi, Dr. Louis Finkelstein; I urge you to read the whole article. You may disagree with some or all of it, but I guarantee that it will excite your mental processes. And I think that before it is too late we must do a lot of thinking and reasoning together.

Need for Concern

Now if I have added all this up correctly —and I'm pretty sure I have—what it says is that the era of business isolation from human affairs, like that of national isolation from world affairs, is gone forever. What it says is that we management and business leaders today form an important current in the stream of civilization. We have a lot more to be concerned about than our own profits and losses. We have acquired tremendous responsibility.

We live in a world foolishly busy spending manpower and money and time figuring out ways to destroy itself, a world in which we leap from brink to brink with the greatest of ease. Our country and Russia continue to build stockpiles of nuclear weapons even though almost everyone agrees that nuclear war would be the start of mankind's Last Countdown. Russia and the U. S. now know how to destroy each other in a couple of weeks, but the new objective is to be able to do it in a couple of days.

Spending of 47 billion dollars for war preparations in a single year has quickened the pace of a creeping inflation which many fear will break into a gallop and ride roughshod through the economy. We seem unable, so far, to have developed the labor-management statesmanship necessary to break up the vicious wage-price spiral, to the benefit of both labor and business, as well as of the forgotten Third Man in the economy, the consumer. So wages and prices keep on with their game of leapfrog.

Let me repeat. All of this puts a terrible burden of responsibility on us businessmen as pacesetters and trailblazers in our American way of life. For, to my way of thinking, it is literally up to us to save the world. Times have changed drastically since the days of Calvin Coolidge, only a short 30 years ago. A number of revolutions have occurred and are occurring.

THE BUSINESS OF AMERICA IS NO LONGER JUST BUSINESS; IT IS ALSO NOTHING LESS THAN WORLD LEADERSHIP.

Somehow, I'm afraid we haven't got that into our heads yet. I'm afraid we haven't quite caught on to the real nature of the crisis that is upon us.

This big, good-natured country of ours

has been much too busy making money, living luxuriously, playing games, watching games, and just having itself one big ball of fun.

It becomes plainer and plainer that this is not just a military crisis we have by the tail. The Soviet Russian dictator, Khrushchev, continues to proclaim that Russia will lick us without firing a single intercontinental ballistic missile or dropping a single H-bomb. Russia, he says, will conquer us on the battlefields of education, of science, of industry and trade, and of culture; Russians will win the vital race for world public opinion by proving they are better scientists, better industrialists, better and more helpful neighbors than Americans are.

So the Soviets have shot their sputniks into orbit. They have reduced adult illiteracy from 75 per cent to less than 10 per cent. They have made scientists and professors—eggheads, we call them—a privileged class. They stress the teaching of foreign languages to facilitate the penetration of propaganda into other countries. They have entered foreign markets with aluminum, tin, wheat, asbestos, and other products. They have launched their own foreign aid program, notably in India where a big made-in-Moscow steel plant is being constructed at cut-rate terms. They have mounted a 15-year program to catch up with the U. S. in electric power production. They are making headway in plans to exceed the per capita production of the U. S. for milk, meat and butter.

This is a different kind of cold war, a kind we don't seem to know exactly how to meet. Too often we seem to set the course of our national policy by the false light of the Soviet moon instead of by the true light of our own heritage—our own democratic prin-

ciples. Too often we seem to concern ourselves with what will hurt Moscow rather than with what will help people.

We can, of course, test more H-bombs and more missiles with atomic warheads. We can send our military power into the Middle East and the Orient. We can continue to install nuclear bases in Europe and elsewhere. We can go catwalking on the brink with Red China.

But in so doing we fail to demonstrate that life is better in a democracy than in a dictatorship. We do nothing to help us win the friends we so sorely need throughout the world. Even in England and Western Europe we are disliked because people fear the consequences of our nuclear base program more than they fear communism.

Communism vs. Exploitation

Colored people all over the world—and remember that two-thirds of the world's population is non-white — are struggling for independence from colonial or dictatorial control, and for higher standards of living. They want to be heard and listened to. They want never again to have to feel inferior, especially racially. To Prime Minister Nehru of India, "colonialism and racialism are worse than communism."

Furthermore, most non-white people remain undecided about the U. S. and Russia. And they make up almost all of the neutral nations in the world.

Yet we seem not to understand the problems and emotions of people of other lands. Time after time—in Africa, in the Middle East, in the Far East—we have taken sides with the status quo, and against the people. They see little reason to regard us as other than rich and selfish exploiters, out primarily

to feather our own nests from the resources that belong to them. This is being said about us: "You sent the Marines when it was a question of Middle East oil. But in Hungary, you wouldn't do a thing when it was a matter of human freedom."

Yes, I'm afraid we've been missing our entrance cues to the stage of world leadership. *Meanwhile, Ivan is stealing the show.*

It's your job and mine—it's the job of everyone who can help—to start turning this thing around. We've got to sweep back the waves of anti-Americanism in various parts of the world. We've got to pin our hopes for world peace and plenty not so much on a program of missiles as on a program for mankind.

The "Conformity" Disease

It seems to me we've got to do a Paul Revere. We've got to wake the people out of their apathy. Unthinking conformity has become a national as well as an organizational disease, to the point where the cartoonist-philosopher Robert Osborn suggests that instead of the eagle our national symbol might more accurately be a flock of sheep. Drew Pearson and Jack Anderson, in their new book, "USA — Second Class Power?", insist that one reason we've been falling behind in the race for world leadership is the hatred by those in authority for new and original ideas. They claim that America's complacent conformity explains why most of our big recent break-throughs in nuclear power and modern weapons have been the work of immigrants and first generation citizens like Admiral Rickover.

Democracy today is in danger of defeat by default. Do-nothing-ism and know-nothing-ism are in the saddle. We hear much

about the "indifferent" generation. Ignorance is becoming smart. We shrug off corruption as "something everybody deals in." We throw up our hands and refuse to bother about issues which affect our own and our children's lives. "There's nothing *I* can do about it," we say. Actually, little power of economic decision remains to people. They have little or no say as to what their tax money is used for, nor what the billions of dollars they put in banks and insurance companies are used for.

People at all levels seem to be shucking off their democratic responsibilities, letting Big Government or Big Labor or Big Business run things to suit themselves.

Nothing could be better calculated to lead to some form of state-ism. Nothing could be worse for government, *or* labor, *or* business, *or* people.

Democracy is valuable and good because it can do something for the individual citizen. It persuades him to take responsibility, to get the facts, to form his own opinions, to make decisions. When the citizen is NOT so persuaded, democracy is violated; it loses by default.

We must remember that democracy is not *inevitably* destined to grow in our society, and that we cannot export democracy and freedom to other lands unless first it flourishes here at home.

TO MY WAY OF THINKING, WHAT THIS COUNTRY NEEDS IN THIS WORLD CRISIS MORE THAN ANYTHING ELSE I CAN THINK OF IS A MASSIVE DOSE OF DEMOCRACY, APPLIED ECONOMICALLY, SOCIALLY AND POLITICALLY.

I suppose that each of us has come to where we are by our own long and winding road. I know my path to understanding has been a slow one. But all my life I've worked

with groups of people—urging them to organize themselves to help themselves, egging them on to solve their own problems instead of running to Uncle. I've said over and over that people have within their own hands the tools to fashion their own destiny—if they'll only use them.

I think we've been demonstrating the truth of that statement to a large degree in our own organization, for it is based primarily, not on the profit motive or the power motive, but on the cooperative motive. I've seen this people's organization grow large and fulfill the needs of the people who use it. Likewise, I have seen cooperative forms of business grow throughout the country, though not so fast as I think they should. We've made mistakes; maybe one of them was not hiring some of you to help us run our business. We have the right ideas, I'm sure, but maybe we need better techniques to translate those ideas into practice. Nevertheless, more than four million farmers are running and have invested some $2 billion in their own purchasing, marketing and supply enterprises. More than 13 million U. S. families—rural and urban—are engaged in some form of cooperative business activity—electrical power, oil, farm supplies, food, credit, housing, insurance, medical and dental care, even burial associations. And these cooperative businesses are, I might add, paying taxes on exactly the same basis as are other corporations.

Cooperatives are Democratic

All this growth has been achieved, mind you, through democratic methods. People have been involved in the ownership and control of their own economic affairs. A cooperative, you know, has something no

other legal institution has; it is the only form of legal entity that can't be controlled by a few people at the top. That's because the principle of one-man, one-vote—regardless of the amount of stock owned—prevents one man or one little group from running away with the thing. A cooperative, too, is the only legal device with a built-in program for returning to patrons or customers a proportionate share of the earnings.

Cooperatives, you see, make it unnecessary for people to turn to the government for economic handouts. After grape farmers took over the Welch Grape Juice Company, they got $150 a ton for their produce instead of $90. With that price they don't need government subsidies.

One of the ouchy areas in the world today is oil. I think the democracy of cooperatives can help here, too. When I spoke one time at the Harvard School of Business, I said that if I were an oil man I wouldn't sleep nights for what I was going to make society go through in the next ten years. Well, it's turned out that the peace of the world is in jeopardy because the major countries are engaged in a critical struggle for control of the great oil resources in the Middle East. American oil companies have poured a vast amount of money — much of it insurance money — into Middle East oil reserves and facilities. Sixty per cent of American oil companies' reserves are there.

Personally, I think that before we get through, we're going to lose those foreign investments. They'll be taken over by the people there, who will kick out whoever has tried to take over. The loss of money doesn't concern me so much as the prospect that we may have to send our army and navy in to protect resources that don't belong to us. To me there's only one way to protect those

investments and help save the world from burning up in its own oil—and that's to get in there and help those people set up a co-operative organization to exploit their own resources for their own good. Until they acquire a real stake in their own oil enterprises, our investments there will remain in peril. Europe and ourselves must be their market.

I have had on my desk a proposal to go into business with some Filipinos to develop oil facilities. We would provide capital and technical aid and after we were paid off, we would get out, and the oil development would belong to them. One of the most important businessmen in the Philippines is back of that project. He came to this country looking for help and somebody in Washington told him to talk to me. He didn't know who I was but he told me what he was up to and asked, "Have you got any answer?" Well, I said at least I have an idea and then I suggested that we help them get going and then pull out or just provide management services. He looked at me and he said, "Now you know what you're saying, do you?" I said yes, because I've been at it for 30 years.

"Well," he said, "nobody else has put up that kind of a proposition." I said no, and I don't believe you'll find anybody else who will. I'll never forget his reply. "Mr. Lincoln," he said, "if you'll help us make this one experiment, then we who are brown can go to our brothers who are yellow or black and say now here's a new way that has never been tried before."

And he told me something else. He said, "You know, Mr. Lincoln, you fellows are never going to lick communism *for* us. You've got to help us lick it if we want to. I happen to be one of those who wants to, but a lot of others there don't know yet,

because they don't see that you folks have done much different than others to exploit them, and unfortunately we haven't had this kind of an example to point to."

I've had the privilege for the last year or so of meeting some of the top bankers of the United States. That came about because of my acquaintanceship over the past ten years with one of the great industrialists of this country. This man, after having been in big business and in government and then in big business again, went round the world and saw some things he apparently had never seen before, even in his capacity as vice president of one of our biggest corporations. Anyway, he came to me awhile back and said, "Murray, when I first heard about you and what you and your cooperatives were doing, I just didn't know whether you knew what you were doing or not. But now," he said, "I'm of the opinion that if you can do what you're doing in a big enough way, it *could* be—*could* be, remember—the most important thing going on in the world today."

Well, at least that's his opinion, and I can't cross it off.

The "Third Man"

Now I tell you these things not with any idea that all business should be organized cooperatively. I don't believe it should; a lopsided economy of any kind tends to be harmful. What *is* important is that all business, whether profit or non-profit in character, should concern itself with the interests of people as a whole.

In Sweden and Norway, today, this concept of the public interest is playing an important role in wage negotiations between labor and management, and it is stopping inflation there. The "third man"—the con-

sumer—is represented officially at the bargaining table, for it is recognized that he has a stake in the inflationary effect of the wage-price spiral fully as great, as far as he is concerned, as the respective stakes of labor and management.

And it is interesting to me to learn from a series of articles in the Christian Science Monitor that the reason this concept has taken hold is that the Scandinavian cooperative movement has given the consumer a dignity and identity far beyond anything that exists in other countries.

Ashley Montagu, the anthropologist, says that a basic discovery of modern science is that "man is born for cooperation, not for competition or conflict," and he points out that this is simply confirmation of a discovery made 2,000 years ago by one Jesus of Nazareth.

We must learn to put this powerful truth to work. "How vain," someone has written, "to have the power of God and not to use it Godlike."

Key to World Leadership

I'm convinced that we're never going to provide world leadership until we set about seriously and humbly to share our American abundance and the fruits of our technology and science with other peoples. I'm convinced that cooperation, applied economically and spiritually, can help us achieve that goal, for cooperatives can help people regain their democratic rights of discussion, decision and action.

At Nationwide we've been supporting a number of cooperative projects overseas. It has been my great privilege to work with CARE, in getting food and self-help tools to people in other lands. Since 1946, CARE,

incidentally, has delivered over 23 million packages valued at $275 million in over 50 countries. We've invested some money to help people in other countries help themselves by organizing banks, stores and even newspapers. We're ready to show Korean people how to use rice straw to make a low-cost building material we call Tec-Pan. I look forward to the day when we will set up an international trading corporation to be owned by people's organizations in different lands. We want to make everybody—everywhere—a capitalist—give each and every one a share, an investment, in what makes the world go forward.

Finally, we need most of all an informed and enlightened citizenry who will care enough, who will be concerned enough, to do all they can to lift standards of living as well as standards of knowledge and of human relationship throughout the world. To me, that's the most human, the best business answer to the world's problems.

The times call for a bold program of co-operation, an intellectual, moral and spiritual rebirth, a dedication to the development and execution of a program for mankind; a program to lift people out of the muck of hunger and poverty and ignorance, up to their rightful position of human freedom, equality and dignity.

To my way of thinking, the life or death of our culture and our civilization is the people's choice and the people's business. The responsibility is yours and mine. Let us strengthen the democratic process throughout America and throughout the world and let us all be of a mind to work at this task together.

Dear Mr. Murrow:

Your interview with the chairman of our board, Mr. Huntington Hartford, on "Person to Person" last Friday night was indeed interesting and brought to mind a letter which I wrote you on November 25, 1957, to which you replied on December 3, 1957. At that time I attempted to make you acquanited with the manner in which our company is trying to solve the problem of producing crude oil on a competitive basis from the tremendous deposits of oil shale in Colorado.

Should you care to know more about what we are doing, including economic results up to date, I will be most happy to supply such information at your request.

Sincerely yours,

H. E. Linden

Dear Ernest:

Thanks for taking time to send the note about the Marian Anderson show.

We were very proud of it and the response encourages me again to believe at least for a little while that people are willing to look at something other than westerns and quiz shows.

Thanks again for writing.

Sincerely,

Mr. Ernest K. Lindley

Cambridge, Massachusetts

Dear Louis:

You certainly "capped the climax"--reached the pinnacle of "The Press and the People" series with the Edward R. Murrow "double spread."

Several friends agree with Lala and I that your exchanges and relaxed commentary with Murrow were the most thrilling thing we have seen on television. I believe it will go down as one of the really superb interviews of the decade, throwing new light on the problem of getting the real story to the people. It was a play with two great stars--an engagement of the giants. It was especially notable, even nostalgic, to me because it reminded me of the first time I saw Murrow in the flesh. It was at a Nieman seminar in the winter of 1946-47, and the "old maestro" put the questions to him then. The talk was relaxed and easy and it had to do mostly with the London blitz and, I recall, there were several good "shaggy dog" stories related.

The series has been good. The camera man is treating you better now. In the interviews with Murrow you sounded like the digging reporter of old.

Best regards,

Sincerely,

Ernest H. Linford

Dear Ed:

My congratulations on your essay in the current issue of TV Guide. I am glad you wrote it, and hope it will inspire some of your colleagues to take heed and use the tool more profitably for the influence of people's minds.

When people are given the opportunity to exercise their rights -- as they were during the recent elections -- it seems rather frightening to me that five of the six states did not choose to work without paying dues.

I think some of the responsibility goes into the management group as well since, certainly, most of us are more balance sheet conscious than in future security. It rather seems to me there are going to be many tough days with such guys as the Hoffas, Reuthers, and the Supreme Court. It appears everybody is willing to trade their future for a book of Green Stamps.

My best to you, Janet, and Casey; and I hope you have a Happy Holiday.

Sincerely,

Leon

Dear Mr. Murrow,

Your vigorous ideas and distinguished work causes me to believe that the forthcoming production of Ugo Betti's "The Burnt Flower-Bed" will be of particular interest to you.

At his death in 1953 Betti was Italy's leading dramatist. France and England have since hailed him as one of the world's great playwrights, and his drama, "The Burnt Flower-Bed," published posthumously, made its English debut in London in 1955. Concerning an 'exiled' leader who is pursued to a mountain retreat by former colleagues intent on his assassination, the drama exposes six people struggling with the demands of truth and the claims of love, while engulfed in the tragedy of societal and personal cynicism and brutality. "The Burnt Flower-Bed" forcefully probes the violence committed against the individual by totalitarian philosophy, and affirms a shattering of those walls that alienate and divide people. Published in English by both Samuel French and Grove Press, the play has been greeted as one of the most important dramas to have been written in Europe since the war.

In the United States Betti has had two unfortunate starts: Alfred Drake's "The Gambler" in 1952, and "Island of Goats" in 1955. However, excitement about Betti has begun again. This renewal of interest and the rising authority of the off-Broadway stage, plus the growth of its audience, lead us to the confidence that a reputable off-Broadway theater will ideally house and support the singular intimacy of "Flower-Bed."

The prevailing enmity and confusion that pains contemporary life and often seems to empty it of meaning compels me to write to you of Betti's stirring call for sanity, love, responsibility and hope. "The Burnt Flower-Bed" has enormous meaning for our moment while being at the same time sound drama. Because of your concern for, and eminent participation in, matters of consequence, I am enclosing a prospectus of our plans and our needs for your kind consideration.

I can easily forward a copy of the play and any additional information you may request. Thanking you for your generous attention I am

Respectfully yours,

Eugene Lion

EUGENE LION is proud to announce the American professional premiere of "THE BURNT FLOWER-BED" by UGO BETTI at an off-Broadway theatre during the 1959-1960 season.

THE BURNT FLOWER-BED, one of Europe's great post-war plays, is a powerful three-act drama which was produced at the Arts Theatre in England in 1955. The London Times and the Manchester Guardian reviewed the play as a "remarkable, high-powered drama."

THE AUTHOR, UGO BETTI, Italy's most celebrated dramatist since Pirandello, has been termed by Philip Toynbee of The London Observer, a "genius"; by J. A. Scott as a "master of the playwright's craft" and one of Italy's most important writers; by G. H. McWilliams in the British publication, Act, as a "rare genius...a powerful, original world dramatist with something new to say."

THE TRANSLATOR, HENRY REED, author, poet and playwright, was awarded the International Radio Italiana Prize in 1953. The London Times wrote of "The Burnt Flower-Bed" translation, "Mr. Reed's translation has two advantages: it suggests fidelity to the original text and is itself English prose that can be listened to with pleasure."

THE CAST: LEUEEN MacGRATH has expressed a deep interest in the female lead of THE BURNT FLOWER-BED and negotiations have commenced. The renowned British actress was introduced to American audiences in EDWARD MY SON opposite Robert Morley, and repeated her role in the film version with Spencer Tracy. While hailed for her portrayals in TIGER AT THE GATES with Michael Redgrave and in Giraudoux' THE ENCHANTED, Miss MacGrath also co-authored with George S. Kaufman SILK STOCKINGS, THE SMALL HOURS and FANCY MEETING YOU AGAIN in which she also played a leading role. Miss MacGrath last thrilled audiences and won thunderous critical acclaim as Lucy in MAIDENS AND MISTRESSES AT HOME AT THE ZOO at the Orpheum Theatre, and again as Princess Nieou-Chi in the City Center's revival of LUTE SONG. In addition negotiations have commenced for the services of other notable actors.

THE PRODUCER AND DIRECTOR, EUGENE LION, writer, actor and director, has acted both in the United States and Mexico. Student of Jose Quintero, Etienne Decroux and Mme. Tamara Daykarhanova, Mr. Lion has most recently written, produced and directed adaptations of Akutagawa's short stories in Mexico City.

FINANCIAL ORGANIZATION: The production is capitalized at $16,000.00, with no overcall. For each investment of $320.00 investors will be entitled to 1% of the net profits of the partnership. In addition to the profits from the stage presentation the partnership will share in sales to the motion pictures, television, radio and play albums of records. The producers will be happy to arrange syndicates for individual investors who wish to contribute amounts under $320.00

It is anticipated that the production will open at a theatre with a potential weekly gross of $4000.00. Weekly operating expenses are estimated at approximately $2800.00. Projecting capacity business, based upon the estimates presently available, the production can earn profits of approximately $1200.00 per week and would therefore be able to recover its production costs within seven weeks and thereafter earn for investors over 3½% per week on their investment. The following is an estimate of Pre-Production Requirements.

PRODUCTION COSTS:		
SETS & COSTUMES	$1250.00	
REHEARSAL EXPENSES	1400.00	
ADVERTISING & PUBLICITY (Pre-Opening)	1875.00	
OTHER PRODUCTION COSTS	2925.00	
		$7450.00
RECOVERABLE THEATRE ADVANCE & UNION BONDS		4250.00
CASH RESERVE FOR CONTINGENCIES		2800.00
RESERVE FOR POST-OPENING ADVERTISING		1500.00
TOTAL PRE-PRODUCTION		$16,000.00

The production will be organized as a limited partnership pursuant to the laws of the State of New York under the standard form of theatrical limited partnership agreement used in the theatrical industry and used by SEYMOUR LITVINOFF, attorney for the partnership. EUGENE LION is the general partner. For more detailed information examine the limited partnership agreement.

All funds will be placed in a special bank account and will be returned unless the entire $16,000.00 is raised.

All checks are to be made payable to THE B-F-B COMPANY and should be mailed to THE B-F-B COMPANY, c/o ARTHUR B. GREENE, C.P.A. 545 FIFTH AVENUE, NEW YORK 17, N.Y.

We will be pleased to answer any questions that you may have concerning the production.

EUGENE LION

STAFF FOR THE B-F-B COMPANY: ATTORNEY: SEYMOUR LITVINOFF;

PRESS AGENT: BETTY LEE HUNT

EXCERPTS FROM REVIEWS OF BETTI AND "THE BURNT FLOWER-BED"

American: Epoch -Anthony Caputi

"The Queen and The Rebels and The Burnt Flower-Bed are serious plays of a kind almost never met today outside classical repertory. Unlike so many recent plays that linger in that amorphous penumbra called 'serious drama,' these plays are emphatically tragedies, if by that term we mean works capable of moving an audience to fear and pity for the fundamental insecurity of the human condition. Yet unlike even those recent plays that qualify in this respect, these are tragedies in an older and richer sense in that they also question the justice of this insecurity and abundantly affirm that through it something rare and beautiful is both lost and won....With all the confidence of a neo-classicist, Betti has taken extremely simple action and has developed them very slowly and very deliberately, illuminating only gradually, but distinctly, their relation to all human action. Rarely in recent drama does one meet, not only this economy and clarity of outline, but the sheer expertness with which these actions are controlled for symbolic value....The simplicity of these actions as well as Betti's aim to achieve massiveness through meaning have never been conspicuous features of American dramatic tradition....But the power of these plays cannot be denied....Betti was a man of beliefs--He sought the heart of the human condition and found it in human responsibility and its role in a universe meaningless without it."

British: The Spectator -Anthony Hartley

"Truth and the responsibility of the individual human being alone in history--these are the ideals that this play (The Burnt Flower-Bed) proposes, and it is a relief to find them stated in a form which is at once clear and subtle. The Burnt Flower-Bed is a melodrama. The action is very rapid, and there are peripeteia almost in every scene. This play of ideas is as gripping dramatically as anything to be seen on the London stage for a long time. Betti has something of the primitive quality common to the best Italian writers, and this passionate simplicity enables him to get away with scenes... which might otherwise be accused of sentimentality. At times (as in Giovanni's great statement of his ideals in the second act) the language has a poetic surge to it....This complex and beautiful play received excellent acting and production at the Arts. Alexander Knox made a fine Giovanni, veering between the dynamic and the fatalistic and, at moments, putting his lines across with a strength which is too often missing on the English stage. It is true they were good lines for a change....I hope that the Arts have it in mind to do some more Betti. As it is, they have...put London in their debt."

Mr. Edward R. Murrow
CBS
485 Madison Avenue
New York, New York

Dear Mr. Murrow:

For some time now, we've felt that people like yourself deserve some recognition for doing so much to advance the development of commercial aviation in general and Pan American World Airways in particular. So we've done something about it.

As the enclosed certificate shows, you have been elected a member of the Clipper Club. And membership is restricted to people who have contributed to the advancement of air transportation.

Perhaps you'll like your certificate well enough to hang it on the wall. We hope so, for it's our public recognition of your invaluable support, as is the identification card also enclosed.

Backed by the interest of far-sighted people such as our Clipper Club members, Pan American will continue to offer more and more travelers the finest in fast, comfortable air transportation. And you, of course, will be especially welcome aboard. We hope to serve you again soon.

Cordially yours,

Willis G. Lipscomb

Liss, Dr. Edw

April 22, 1958

Dear Dr. Liss:

I have your letter of April 1st.

Your idea for a television program may, perhaps, have merit, but I am sorry to have to tell you that I have no authority or control over any programs other than my own.

Thank you for taking the time to bring it to my attention.

Sincerely yours,

Dr. Edward Liss
130 East 39 Street
New York, New York

Sugg.

My dear Mr. Murrow:

It occurred to me, following one of your many round table discussions which I have witnessed, that it would be timely for you to organize a group discussion on education, present and future. There has been so much wild talk about it that it is time for some organization to formulate the current criticisms and future plans in this area.

I would suggest that the panel be representative of all those fields which go under the heading of education: education, sociology, anthropology, psychology, psychiatry, and a parent representative. I thought of you because I remember with a great deal of pleasure your address to my daughter's graduating class at Smith College. If I can be of any help, it would give me pleasure to do so.

Sincerely yours,

Edward Liss

March 25, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System
New York
New York

Dear Mr. Murrow:

Recently I had dinner with Tom and Patsy Neblett in Los Angeles. Tom told me that he had invited you to be his guest at the Bohemian Grove Encampment this Summer, and particularly to visit us at the camp of which he and I are members. He suggested that if I felt moved to second the invitation that I might write a letter urging you to come; and I do so herewith.

I think you will enjoy the Encampment. I know that our campmates and other Bohemians will enjoy knowing you. We who are members of the Club are quite prejudiced. I have sometimes referred to the membership as the "over-privileged Bohemians". I do think that attending an Encampment is an experience that you will enjoy and might long remember. In 1951 I had as my guest John R. Steelman. I picked him up at the airport and brought him to San Francisco. We stayed all night at the clubhouse. Then I took him to the Grove next morning. All the way from the airport to the clubhouse and from San Francisco to the Grove he kept talking and worrying about problems he had left behind him on his desk at the White House. Then we entered the Grove, changed our clothes, had dinner, and saw the evening show. On the way back to the camp he suddenly turned to me and said, "Bob, you know all those problems I was talking about; they somehow seem remote and unreal."

It is in the tradition of the Grove that everyone does what he wants to do. If you want to stay out late at night and listen to the entertainment perpetually going on in other camps, as Tom Neblett usually does, you do so. If you do not want to stay out late at night, and I usually do not, you do not do so.

Every evening there is some entertainment at what we call the Campfire Circle. I suppose you might describe most of it as somewhat in the nature of variety shows. Traditionally, the show on the second Saturday night is run by John Charles Thomas. It is always known as the John Charles Thomas Revival Hour. Members of the chorus usually sing. John Charles himself does not usually

sing on his own program; but he does sing on others.

The Club has an orchestra of about 50 pieces, a band of about the same size, and a chorus of about 100 voices. Collectively and in various groups these musicians perform at the Campfire shows and often at the various camps. I shall explain about the camps in a moment. One of my favorite groups calls itself the "Dixieland Jazz Band". They are all former professional musicians. One of them is now a lawyer; one is the Assistant City Manager of Oakland; one owns a large firm of building supply houses in Oakland and Berkeley; and one is a dentist. I have heard some of the better Dixieland bands in New Orleans, Las Vegas, on the radio, and on television. I have never heard any in the same class as this Bohemian group.

On the second Saturday night there is always a very ribald musical comedy which we call the "Low Jinks". This is written, directed, sung, and performed by members of the Club. Usually, some of the performers are professionals and some are amateurs; sometimes all the performers are amateurs. On the last Friday night there is an excellent musical and variety show. It is upon this occasion that we permit our guests to perform if they want to. On the last Saturday night there is a very serious allegorical play, which is always written, directed, sung and performed by members of the Club.

All of these shows are performed outdoors. In fact, at the Encampment nearly everything is outdoors.

The only semi-serious activity at the Grove is what we call the "Lakeside Talks". Each noon at the Lakeside there is an organ concert. Then at 12:30 there is a talk. The talk may be on any subject from international relations to one very excellent talk we had a couple of years ago by the composer George Antheil on "How to Compose an Opera". I noticed in the paper that George Antheil died of a heart attack a couple of weeks ago. Traditionally, the talk on the last Saturday is given by Mr. Hoover. The only work I do at the Grove is in connection with these Lakeside Talks and my present assignment is to be the liaison with the Hoover family. Mr. Hoover always gives me a bad time before he consents to talk; but he always does consent. And some of the best talks he has ever given have been at the Lakeside. I should warn you that if you come, the Lakeside Committee will be after you to give a talk; but, privately, I can say that you are perfectly free to accept or reject as you choose.

Incidentally, it is the tradition and common understanding that nothing that is said in the Grove is ever repeated publicly outside the Grove. The Encampment this Summer will be

about the sixtieth annual encampment; and so far as we can discover, this understanding has never been violated. The understanding even extends to the point that one is not supposed to say publicly that he is going to or has been at the Grove. I must say that this has not been universally followed; but a few years ago John Daly was a guest at the Grove, and a very pleasant guest; but he referred to this fact on his next television series and a good many Bohemians were quite unhappy about it.

I referred to the fact that Tom and I belong to the same camp. Most of the Club members and their guests stay at what we call private camps. Each camp is a bit like an informal college fraternity. Some are quite elaborate. Some are quite simple. At our camp we sleep in tents, although we do have a fireplace inside the cabin for very cold nights.

Perhaps I should introduce some of the members of our camp. Our Captain is Emanuel Fritz. He is a retired Professor of Forestry at the University of California. Perhaps he is the leading authority in the world on Redwood trees. About eight times during the Grove Encampment he conducts what we call a "walkie-talkie". He leads groups of Bohemians and guests around the Grove and talks about the Redwood trees. In my years of acquaintance with him I have heard, if not learned, more about trees than I ever knew existed in the sum total of human knowledge on the subject. There is George Harris. From Roosevelt to Roosevelt he was a member of the Washington photographic firm of Harris & Ewing. He has presented the camp with about 300 photographs that he personally took of the great and near great of Washington. The one photograph of which he is the most proud is of a woman who he says was the most beautiful he ever met, and I acquired an unearned reputation as a historian by identifying her. She was the Countess Dumba. There is Freddy Foy, who is President of Koppers Company. There is Wendell Stanley, who was handed the Nobel prize for his work on virus and who is the advocate of the point of view, of which you may have read, that some cancers are caused by virus. There is Clark Kerr, who is President of the University of California. There is Guy Crump, a well known Los Angeles lawyer, at the Encampment a serious drinker and teller of ribald stories; but his talk on the Dead Sea Scrolls is commonly considered one of the best ever given at the Lakeside. There is Ralph Moody, whose principal occupation is executive of the B-G organization which runs a chain of sandwich shops throughout the country, but whose avocation is writing fiction, of which the best known is probably Little Britches. Then there is Oscar Lewis, the author of historical books.

My own tent mate is Ronald Button, who was formerly Treasurer of California and was written up by Business Week as having saved the State of California about sixty million dollars

in his first year as Treasurer of the State because of his novel method of financing state bonds; then he was defeated for reelection by a narrow margin because he was a Republican.

We have a number of other characters around the place. Several of them are expert domino players and they would be delighted to entice you into a game and take some of your money.

We usually have some interesting guests. I understand that Ralph Moody is inviting Bennett Cerf, but I have not heard for sure whether he can come.

Now this next point you will scarcely believe, but it is true nevertheless. When you come you must bring some relatively warm clothes. To those who have become inured to the steaming latitudes of the mid-Atlantic it is difficult to believe that in July, at near sea level, you may need long underwear and a heavy sweater or a leather jacket. I stress the point even though I understand that you originally came from the Northwest; and so did I. But I do not recall any coastal valleys in the Northwest which during the Summer get as cool as it sometimes does at the Bohemian Grove.

It is part of the tradition of the Grove that we are relatively isolated. Communications in and out by telephone and telegraph are not encouraged, but they can be had at some expense of time and effort. If a telephone call comes in for you they will write your name on a blackboard down at the center of the Encampment. If you happen to pass by and see your name you will know that you have a phone call. If one of your friends sees your name he may remember to tell you. Or maybe he will decide you should not be bothered and he will just erase your name. There are no radios, television sets, or automobiles allowed within the Grove. Yet transportation in and out is quite easy.

I find that writing about the Grove in generalities is highly inaccurate. I have to use specific instances. So have I tried here. I could keep this up for some pages more but I could really sum it all up in what I first said: I do now second the invitation. I hope you can come. Recently at the clubhouse I was having dinner with some of the other members of our camp. They join me.

Very truly yours,

Robert Littler

Int for letter etc

HENRY LIVA

182 GRAHAM AVENUE
Brooklyn 6, N. Y.

April 17, 1959

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, N.Y.

Dear Mr. Murrow:

I am taking the liberty of submitting for your consideration a copy of a letter of mine to Senator Lyndon B. Johnson, concerning the conquest of outer space.

Being sure that interplanetary travel is impossible beyond any doubt, I am submitting to legislators that the scores of billions of dollars that are being wasted for the conquest of space would produce beneficial results if they were spent for improving and augmenting dependable means of defense, for more and better schools, for more adequate teachers' salaries, for the advancement of teachers' scientific knowledge, for the teaching of factually and experimentally proved scientific truths instead of imaginary theories, for more housing buildings, and for other necessities.

So far everything seems to indicate that what I am submitting is being ignored.

Your personality has inspired me to convey this information to you because I think that within ten years the taxpayers of this country, that are not interested in the rocket business, are bound to become aware that the conquest of space is a harmful and very questionable business; and persons of your standing may feel interested in expressing their objections to it.

If you will grant me your acknowledgment of this letter, I shall appreciate it very much.

Sincerely yours,
Henry Liva
Henry Liva

March 20, 1959

The Hon. Lyndon B. Johnson
United States Senate
Office of the Democratic Leader
Washington, D. C.

Dear Senator Johnson:

On May 1, 1957, I took the liberty of forwarding to you a letter of mine enclosing for your consideration two pamphlets on the need of legislation in behalf of science.

You acknowledged that letter on May 8, 1957. Other legislators who received my pamphlets did the same, but no development followed, nor any action of any kind was taken.

You may not agree with me, but from the point of view of what I know in physical astronomy, I foresee that this inaction is bound to have serious consequences, in the long run, if not in the not distant future. I foresee also that these consequences may disquiet legislators, executive officials, and scientists much more than undistinguished people.

In the light of Kepler's laws of planetary motion, of the laws of motion, and of the law of universal attraction, the statements that scientists have put in orbit artificial satellites around the earth and artificial planets around the sun can be seen as nothing but untrue statements. These statements are untrue because they are based on the principle of inertial motion; whereas, in physical astronomy, all the facts prove that in spatial vacuum

there is no movement that is not due to acting and resisting forces. In other words, in spatial vacuum, there is not such a thing as inertial motion.

It is a grave misfortune that the imaginary existence of artificial satellites and planets is proclaimed real by an imposing array of scientists. And the consequence is that the truth I am endeavoring to make known is being ignored by those who are influenced to believe what they cannot,or do not think they should, ascertain for themselves.

Fortunately, what I am submitting is so solidly based on the well known aforesaid laws that, however imposing and influential, no array of scientists will succeed in suppressing this truth permanently.

But the certainty that what is not true cannot stand the test of time does not dispel my fears for the future of this country. Because the Russians have succeeded in making the leaders of this country believe that the conquest of space is possible.

The infusion of this fallacious belief into the mind of the people of this country cannot but be one of the most harmful maneuvers of the cold war. It is evident to me that this maneuver is intended to cause us economic troubles through waste of scores of billions of dollars, and military weakness through misuse of defense appropriations. It might even be intended to show to the world, at the time the authors of the maneuver may deem right, that we are so inferior to them in scientific knowledge as to accept as

a great scientific achievement what is nothing but an evident hoax.

Our opponents might also be trying to cook us in our own rugged individualistic juse. And they might succeed in this intent if we do not stop the economically destructive business of the fallacious conquest of space.

Old and recent examples show that when military authorities and producers of armaments exert predominant influence upon the political authorities of a people, the peace, the civil liberties, the economic welfare, and the future of that people are in danger.

In this lunatic era in which even children are out to conquere the whole universe that is in existence in spatial vacuum, the added influence of scientists has aggravated the situation. This is the only logical conclusion at which I can arrive, considering that these gentlemen have suggested "that politicians should perhaps turn the reins of government over to them." — God forbid! — And they have begun to speak on "The Road to Scientific Supremacy".

The activities concerning the conquest of space give an idea of what an inauspicious event it would be for mankind should these overinflated minds achieve their purpose.

We are now in a position in which unilateral advice in military and in scientific matters is very dangerous.

I wish earnestly that another world war be avoided. But there is so much misunderstanding, insincerity, egoism, greed, and corruption in the world that mankind may be pushed into a war far more destructive than the recent ones. If this misfortune befalls mankind

there will be no victory on either side.

One should bear in mind, I think, that present day communism is a grown child of a period of largely destructive wars; initiated by overambitious militarists. In this period, the producers of armaments and the military, having miscalculated their expectations, have caused more harm to their own countries than they have inflicted, with their arms, to their designated victims. If this period will continue with the feared intensified destructiveness, the grown child, as a natural result of intolerable circumstances, will become a strong man.

The peoples of the world have been kept too many years under constant fear of being destroyed, in an era that professes to be civilized. If now there are peoples more interested in being given peace of mind than in being given the political system they would prefer in the realm of reason is not their foult.

I hope that men of courage, endued with foresightedness, may perceive that we are undermining ourselves and will act to eliminate the peril before it is too late.

I shal much appreciate your courtesy if your acknowledgment of this letter and of the enclosed pamphlets will be granted.

Yours respectfully,
Henry Liva

Attention: Miss Kay Campbell

Dear Miss Campbell:

Thank you for your letter of August 27.

When you forward my letter of August 11 to Mr. Murrow, you might like to enclose a copy of a manuscript which I have recently submitted to the Saturday Evening Post. This is merely for information and not for publication until I have heard from the Post.

It might also be informative to send Mr. Murrow a copy of the report of American Bar Association Special Committee on World Peace through Law, which is a 12-page printed pamphlet, dated August 24, 1959. I haven't a copy other than my file copy, but I think you can obtain one from the office of Mr. Arthur H. Dean, 48 Wall Street, New York 5, New York, or that of Lyman M. Tondel, Jr., 52 Wall Street, New York 5, New York. These men are lawyers and members of the ABA Special Committee. Perhaps you will recall that Mr. Dean is a former law partner of the Hon. John Foster Dulles.

Sincerely,

D M Livingston

DML:tj

Enclosure

AN APPRAISAL OF THE CHANCE OF PEACE

By Donald M. Livingston

The peace with which we are here concerned is not the personal, individual serenity of mind and conscience which may develop through an intimate relationship between a man and his Creator; nor is it the social serenity of the complete absence of all conflict, unrest and violence in a world governed by love and understanding. The first is a fundamental goal which each must gain for himself; the second is the ideal, man's ultimate goal - attainable only through a complete unity of wisdom combining knowledge, feeling and will.

Our concern is with political peace among nations, the definite tranquillity of public order and security based on law, with compliance secured by the expression of world public opinion, rather than enforcement by armed might of a governing body. This definition of peace does not include such temporary expedients as armistice or treaty following war.

What are the obstacles in the way of achieving this world of peace, what are the advantages?

It is difficult, perhaps impossible, to find a man who will state publicly, for the record, that he is opposed to peace and in favor of war. Unless all men are arrant liars, we can accept the desirability of peace as a principle rather than a theory in international affairs. There is here no reason or disposition to question the sincerity of any advocate of peace.

One might begin a listing of the obstacles to peace with a philosophical discussion of the nature of man. During life he must work, struggle or fight for air, water, food, shelter, clothing, love, freedom, fuel, tools,

materials, education, transportation, conversation, recreation and salvation; he must fight against disease, decay, fire, flood, storm, marauders and damnation. Even sport is a contest; the fish, the game animal, the competitor must always win or lose. An increasing social awareness of the rights of others has modified the struggle to some extent and led to adoption of certain rules of conduct. The idea of abstract justice is a concept difficult to accept. No one goes to court for justice; each litigant seeks to win his case. Despite this fact, some form of the rule of law is generally accepted within nations, as a necessity in community life. Resistance to rules of conduct among nations is still a formidable obstacle to peace.

Inertia, acceptance of the status quo, complete immersion in the question or task of the day, act as barriers to peace. When disturbed by some external force such as another nation's warlike act, the normal reaction is to meet force with force. Lacking any institution for peace, war is almost inevitable.

The enormity of the task of obtaining agreement among nations on law, courts, jurisdiction and compliance leads to discouragement and inaction.

Leadership limiting itself to platitude and generality unconsciously presents peace as idealistic and unrealizable. It offers no specific plan around which public opinion may rally in support.

In summary, the obstacles to peace appear as the natural perversity of man, his inertia, the size of the task, and lack of leadership.

A multiplicity of factors is conditioning the mind of man to entertain seriously the idea of peace as an institution to eliminate war.

War has not proved to be a solution to world problems. Wartime political leaders are quickly removed from office at the end of hostilities. Military service is accepted, not as a patriotic privilege, but as a legal necessity. People want peace; they can easily be stirred to defense of their country, but are difficult to lead to invasion of another, unless there is great promise of relief from intolerable living conditions, and some neighbor state can be charged with denial of access to food and raw materials.

Education, in the broad sense of development of faculties and powers, has increased in pace and availability. An educated people will determine its condition and government, and the character of its participation in world affairs. Order and security will be welcomed.

The turbulence in newly self-governing states is followed gradually by stability if they are helped to education and industrialization, rather than propaganda and arms.

The United States budget for 1960 asks for $46 billion for major national security, $2 billion for international affairs and finance, $5 billion for veterans services and benefits, $8 billion for interest. These proposed expenditures, almost 80% of the total budget, relate directly to the cost of war, past, present and future, hot or cold. There is also a Federal debt of $285 billion, representing the unpaid costs of World Wars I and II, the Korean War, and the present cold war. It can be granted that some small part of these costs relate to peaceful accomplishments and objectives, while recognizing that these are only the by-products of a strategy of deterrence of enemies, and their defeat if war is thrust upon us. Public officials

of very high rank have said that this condition may continue for twenty-five or fifty years. The growing demands of state and local governments and school districts, plus the steadily declining purchasing power of money and the constantly expanding needs of the people, have started to apply an accelerating squeeze on the taxpayer which will eventually force a decision and a choice.

There is disgust with war, opposition to war, hatred of war, among former military men of all ranks, their families and civilians.

International diplomacy has a consistent record of failures to achieve peace as an institution. The Hague Peace Conferences of 1899 and 1907 did not prevent World War I. The League of Nations and the Pact of Paris of 1928 in which 60 nations of the world, including all of the great powers, renounced war and agreed to settle disputes by pacific means, did not prevent World War II. United Nations not only failed to prevent the Korean War, but divided on the question, with various members helping each active participant. The International Court of Justice, fifteen judges, is given a statutory mandate to decide disputes by applying international conventions, custom, general principles of law, judicial decisions and the teachings of qualified publicists of the various nations; if the parties agree the Court may decide a case by what is just and good. Progress in collection and codification of these guides to judgment has been minimal. There is no statutory law. There is no method of securing compliance with decisions. Only sixteen members of United Nations, including none of the great powers, have accepted the jurisdiction of the Court without substantive reservations.

The Security Council, which has the primary responsibility for peace, cannot act except with the concurring votes of the five permanent members, Nationalist China, France, Great Britain, Russia and the United States. The General Assembly can recommend, but cannot legislate. The Charter of the United Nations and the Statute of the International Court of Justice cannot be amended without the consent of the five permanent members of the Security Council.

Many individuals and organizations propose various plans and actions which they hope may attract support and contribute to the institution of peace. The plan with the greatest appeal to me, perhaps because it is my own, is the following:

- - - - - - - - - - - -

THE PLAN

Introduction in the General Assembly of the United Nations, by any member state or group of member states, of a resolution recommending for ratification by the member states through their established procedures, parliamentary or otherwise, the following:

(a) Simple basic laws to cover situations which most commonly lead to serious disputes between states.

(b) Compulsory judicial process through continental and inter-continental courts of original jurisdiction, appellate courts, and a court of final review.

(c) Compliance with the decisions of the court by declaration of such

intent, and agreement to sever all contacts with a state which will not comply with the decisions and orders of the court.

(d) Provision for complaint to the court by any state, or by the General Assembly of the United Nations, of any grievance under the law.

(e) Provision to make the courts available to any state in the world which has established a government, and whose language can be translated to one understood by the court, upon ratification in the same manner as a member state.

(f) Provision for submission to the court of disputes between states under any contract (treaty) which is lawful and not opposed to public policy.

(g) Provision for the recommendations to become effective following ratification by any three member states in each of the six continental areas, limited to the states which have ratified the proposals.

THE LAW

Basic international laws such as these:

(1) No state shall trespass upon the territory of any other state.

(2) No state shall divert or charge the character of any stream or other body of water bordering on any other state or flowing to or from such state.

(3) No state shall subject the person or property of any alien to state laws not equally applicable to its citizens.

(4) No state shall harbor persons or property assembled to overthrow the government of any other state by force.

(5) No state shall intrude in any manner in the domestic affairs of any other state.

(6) No state shall form any alliance with another state for invasions of any other state.

(7) No state shall supply military personnel or materiel to any other state except for its use for internal security and defense against external aggression.

(8) No state shall counterfeit the money or securities of any other state or its citizens.

THE CONTINENTAL AREAS

1. Africa, including Egypt but otherwise dividing Africa from Asia by the Red Sea and the Suez Canal.

2. Asia, the mainland, including the sub-continent of India, Ceylon and Asia Minor.

3. Australia and the island states of the Pacific, including New Zealand, The Phillipines, Indonesia, Formosa, Japan.

4. Europe, including Eire and the United Kingdom.

5. North America, including Central America, and the West Indies-Caribbean area.

6. South America.

THE COURTS

1. Original jurisdiction.

(a) Continental. Each ratifying state in the continental area to appoint one judge for a ten year term, the judges to choose a President Judge, appoint the necessary personnel, adopt rules of practice, state the requirements for admission to practice, provide for reports of cases, and submit

annual budgets to the states in the ares.

(b) Inter-continental. Consisting of an equal number of judges appointed by the President Judges from among the judges of the Continental Courts in whose jurisdiction the litigants are located, to serve for a term of court and to be suitably designated, as for example - The Intercontinental Court of Asia, Africa and Europe, Term of 1959.

2. Appellate. To hear appeals from continental and intercontinental courts. Three judges to be assigned by the President Judge from the court of original jurisdiction, and three each to be assigned by the President Judge from a continental court selected by each litigant from the continental courts not making assignments to the trial court. To sit whenever necessary for a specified court term.

3. Final review. Six judges, one assigned by the President Judge from each Continental Court, to sit whenever necessary, for a specified court term.

NATURE OF THE JUDGMENTS OF THE COURT

If judgment was for the complainant, the order of the court could direct the respondent to correct or remove the cause of the complaint, and pay compensation for personal injury and property damage.

COMPLIANCE

Failure to comply with judgments and orders of the Court to be followed by notice by the Court, to all states within its jurisdiction, of such non-compliance, appointment by the Court of one state through which the recalcitrant state can communicate with the Court, and direction by the Court

to all states within its jurisdiction to sever all other contacts with the recalcitrant state until such time as the state shall comply with the decision of the Court.

- - - - - - - - - - -

During the past three and one-half years this plan has been submitted to the Offices of the President and Vice-President, the State and Justice Departments, many Senators and Members of the House of Representatives, law school deans, officials of the American Bar Association, lawyers, business men, newspapers, magazines, the United States Mission to the United Nations and others. Despite the fact that it has attracted exactly no adherents, the resultant comments indicate clearly that peace as an institution won't be achieved by any form of world government, but through a world regime of law, an effective legal system including the four essentials of courts, jurisdiction, law and compliance.

Another effort is the current activity of the American Bar Association Special Committee for World Peace through Law. This committee has been in touch with 1400 state and local bar associations, 74 bar associations in foreign countries, 182 teachers of law, 2400 members of the American Society of International Law, the International Bar Association, and the Inter-American Bar Association. The American Bar Association has accepted a planning grant from the International Cooperation Administration, an agency of the United States "to consider and recommend means of developing and strengthening, within and among nations, legal concepts, standards, and institutions which will contribute, through facilitating the expansion of the flow of international investment and trade and otherwise, to the

economic growth of such nations and which will facilitate peaceful settlement of disputes within and among nations."; it has held five regional conferences of state bar associations presidents and leading lawyers in the United States; it plans four world regional conferences and a world conference of jurists, teachers of law and practicing lawyers; the Committee has a dynamic young Chairman who advocates the rule of law convincingly at home and abroad.

The aggregate of advantages for peace as an institution is impressive. War is not a solution of world problems. Education leads people to order and security. Economic aid is more effective than propaganda and arms. Rising taxes and inflation will influence a decision for the institutionalizing of peace. People hate war and desire peace. There is a yeast of interest in planning for peace. Plans are developed, perhaps not accepted, but not rejected without consideration, explanation and encouragement. Practicing lawyers, teachers of law and jurists are actively working under competent leadership for peace as an institution. The United States government has for the first time made funds available for examination of the possibilities in lawyer-to- lawyer exchanges of opinion which can be developed to lawyer-to-people-to-people public opinion support for a definite program. Diplomacy cannot achieve peace; United Nations and the International Court of Justice cannot function effectively for peace under present limitations. The cause of failure is known - the omission of essential enabling provisions to accomplish the stated purpose. The reason may have been an incredible naiveté, an unbelievable ignorance, a practiced cynicism, intransigence, a callous disregard of the lessons of history, or failure to realize that the problem of achieving a world of peace overshadows all

other problems. It may have been simply that the world was caught in a moment of history without great leaders wise enough to tell the Conference at San Francisco in 1945 to continue until an effective instrument of peace had been achieved. Now there may be little time to arrange life under the rule of law, before atomic death in some tomorrow; there are no other alternatives.

Balancing the advantages against the obstacles to peace, one is forced to conclude that the scales are weighted against peace, unless they can be tipped toward peace by one decisive weight. This is the leadership of the United States, expressed with positive clarity, not in platitude and generality, not in summit meetings, but with a concrete plan for achievement of peace as an institution, the rule of law with the four essentials, courts, jurisdiction, law, compliance.

The private organization or individual has no place in inter-nation affairs. Under our constitution only the President has the power to make treaties; the Senate may only advise and consent. If anything is to be done to institutionalize peace, the initiative must be taken by the President of the United States. The people cannot accomplish it by the weight of public opinion. Whether we like it or not, the United States is the leader of the free world. No other state is likely to propose the achievement of peace through an effective world regime of law. Actually we have nothing to lose. We still have our military power and can and will maintain it until there is proof of acceptance generally of the rule of law. It is not material whether or not Russia joins the legal system. The

advantages of a participant far outweigh those of an outlaw nation. There is no reason why the rest of the world cannot begin to reap the benefits. The possible absence of Russia can be only temporary; as her people acquire a more general education, communism as practiced will change greatly, or wither and die. There is no way to stop this process; it has long been established as a principle of human conduct.

Black Mountain, North Carolina

August 27, 1959

Dear Mr. Livingston:

Your very nice letter of August 11th arrived after Mr. Murrow had left the country to start ten months of extensive travel. I will send it on to him as soon as I have a forwarding address.

Sincerely yours,

Mr. Donald M. Livingston

Mr. Edward R. Murrow,
Pawling, New York

Dear Mr. Murrow:

I hesitate to suggest work to a man who has recently decided on a one-year vacation. I do so only because it may appeal to you as a new activity with new people and perhaps some places you haven't visited.

The immediate past president of American Bar Association, Charles S. Rhyne, spoke to a great many domestic and foreign bar association groups in an attempt to build acceptance and public opinion support for World Rule of Law. Following his term in office he was appointed chairman of the ABA Special Committee on World Peace through Law. The International Cooperation Administration made a grant for the work Rhyne had in mind, which I believe, was the first instance of large scale funds put up by the United States for work in the peace field. In April and May, 1959, this committee conducted five regional conferences at Boston, Charlotte, Chicago, San Francisco and Dallas. The participants were state bar association presidents and four or more leading lawyers of each state in the several regions. Four regional conferences are planned tentatively in the cities of Rio de Janeiro, New Delhi, Accra and Vienna. A world conference would follow. The committee has made a report to International Cooperation Administration, which will probably supply the necessary funds.

A little more than three years ago I got to thinking about taxes, which led me to seek a substitute for war. The only thing I could think of, which had any promise for success, was law. I have since been in rather close touch with all of the efforts which I can locate in this field. Rhyne's committee is moving fast in the right direction. I won't attempt to state the substance of their report. In my opinion it is practical. It makes good sense.

I wish you would look into the matter, and if it appeals to you, arrange to be brought up to date by Rhyne, informed about the ABA action at Miami Beach, Florida, August 24, 1959, and then arrange to attend these world regional conferences and the eventual world conference of lawyers.

The committee plan is to make it a lawyer-to-lawyer-to-people-to-people program, not to bring governments into the matter until the ground work is done.

You have the ability and following to report such a matter. I hope it will appeal to you. If it does, please call upon me for any background material which I may be able to supply.

The money for TV and radio programs, travel, etc. must come from someone. Any of our great American corporations which do a large volume of overseas trade should be sufficiently interested in the stability of their markets to buy the necessary time. I think I'd consider Standard Oil, Gulf Oil, corporations of that type which have large foreign investments and business.

Sincerely,

DML:tj

U.S. Naval Base
Norfolk 11, Va.

Dear Commander Lloyd,

As you know, the press of events in the Virginia school situation forced us to update THE LOST CLASS OF '59 virtually until air time last night. In the final trimming of material we deleted that paragraph of your remarks which pointed out that no individual could speak for the Navy, and that you were speaking only for yourself.

In view of the fact that you expressed no view regarding the segregation-integration question, but restricted yourself to the questions of inconvenience and expense, we did not feel that we compromised your adherence to naval regulations.

In the event that your superiors wish further explanation of your participation in the program, I will be happy to explain the deletion of the remarks.

Fred Friendly and I thank you very much for your cooperation. We have been much indebted to you for your past assistance on various projects involving the Navy and we look forward to future associations with you and your colleagues.

Sincerely yours,

ERM:skh

Dear Mr. Murrow:

The "Helen Keller World Crusade for the Blind" was opened last Tuesday with a meeting and reception at the United Nations. As soon as possible we shall send you a full report of the meeting in the form of a presentation that will be used in attempting to attract support from business corporations. Meanwhile, we enclose copies of the meeting agenda, a facts sheet about the Crusade and the Crusade mail appeal materials - the AFOB EXTRA, the letter signed by the Crusade Chairman, Miss Katharine Cornell, and the reply envelope. It should be noted that these are for mass distribution only. They are not being sent to our regular contributors or prospects such as corporations and grant-making foundations. 250,000 have been mailed and another 250,000 are to be mailed in the Fall.

We are happy to report that the first contribution to the Crusade has been received from Mr. John D. Rockefeller, 3rd in the amount of $1000.

Very truly yours,

John D. Lloyd

HELEN KELLER WORLD CRUSADE for the blind

22 WEST 17 STREET, NEW YORK 11

Mrs. Dwight D. Eisenhower, Honorary Chairman

Miss Katharine Cornell, Chairman

My good friend:

The enclosed bulletin, AFOB EXTRA, is an appropriate way, we think, to bring you news of Helen Keller, who has been news most of her life.

The distinguished author, Zona Gale, once put it that Helen was "news from God concerning the God in man." She has been a constant inspiration since the day over 70 years ago when her beloved teacher, Anne Sullivan Macy, entered her life and set her on the road back to the world from which she had been banished in infancy by an illness that left her incurably blind and deaf. That day marked the beginning of a life devoted to helping others.

"Humbly I rejoice," she has said, "that the Lord has accepted whatever abilities I have for the liberation of the blind of the world." That statement reflects Helen Keller's concern for the more than 12,000,000 blind men, women and children - nine-tenths of the world's total - living overseas in countries ravaged by war, poverty and disease. It expresses, too, the breadth of compassion motivating her work with the American Foundation for Overseas Blind, the only agency for the sightless whose program is completely world-wide in scope. She helped to establish it over 40 years ago, and strives constantly for its expansion - not only to rebuild lives broken by blindness, but to extend international understanding and world peace.

Helen will be 80 years old in June 1960, and it is my hope - a hope I share with the outstanding Americans whose names appear on this letter - that, as a birthday tribute to her, all Americans will join with us in the "Helen Keller World Crusade for the Blind" and contribute towards the fulfillment of her dream. Checks should be made payable to "Helen Keller Crusade" and mailed to Miss Keller with the coupon on the back of the AFOB EXTRA. Please give as generously as you can.

Very sincerely yours,

Katharine Cornell

THE HELEN KELLER WORLD CRUSADE FOR THE BLIND

PURPOSE: To extend the services of AFOB - the American Foundation for Overseas Blind.

RELATIONSHIP WITH HELEN KELLER: Helen Keller helped to establish AFOB in 1915 and, as its International Relations Counselor, plays a leading part in planning and conducting its activities. The board room of the Foundation, where many mementoes of her illustrious career are exhibited, is named the Helen Keller Room.

AFOB SERVICES: The aim of AFOB is to help blind people overseas achieve full independent lives. It does this by providing guidance, expert consultation and material as well as financial assistance towards the improvement of programs for the blind in all parts of the world and the inauguration of such programs where they have not already been established. These include programs for the education of blind children and for the rehabilitation, vocational training and employment of blind men and women. Educational and training equipment is supplied - machinery, tools and materials - braille publications, presses and "Talking Books" in many languages. Scholarships are also provided for teachers of the blind, rehabilitation workers and vocational instructors.

Three regional offices are maintained - the Europe-Middle East office in Paris, the Far East office in Manila, the Latin American office in Santiago, Chile.

NEED: More than 12,000,000 blind men, women and children, said to represent nine-tenths of the world total, are found overseas in countries ravaged by poverty, disease and war. Only a small proportion of them are as yet receiving the assistance they need.

GOAL: Helen Keller will be 80 years old on June 27th, 1960. As an 80th birthday tribute to her, the Crusade will seek to raise $1,250,000 in this country for developing services to which she herself has assigned top priority.

LEADERSHIP: A National Committee is being formed under the honorary chairmanship of Mrs. Dwight D. Eisenhower and the chairmanship of Miss Katharine Cornell. It is expected that regional committees will also be organized. A list of the National Committee is attached.

####

A.F.O.B. EXTRA

AMERICAN FOUNDATION FOR OVERSEAS BLIND — 22 West 17th Street, New York 11, N. Y.

HELEN KELLER CRUSADE

Helen Keller's friends and admirers – millions of men, women and children throughout America – are planning a mammoth 80th birthday celebration in her honor.

The birthday "present" will cost $1,250,000. It will take a year to wrap. And while it will honor Miss Keller, the real beneficiaries will be the 14,000,000 sightless people of the world.

The year-long observance will take the form of the "Helen Keller World Crusade for the Blind" – a national campaign to raise funds for expanding services and establishing new projects for the education, training and employment of the blind in areas to which Miss Keller, herself, assigned top priority in her historic survey tours.

The Crusade will be conducted by the American Foundation for Overseas Blind – the voluntary organization through which Miss Keller has worked for the world's sightless since its founding more than forty years ago.

Chairman of the Crusade is Katharine Cornell, America's first lady of the stage, for more than 20 years a close friend of America's "first lady of courage." Miss Cornell who has been active in support of many national and international activities for the blind, is an AFOB board member.

The projects will provide enduring recognition of Miss Keller's life-long service to the blind.

For, as she herself has repeatedly told the world and demonstrated in her own life: *"the blind do not want charity; they want the kind of help that will give their lives a goal."*

Miss Keller's life has a goal – to bring new hope and joy to a world she has never seen or heard.

When the world celebrated Miss Keller's 75th birthday, Katharine Cornell said in a congratulatory message:

"In congratulating you, I am congratulating all of us fellow-creatures who have been lucky enough to have had contact with you."

This is the spirit of the "Helen Keller World Crusade for the Blind." Through it, every American who has drawn courage from Helen Keller's example can share in honoring her.

Sam Vandivert

HUMBERTO MARENCO, AFOB fellow from Costa Rica, reads a braille map of the New York subway system with Aaron Pincus, Supervisor at the Long Island Rehabilitation Center of the Industrial Home for the Blind.

Blind Latin American Teacher Studies Training Methods Here

"Suffering and privation are everywhere," wrote Helen Keller, "but in their complicated insecurity, the blind need education more than others, because it is only through special instruction that they can be taught to support themselves."

The example of Helen Keller in proving, with the help of an exceptional teacher, that mind and will could triumph over the handicaps of blindness and deafness, has inspired thousands of men and women to become workers for the blind, as teachers, rehabilitation workers and vocational instructors. Typical of these dedicated individuals is Humberto Marenco of San Jose, Costa Rica. Now in New York on an AFOB fellowship, Marenco has been a leader in the development of services for the blind in his small Central American republic.

Humberto Marenco was fourteen years old when he was struck by blindness. Protected by a loving family, he spent the following ten years going from doctor to doctor, undergoing every conceivable treatment that might restore his sight, coping as best as he could with his new handicap. His older brother and two younger sisters would read to him so that he could keep up with his studies, but these were bad years for Marenco.

The turning point in his life came in 1949 when he was twenty-four.

"A Red Cross 'gray lady' told me about the school for the blind where blind people had fun, played the guitar and learned braille," Marenco says. "I first went to the school to get rid of my spare time. I had lots of spare time to get rid of in those days."

(continued on page 3)

A Birthday Tribute

It may seem premature to begin preparing for the observance of a birthday over a year before the event, but when it's an eightieth birthday, and the person who will be eighty happens to be Helen Keller, who will not agree that the observance should be even more noteworthy than any that has gone before? Who will not also agree that some exceptional kind of tribute should be paid to the renowned humanitarian who, against the odds of her own deafness and blindness, became the world's acknowledged leader in work for the deaf and the blind?

Helen Keller's friends do agree. Under the name of "Helen Keller World Crusade for the Blind," they are asking all Americans who share their admiration for Miss Keller and their belief in the value of her work to join with them in helping to expand the work of the American Foundation for Overseas Blind. Miss Keller has been closely associated with the Foundation since it was established forty-four years ago to assist blinded soldiers of the 1st World War, and has played a leading part in its subsequent development as an international organization dedicated to promoting the economic and social well-being of sightless people in all parts of the world.

In her extensive travels as International Relations Counselor of the Foundation, and as emissary to the handicapped people of the world under the auspices of the U. S. Department of State, Helen Keller has found that the development of services for the blind has been most neglected where most needed — in impoverished areas of the Middle East, Asia, Africa and Latin America, where over 12 million sightless people — nine-tenths of the world's total — are concentrated. The Crusade, it is hoped, will enable the Foundation to expand the services already established in those areas and create others where they are urgently required.

Everyone in America is invited to celebrate with Helen Keller her eightieth birthday, and to join with the rest of her friends in providing a fitting birthday tribute by giving to the "Helen Keller World Crusade for the Blind." In our judgment, the money so given will do more than merely promote the well-being of those blind persons immediately concerned; it will also serve as an unmistakable demonstration of world brotherhood in action and will contribute abundantly to international understanding and peace.

You can help further Helen Keller's work by sending your contribution to the "Helen Keller Crusade," 22 West 17th Street, New York 11, N. Y.

AFOB AIM: Productive Lives For The World's Sightless

"I am agreed it is good to turn our adult school to be a rehabilitation center to help those poor handicapped people to have the chance to earn their own living, and not begging on the street. They will be very grateful to you if you could bring their lifes into happiness and independent."

The young Vietnamese woman who wrote this to AFOB is the head of a small school for blind children in Saigon. She started it herself a year ago, after training in the United States. Until then, there had been virtually no facilities for the education of blind children in her country, and no adequate facilities for adults. The school she refers to was originally intended for blind boys, but has become little better than an alms-house in which all but a few of the inmates are over eighteen, and many are mature men.

AFOB has a plan for correcting this situation. Training centers would be established for the older inmates of the school, the children transferred to the school, the school properly equipped and furnished, the enrollment of the school increased.

This is but one of many proposed AFOB projects whose early implementation is regarded as essential in the countries concerned. The projects vary as do the conditions found in those countries and the stages of development achieved in their services for the blind. In Chile, for example, a demonstration center is needed for training rehabilitation workers throughout Latin American — in Greece, an agricultural training center to serve the northern provinces — in France, expanded facilities for the "Talking Book" program, serving fifteen countries in Europe and the Middle East. All are designed to meet immediate needs. All, it is hoped, will be brought into being by the generous response of the American public to the Helen Keller World Crusade for the Blind.

Founded over forty years ago, AFOB provides guidance and material as well as financial assistance in the development of services for the blind in other countries throughout the world. In addition to its world headquarters in New York, the Foundation maintains regional headquarters in Paris, serving Europe and the Middle East — in Santiago, Chile for Latin America — in Manila for the Far East.

EDUCATION: During a two and a half year mission completed in 1957, AFOB field representatives promoted the formation of the Advisory Committee on International Aid to the Blind of Korea. Aided by AFOB, the Committee now maintains teacher training courses and coordinates the work of twelve schools, three training centers and a braille publishing center. Ten additional schools are planned. Here a class of Korean children is shown at the National School for the Blind in Seoul.

FARM TRAINING: The blind farmer above is being trained to raise and care for poultry at the new agricultural training school in Formosa where the Committee for the Blind with AFOB help and guidance, had already established four industrial training centers and a braille publishing plant. Brailled scale is part of the machinery and equipment donated by AFOB.

TO HELEN KELLER

You are one of our great spirits.
You have explored open ways into realms of darkness,
And by your high example of achievement
Brought emancipation to myriads of fettered souls.
But more than this —
You have brought light to those
Who have eyes and will not see,
And truth to those who have ears and will not hear.
In visions of a better day of justice,
Peace and brotherhood for mankind,
And in serene determination to speed
The coming of that great day upon the earth,
You are among the great leaders of our generation.
I salute you with reverence and gratitude
As I think of the clearness of your mind,
The love of your heart
And the valor of your spirit.
Alike in your thought and life,
You are a flaming beacon for us all.

John Haynes Holmes

U.S.I.S. — Paris — Photos L. Falquet

INDUSTRIAL TRAINING: At the AFOB Industrial Training Center in Paris sightless French citizens learn to operate drill presses in preparation for employment in open industry. Cost of the program is shared with French Ministry of Labor and the National Association for Professional Rehabilitation, a French voluntary agency. Other activities in Paris include business and professional training courses; the "Talking Book" program serving 15 countries in Europe and the Middle East and publication of the French language braille magazine, "Et la lumière fut."

Studies Training Techniques

(continued from page 1)

Spare time presents a very different problem to Marenco now. He doesn't have any.

He teaches at the school for the blind in San Jose, tutors six blind students who are the first to attend high school in Costa Rica and works as a volunteer instructor at the Centro Helen Keller, the rehabilitation and vocational training center that he helped to establish five years ago. A board member of the Centro, Marenco also serves as its representative in the National Commission for the Blind, recently created under legislation he helped to formulate.

Married in 1953 to the former Dora Santisteban, herself founder of the Division for the Blind at the state-operated School for Special Teaching, Marenco is the father of two handsome boys — Jose Humberto, four, and Francisco Xavier, three.

These days Marenco is a student, too — a special kind of student. Under AFOB sponsorship he arrived in New York in February for intensified training in adult rehabilitation. While his work has mainly been with blind children, he will on his return to San Jose help adults and train other rehabilitation workers.

He is now, as he explains it, "observing and being observed." His course includes work in rehabilitation, placement, counseling, workshop methods, recreation and public education, all of specific value to Marenco, since, as he says, "in Costa Rica one person is called upon to do practically everything."

The granting of training scholarships to qualified candidates such as Humberto Marenco is one of AFOB's most important services. By demonstrating the potentialities of sightless people an experienced worker or teacher of the blind effectively encourages the officials of his country to assume the responsibility of training its sightless citizens.

Sam Vandivert

MARENCO with trainee at the washing machine in model apartment (not for rent) at the Long Island Rehabilitation Center. The apartment, completely furnished and equipped with every modern appliance, duplicates usual hazards as well as conveniences to which blind people living in the city must become accustomed.

Sam Vandivert

ON RETURNING HOME Marenco will help inaugurate Costa Rica's first industrial workshops for the blind. Here he helps a blind trainee learn how to operate a drill press.

AFOB LEADERS:

THE world celebrated Helen Keller's 75th birthday in June 1955. Shown with her at the high point of that celebration are two of her leading co-workers in her worldwide efforts to help others who are blind. M. Robert Barnett (left) Executive Director of AFOB, who lost his sight at the age of 15, worked for two years as a reporter for Florida newspapers and the Associated Press. In 1944, when he joined the Florida Council for the Blind as a placement officer, he learned the basic techniques of some 90 industrial occupations. Later he served as the Council's Executive Director. When he was named to his present post in 1949, he was the youngest official of that rank in a national institution for the blind. Eric Boulter, AFOB Field Director, who was blinded in World War II, met Helen Keller in 1947 in Greece where he was directing a master rehabilitation plan for the blind commissioned by UNRRA and the Greek Government. Miss Keller persuaded him to join the AFOB, first in 1948 in Paris as Assistant Director of the European-Middle East program and two years later in New York as head of its global program. As the AFOB International Relations Counselor, Miss Keller takes an active part in the planning and development of AFOB work.

WORKERS FOR BLIND PLAN WORLD MEETING

Development of new employment opportunities for the world's blind will be the major topic when more than 200 workers for the blind meet in Rome, Italy this summer.

The event will be the Third General Assembly of the World Council for the Welfare of the Blind, to be held July 21–30 at the headquarters building of the United Nations Food and Agricultural Organization.

Delegates will hear major addresses from nine top leaders in the field from various parts of the world and will discuss rehabilitation and training programs to help the blind become economically independent.

The President of the Council, Colonel E. A. Baker will preside. Colonel Baker, who is managing director of the Canadian National Institute for the Blind, is also a director of AFOB. Mr. Eric Boulter, AFOB Field Director, serves as Secretary-General of the world organization.

The World Council was formed as the result of a unanimous resolution adopted at an international conference in 1949 sponsored by AFOB and the Royal National Institute for the Blind, London. One of the first acts of the Council when it was formed was to elect Helen Keller to honorary life membership. Previous assemblies were held in Paris in 1951 and 1954.

We make every effort to avoid duplicate mailings, but it costs more to eliminate some duplications than the savings justify. If you receive a duplicate copy of our material perhaps you would be good enough to share it with a friend.

HELEN KELLER, as she appears today, with her braille Bible in the library of her Connecticut home. "I love it as I love no other book," Miss Keller says. Reading from the Scriptures is a daily morning ritual.

Helen Keller– "FIRST LADY OF COURAGE"

Because her conquest of both deafness and blindness proved that human faith and courage could transcend all known boundaries, Helen Keller is beloved and unique in the world. In her unceasing work to help others achieve what she has — to prove, without limit of nation or race, that she is not unique — lies the measure of her achievement.

IN 1887, at the age of seven — an old photograph captures a pensive mood. It was in this year that beloved "Teacher," Anne Sullivan, came into Helen Keller's life and "began to reveal all things to me."

HELEN KELLER, as she appeared in the 1920's, pictured here with "Teacher" Anne Sullivan. Her book, "Teacher," published in 1955, is a tender, revealing account of their nearly half-century together.

DESPITE her tremendous handicaps, Helen Keller determined she would go to college. She did, entering Radcliffe in 1900. With the help of Anne Sullivan, she was graduated cum laude in 1904. It was during this period, she commented later, that she first became conscious of the fact that there was solid work for a blind and deaf person to do.

HELEN KELLER with the famous inventor Alexander Graham Bell, through whose friendship Anne Sullivan was brought to teach her. She said of him later, "He was a compassionate man whose very touch made me love him immediately."

"HELEN KELLER IS NEWS FROM GOD CONCERNING THE GOD IN MAN." *Zona Gale*

"YOU SEE AND HEAR WITH YOUR SPIRIT; YOU SPEAK WITH YOUR SPIRITUAL TONGUE LIKE A STAR" *Yone Noguchi (Tokyo, Japan)*

WITH George Bernard Shaw and Lady Nancy Astor.

SHE has known every President since Calvin Coolidge. She said of President Eisenhower, "I felt the courage and thought that carried him through such great years of the world's history."

IN 1955 she conferred with Prime Minister Nehru on the massive problem of founding programs for the 2,000,000 blind people of India. The Indian press called her "America's greatest gift to India."

WITH Eleanor Roosevelt before she left on a world tour in 1955.

ONE of the great "thrills" of her life — meeting Sir Winston and Lady Churchill.

AN ARDENT music lover, she captures the rhythm of music from 'Tristan and Isolde' from the throat of Lauritz Melchior.

HELEN KELLER is greeted by a delegation of young admirers on her visit in 1948 to the New Zealand Institute for the Blind. Her travels all over the world have been an inspiration to the handicapped and have spurred the development of rehabilitation programs everywhere.

"THE BLIND should no more feel sorry because the good Lord has given them Louis Braille for one eye and Helen Keller for the other," said Sheik Shaalau in his speech to Miss Keller when she visited Egypt in 1952.

HELEN KELLER toured the United States after World War II to visit wounded combat veterans in service hospitals. The hospitalized veterans took her to their hearts as a "comrade in arms." Standing with her is her constant companion Polly Thomson.

AIDS TO INDEPENDENT LIVING

Perkins brailler $90.00

Carpenter's level $ 6.15

"The blind don't want charity; they want the kind of help that will give their lives a goal."

Who knows better than Helen Keller, lifelong friend of the blind, the kind of help which will mean most to a blind person, somewhere in the world, struggling for dignity and self-reliance?

She has written, "Blindness . . . is to sit helpless, staring at the dark with nothing but the dark staring back, while one's spirit tugs at its fetters, and one's hand aches for the tools it used to wield."

Your gift to the HELEN KELLER WORLD CRUSADE FOR THE BLIND will honor that great woman and put into the hands of a sightless person the tools he needs for a productive, useful life.

Dear Mr. Lloyd:

Thank you for your letter about the meeting on May 19. I regret that I shall be unable to attend, as I already have one or two engagements during the latter part of that afternoon. In any case, that time of day is usually bad for me, as I have an evening news broadcast to prepare.

I am returning the "Consent for Use of Name" form, as you request.

Sincerely yours,

May 7, 1959

Dear Mr. Murrow:

I apologize for my delay in fulfilling a request from Miss Katharine Cornell to send you the plan for the "Helen Keller World Crusade for the Blind" as well as information about this Foundation's activities. The purpose of this letter, though, is to let you know that arrangements have been completed for the opening event on Tuesday, May 19th, at the United Nations. I hope you will be able to attend.

A meeting, lasting not longer than an hour, will begin at four o'clock in Conference Room Number One of the General Assembly Building, and will be followed by a cocktail reception from five o'clock to six o'clock. Speakers will include Ambassador Henry Cabot Lodge, Ambassador Ali Sastroamidjojo of the Indonesian Delegation to the U.N. and Mr. Andrew W. Cordier of the U.N. Secretariat. The Chairman of our Board of Directors, Mr. Eustace Seligman, will preside.

At this writing it is not certain that Miss Keller herself will attend, being reluctant to appear without her companion, Miss Polly Thomson, who has recently been ill. I am anxious, however, to have you meet our Executive Director, Mr. M. Robert Barnett, and our Field Director, Mr. Eric T. Boulter, who is also Secretary-General of the World Council for the Welfare of the Blind. Being exceptionally articulate, as well as blind, they are convincing spokesmen for our program.

I enclose a list of the Crusade Committee, and will, within the next few days, send you the plan of the Crusade and information about the program of the Foundation. Meanwhile, I should be grateful if you would let me know whether or not we may have the pleasure of your company at the meeting and reception on May 19th.

I also enclose a "Consent For Use of Name" form, required by New York State law, and would appreciate it if you would execute and return it to me with your response to this letter.

Very sincerely your,

John D. Lloyd

Dear Trevor:

I am ashamed to confess that I didn't know you were at Dartmouth.

Please don't fail to let me know when you are going to be in this miserable city. We must arrange a reunion.

I am trying to lend Sam Berman a hand with his globes, but it isn't easy.

I hope you enjoy Dartmouth and that you share my high opinion of John Dickey.

As ever yours,

Mr. Trevor Lloyd

March 6, 1958

Mr. Edward R. Murrow,
c/o Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Ed:

A letter from Sam Berman of Geo-Physical Maps Inc. reports the results of his efforts to draw attention to comparative figures on Geographic education in US and the USSR. Last spring I was fortunate in spending a month over there and in addition to visiting Arctic institutes and universities, called on schools whenever I could. I also spent some time at the Pedagogical Institution of USSR in Leningrad. One result of all this was quite a large collection of text books used at all levels and incidentally a fine group of books used in education in the various Arctic places of the USSR.

It occurred to me that the good work the Soviet authorities are doing in geographical teaching and research stems from two causes: (1) the simple fact that they are using what is basically the original European educational system in which geography has always played an important part. However in the USSR there is (2) the special characteristic of a need to develop the whole vast land and its resources, to improve transport, power development, the best utilization of labor, etc. This of course calls for geographical work at the university level. It so happened that I was in the country when the plans for decentralization of economic planning were announced. Geographers everywhere thought this a commendable idea for two reasons: that the local economic geographers and others knew far more about conditions in their area than too remote and theoretical economic planners in Moscow; and also that there would be lots more jobs for the boys, particularly for economic geographers with local knowledge. I don't know what you can do to further general interest in this country in the expansion of geographical work in schools, colleges and institutions, but it is most certainly our direst need.

On the way back from Moscow I stopped off in Budapest for a week, (This was in April, 1957) just to see how it looked so many years after CIE used to forgather there so long ago. It was all very depressing, except for the people. They were the same as ever. On their urging I visited Debrecen last seen when I helped drive your Ford car from Bucharest to Paris. The one week visit

to Hungary was so successful that I agreed to return to give lectures on the geography of Canada at all the university towns. So at the end of June I drove back to Vienna and spent more than two weeks on what amounted to a triumphal tour with overcrowded lectures devoted to the land to which something like 35,000 young Hungarians had escaped. The whole thing was extraordinarily stimulating and must have been pretty small consolation to Kadar's Government. I returned with the firm conviction strengthened by another visit to Poland and Czechoslovakia that it is in our best interest to flood these eastern European countries with travellers from the West. Fortunately as a Canadian I was able to enter Hungary without any State Department repercussions.

With best regards

Sincerely

Trevor Lloyd

Dear Mr. Loeb:

I hope you are not unduly concerned about the shot we missed during our visit to your home. I really do not think it detracted a great deal from the content of the show, and it is one of those minor mishaps that is likely to happen at any time on a live TV program.

Will you please thank Mrs. Loeb for her patience with our crew and, indeed, with me. It was a most enjoyable visit.

Sincerely yours,

Dear Mr. Murrow:

The film of the "Person to Person" show arrived beautifully boxed, and thank you so much.

We have no projector at the Waldorf but are looking forward to showing it Friday night and seeing just how amateurish we were.

Sincerely,

G. M. Loeb

Dear Mr. Murrow:

I am attaching a gift copy of my book, just in case someone has not handed you one.

Mrs. Loeb and I enjoyed the broadcast but we enjoyed our luncheon with you better.

I want to compliment your crew on the way they left the house. The most critical person couldn't find anything but praise for everything they did the whole time they were there.

We are beginning to get a lot of comments about the show. Most of them were to the effect that it was "natural", which I suppose is a polite way of saying that we were amateurs.

Of course, I would have liked to have talked more about economics or the stock market. In fact, I think some of the questions you put to me at the Pierre were very suitable for the air.

We will be watching again next week and by all means let's have that "in person" visit before you go abroad. As I understood it, I thought you said something about preferring it in July. We would too, in a way, because the new swimming pool should be finished. As Mrs. Loeb said, it can be overnight or just for dinner, as you and Mrs. Murrow prefer. I never believe much in invitations that say "call me some time", but this is very sincere and if you can set a date we can, if you will give me a ring at the office, WH 4-2100, or have your secretary call John Garcia here.

Sincerely,

G. M. Loeb

Loeb, Jr. James

March 17, 1959

Dear Mr. Leob:

The economics of this television business are so complicated that I am inclined to doubt that the project you propose is workable except on educational television stations of which I believe there are only some thirty-six in number.

I am sure that there will be no substantial improvement in the quality of television programming, unless the viewers can somehow make their voices heard. On the other hand, maybe there aren't very many who are really dissatisfied with the current fare.

I hope to try to find out a little bit about that in the course of the coming year.

As ever yours,

Dear Mr. Murrow:

In line with the stimulating speech you made sometime ago, I enclose an editorial from last Monday which is self-explanatory.

It seemed to me that a substantial job could be done in enlisting an audience for good televiewing, even on weekday nights, if the support of some of our 21,000 high schools could be enlisted, perhaps through the National Education Association and the Congress of Parents and Teachers.

If you find a minute in your impossibly busy schedule, I will greatly appreciate any comment you might have.

Incidentally, you will undoubtedly not remember me from the conversation we had some years ago, but I count some of your colleagues as good friends, especially Blair Clark, Eric Sevareid and Winston Burdett. Needless to say, the news of your impending leave of absence was received with dismay by millions of people, including the Loeb family now in retreat in the Adirondacks.

Most cordially yours,

James Loeb, Jr.

TV AND EDUCATION

Last week it was brought out at the Saranac Lake Parent-Teachers Association meeting that television is a serious handicap to the educational process, especially at the high school level.

It was pointed out that the fault lay with the parents as well as with the students themselves. Not only do too many students listen too long (as much as three hours per night) to programs which in no way contribute to their educational development, but too many parents expect their sons and daughters to do their homework while they, the parents, are listening to these same non-educational programs.

It would appear that all educational authorities are concerned with this problem, including the New York State Department of Education.

* * *

We would have no way of knowing what is being done to meet the problem in other communities or at higher levels. We hope that more constructive ideas are floating around elsewhere than were suggested at last week's P-TA meeting. As far as we could determine, the problem seems much like the weather, in that there is much talk about it but no one can think of anything to do about it.

It seems from this corner that any solution must be based on two premises:

(1) Television is here to stay, no matter what we may think of it.

(2) Most television programs are bound to be non-educational in character. This is true now because of the obvious commercial objective of obtaining the greatest possible number of viewers. And for the same reason it would be true if pay-TV were to be adopted.

In the light of these premises, we suggest a positive rather than a negative approach.

There ARE good programs on television, both directly educational and cultural. Most of them unfortunately are on Sunday morning and afternoon, a period which has aptly been called the "ghetto" of cultural television. But, in addition, there are from time to time fine programs during weekday evenings.

Now would it not be the path of wisdom for the schools to make a major effort to encourage the students to watch the GOOD programs? Such an effort might have a short-run educational effect, but it would also help develop, for the long-run, better taste among our citizens in relationship to what is bound to be a major communications medium for as long as we can foresee.

Finally, such an effort, if sufficiently widespread, might help build an audience for better programs which would even be of sufficient size to be more attractive to commercial sponsors.

* * *

To be precise, we think the teachers might well require students to watch, and even to comment on orally or in writing, specific television programs of educational or cultural interest. In the rare cases of students who do not have television available, exceptions could be made and alternative work assigned.

Just for example, we wonder how many students in the English classes of this area were encouraged to watch the Old Vic Company do Hamlet last week. Even though many of the critics were highly critical of the interpretation, the mere hearing of the language of Shakespeare was an experience for which we all should be grateful . . . and for free.

We think that such a positive approach should be taken not only by the administration of our schools and by the teachers, but also by the P-TA and all other agencies concerned with educational improvement. In fact, we shall send these thoughts—which are surely not original with us—to the National Congress of Parents and Teachers, the National Education Association, and any other agencies we can find.

So far as our local situation is concerned, we specifically invite our local P-TA to name a small but representative committee which, each week, would choose from the television listings the half dozen or so programs of greatest educational value. And The Enterprise will publish the committee's weekly recommendations in such a manner as to suggest to the teachers, the students and the parents a diet of televiewing which can be both entertaining and instructive. I heppened to tune in to your farewell speech.
God's speed and good luck to you. Do not forget your
devoted friends, among them,

as always , yours

Karl Loewenstein

Karl

Loewenstein, Karl

March 16, 1959

Dear Karl:

How it warms the heart to hear from old friends, particularly in the wake of a decision which wasn't very important in itself, but which wasn't easy to make. One thing I hope to do in the coming year is to see a few old friends rather than just see the people I must see.

At the moment I have made no plans - don't know where I am going or what I will do, but I do hope, at least, to get my bearings and perhaps change my priority somewhat.

Should you be in New York before the 1st of July, it would give me the greatest possible pleasure to see you again.

As ever yours,

Mr. Karl Loewenstein

Dear Ed:

The announcement that you would withdraw for a year from broadcasting has saddened me, as most other people of your faithful audience. Trying to place myself, however, in your own position I think I can understand your decision. You have reached, after a steep ascent, a high plateau in broadcasting and television which, although some minor hills may lie ahead, will not offer a fundamental challenge. You may desire to turn to something new. I could imagine two things: one is gathering together the money and organization for the really high-grade television functions you have envisaged so plainly in your articles in the Reporter. This, of course, is primarily a financial matter. If you could accomplish it, you may render a tremendous service to this country. The other alternative would be a public career. Since we hate to see you in politics, I could imagine the presidency of a university or a large college as a desirable and constructive purpose.

In the meantime you will have a marvelous time relaxing in Europe. My favorite location would be Italian Switzerland, the Lake of Geneva, or the Provence. In the meantime, all good luck to you.

Cordially, as ever,

Karl

Whitehall 2233

25 March, 1959

Dear Mr. Murrow,

We hear that you are over on this side of the Atlantic for a bit and wonder if there would be any possibility of your finding time to fit in a talk at Chatham House? It would be excellent if you could do so. A date to suit you could, I am sure, be arranged. The topic would be anything you like, though something on the current American political scene would be of interest to a lot of people. Both the Middle East situation and the forthcoming negotiations on Germany may perhaps put some strain on Anglo-American relations and any enlightment you could provide on American attitudes would certainly be valuable.

With apologies for worrying you if you are here on holiday and regards from your friends at Chatham House.

Yours sincerely,

Frank Logan.

To: Mr. Richard M. Nixon

Copies to: Mr. Christian A. Herter
✓Mr. Edward R. Murrow

Dear Mr. Nixon:

Your recent speech on the World Court, and subsequent comments by my favorite news analyst, bring to mind a new approach for handling the Berlin and German reunification problems. I pass these suggestions along to you in the hope that they may be worth using in the coming negotiations. The main features are itemized below.

1. Berlin should become the capital of a reunited Germany, consisting of a confederation of the East German section and the West German section.

2. This confederation would continue the present communist methods of government and business in the East German section, and the democratic methods of government and business in the West German section, while making a deliberate effort to put everything else throughout the nation on as unified and common a basis as possible. Examples of things held in common between the two sections would be language, cultural matters, currency, and legal matters.

3. Germany would be demilitarized, in the sense that each soldier in East Germany and West Germany today would be replaced by one United Nations soldier.

4. The World Court would be established as the arbiter of any disputes between the eastern and western sections, and would be the supreme law of the land. Legal decisions handed down by the World Court would be enforced by the United Nations forces stationed in the country.

5. The U.N. forces would be responsible for defending Germany in case of aggression from outside her borders.

These suggestions are based on the view that divided Germany is in effect a small-scale model of a world divided into Communist and non-Communist camps. If the program outlined here would work out well in Germany, many of the principles and the lessons learned could be applied to easing the communist-democratic controversy in the world at large. It would also impress on people everywhere the value of a higher court in matters of nuclear concern, and that soldiering has become legitimately the job of the U.N. only.

Sincerely yours,

Donald W. Long

A PROJECTED ORDER OF SOCIAL MAN

by

RANDOLPH PETER LORENTZEN

Copyright 1959
Randolph Peter Lorentzen

PREFACE

This work represents a man and his product. The product, idea structure, definition and evaluation toward the evolving of a more functional social order for man.

By the use of idea structure, the written and spoken word we correlate the many facets of unrelated knowledge into a general outline or school of thought.

Knowledge and communication of ideas among men is dependent on mutually accepted definitions of terms used to explain matters under discussion. Knowing this fact, I understand that the contents of this paper shall be, in many instances, passionately misinterpreted, however I set forth my ideas at this time for it is quite apparent our Western Civilization is gradually falling into an era of total confusion brought about largely by the rigidity inherent in the nature of many of our present social orders and projections.

It is understood in my mind, this is an ordered universe, all phenomena has explanation, those things we do not understand we must continue to probe lest in our unawareness a life we so diligently seek, so stubbornly cling to be lifted from us by an ageless process, "erosion of time," time in passage inevitably wears away and surely destroys the poorly conceived and badly administered social orders of man.

Knowing and understanding the demanded order of all things, I, with the comprehension available to me set forth the following thoughts for consideration by my fellow man.

PHILOSOPHY

For a civilization and attendant social man to project a social order we must first spin a gossemer thread of continuity called philosophy, a philosophy that will give definitions to and place values upon the transcendent and translucent image called life.

These values are arrived at by the sum total of mans collected knowledge and experience, weighed, evaluated and expressed by the human mind.

As we express by word or deed any given concept it is to clarify and give better understanding to our being, for only as we comprehend more completely the nature of ourselves, the phenomena of human thought and expression so only, by this token, shall we learn to live more comfortably with ourselves within this complex we call civilization.

Civilization; an endless conglomerate of mens ideas, written, spoken and applied. To the living must fall the task of evaluating, make more orderly this conglomerate, we must winnow through the knowledge now available, deliberately editing the poorly conceived and just as deliberately press home the great teachable schools of thought that light the way for man, easing his anxieties, lifting his burdens.

The mind of man and thereby his civilization is shaped by the order of knowledge pressed against it. It behooves each of us to understand the nature of mans collected knowledge lest we unwittingly press imperfections on the minds

of the innocent. Imperfections once learned become a way of life.

Our philosophy must be a continuing effusion of ideas, for ideas correctly conceived are exalted by the passage of time sustained of inner truth and dynamic. Poorly conceived, passage of time either rectifies or destroys any given idea projection.

The mind of man is a defenseless organ, idea growth largely dependent on the impressions to which it is exposed. Following out this assumption our heritage an overwhelming factor in shaping us to what we are. It shall follow then, if a portion of our heritage is unproductive, unfruitful in the projection of the image of life that portion can be regarded as a detriment to the individual, in turn a detriment to the body politic of social man.

Organic life and mans civilization is an ever growing process, cell on cell, idea on idea, it is this structural growth concept in the organic field, in the field of ideas we must recognize. We dare not distort, divert or subdue the work of the ages; we must understand, aid and abet this evolutionary process, we must benefit from the work and understanding which has gone before. Infused in this projection lies the theory "intelligence of time" for locked in the incomprehensible span of the ages lie the secrets of what we are, what we feel see and hear. Our struggle is the unlocking, a better comprehension of that which has gone

before. Attaining this kind of understanding man shall find his ability to create and project social order greatly enhanced.

As we live, as we work, as we direct our efforts toward the building and understanding of a more ordered social complex, from the performance of this effort we must derive and give meaning to our exsistence. We must experience the glow of accomplishment, achieve dignity begotten of knowledge, know the warmth of the dynamic of life, know and experience these qualities and a people shall be close to the touchstone which unlocks the total potential of a life on earth.

POLITICAL PHILOSOPHY

Political philosophy relates to idea structure,methods and purpose of mans effort to build social order for the group. In this area of thought we must create and formulate guiding concepts of social order. This endeavor by the human mind its most magnificient attainment for first we must grasp the nature of the cosmos which spawned us then create from that understanding social orders in keeping with the nature of our being.

Let me distinguish more clearly definition between philosophy and political philosophy. Philosophy concerns those values as related to the individual as an individual entity. Political philosophy concerns values as related to man as a social being, the order and attitude of his relationship with his fellow man.

In the scope of political philosophy we are concerned with men, their training, theirslection and their election to duly constituted governing groups. We are concerned with the nature and the work of these duly constituted governing groups as they create and direct social order.

A first concept I set forth; in an age of total communication the right of universal suffrage, paramount. Observation has confirmed my belief in this concept for it is to be noted how instinctively the general body politic senses its environs, the potential of appointed or self-assumed leaders, sense and feel but as individuals impotent to adequately express the essence of living in a social order. The development and expression of these social attitudes one of the great works

faced by civilized man.

A second concept I set forth; we must select, train and school individuals for the important work called for in the socio-political profession. This professional category will furnish a society with the candidates from which the body politic will select their chosen representatives to the governing offices.

Consider the selection of individuals to be trained for duty in the socio-political profession. Genetic inheritance of an individual a prime consideration the accident or knowledge of having, genetically speaking, quality progenitors. The training and exposure of the mind of these selected individuals a second important consideration, this, for the individual mind finds it very difficult to rise above its cultural milieu' and training.

Educators can be denoted as the carriers of a civilization, upon their work man depends for the foundation on which social orders can be built. In setting up the socio-political profession it would be correct to have the educational administrators break loose from the general student body those individuals deemed qualified to carry mans highest responsibility. Upon those individuals nominated the intellectual and material resources of state be made available, from these minds will come the direction and projection of social man.

The enormous extent of mans storehouse of knowledge

precludes total comprehension by any individual mind. We must recognize the necessity of the socio-politically trained profession, by the general nature of its largess, able to give direction in multi-specfic fields and yet produce a cohesive civilization for a multi-individual group.

To maintain dynamics in the socio-political profession elections periodically take place. On these occasions the trained and equiped individuals will stand before the general body politic and in the presentation of themselves, their thought patterns, seek approval and appointment to a governing body.

To emphasize, my main concern in this projection, the genetic caliber and the kind and quality of mental exposure the individuals involved in the socio-political profession, receive. In all phases of this work it takes ability to understand, training to execute the work to be done. A corillary to the above stated idea, each individual of any given society must be schooled and trained in the responsibilities of social intercourse for without socially trained attitudes throughout the body politic there would be little hope for a sustained social complex.

Noting the numerous inadequacies ofour present day "Western Civilization" it occurs to me the relationship of social structure to man is in a state of radical imbalance. The social order we have inherited emphasizes social structure for material gain and self-aggrandizement. My definition of social structure; the material and social

complexes of man fitted together in a mosiac, each complex, each person, each unit discharging an assigned obligation, each in turn benefiting from the operation of the structural whole.

For man to embrace and have faith in a political and social philosophy we must accept the fact that as man we stand at the apex of all organic life. The ability and extent of our mind enabling us to occupy this unique and lonely position. From this lonely vantage point we must develope our arts and sciences to the full lest the incompleteness of our knowledge lead us astray. To knowledge and knowledge alone we must look for the light by which social man can see the way.

SOCIAL STRUCTURE

Social structure is the written form, the blueprint, the skeletal structure along which man implements a social order. The writing and promulgating of these forms, the prime function of any governing group guided in the work by the accumulated knowledge and philosophies of man, bringing into being a social and material complex which has as its end purpose the cultural training and material welfare of individual man.

As we undertake the rearrangement and creation of new social forms we must first survey our present social structure. Much has been evolved which is of great value and if upon critical evaluation certain social orders are found to be correctly conceived these forms most certainly be incorporated and projected into the future. Where circumstance, environment, necessity demands a more reasoned order, man must implement a new social approach.

Evolved social forms must be kept accessible to discussion and revision. As mans comprehension grows so must the social structure.

The first major revision of our social order which I deem functionally necessary; all governing groups unicameral in structure. There should be three primary divisions in government; local, regional, central. Each division essentially the same in structure and procedural form. Basic policy created at the central level influencing the general procedure of the regional and local groups.

These elected governing groups the fountain head, the hub upon which a social order is built. Each group electing its own executive head who in turn becomes the executive arm of government. The executive head appoints members of the governing group to head up the major divisions of government, as;

Department of Education and research
State and foriegn relations
Justice and jurisprudence
Economics
Industry and production
Agriculture
Welfare and human relations
Public works and construction
Armed forces
Conservation and resources
Commerce and distribution.

and any other field men might deem necessary in the make-up of a social order.

To better illustrate my concept of government in above paragraphs, I use the analogy of the spoked wheel. Spokes, representing the specialized departments of mans social order. The elected governing group, the hub, the area in which all stresses, materials and knowledge, interchanged and distributed outward into the social structure. The cap nut, the executive arm, the pivitol point upon which the structure revolves. The expression in the form of a personality of any given community.

Each department enabled by the governing group. The purpose, policy and administrative procedure contained in each enabling act. Major shifts of policy within a department subject to approval of the elected governing group.

In the minds eye I vision the three major governing groups, the central group or senate, the regional group or representatives, the local group or council, each expressive of particular problems yet tied by procedure and method to the other prime governing bodies. The purpose of such a projection, to have sensitivity to the very extremities of a society, to have social and political structure that will transmit the problems of man, then transmit back to man the very best social organization can give.

History records the collapse of many improperly designed social-political structures, taking with it a people, a knowledge, a culture. In our work, our knowledge we must so design social structure as to be sensitive and fluid to the changing aspects of our own environment and the environment of areas beyond our immediate observation and control.

Immediate to ourselves at all times is the need and demand for goods, services and materials; the production and distribution thereof. In the wheel of mans social structure let us examine a schematic of economic order.

ECONOMICS

The segment of our social structure relating to economic arrangement and method demands of man his finest power of reason.

Economics are methods divised by man to make the materials, the skills and the energies combine and flow throughout a social complex. It is an instrument of implementation, the limiting factors of an inadequately implemented society, insufficient energy, insufficient material, incompleteness of comprehension.

My basic concept of economic order; a central or master accounting center, a network of regional and local branches throughout the social complex. Each individual an acountee from birth until death, an arbitrarily set basic credit for each individual, predicated on the fact, the act of being establishes one as part of mans community. Variations of credit arbitrarily established as individuals gain skills and production worth in the community of man.

Collateral of the central accounting, the total material substance of a community and energies contained therein. Direction of expenditure to be controlled by the governing boards of these accounting units, subject to a degree of control by the governing body of the community. The men comprising the boards of these accounting units the economists of any given social complex.

A civilized society of necessity has many diverse segments of endeavor such as the industrial, commercial, agricultural, educational complexes. Each complex or contributing factor thereof will receive from the accounting center enabling certificates along with allocation of materials, energies and skills necessary for proper implementation. Once implemented, institutions will become semi-automonous, guided, directed, administered by men trained and skilled in the particular enterprise.

To aid in understanding the concept of my economic thinking we can use the analogy of the blood system. The central organ pumping vital fluid to all portions of the entity. Failure of the fluid to reach the organs or tissues results in the crippling or death of the entity. In the use of this analogy I mean only to convey a general idea or impression. It is in the nature of things, each entity, each facet must be reasoned out along lines related to the inherent nature and function of the particular being studied and developed.

In the development of economic structure, we must have an order of knowledge based on reason, a structure which can be directed, discussed in logical and ordered terms. Economics, a field closely akin to the exact sciences for many of the laws governing economics as inflexible as the rules of mathmatics. We must develope an order of economics efficient in the performance of a designated

function, namely the use and flow of materials and energies through every phase of mans social structure.

A basic concept in a projected order of economics, title to and ownership of home or domicile with rights and protection of due process of law. All titles granted and controlled by the economic accounting units. Inheritance to right of title given preferance but considered and granted only by the economic accounting units, by so doing we recognize a basic fact, the world is for the living, the dead hand of the past must be questioned before the bulk and weight of any given development is permitted projection onto the social patterns of living men.

We must conceive in the field of economics an accounting system which keeps current, a knowledge which can tell us the status of our material welfare and give indication to our probable material status in the future. Man has ability to devise many things, we can devise an economic order if we but give our attention to the problem.

AGRICULTURE

Agriculture is a basic production segment of any social order. Method and procedure for this field of endeavor must be defined. Individuals to have title to land with full implementation necessary for production of land in possession. This individual procedure followed to a point in size and complex beyond which the operation would fall into an industrial category and be enabled as such.

The agriculturist as all other individuals of a social order an accountee of the auditing system and as all others given basic credit plus increments in recognition of needs skills and production.

In a well ordered social complex, man, using the instruments of communication and computation can sensibly regulate the field of agriculture by using the basic equation, estimated consumption as equated with estimated ability to produce.

WELFARE

That segment of a social order designated as the department of Welfare shall exercise strong influence in the reshaping and projection of mans social order. Basic in motivation, the welfare and well being of each individual.

Dreams of a better expression for our lives, a more ordered social structure, noble indeed, but to bring dreams to fruition man must use the newly acquired knowledge of the developing social sciences. We must take advantage of the new horizons created by the field of anthropology, biology, psychiatry, sociology and related social sciences. Men proficient in the area of these sciences must give to man the knowledge and the clues on how better to direct our efforts in the operation of a social complex, for as we build we must remember our efforts will not flourish if the ideas we use are destructive in part or in whole to the creators.

I emphasize again, the strong influence of the social sciences must be felt as man directs his efforts toward the building of a more ordered social complex.

THIS WE CAN DO

The infinite number of subjects needing explanation in the spectrum of a social order will be a continuing work for as long as humans inhabit the earth. To contribute to this work it is my intention to develope, from the text of my "Projected Order of Social Man," studies and lectures, these to present to my fellow man.

Hope, the eternal flame, if stimulated by thoughts contained in this material can burn anew if but each of us gives of our knowledge, our understanding, our energy, give that this hope can grow, that the knowledge of man shall have voice, that the dynamic of life in each of us be given greater expression as we pursue our daily lives.

From "Springbrook" whence the many speculations of a restless mind have come to maturity, I shall begin.

A new school of thought? a new vigor? with our knowledge, this we can do.

Love, J. Spencer

September 24, 1958

Mr. J. Spencer Love
Burlington Industries Inc.
Greensboro, N.C.

Dear Mr. Love:

Thank you for your letter of September 19, in which you were kind enough to express a hope that I might some day visit Greensboro.

You have given voice to a hope which I have myself and, whenever I can see some clear time ahead, I shall make a return visit to Greensboro.

Yours very truly,

Burlington INDUSTRIES, INC.

J. SPENCER LOVE

GREENSBORO, N. C.

September 19, 1958

Say thanks

Dear Mr. Murrow:

Orton Boren, President of our Chamber of Commerce, told me of his visit to you this week and of your gracious reception. It would be a wonderful thing if you could come back to the city and County of your birthplace and give us just one evening. This would be deeply appreciated by the many admirers you have in this area, who are proud to claim you and who would like to see you -- hope it wouldn't be presumptuous for me to suggest that perhaps you might even owe it to us.

Hoping that we will hear favorably from you for some date this winter, and with warmest assurances of highest esteem, I am

Sincerely,

Spencer Love

Mr. Edward R. Murrow (Personal)

ROBERT D. LOVE
VICE PRESIDENT & GENERAL MANAGER

January 26, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System
New York, New York

Mr. Murrow, we have now seen your show "Corporation, Sex and Sin." I wonder when the next chapter of your book will appear on "Labor Unions, Sex and Sin" - or are you merely attempting to cast shadows on corporations and American business life.

I read a speech you made concerning the television industry and its low caliber of programs. The speech was a good one, however, it seems to have hollow ring since seeing this latest program. The purpose of television and radio should be to educate our people on the American way of life. The type of moral problem you presented has been overcome - or never thought of - by the corporations who have their heart and soul in this country.

This program was damaging to American business. I hope in some small way the inferences cast on corporations will be rectified at the earliest moment.

Very truly yours,

Bob Love

Lowell, Mrs M

August 28, 1958

Mrs. Mildred V. Lowell
378 So. West Street
Galesburg
Illinois

Dear Mrs. Lowell:

As Mr. Murrow is at present away from New York, I am replying to your letter in his stead.

I agree with your friends that it is hard to imagine that human beings could inflict such terrible suffering on their fellows, and it is tempting and far more comfortable to believe that it has not really happened. However, it is a matter of public record and history, however infamous, that these things did happen. I would recommend that your friends read the transcript of the Nuremberg Trials as evidence.

Yours very truly,

Sheila Hogg
Secretary to Mr. Murrow

Mildred V. Lowell
378 S. W. St.
Galesburg, Ill.

August 17, 1958.

Mr. Edward R. Murrow,
N. B. Company,
New York, N. Y.

Dear Mr. Murrow;

Before asking a question which I sincerely hope you will answer and return to me in the enclosed, self-addressed envelope, it seems best to identify myself.

I have been a resident of Galesburg, Ill (the home of Knox College) for almost sixty-eight years. For over thirty years I was principal of a local, partially state supported school for physically exceptional children. I also

served as pianist and organist in two local churches for forty years. I hold a B. a. degree from Knox College and an M. a. degree from Columbia University, New York.

My son, Dr. W. F. Sowell is also a graduate of Knox College and of Washington University Medical school in St. Louis, Mo. After completing six years graduate study he became a life-time member of the American Assoc. of neuro psychiatrists and chief of the medical staff of Ypsilanti, Michigan State Hospital. He served in the medical corp with the 30th Div. of the First Army in Europe, being released from the army with the rank of Lt. Colonel. The 30th Div. (as you will recall) was among the first to land in Normandy. This division distinguished itself at Mortain,

the Battle of the Bulge", etc. as recounted by R. E. Merriam in his book, "Dark December". At the close of the war in Europe the doctors (including my son) were taken into the Buchenwald prison where so many atrocities occurred.

Since my retirement four years ago I have read at least twenty-two books on the war in Europe and the Pacific. A few also concerning the Korean conflict. I am particularly interested in military strategy but to read of that one must learn of the atrocities also, the tortures, death marches, brain washing, etc.

About six weeks ago our beautiful Carnegie Library was almost completely destroyed by fire during a time when one of this city's water pumps was broken

To my regret I had made no card file of the books read and cannot do so now because the books are destroyed.

Several of my teacher friends (with several degrees each) claim these atrocities are entirely propaganda, that they did not happen. I am shocked, to say the least, that these friends would doubt the word of the prominent persons who have written the books I have read. Nearly every one has been highly recommended by the Chicago Tribune book reviewers. Some of the reviews have suggested that the American public should be required to read such and such a book so that the people

ioned know of the hardships our soldiers experienced and might again if even a small war should be forced upon them. I do not doubt the integrity of any authors work which I read nor do I doubt the comments made by prominent Americans. (Many of the comments were printed on the fly-leaf of the books or on the cover.)

I suppose these friends will claim the story of Ann Frank appearing in this week's issue of Life Magazine is fictitious. Evidently they believe as untrue the mass deportation and massacre of the Jews.

Please, comment on such atrocities in both

theaters of operation (in both Europe and the Pacific). Or hand this letter to some one who will do so.

Are my friends stupid or am I? Frankness in reply will be appreciated.

I listen to most of your broadcasts and because of their interest, sincerity and truth chose you to answer my question.

Thank you most truly.

Mildred Vivion-Sowell

August 15, 1958

Paul Jones, Director of Public Relations for the National Safety Council, just called me in connection with the Annual Safety Congress which takes place in Chicago on October 22.

He hopes that you would consider being the key speaker to address the more than 2000 people who attend the Congress at the Hotel Conrad Hilton.

Since I have had an opportunity to attend one of these annual meetings, I can assure you that it is handled extremely well and is attended by outstanding leaders of business and industry. Some of the people who have spoken at previous meetings include:

General Eichelberger
General Groves
Robert Young (actor)
Eddie Cantor
Governor William G. Stratton of Illinois
Louis B. Seltzer, Publisher of the Cleveland News

Since Ned Dearborn, President of the Safety Council, is retiring this year, past presidents and members of the Board of Directors will be present as dais guests. They include:

Cleo F. Craig, Former Chairman of the Board of A.T.& T.
William Irvin, Former Chairman of the Board of U.S. Steel
W.F.S. Rogers, Former Chairman of the Board of the Texas Company
Walter Carey, President of the Carey Transportation Co.
Crawford Greenewalt, President of DuPont

I know you will give this your serious consideration.

May I call you Monday afternoon for your reaction?

I telephoned Mr. Lowenstein & told him Mr. M away on vacation.

November 24, 1958

Mr. Edward R. Murrow
c/o Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Sir:

Oftentimes I have thought that a most valuable experience would be to be behind the scenes in the creation of a "See It Now" production. I have little idea of the mechanics of such an operation, nor of the personnel involved. However, if there would be need of another hand, especially during the months of June through early September, I would be very happy to be considered.

I am a third year Government Honors student at the University of Rochester. My present plans for the future include either a career with the U.S. State Department or the United Nations. I have had a little experience with international travel since my parents are at present in Belem, Brazil. My father is a Consultant in Nutrition with the International Cooperation Agency, affiliated here with the Brazilian-American organization-SESP.

I have some camera experience and a knowledge of traveling and the outdoors. My language facilities include a small knowledge of French, a good background in German, and one year of college Russian. In extra-curricular activities I am active as the President of the United Nations Student Organization.

If there would be any possibility of a position with you or the CBS international news organization during the school vacation period, I would be very appreciative of any notice or chance for interview.

Very truly yours,

Michael Lowenstein

May 8 1958

Miss Esther H. Dobbins
Program Information
CBS Television
485 Madison Ave.
New York 22, N Y

Dear Miss Dobbins:

Your reply to my letter of the 6th received and tell Ed Murrow's office program Information department they better wake up and know what programs have been going on. Also ask them if they want me to send them a record of this program?

This program was on the RADIO on a Sunday afternoon sometime in February, the best I can recall and I cut a record of it on my recording machine. There were four religious leaders who spoke between the music, one of them Rev. Hoffman of the Lutheran Church. I skipped the talks or I could give you the names of all four. The music was of modern character and I like it very much and would like to know the name of the composer of the music.

Murrow's Program department surely should have a record of this program, perhaps right on tape.

Very sincerely
LUDWIG MUSIC PUBL. CO.

Carl F. Ludwig, Pres.

CFL;vj

PS I would also like to know the address of the composer of this music on that program or where he can be reached.

c/o Columbia Broadcasting Company
799 Seventh Ave.
New York 19, N.Y.

Dear Mr. Murrow:

Several months ago you did a program on a Sunday afternoon, with four religious leaders speaking in between and I had my tape recorder on at the time and took down this music, which I liked very much, since it was modern, contemporary and still very listenable.

I wonder if you can advise me, who composed this music, since I would like to get in touch with the composer to see if we could get him to do some numbers for us?

Three years ago we published The CAMBODIAN SUITE by the then King Norodom of Cambodia, which has since been recorded by Andre Kostelanatz on record # CL763 and last year we did a fine Japanese number DANSE OF THE JAPANESE YOUTH for Symphonic Band, which was brought to this country by Col. Howard, Music director of the U.S.Air Forces Band. Col. Howard made a speech in Cleveland this week, praising our publications of these two works, for the goodwill between our country and Cambodia and Japan. Mrs Ludwig, who engineered the securing of the Cambodian Suite received a medal and was knighted by the present King of Cambodia for furthering the culture of Cambodia, which we of course treasure very highly. Thought the above would be of interest to you, as to what we are doing in the field of music publishing?

We listen to your broadcasts quite regularly and enjoy your presentations very much.

Very sincerely
LUDWIG MUSIC PUBL.CO.

485 Madison Avenue
New York City, N. Y.

Dear Mr. Murrow:

I had written The Reporter last week asking permission to reprint your address "A Broadcaster Talks to His Colleagues" in a freshman English text I am preparing for Harcourt, Brace and Company. They said you alone hold the copyright on this piece (though they are happy to grant their permission) and that I should write you directly.

The text I am preparing will be a 182-page, paperbound book to be called Essays Today 4. It is the fourth in a series. They have sold widely in the colleges (for about $1.35) and they contain contemporary essays from learned journals and a few popular magazines. Essays Today 4 will appear in January, 1960.

If I may reprint "A Broadcaster Talks to His Colleagues," in its entirety, will you inform me of exactly how you wish the acknowledgment to appear (at the foot of the first page of the reprint) and what fee for permission to reprint you will expect for this essay? I shall, of course, meet whatever other requirements you specify.

Sincerely yours,

Richard M. Ludwig

August 7, 1959

Dear Ed:

Just because I am out here on my vacation doesn't mean that I can't be of service to you, should you so desire. Address as above; telephone: Montauk Point 8 - 2468.

Based on the notes I took during the very pleasant and rewarding lunch I had with you at the Century, I wrote a long letter to our man in Stockholm, Ellis I. Folke, whose address I know you have. Copies of this letter went to the Embassy in Washington and to Sven Backlund of the Foreign Office in Stockholm.

I know your Secretary has been in touch with Lars Malmström of the Swedish National Travel Office in New York in regard to your car.

On the Swedish American Line in New York, the man to contact regarding tickets, your car, embarkation time, seating arrangement in the dining room, etc., is Carl Hallengren, head of the Line's public relations office, an old friend of mine and a very able official.

Should there be anything else that you think I might help you with regarding the Sweden part of your trip, I know you will call me right away. I hope the various printed matter and booklets I mailed you after our lunch were what you wanted.

Have a wonderful time.

As ever,

Holger

New York 22, N. Y.

Dear Ed:

Forgive this persistence from my side, but time is marching on, and at the end of this month I will leave for my vacation, and will not return until after you have sailed.

In Stockholm, I have, first of all, alerted Mr. Ellis I. Folke, head of our Swedish office. He has lived in the United States for many years, and is an able and imaginative man. The name of our office in Stockholm is Svensk-Amerikanska Nyhetsbyrån, and the address is Brunkebergstorg 14. He is prepared to help you in any and every way with introductions, etc.

The man on the Foreign Office for you to see, for interviews with cabinet ministers, etc., is Sven Backlund, who heads the Press Department. The Foreign Office is known as Kungliga Utrikes Departementet and is located on Gustaf Adolf's square.

You might also like to meet Tore Tallroth, head of the Swedish Institute. In such a case, Folke will arrange an interview or meeting. I forgot to say that Backlund for several years was stationed in the United States, in San Francisco, Minneapolis, and, at the end of his stay, as Press Attaché of the Swedish Embassy in Washington.

The Swedish National Travel Office here, Room 464, 630 Fifth Avenue, would be very happy to help you with any kind of side trips or excursions in Sweden and arrange for free railway fare from Gothenburg. I have spoken to Mr. Lars Malmström, who will do all he can to help you, should you so desire. The telephone is CIrcle 6 - 1675.

As ever,

Holger

Dear Ed:

I hate to intrude on your privacy and disturb your greatly needed rest, but we are all, of course, so happy to know that you will include Sweden in your long forthcoming trip, and it gives us added pleasure to learn that you will travel on the M. S. "Gripsholm," of the Swedish American Line.

From my own completely satisfactory experience with this lovely ship, I know that you will love her. Her size is right, and the pace onboard is leisurely and unhurried. You and your family will be assured the privacy you are seeking; there will be ample time to rest, ans the weather ought to be favorable. The excellence of the cuisine I hardly need dwell upon. I know the staterooms that have been assigned you, and better ones cannot be had.

I have looked in vain for you at the Century, but I gather you have wisely staid away from the city these hot days. I do hope, however, that we will have a chance for a long and good talk, or several, preferably, so that we can line up things for you while you are in Sweden. The Swedish Embassy in Washington and the Foreign Office in Stockholm are alerted about your pending arrival and they are anxious to do what they can to make your stay an interesting and profitable one.

Today I will limit my questions to these: When will you arrive in Stockholm? Where are you going to stay there? How long will you be in the city?

Thank you for letting me know.

When you come to New York, perhaps you can give me a ring, so that we are sure to meet.

With every good wish, I am,

As ever,

Holger

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Mr. Murrow:

I am taking the liberty of enclosing a preprint of an article "Fall-Out, Inspection, and Survival," which has been submitted for publication to the Atlantic Monthly. With the possible exception of some of the conclusions the article does not pretend to contain anything original; I hope, however, that it does bring together, in convenient form, a discussion of some of the many aspects of this complex issue and that you may find some of it informative and useful.

Sincerely yours,

Harry Lustig

Harry Lustig
Assistant Professor of Physics

Fall-Out, Inspection, and Survival

1. Introduction

Today, for the first time, nuclear bomb testing is a real issue in America. Citizens are beginning not only to feel but also to express a concern; public discussion meetings are being held; "peace marchers" walk from Connecticut to the U.N.; pacifists sail into the Pacific bomb testing grounds; national and local "Sane Nuclear Policy Committees" with leading citizens at their head are making their appearance and some of the media of mass communication are giving a hearing to the opponents of bomb testing. On the other side of the issue the Atomic Energy Commission and some scientists engaged in military work are redoubling their efforts to allay public fears about fall-out and to question the effectiveness of any inspection system; the State Department, the Defense Department, the President and much of the press are renewing their arguments that bomb tests must go on for the safety of the free world.

In many countries outside of the United States doubts about the wisdom of continuing nuclear explosions have been publicly voiced for some time and in some countries the opposition to further bomb testing has become powerful and near unanimous. One of those countries is Japan which has been the direct victim of three nuclear bombs: those dropped on Hiroshima and Nagasaki during World War II and, through the unexpectedly heavy and extensive "local" fall-out, the 17 megaton test bomb exploded at Bikini in 1954. India has been asking for a cessation of bomb tests for years. In Great Britain public agitation has steadily grown until today the H-bomb is the hottest political issue; a test ban is part of the official platform of the Labor Party, and important elements in it are asking for unilateral nuclear disarmament by Britain. In other European countries public opinion polls are recording majorities in favor of a test ban. And last, but by no means least, the Soviet Union has announced the unilateral suspension of nuclear testing.

It is hardly surprising that H-bomb tests are a leading international issue. For one thing, several countries possess the bomb and have contributed to the tests and to the fall-out; the United States has conducted approximately twice as many tests as Russia and Great Britain is a poor third. The proportion of fall-out contributed by each nation is probably in the same order. There is every reason to believe that France is about to explode her first plutonium bomb, and there is no reason to believe that other nations will not join the anything but exclusive bomb-owners-and-testers-club in due time. Secondly, the fall-out falls out alike (with minor variations) on him who produces it and on him who abjures it; it is no respecter of national boundaries and descends equally on the free world, the Communists, and the neutrals; it knows no difference between the guilty and the innocent, the good and the bad. Thirdly, the whole world has a profound stake in the outcome of the argument as to whether bomb testing is more likely to prevent or to hasten the advent of total nuclear war.

It is disturbing to note that in spite of the great amount of interest in the issue in America, the amount of solid information and real understanding possessed by most citizens is small. It is the purpose of this essay to provide information and to contribute to understanding.

Many persons are primarily concerned about the health dangers from fall-out. Accordingly we begin with a discussion of this issue. An analysis of the problem calls, in logical order, for answers to the following questions: 1) What are the origin and the means of distribution of the fall-out? 2) What is the mechanism by which radiation interacts with the human body? 3) What other sources of radiation are we exposed to and what is their relative importance compared to fall-out? 4) What specific diseases can we expect to suffer because of fall-out and how many people will be affected?

We shall attempt to confine ourselves to objective scientific facts; we shall present a modicum of technical detail and a minimum of figures; and we shall discover that answers to our four questions become progressively more

difficult and less certain. That is, the physics of fission is well understood; the meteorology of fall-out and the geochemistry of strontium 90 are well in hand; the mechanism of ionization has been studied by the biologists; the cause and effects of mutations are fairly well known to the geneticists; but the relation between dosage and disease is still largely a mystery to the medical people.

We shall then turn to an examination of the scientific capabilities of a test ban inspection system. This will inevitably lead us to a discussion of the political aspects of the inspection problem, and from there to an examination of other political and military issues. I do not know whether an objective examination of political and historical questions is ever possible, but I should hope that our discussion will at least show less bias that I find in much of what passes today for truth in the utterances of our political leaders and in what is presented as objective analysis in many of our media of public information.

2. The Origin and Distribution of Fall-Out

When the uranium or plutonium in an atomic bomb is fissioned three important effects occur. First there is the production of neutrons which keep the chain reaction going. The second is the release of a large amount of heat and blast energy; thus one of the H-bombs detonated by the United States in 1954 was rated at 17 megatons. This means that the heat and blast energy from this explosion was equivalent to that resulting from the detonation of 17 million tons of TNT. Another figure might be informative; if the energy resulting from the complete fission of a 1 lb. uranium bomb could be so harnessed, it could raise the temperature of approximately 100,000 tons of water from freezing to boiling.

The third and, as far as fall-out is concerned, most important result is the creation of nuclei of lighter elements, the so-called fission pro-

ducts. A hundred or so different fission products are made, but they all have one thing in common; they are highly unstable and decay, in long series, until a stable element is reached. Each step in the decay chain of each nucleus involves the emission of a particle, most often an electron (or beta particle) and is often accompanied by the emission of a gamma ray. These radiation particles are very small and travel at or near the speed of light (186,000 miles per second). They are the agents which can destroy or damage human cells.

It is important to realize that this radioactive decay of most of the fission products does not take place immediately upon their formation in a fission reaction. Instead there is a delay; first one nucleus goes, then another, then still another; the rate of decay varies widely from element to element. In this connection it is important to understand the meaning of the term <u>half-life</u>. The <u>half-life</u> is the amount of time which elapses until half of a given amount of an unstable element has decayed and given off its radiation. Thus if a fission product has a half-life of ten years, this means that ten years after its formation in a nuclear detonation half of the nuclei have already emitted their electrons and gamma rays and the other half have still to do so; ten years later, half of what was left after the first ten years will still be around and so on, ad infinitum. While it is thus theoretically true that the fission products from the bombs already exploded will produce radioactivity for all time to come, it must be recognized that this long range effect will be, in practice, unimportant for elements of short half-life; that is, after a time corresponding to many half-lives a once radioactive element is essentially dead.

Even if we are not concerned with eternity the question of half-life is important. This is first because the occurrence of some diseases apparently does not depend only on the total dosage of radiation received but also on the time interval over which the explosure occurred. Secondly there is a

considerable delay between the creation of much of the fission products and the time they reach us as fall-out.

The fission products and their descendants then are the fall-out. How do they get to us? There are three distribution groups. If a nuclear explosion occurs close to the ground many of the fission nuclei fall back to the ground together with earth particles within hours or days and in the general locality of the detonation. It is this local fall-out which hit the Japanese fishermen on the "Lucky Dragon".

The remaining fission products ascend into the atmosphere. Part of them get no further than the troposphere. The troposphere is the region in which our weather phenomena occur. It extends about ten miles up to the tropopause which is a layer at which an inversion occurs in the atmospheric temperature. The fission products in the troposphere may be displaced West-East or East-West by the prevailing winds before they come back down to earth in precipitation. This occurs within a matter of weeks; and this fall-out is thus confined to the general latitude of the detonation. At the time of this writing large areas of the United States, Europe and Asia are experiencing tropospheric fall-out from the recent Russian tests.

Finally, a portion of the fission products reach the stratosphere. The more powerful the explosion the larger the fraction which belongs to this category. In the stratosphere the debris gets a thorough mixing as well as a long sojourn; the mean "residence time" has been estimated at ten years. Eventually however the fission products reenter the troposphere and come down as fall-out, in precipitation, all over the earth.

3. The Biological Effects of Radiation

When matter, whether it be animate or inanimate, is subjected to high energy radiation, the results are that each radiation particle as it passes through the material leaves behind a trail of disrupted (ionized or excited) atoms and molecules. In ionization an electron is knocked out of the atom. In excitation the electron does not receive enough energy to escape from

the atom, but the energy lost by the radiation particle is eventually re-emitted as an x-ray or causes a chemical change in the molecule to which the atom is attached. A given radiation particle continues on through the piece of matter until it have lost all of its energy by successive collisions.

The molecular effects produced in the human body can be illustrated by the following example. An average single cell in a human tissue may contain about a hundred thousand billion molecules (10^{14}). A dose of radiation more than large enough to cause death if received in a span of a few days by the whole body would ionize about a million molecules per cell, that is only one out of every hundred million.[1]

We must briefly turn our attention to the various units which are used (often confusingly) to describe a radiation dose. There is first of all the curie. It is a measure of the activity or strength of a given amount of a radioactive element (e.g. a certain fission product) and characterizes the number of particles which are emitted per second. Equal numbers of particles from different radioactive sources do not, however, cause equal numbers of ionizations and excitations even in the same absorbing material. This number depends on the mass, charge and energy of the radiation particle. Therefore another unit is needed to measure the biological or other effects of radiation. This unit is the roentgen; closely related to it are the rep, rem, and rad. Each of these units measures the number of ionizations produced by a radiation dose in one gram of exposed material. Finally in order to measure the effects of strontium 90, the relative concentration of radioactive strontium per gram of calcium in the body is a useful datum. This has led to the invention of the strontium unit, also called by the A.E.C., the sunshine unit. ("Sunshine" is the name of the A.E.C. project concerned with the measurement of strontium concentrations.)

We have given a brief explanation of these units because all of them are frequently encountered in the literature, but we shall largely dispense with their use. Instead we shall give comparative doses, on the basis of assigning the number 1 to the dose from natural background.

What is this natural background? The human race is and has always been exposed to ionizing radiations from various natural causes. Among these are non-man made radioactive elements such as radium, natural uranium and potassium which are found in the soil, in rocks, and, in some cases, in the human body. There are the cosmic rays; they are high energy particles which reach us in large numbers from outer space. In addition to the natural background there are the man-made medical and industrial x-rays and they present a by no means negligible health hazard.

In Tables 1 and 2 we have put together a comparison of radiation bone doses and gonad doses due to various causes.[2] The most obvious immediate

---

Table 1[2]

Relative Bone Doses

Natural background (ranges from .7 to 4).....	1.
Additional radiation from living in a brick house.....	.2
Additional radiation from living 5000 feet above sea level.....	.15
Average 1955 Strontium 90 measurements in human bones.....	.0025
Average 1957 Strontium 90 measurements in human bones.....	.01
Average Strontium 90 dose in 1970, if no more tests.....	.1
Average Strontium 90 dose in 2000 if tests continue at present rate.....	.6
Dose clearly associated with bone cancer.....	1000.
Bone lesions in 100% of 20 adult cases.....	300.
Estimated dose to increase leukemia incidence by 10% if no threshold.....	1.

---

conclusion to be drawn from these table is that fall-out from bomb tests amounts to only a small percentage of radiations from other sources. This fact has led some, not necessarily disinterested, observers to conclude that fall-out presents no health hazard worth worrying about.

It is hardly necessary to list the objections to this argument. For one thing, the picture looks more somber if one talks in terms of the number of people killed by fall-out rather than in percentages. Secondly, exposure to natural background radiation is an inevitable concomitant of living on this earth; fall-out is a rather new and, one may hope, reversible invention of the human intellect. Thirdly, exposure to x-rays is a voluntary act gen-

Table 2[2]

Gonad Doses Relative to 30 Year Background

Average natural background (varies from .5 to 4).....	1.
Additional dose from living in a stone house.....	.2
Additional dose from living at 5000 feet.....	.15
Luminous wrist watch dial, 1 ft. from gonads.....	.2
Population average from diagnostic x-rays.....	1.
Gonad dose from one fluoroscopic examination.....	.5
Average dose from bomb tests to 1955.....	.003
Estimated average dose from tests if testing continues at present rate.....	.005 -- .2
Estimated dose to increase mutation rate by 5%.....	.05 -- 3.

erally undertaken with the hope of relief from suffering or prevention of disease; the whole human race is exposed to fall-out, including those of its members who see no benefits to be derived from nuclear weapons tests. "Contamination without representation" Norman Cousins has called this phenomenon.[3] Finally, the tables themselves have to be interpreted with some care. This we shall do in the next two sections.

4. Somatic Dangers: Leukemia and Bone Cancer

There is no doubt about the effects on human life and health from large doses of radiation. It takes a few days' body exposure of about 500 roentgens (which is approximately 3000 times the natural background received in one year) to kill a man. Smaller but still sizeable doses are definitely known to cause various forms of cancer, cataracts of the eye, and other diseases.

The doses involved in fall-out are small compared to 500 roentgens. In order to study their effects it is useful to divide the hazards into somatic and genetic ones. Among the somatic effects only bone cancer and leukemia have been studied to any degree.

In connection with leukemia and bone cancer we shall consider only the hazards from the fission chain product strontium 90. It is not the only product which plays a role, but it is one of the most important ones and the only one for which more than a smattering of data has been collected.

Strontium 90 is important for the following reasons: 1) It is very abundantly produced in the fission of both uranium and plutonium. 2) It has a relatively long half-life, 28 years. 3) It is produced in a soluble form which is easily incorporated into the soil and into plants. Besides, its origin from a gaseous primary fission product (krypton 90) means that it spreads particularly easily over a large volume in the stratosphere. 4) Because it is chemically like calcium it is readily taken up by human bones and has a long "residence time" in the body. 5) And, finally it has been experimentally demonstrated to be carcinogenic.

The amount of stronium 90 (in curies) per square mile of the earth's surface has been regularly measured for several years in many localities. As expected the rate of increase has been sharp, reflecting the accumulation from each additional bomb explosion and the arrival of delayed fall-out from the stratosphere. (Since strontium 90 is only produced in fission, there was no strontium 90 anywhere in the world before 1945, unless one includes the few nuclei undoubtedly produced in the laboratory in and since the first experimental fission reaction in 1939.) Since the half-life of strontium 90 is very well known, and the fall-out rate is fairly well known, one can make predictions about the future ground accumulations of strontium 90 both if tests are stopped and if they are continued at a specified rate. These predictions will probably be correct to within a factor of five.

How much strontium 90 actually gets into the body? This too can be calculated to such a degree that at least averages have some significance. The strontium 90 is taken in with different foods; directly, in leafy vegetables, in smaller concentrations in plant roots, and indirectly in meat and milk. Fortunately a discrimination factor works in our favor; that is the proportion of strontium to calcium is reduced in each biochemical step. The total dilution factor has been variously estimated from 1/4 to 1/16.[4]

The amount of strontium 90 in a person's body will clearly depend on the kind and origin of the food he eats. Persons who derive all their food from a limited plot of land which is poor in calcium or has had a heavy dose

of local or tropospheric fall-out would receive accumulations of strontium 90 many times those of the average U.S. city dweller who obtains his food from widely distributed sources. Thus the strontium 90 level in the Fall of 1956 Japanese rice crop averaged about 150 strontium units,[5] compared to perhaps 2 strontium units for a typical American diet. The difference is presumably due to a combination of the special growing conditions for rice and un unusually heavy fall-out occurring shortly before harvesting time. Finally, children must be presumed to carry a heavier strontium burden than adults. This is because they will have absorbed more calcium that has been strontium contaminated than adults who have built most of their bones before there were any bomb tests.

An experimental analysis of the strontium 90 content in human bones is actually being carried out by the scientists of the U.S. Atomic Energy Commission and by other workers. The limited data so far available[6,7,8] show indeed a wide variation, with the maximum concentration being 25 times the average. Children showed significantly higher amounts than adults.

How much strontium 90 causes bone cancer or leukemia? There are, for obvious and fortunate reasons, no experimental data for human beings. One of the few quantitative findings for animals is a report from the Soviet Union[9] that leukemia has been produced in animals by strontium 90 at dose levels ten times smaller than the levels at which the production of bone tumors has been observed. There are, however, some quantitative data on the effects of exposure to radium. It is possible to calculate the roentgen equivalent of 1 curie of strontium (this is necessary to obtain the strontium date in Table 1) and to compare it with the ionization effect of radium. It turns out that 1 curie of strontium 90 is equivalent to 0.1 curie of radium[10]. The reasonable assumption is then made that 1 roentgen of strontium has the same somatic effect as 1 roentgen of radium.

All the available data on bone tumor incidence in radium-exposed subjects are summarized in Table 3.[11] The total number of observed cases is only 74, and even these data are subject to many uncertainties.[11]

Table 3[11]

Tumor Incidence in Radium Exposed Patients

Total Radium Body Burden in Units of Annual Natural Background	Exposure Time, Years	Bone Tumor Incidence	
		Tumors per Person	Tumors per Year per Person
1700 -- 5000	31	1/8	0.004
900 -- 1500	27	2/9	0.008
200 -- 2200	25	4/21	0.008
150 -- 450	31	2/9	0.007
22 -- 220	25	2/19	0.004
7 -- 22	25	0/4	0.000
4 -- 110	?	0/4	0.000
	Average Natural Incidence		0.00002 to 0.00006

The table shows that when the total dose was less than 22 times annual background no case of bone cancer was found. The statistics clearly do not permit the conclusion that an exposure of, say, 20 or even 2 times annual natural background for 25 years (i.e. an actual steady increase of 80% or even only 8% over natural background)is safe. Let us suppose that in the range of 7 to 22 natural background units, the tumor incidence were actually ten times normal. How many cases of bone tumors would we expect to find in a group of four patients? The answer is, of course, none. On the average only one person in a hundred would be affected.

The big question is then: is there a threshold (minimum dose) for bone cancer and leukemia and if so, how much is it? The data do not suffice to give an answer. Nevertheless, biologists have expressed opinions based on their theoretical preconceptions and, perhaps in some cases, on their political prejudices. These opinions have differed significantly. Based on the assumption that leukemia is a somatic mutation and on the fact that there is no threshold for genetic mutations the biologist E.B. Lewis has concluded[12] that the number of leukemia cases may be proportional to the radiation dose even down to very small amounts of radiation. A.M. Brues of Argonne National Laboratory who was appointed by the U.S. Government to the United Nations Scientific Committee on the Effects of Atomic Radiations argues,[13] also on

theoretical grounds, that a threshold ought to exist.

If Lewis' assumptions are right, i.e. if the cancer producing effect is proportional to the dose, the average explosure that will result from tests conducted through 1956 may be expected to result in leukemia or bone cancer in 60,000 persons.[14] The proportionality factor was determined from data on the incidence of leukemia in radiologists, spondylitis patients in England, people from Hiroshima and Nagasaki, and other exposed populations.

It should be pointed out that even if a threshold exists and even if it should be considerably higher than the dose from fall-out, this does not mean that no one will die from leukemia or bone cancer as a result of bomb tests. The reason is the variation in strontium 90 levels among different human beings. Clearly the average (mean, median, or what have you) of a set is not the only significant parameter; the fluctuations about the average are often just as important. Thus, let us assume that the height of the average adult American male is 5'8". Obviously this does not mean that every (or, in theory, any) member of this group is 5'8" tall. The distribution of heights is, however, probably fairly symmetric about the average and confined to a narrow range; there are few men who are less than four or more than seven feet tall. The average annual per capita income in the United States is, let us say, 2000 dollars. There are quite a few people, however, with no income at all and also a goodly number with incomes more than ten times the average. This distribution is neither symmetric nor as narrow as the fluctuations in height.

The question is: what is the distribution curve for strontium 90 in humans? The scant data have been fitted (none too well) both by a <u>Gaussian</u> and a <u>log normal</u> distribution curve.[6,14] The remarkable results are shown in Table 4.[15]

Another example of the care with which statistics have to be used is afforded by the juxtaposition of the views of two eminent scientists. The physicist Edward Teller, who has been a leading proponent of continued testing and manufacture of nuclear bombs, writes, together with Albert Latter:[24]

Table 4[15]

Effect of Fluctuations in Strontium 90 Levels

If world average strontium 90 from fall-out is (in strontium units):	No. of people exceeding 100 strontium units if distribution is	
	Gaussian[6]	Log Normal[14]
50	3,000,000	100,000,000
35	1,000	8,000,000
25	0	100,000

"To see fallout radiation in proper perspective it should be compared not only with other kinds of radiation but also with other dangers to health. Some estimates are, for example, that being 10% overweight seems to reduce a person's life expectancy by 1.5 years, that the life-long habit of smoking one package of cigarets a dat cuts it by seven years, that living in the city instead of in the country reduces life expectancy by five years, and so on. On this statistical scale the reduction in life expectancy from worldwide fallout at present levels totals less that two days. Or, to put it another way, the worldwide fallout is as dangerous to human health as being one ounce overweight, or smoking one cigaret every two months."

To this the Nobel Prize winning chemist Linus Pauling, who has been in the forefront of the campaign to stop nuclear testing, replies:[16]

"A decrease of 2 days in life expectancy might not be considered a serious matter if it meant that every person would die 2 days earlier than otherwise. But let us consider what death by leukemia or bone cancer or other disease means.

"One of the people of a group of 2500 may happen to have the bad luck of having one of his molecules damaged by fallout radiation in such a way as to cause him to die of leukemia or other disease, and the other 2499 might not be harmed at all by the fallout radiation. The first man may die 5000 days before he would have died if the bomb tests had not been made; his life expectancy will have been shortened by 14 years, and that of the other 2499

not shortened at all. This amounts to an average decrease in life expectancy of 2 days per person. There are 2500 million people in the world, and accordingly we may conclude that, if testing is continued, it may cause 1 million people now living in the world to die 10 or 15 or 20 years earlier than they would have if the bomb tests had not been carried out. We may say that we would be sacrificing 1 million people of the present generation to the bomb tests, if they were to be continued for another 24 years and about 200,000 to the tests already made."

5. Genetic Hazards

The genetic situation is considerably simpler. Our entire biological legacy is transmitted through the genes. A gene is remarkably stable. Ordinarily it is transmitted unchanged from parent to off-spring generation after generation. But rarely, perhaps once in a hundred thousand generations a gene changes or mutates. The mutant gene is just as stable as the original; it too is transmitted generation after generation. Although the likelihood of any particular gene mutating in any particular generation is very small, there are so many genes in the cell (perhaps 20,000) that the probability of some one of them mutating is not so small. Indeed it is likely that a fertilized egg has at least one chance in ten -- and probably higher-- of having somewhere a new mutant gene.[17]

Mutations and mutation rates have been studied in a wide variety of experimental animals and plants, and in man. One result clearly emerges: almost all mutations are harmful. Theory as well as the data makes this apparent. For a mutation is a random change of a highly organized, functioning system. A random change in it is almost certain to impair it, just as a random poke at a television set is not likely to improve the picture.[17]

A second conclusion is that there is a wide range in the degree of harm and that mildly harmful mutants far outnumber those causing gross or obvious changes. On the other hand, lethal mutations are quickly eliminated from the population while a mutant that causes a small amount of harm will persist through more generations and thereby affect a correspondingly larger

number of people.[17]

Thirdly, when a mutation occurs it may cause damage in the first generation of children, or if it is of the type that causes damage only in a double dose (i.e. recessive), hundreds of generations may intervene before the damage occurs. Following an increase in the mutation rate, the resulting effects would be spread thinly through many generations. Although the amount of harm would be greater in the first generation than in any other single generation, geneticists have estimated that it would take 30 -- 50 generations for half the damage to be felt.[17]

A fourth well established fact is that all forms of high energy radiation cause mutations in all living beings.

A fifth universally agreed to fact is:"The number of mutations in the whole populations is strictly proportional to the total amount of radiation reaching the reproductive cells."[17] It makes no difference whether one person receives one roentgen per year for ten years, or 10 roentgens all at once, or whether 1000 persons each receive 1/100 of one roentgen -- the total genetic effect is the same. There is no threshold, no such thing as a safe or harmless dose.

We must now ask: how many roentgens of radiation cause how many mutations in man? If we knew the answer to this question we could predict with some assurance how many genetic victims the bomb tests have already claimed and will claim if continued at a specified rate. But we do not know the answer.

We do have an estimate of how many human mutations occur each year. (At the present time 75 million children are born in the world each year. About 2 per cent of them, 1,500,000 per year, are seriously defective because of bad heredity.[16]) But we cannot tell what fraction of mutations is due to causes unrelated to radiation of any kind. Crow[17] estimates that perhaps as many as 90 per cent are due to causes unrelated to radiation, but we simply do not know. The entry in the last line of Table 2 reflects this range of uncertainty.

There are, of course, experiments on animals which directly relate a radiation dose to an increase in the mutation rate. The trouble is that, although all the laboratory species show an increase of mutations with radiation, the amount of increase is different in different animals. For example, typical rates in the house mouse are fifteen times as high as those in the fruit fly and there are no other reliable data from any other mammal.[17]

On the assumption that men are more like mice than like fruit flies, Professor Crow[17] has estimated that if bomb testing continues at the present rate, there may be some 8000 children in each first generation born with gross physical or mental defects, or a total of 80,000 for each first generation in the distant future, and that 40,000 embryonic and infant deaths will occur in each first generation or a total of 700,000 for all generations. Pauling speaks of 15,000 seriously defective first generation children for each 10 megatons of fission.[16] Teller talks only in percentages.[24]

6. Detection of Tests

We now turn to a discussion of the detectability of nuclear explosions and the feasibility of an inspection system. The main techniques for the detection of nuclear weapons testing rely on the observation of four phenomena: 1) acoustic waves, 2) seismic waves, 3) electromagnetic radiation and 4) radioactivity.

The acoustic waves are generated by a variation in the air pressure at the explosion site. They travel with the speed of sound and can be detected by sensitive barometers. This technique accurately gives the location and time of the test, and also gives a measure of the size of the explosion (yield in equivalent kilotons of TNT). While it is not effective for deep underground tests, it is in general the most sensitive and reliable detection device.

In all blasts, including detonations in the air, considerable energy is transferred to the ground. Thus seismic waves are produced, as in earthquakes, which can be detected over large distances by seismographs. Seismic detection techniques also tell the location, time and size of an underground

explosion. It is interesting to note that the seismic signal from a bomb explosion can be told apart from that resulting from an earthquake. In a comprehensive study on the whole detection question,[18] Professor Jay Orear of Columbia University points out that the initial signal of a man made explosion is a sharp pulse, while the signal from a natural earthquake is of much longer duration. "The initial seismic waves from a bomb test are longitudinal and come from a point source, while the natural earthquakes' initially are predominantly transverse and usually come from a more extended and deeper source."

In every nuclear explosion, electromagnetic radiation of many frequencies is emitted. Of these the frequencies corresponding to visible light and to radio noise are particularly easy to detect. "To detect the light, one merely points a photocell at the sky. It doesn't matter whether it is day, night, clear, or cloudy. As long as the test is not deep underground, a very distinctively shaped light pulse will be observed." This technique is probably useful up to about 500 miles.[18]

Finally, we come to radioactivity. As we shall see later a "100 per cent clean" bomb is an impossibility. Every nuclear explosion, except again one which is carried out deep underground, results in some fall-out. The experience of the last few years has shown that even exceedingly small amounts of radioactive fall-out have been detected at large distances.

How effective are these detection devices and what sort of inspection system would be needed to provide assurance against cheating? For some time now it has been generally assumed that an agreement to cease bomb tests would be self-enforcing, i.e. that violations would be detected by monitors outside the offender's territory. This feeling is based not only on the understanding of the detection techniques we have outlined but also on the fact that Russian tests have regularly been detected and announced in this country and that there has been a close correspondence between American tests as announced by the A.E.C. and as detected by foreign observers. For example, the U.S. Pacific tests of 1954 were detected by seismographs, as

well as by other techniques, in the United States, Australia, Pakistan, Japan, Greece, Sweden, Germany, South Africa, and other countries.[19]

Nevertheless one cannot say with certainty that there may not have been some unannounced tests which have gone undetected. Such tests would most likely have been of the underground variety. It is therefore of interest to report some examples of detection of underground explosions. After initially giving out false information, the A.E.C. conceded on March 11, 1958 that a 1.7 kiloton underground nuclear explosion was detected as far as 2300 miles away.[20] This bomb, which has been referred to by A.E.C. Commissioner Libby as "this little fellow" is the smallest nuclear device ever fired by the United States.[21] Since then a Canadian non-nuclear explosion of 1.375 kilotons of TNT has been detected by stations within a radius of 2400 miles.[22] An earlier chemical explosion of 0.06 kilotons was detected by a seismograph 240 miles away.[23]

After studying all the available evidence Orear concludes that in order to be on the safe side against violations of an agreement, the establishment of monitoring stations inside the Soviet Union is desirable. "About 25 such stations uniformly distributed throughout the Soviet Union should be sufficient."[18]

What has been the attitude of the American Government towards the necessity for an the effectiveness of an inspection system? The Government has steadily insisted that the creation of an effective inspection system was an absolute prerequisite to any agreement with the Soviet Union. As to whether such a system could be devised, the attitude of government officials has been somewhat varied and vacillating. Harold Stassen has been talking in terms of a requirement of a dozen control posts in the Soviet Union. A.E.C. officials and scientists in charge of the bomb making and bomb testing program have been intent on creating the impression that an adequate inspection system was not possible. An example of this activity is the case of the 1.7 kiloton detonation, mentioned above, in which the A.E.C. first

erroneously announced that the explosion had not been detected beyond 250 miles and failed to correct its error long after it have become aware of it and until it was forced to do so by the alertness of non government scientists.[20] Commissioner Libby himself has been "ambiguous and at times seemingly contradictory"[21] on whether a satisfactory inspection system could be devised. Perhaps the most clear-cut expression against an agreement to stop testing has come from Dr. Edward Teller, generally referred to as the "father of the hydrogen bomb": "...such tests can be effectively hidden if appropriate care is taken to hide them...The question is only how much it costs to hide a test of any given size...Past experience suggests that any international agreement to stop tests may well be followed immediately by secret and successful tests behind the Iron Curtain."[24] It should be stated that Teller has consistently refused to describe a method of testing which is undetectable. And Orear has pointed out[25] that it is technically correct, although quite misleading to claim that tests can be hidden: "We know we can't detect nuclear explosions the size of a firecracker."

Recently, the U.S. Government seems to have come to accept the conclusion that an adequate inspection system is feasible. Basing himself on the still secret Killian report, Secretary of State Dulles stated that the inspection system would not be foolproof but would afford "a high degree of probability" that any attempt to cheat on a test suspension would be detected.[26] The Senate Subcommittee on Disarmament has held hearings on this subject; among the witnesses heard in Executive session were A.E.C. and military officials. The Committee's chairman, Senator Hubert Humphrey, writes: "After all this study, my own conclusion is much like yours. I believe that it would be possible to establish an inspection system for detecting nuclear weapons tests which would make any attempt to violate the test suspension a tremendous political risk."[27]

What has been the Soviet Union's attitude on inspection? While declaring that any test cessation agreement would be self-enforcing the Soviet Union has nevertheless announced its willingness to accept monitors within

its borders. In fact, it was Soviet Delegate Valerian Zorin who proposed in the June 14, 1957 meeting of the U.N. Disarmament Subcommittee that the test-ban agreement "be implemented by scientific control posts to be set up in the U.S., U.S.S.R., U.K., and Pacific Ocean areas." Since then, the Soviet Union has announced the unilateral suspension of bomb tests, but its leaders have asserted that Russia is standing by its willingness to conclude an inspection agreement.

An additional point needs to be made. An inspection system to enforce a test-ban agreement has two features which no other proposed disarmament agreement has: 1) It is orders of magnitude more foolproof against cheating than any other agreement such as a pact to cease nuclear weapons production and 2) its establishment requires only minimum interference with what nations like to call their "internal security"; most other types of agreement would require a degree of inspection and free access which the U.S.S.R. and possibly the other nations involved would be reluctant to accept. Conversely it must be recognized that an agreement to stop bomb tests is in itself not a major disarmament move. Many people feel, however, that it would be a test of good faith which could lead to further agreements. Finally the point has been made that even if agreement or establishment of an internal inspection system should not prove possible, a second best alternative would be a test-ban agreement which could be checked only by outside monitoring. Such an agreement would restrict testing essentially to underground explosions which are preferable to explosions in the atmosphere because they have no fall-out.

7. Clean Bombs

We shall here not be concerned with the appropriateness of dubbing a weapon "clean" which 'though its radioactive fall-out may be reduced still has the power of incinerating millions of people. Instead we wish to examine how a "clean" bomb differs from a "dirty" bomb and what the arguments are for and against the necessity of producing clean bombs.

We have seen how a fission reaction inevitably produces radioactive

fission products. There is however another nuclear reaction, involving the fusion of isotopes of hydrogen, which releases even more prodigious amounts of heat and blast energy, but whose end products are not radioactive. This fusion reaction is employed in the hydrogen bomb. However, it has so far proved impossible to explode a hydrogen bomb unaccompanied by fission; in fact, fission with its attendant heavy fall-out has come in at two stages. First, extremely high temperatures of millions of degrees are required to initiate and sustain the fusion reaction; these are achieved in a fission process, i.e. a regular A-bomb explosion precedes the fusion process. Secondly, in the large megaton H-bombs, the fusion reaction has been followed by an additional large uranium fission. The reason for this third stage is the following. A fission chain reaction is self sustaining only in uranium which has been enriched in the isotope 235, or in specially prepared plutonium. The manufacture of these materials is time consuming and very costly. The material used in the third stage of the hydrogen bomb is natural uranium which is plentiful and cheap; but it does not sustain a chain reaction. The fusion process, however, is a copious source of neutrons and these neutrons, in turn, do initiate a fission reaction in the natural uranium.

It is easy to see how to begin to reduce the fall-out in this fission-fusion-fission bomb; one leaves off the last fission stage or tries to replace it by more fusion. This still leaves the first fission stage with its attendant radioactivity. I know of no physicist who has proposed a way to eliminate this prerequisite to violent fusion; but ideas may well be germinating within the guarded portals of the A.E.C.

Even if fission could be completely eliminated from the hydrogen bomb a residue of radioactivity would still remain. The reason is that the neutrons which are produced in such large numbers in a fusion bomb as well as in a fission bomb in turn induce radioactivity in the bomb shell and in the atmosphere. Because all data connected with nuclear weapons are secret it is impossible to estimate the degree of "cleanliness which our bomb

makers are aiming for; it can be stated however that a "100 per cent clean" bomb is unachievable. Sometimes, sight is lost of the fact that a large "almost clean" bomb may produce more fall-out than a small "dirty" one. Thus a 20 megaton, 96% "clean" bomb contributes 40 times as much fall-out as one of the 100% "dirty" bombs which were dropped on Japan.

What reasons are advanced for the "compelling need" to continue tests with the aim or producing "cleaner" bombs? President Eisenhower has spoken of our duty to humanity. It is doubtful that any member thereof would thank us for having been killed with a clean rather than a dirty bomb, or even that those who will have been spared death in a nuclear was because we did not spread lethal radioactivity over wide areas will be very kindly disposed towards us. Nor have we any reason to expect that in case of nuclear war the Russians wouldn't use the old fashioned dirty bombs against us; let us remember that they have stopped nuclear testing without having made any apparent progress towards a "cleaner" weapon.

The reasons for our insistence on producing "clean" bombs are clearly less cosmic and more parochial. It has been stated that if we want to drop nuclear bombs on the enemy in the neighborhood of our own troops the bombs had better be relatively free of fall-out. To this argument no direct answer presents itself. There has also been talk of developing a nuclear anti-missile, which may have to be exploded near our shores. The design of such a weapon presents tremendous, perhaps insuperable difficulties; in any case it would certainly not be 100 per cent effective; but again, once we are willing to face the prospect of a nuclear war it is difficult to argue against the advantage of developing a "clean" weapon.

The future U.S. tests are of course not only to be concerned with the development of "clean" bombs; there is also the task of devising better ways of packaging and delivering the "dirty" bombs and of making those bombs more efficient. The military tell us that these improvements are absolutely necessary if we are to win the next war; one trusts that the kind of war they have in mind is the old fashioned war fought primarily with troops and

not with civilian populations. An uninitiated civilian is in no position to take issue with this claim; except to point out that it is hard to find a case in history in which a military leader ever thought that he had enough or good enough weapons. He can, however, express his conviction that such a limited, peripheral war is a figment of the imagination. In this conviction he is joined by historians, philosophers, scientists, and statesmen (including some in our own government) whose number is legion. Perhaps rather than quoting any of them it is more interesting to report the remarks of a military man, in one of his less sanguine moments. The distinction between limited and total war, he states, is an "escapist device, a case of candy coating the bitter truth. If war is viewed in its broadest contest, there is no such thing as limited war."[28]

Most of the leaders on both sides are aware that a limited nuclear war would almost certainly grow quickly into an all out global nuclear war. Because of this realization neither side will embark on a limited war. Nevertheless total war is likely to come to the world. Why this is so is discussed in the next section.

8. The Nature and Danger of Nuclear War

What would a total war, fought with nuclear weapons be like? Most everyone has heard warnings of the horrors which await us and we shall be brief and moderate in our description. In an official handbook published in July of 1957, the U.S. Atomic Energy Commission describes some of the effects of a twenty megaton bomb explosion, after cautioning that the twenty-ton maximum is "not to be taken as an indication of capabilities or developments": 1) Persons thirty miles from ground zero would suffer second degree burns. 2) Brick and wooden homes eleven miles from the explosion would be destroyed by the blast. 3) Persons within two-and-a-half miles of the explosion would be subjected to a lethal dose of radiation in the first minute and an area several hundred miles downwind from ground zero would be so contaminated as to be uninhabitable.[29] These statements are hardly surprising when one recalls the effects of the bombs dropped on Japan; these bombs were

rated at 20 kilotons, i.e. one one thousandth of the bomb described here.

Writing in the Bulletin of the Atomic Scientists three years ago,[30] the physicist Ralph Lapp estimated that a "small-scale" attack, using only 28 bombs, could cover the industrial heart of America producing an uninhabitable "atomized" area normally occupied by 50 million Americans.

In a fascinating but rather gruesome study summarized in testimony before the Joint Senate House Committee on Atomic Energy, Dr. W.W. Kellog of the Rand Corporation and Charles Shafer of the Federal Civil Defense Administration have tried to estimate what to expect in the initial stages of a nuclear war. This extremely detailed investigation considers such factors as Russian capacity for attack, our capabilities for shooting down attacking planes, distribution of weapons used and of areas bombed, U.S. evacuation plans, and metereological distribution of fall-out. They conclude that as a result of an attack lasting two hours, of the order of 100,000,000 persons in the United States would die.[31]

We would however be able massively to retaliate and inflict equal destruction on the Russians. For it is now several years that each side has had the capacity for utterly destroying the other. Our capacity lies mainly in the thousands of bombers of our Strategic Air Command located at scores of bases near the perimeter of the Soviet Union; a large number of these bombers is in the air loaded with megaton bombs, patrolling the borders of the Soviet Union and waiting for the signal to retaliate. In addition we are perfecting intermediate range and intercontinental ballistic missiles equipped with nuclear war heads. The Soviet Union, in turn, not only has long range bombers, but probably also operational intercontinental nuclear missiles. And then there are the submarines which are no doubt hovering near our shores, ready to fire nuclear bombs.

To worry in this sort of situation about relative advantage, more efficient packaging of weapons, and "clean" bombs seems a peculiar form of madness. By the same token, however, a planned nuclear war becomes quite improbable. No one, at least in this country, believes that the United

States would start a nuclear war; at the same time most informed observers of the Soviet Union agree that neither the people nor the leaders of the Soviet Union want war. Yet the fear that the other side may start a war exists in both camps and forms a basis for popular participation in the arms race.

It is precisely this fear and the ever exacerbating armaments race which will make global war inevitable. No one will plan a war but it will start by accident. The possibilities for a fatal incident are numerous. Think, for example, what might have happened if the bomb which was recently accidentally dropped on South Carolina had resulted in a full scale nuclear explosion and if simultaneously a Russian submarine had been sighted in the Gulf of Mexico. Or imagine the danger if this accident had happened to our Air Force not over South Carolina but over Russia, on one of the occasions when one of our planes had strayed across the border. The Russians have recently complained about the flights of American bombers which are despatched towards the Soviet Union whenever an unidentified object is sighted on our radar screens. Our government has indignantly rejected the suggestion that these flights may constitute a threat to peace. War cannot start by accident, it is stated, for the pilots are instructed not to proceed to their targets and to attack unless they receive an order to do so from the President of the United States. Let us dismiss from our minds the chance of a garbled radio message, or the possibility of a momentarily mentally deranged pilot who wants singlehandedly to deliver the free world from the scourge of communism; Americans simply do not make mistakes. But what is to prevent the Russians from making a mistake? They have radar screens too; they see suspicious objects, and these suspicious objects turn out to be a flight of American bombers. Is it unreasonable to expect that the Russians would send up a flight of their own planes to investigate? (We can only hope that they have the good sense and the steady nerves not to send up an intercontinental missile to "retaliate".) We then have the situation in which each country sends its airplanes towards the borders of the other in order to investigate

and, if necessary, retaliate; it is intriguing, but not amusing to speculate what may happen when the flights meet, or when the radar watchers in both countries keep seeing the "unidentified objects" coming closer. Over the long run it does not matter how small the probability of an accident is per unit time; it is mathematically demonstrable that as time goes on, this probability approaches certainty.

This truth is recognized by many of our leaders, but they seem unwilling or unable to do anything about it. One of those who recognizes it is Senator Humphrey, and he also feels that disarmament, no matter how modest and tentative, offers the only hope: "Even if we have to assume the risk that some ingenious method might be devised for conducting a nuclear weapons test in secret, I think that this risk is probably smaller than continuing the arms race with no control whatsoever."[27]

9. Who Wants Disarmament?

We turn now to a very basic, and perhaps somewhat dangerous question. It should be examined at greater length than we can give it here and perhaps by a historian or political scientist. (But where is he?) This question is: who, if anybody, really wants disarmament?

It is well known that the United States is not willing to stop the testing of nuclear weapons before the conclusion of a number of other disarmament agreements including enforceable cessation of weapons production. A good case can be made for the argument that the United States is at the present time opposed to the cessation of bomb tests under <u>any</u> circumstances. This case rests partly on the fact that we know that our surveillance demands would not only obligate the Soviet Union to open its factories and labor camps to outside inspection, something which as a dictatorship she is unwilling to do, but that compared to a test-ban the other demanded agreements are <u>really</u> unenforceable. But the main reason for being suspicious of the motives of the U.S. Government lies in the long and continuing history of deceit and trickery exhibited in the whole bomb testing controversy.

The first example of this deceit and trickery has to do with the health

hazards from fall-out. In an excellent and detailed study, Professors Charles Price of the University of Pennsylvania and Hugh Wolfe of Cooper Union show how the A.E.C. has from the beginning consistently withheld information as to health dangers and distorted the facts to reassure the public.[32] This practice of giving out misinformation on health hazards continues to this day. Thus while admitting that strontium 90 levels rose 50 percent in 1957 and that exceptionally heavy radiation (probably from recent Russian tests) is currently falling on the United States and the rest of the world, the A.E.C. keeps on announcing and the newspapers keep on explaining that "nowhere in the nation has it approached dangerous levels".[33] This despite the fact that the scientists on the A.E.C. know and the newspaper editors should know that, at least for hereditary effects, there is no minimum danger level and that every additional bit of radiation adds to the genetic burden. A correspondent of the New York Times explains that "these [fall-out] products contribute to the steady build-up of the world wide level of radioactivity which <u>some day</u> may become intense enough to damage organic tissue and affect heredity"[33] (Emphasis mine). This same newspaper converts a "maximum permissible (somatic) dose" (itself an arbitrary and meaningless standard) into a "minimum permissible dose".[22] Misstatements concerning health dangers have even found their way into President Eisenhower's reply to Premier Khrushchev's proposal to suspend nuclear tests by agreement: "It goes without saying that these experiments, so far as the United States is concerned, are so conducted that they cannot appreciably affect human health....we conduct nuclear tests only in such a manner as would keep world radiation from rising to more than a small fraction of the levels that might be hazardous."[34]

Another area in which there has been deceit is the question of detection of bomb tests. We have previously pointed out how the A.E.C. misinformed the public by a factor of ten about the range at which a small underground test was detected. Thirdly there has been a good deal of dishonesty in connection with the "clean" bomb.

The most virulent public opponent of a test ban has been Dr. Edward Teller. His case is indeed a very sad one. I have read with great care the article by Teller and Latter in the February 10th issue of Life Magazine,[24] headlined "Dr. Teller Refutes 9.000 Scientists" (the 9,235 scientists of 44 nations, including 36 Nobel Laureates, who called for a U.N. supervised agreement to stop nuclear weapons tests). It is unfortunately necessary to say that the article is full of the most artful half-truths and the most incredible distortions. I do not have the space to point these out here, but I am prepared to do so. The cynical may say that to expect a man who is a leader in the bomb making and bomb testing business to admit that people will die because of the bomb tests already conducted is like asking a cigarette manufacturer to agree that smoking is responsible for lung cancer. And a conviction that "disarmament is a lost cause" is a poor starting point for an objective examination of the possibility of making a useful agreement with the Russians. Still a scientist's reputation for integrity and honesty is his most important possession. Dr. Teller has enjoyed a high reputation among his colleagues, at least for his scientific ability and integrity. His scientific ability remains unimpaired, but the same cannot be said for his reputation for integrity.

Perhaps the most disturbing evidence of the United States' unwillingness to end nuclear testing has been the reaction to the announcement of the Russian suspension of tests. Secretary Dulles has called this move "phony"; President Eisenhower has branded it a "gimmick". This reaction is based on the fact that the Russians announced their suspension immediately after their last series of tests and immediately before our planned series; thus this move is supposed to be aimed at preventing us from catching up. No one would deny that the Russians were aware of the propaganda value of their move; but nevertheless the U.S. reaction is largely unjustified. For one thing, the same issue of the New York Times which prints Secretary Dulles' outraged reaction also reports in an article headlined "Soviet Tests Put at 39 to U.S.' 90": "Because of the longer, more sustained test program,

Atomic Energy Commission officials feel that the United States has a more advanced and versatile nuclear arsenal than the Soviet Union."[23] Thus it would seem that if any one had any catching up to do, it would be the Soviet Union. More importantly it should be pointed out that the United States had it in its power to halt bomb testing after one of our series and before a Russian series by accepting the Soviet offer for an agreed cessation with inspection stations.

Finally there is a good deal of evidence that the United States Government does not really want <u>any</u> form of disarmament agreement unless, perhaps, it be one which seriously weakened the Russian position vis-à-vis that of the United States. Again this is not the place to develop such a thesis in detail, but it would have to be based on the following points: 1) The United States has rarely made a disarmament proposal with the expectation that it could be acceptable to the Russians. 2) On several occasions when the Russians did accept one of our proposals we have turned around and abandoned it or hedged it with new conditions. 3) We have rejected out of hand all proposals for disengagement, neutralization and denuclearization in Europe, even when they have come from such friends of the West as former U.S. Ambassador to Moscow Kennan, and British Labor Party leader Hugh Gaitskell.

Perhaps the most telling confirmation of the thesis that the important leaders in the U.S. Government do not want disarmament or an end to the cold war comes from a remarkable but not much reported speech made on February 20, 1958 by Robert E. Matteson, director of the White House Disarmament Staff under Harold Stassen. Without mentioning names Matteson highlighted the then existing split within the Administration between the "relaxation of pressure" approach (presumably Stassen's) and the "increased pressure" approach (presumably Dulles'). He said "there exists in the policy formulation process...a day-to-day competition between the major emphasis of these two different concepts."

The relaxation of pressure policy, according to Matteson, "would advocate the maintenance of relatively great military and economic strength,

but, at the same time, would pursue a course of gradually relaxing tensions, of increased contacts with the Communists, of increased trade, of gradual and reciprocal safeguarded arms limitation and control, and of the willingness to carry out negotiations with the Communists based on a true mutuality of interest."

The alternative approach toward Russia and her allies, Matteson explained, "...would put heavy emphasis on increasing the strength of the military alliances -- such as NATO, Baghdad, SEATO -- and on placing nuclear units around the border of the Soviet bloc. It would restrict to a minimum contacts of American and free-world people with Soviet Communists. It would put a heavy secrecy label on information to scientists and the American people in general. It would frown on serious negotiations with the Communists." Increased pressure on the Soviets, he said, in hopes of forcing a surrender "may more likely result in violent Soviet reactions, which would make war itself more likely."[35]

Today Harold Stassen is no longer in the government and there is no longer a fundamental split in the Administration. In a way, in which he probably does not suspect it, Edward Teller is right. Given the present attitude in Washington, disarmament is a lost cause.

It remains of academic interest to ask whether the Russians really want disarmament. No one can say with absolute certainty that they do. For they are able to put forward the most reasonable disarmament proposals with impunity, knowing that they will be rejected by the United States. Still there is always the possibility that there might be a slip up and that the Soviet Union would have to go through with its proposals or suffer a heavy political blow. Perhaps more convincingly it should be pointed out that the Russians believe that disarmament and peace would be to their economic and political advantage.

There are no doubt people in this country to whome the assertion that Russia truly wants sensible disarmament sounds ludicrous if not downright treasonable. And even many otherwise clear-thinking and well informed per-

sons will ask: "But can you trust Russia to keep an agreement?"

I think the question, asked in this form, is meaningless and obfuscatory. For history shows that every nation has kept those agreements which she thought to be advantage to keep and has broken those which her leaders thought would keep her at a disadvantage. If the record nevertheless shows that over a given period of time one nation has broken more treaties than another, the reason probably is that as a militarily, economically, or politically weaker nation she had been forced to enter into more disadvantageous agreements that the dominant nations. It would be valuable for an objective historian (if he be found) to write a chronicle of diplomatic history since 1917 which would not only give the balance sheet of agreements kept versus agreements broken, but which would also explain the circumstances under which agreements were made and broken and which would, for good measure, add a table of "friendly" versus "unfriendly" acts committed by each nation towards the other.

Clearly the real question is: Do the Russian leaders recognize that war in general, and global nuclear war in particular, would not be to Russia's advantage, and that fair and equitable disarmament and friendlier relations between East and West present the only hope for avoiding war? Almost every one of the many words spoken by Khrushchev and his lieutenants, many political moves recently made by the Russian government say that the answer is yes.

And in spite of all of this many Americans remain convinced that Russia's main aim has been and remains to destroy us militarily, that she is poised to attack us with all her might and that she will jump at the first sign of "weakness" on our part. And "weakness" in this contest is interpreted to mean agreeing to a limitation on the further development of nuclear weapons or refraining from the establishment of missile launching bases in Germany. Worse than that, we are in mortal danger right now, for Russia is supposedly ahead of us in weapons and a desperate effort on our part is required just to catch up. The fact that these premises lead to the demonstrably false conclusion that Russia should have already attacked us does

not seem to impress our fear-obsessed fellow citizens.

And this is not surprising. For as the psychologist Erich Fromm points out, most of us, in our attitude towards Russia and in our evaluation of the political realities of the day are suffering from a debility very much like paranoia. Like the classic paranoid individual, we manage to remain quite sane in most of our other activities; no one can convince us by reasoned argument that our basic fears are groundless for there is always a bare logical possibility that they are not; and the more it is pointed out to us that we are unrealistic and irrational, the more we are convinced that only we are truly realistic and that our critics are either ignorant or, more likely, in league with the enemy. Then there is the projection of one's own failings and shortcomings into the adversary: We are truly the personification of all that is pure and good and Russia is the incarnation of evil; if there is misfortune or injustice anywhere in the world, Russia must bear all and we none of the blame. Finally this leads to a characteristic confusion of ethical judgment and political reality; in our ethical value system we abhor dictatorship and suppression of liberty. Russia is a dictatorship which suppresses freedom. Russia is also our enemy and we justify our fear and hatred of her by pointing to her non adherence to our professed ethical values. Of course there are other dictatorships in the world, where human freedom and dignity are violated; Spain, the Dominican Republic, Saudi Arabia and South Korea lead but do not exhaust the list. But these countries are our friends, they are bona-fide members of the free world.

This brings us back once more to the realities of making an agreement with Russia. It has happened more than once, that in a conversation with a well-meaning, well informed, and well educated person, after I had stated some of the views expressed in this article he has come back with the portentious objection: "But what about Hungary?" I believe that a sane person should have no difficulty in answering this question: The answer should be: 1) As a man who believes in human freedom and dignity I condemn the suppresion by the Russians of the Hungarian revolt. 2) While, in the moral

sense, there is no excuse for the Russian intervention, there is certainly a political explanation; given the present balance of terror and armaments race the Russians felt that they could not afford to let Hungary become, at best neutral and at worst, another base for American bombers and missiles. 3) It is difficult to compare one evil with another, but at least in the number of people killed the suppression by the French of the Algerian revolution has been every bit as brutal. But no one suggests that it is useless and dangerous to make agreements with France.

10. Conclusions

Here then are the main conclusions of this analysis:

1) There is a definite, although not yet numerically calculable, danger to life from bomb testing. There is no threshold for genetic damage; every bomb exploded, no matter how small, takes its toll in human life. The situation is less clear for somatic effects, such as bone caner and leukemia, where the possible existence of a minimum danger level may or may not confer immunity at present fall-out levels.

2) The testing and development of new nuclear weapons, including the so-called "clean" bomb may be of some military value in preparation for a "small" war which will not involve civilian populations. It is extremely unlikely that any future war involving the major powers will be of this kind. Instead a war will, in a short time, wipe out a large fraction of the world's population. For this kind of war both the United States and the Soviet Union have for some time been amply prepared. The continuation of the armaments race, of which bomb testing is an important facet, in itself, hastens the advent of the day when such a war must break out. Conversely, an agreement to stop bomb testing may be the first step on the long road to disarmament and peace.

3) An agreement not to test any more nuclear bombs is, to a large extent, self-enforcing; that is, violations can be detected by monitors outside the offender's territory. This applies particularly to above ground tests, which are the known fall-out producers. In order to increase the

probability of detection of all tests to where it approaches certainty a relatively small number of inspection stations, perhaps twenty-five, in the other power's territory seems desirable. An agreement to establish inspection stations would have the additional advantage of being the first breakthrough in the disarmament impasse.

4) The Soviet Union has announced the unilateral suspension of nuclear bomb tests, but she also declared her willingness to enter into an inspection agreement.

These conclusions, it seems to me, lead rather forcefully to the following imperative. The United States and Great Britain should announce the immediate suspension of all nuclear bomb tests. Simultaneously, negotiations should be held with the Soviet Union for the conclusion of an inspection agreement. The solution of other cold war and disarmament problems should not be connected with the cessation of bomb tests. Some persons, no doubt well meaning, have suggested that we should begin negotiations now, but not call off further tests at this time. Since negotiations can always be made to take a long time this procedure would at least allow us to carry through our presently planned tests in the Pacific. I am against this plan. For one thing the Pacific tests will inexorably add to the number of fall-out victims. And secondly we have no right to expect that the Russians will be wiser or better than we are and that they will not then demand to have one more go at "improving" their bombs. I think the time is now to call a halt to this melancholy contest.

Unfortunately this recommendation runs head on into the remaining two conclusions:

5) As evidenced by the continuing campaign of misinformation on fall-out dangers and inspection possibilities, the United States is dead set against a cessation of bomb testing.

6) The United States does not want any disarmament agreement which would not seriously weaken Russia's position in relation to ours,

Where do we go from here? Surely what is required first of all is a real change of heart on the part of those who speak and act for America. Whether it is possible in today's world for us as citizens to change the attitude of our leaders I do not know. I do know that a prerequisite to any meaningful action is that we should know the truth. Today when it comes to foreign affairs and to recent history, our people are in many ways as effectively misinformed and propagandized by our leaders and creators of public opinion as the Russian people are by their rulers. The nuclear bomb controversy is a prime example of a field in which information and enlightenment are sorely needed. I hope that in this article I have, at least in small measure, contributed to truth and to knowledge.

Lyons, Louis M.

February 9, 1959

Dear Louie:

I am returning herewith the check the WGBH Educational Foundation so kindly sent me, because I choose not to accept an honorarium for so pleasant a chore. However, if the Foundation would like to reimburse me for travel and hotel expenses, I think that might be considered in order.

My round trip plane fare was $30.03 and my hotel bill $20.78, making a total of $50.81. I have paid the bills. Invoices for your files are attached.

Sincerely yours,

Mr. Louis M. Lyons

New York City 22

Dear Mr. Murrow:

The staff and board of WGBH are eager to put on a little reception, i.e. cocktail party, for you after our broadcast.

I promised to try for you. I told them the Nieman Fellows want you for dinner. But they say they can do this between 4 and 6 p.m. very comfortably.

We all hope you will let us hang onto you for this.

Joe Lyford tells me he has made an appointment to see you the first of the week. Let me ask him to check with you and give me the word.

Sincerely yours,

Louis Lyons

January 14, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York City 22

Dear Mr. Murrow:

As I wired you, I am delighted that you can come up and tape a broadcast for "The Press and the People" program on Saturday, the 24th.

I suggested doing it in the afternoon because the station had scheduled another session for the morning. But we will be through by 12:30 with that.

So you and I can do our interview by 2:30 or 3:00, if that is convenient.

I am enclosing an outline of suggestions for it. But I will be wholly happy to have you discard them for any of your own -- just so long as we get you to take a hard look at the business of getting information through to the American people, and pass judgment on it. You've earned the right to do this, and we want to get it.

The studio (WGBH) is at 84 Massachusetts Avenue, opposite MIT, just across the Massachusetts Avenue bridge from Boston. But we want to meet you and make a reservation for you here. Joseph Lyford, who produces the program, will phone to see what use we can be to you at this end. One thing Joe has done that has been a great help is a pre-interview with guests, on tape. That has let me know what they really want to talk about. We know from your Chicago speech what we can go into with you. So I won't worry about it. But if it seems to you useful, Joe would like to go down to talk it over with you. But he can get the word on that when he phones.

One other thing -- a big thing with us. The Nieman Fellows greatly hope for an informal session with you, and I've promised to do my best. We'd like to have some cocktails and dinner and talk. If you have to get away early we can push it up into the afternoon, and can guarantee anyway to get you to your train or plane. If it works out that Friday night is easier for you, we can just as well do that. I hope they can have some chance at you, even if it has to be short.

It's grand of you to come. I'm looking forward to it very keenly.

Yours sincerely,

Louis Lyons

Louis M. Lyons

WGBH-TV and FM
1/24/59

Possible points for interview on "The Press and the People" (a 30 min. program)

1. Your criticism of the TV industry for lack of time to deal adequately with the news. (Based on the Chicago speech)

As much detailed discussion of this and what might be done about it as you like.

2. What it takes, besides time, to report in depth and get basic information through to people.

Your own efforts to dramatize and personalize the news -- See It Now -- Person to Person -- your Africa program, etc.

3. Something about the CBS corps of correspondents. (On one of our programs they were called the top corps in the field.)

But how much of what they could contribute comes through in occasional 2 1/2 minute talks? Could we get periodic half-hour reports from each, or something of that sort?

4. Your judgment about the performance of the press in providing the information on public issues we need.

TV vs the press -- the role of each. What can each do best? Is there a differentiation of function?

5. Your own chief sources of information. How much do you depend on the press or wire services as a primary source?

6. Radio -- your 7:45 p.m. news program. Do you find radio a more satisfying medium for reporting?

To what extent does TV reporting limit the news to what can be pictorial?

7. Your editorial (on the radio news at 7:45). Your philosophy about the place of the editorial in a broadcast. How different if any from editorial and news in a newspaper?

If an approach through such points as these doesn't add up to you, any other will do. What I am after is to get your judgment and appraisal on our systems of getting information to the American people.

January 14, 1959

I have had a conversation with Mr. Joseph Lyford, who will be producing the discussion show you are doing on January 24 from WGBH in Boston, Mass. The program will be videotaped and will be carried on 43 stations across the country and 4 radio stations. Mr. Lyford wishes to have a talk with you beforehand to map out the questions and general format of the program and will be in New York on January 20. I have therefore asked him to come here at 11:30 a.m. and hope this suits you.

He says he will book a room for you at the Somerset Hotel for all day Saturday and Saturday night, if you so desire. The program will be taped during the afternoon, unless you particularly want to do it in the morning. However, I told Mr. Lyford you would probably find the afternoon more convenient in any case.

The Nieman Fellows want you to have dinner with them. Do you wish to?

will talk

Dear Mr Murrow,

Frank Kelly gave me a big lift by suggesting the possibility that you may be able to do a broadcast in this new program we are working on.

This would be wonderful. I just phoned you, and your office thinks Friday afternoon the earliest time to talk on the phone about it. So I will try then.

But I don't want to wait to say that I hope very much we can have you for our opener, if your schedule allows, or for your earliest good chance.

We hope to be able to tape the first interview by Nov 22d or Nov 29th. I am naming Saturdays as in most cases the freest time for it. But if you say you can more easily do it before then or another day of the week, we will fit it in so as to get you.

As I see it, this would be a straight interview-conversation, just the two of us, and we'd be talking in any terms you want, about the problem of getting essential information through to people in the channels available. We could stick to the air or include the press.

To take a large look at the whole matter with you would be a splendid opener. But also, it would be fine later, if we had to wait.

HARVARD UNIVERSITY
NIEMAN FOUNDATION
FOR JOURNALISM

OFFICE OF THE CURATOR

CAMBRIDGE 38, MASSACHUSETTS

You've said it in your Chicago speech, and it might well be a variant on that.

Let me phone Friday, in hopes.

I will gladly come down to talk it over, if you have the time. I am delighted that Frank Kelly filled you in on it. We are still struggling with a practical format. A good start would be a break for us.

Your Chicago speech has come to me from several enthusiasts, suggesting it for Nieman Reports.

I want to run it, if this is permissible.

It will be late December before the next quarterly issue can come out. But I dont care if it is published elsewhere first.

It was a magnificent statement.

Very sincerely,

Louis M Lyons

MacArthur, Art

June 19, 1958

Dear Mac:

You are hereby cast into outer darkness, for apparently you passed through New York without letting me know. I am disappointed and outraged.

I very much fear that we cannot accept your gracious invitation to come fishing this summer. I am flying to the Coast the first week of July to see my mother briefly and then must return straight to the farm about the middle of July. There is a chance that we might be able to get away for a few days during August, but that depends on what happens in Lebanon, Cyprus and various other places. If I see a chance to get away, I shall not hesitate to grab the phone and pay you a visit.

We had a most miserable Spring on the farm - good weather for growing hay, but nothing else.

As ever yours,

Mr. Arthur MacArthur

Dear Ed:

Fran and I left Paris Saturday at midnight and arrived home yesterday P.M. Am very thankful to be on U.S. terra firma again. Sorry we missed you in Europe.

I had forgotten that Casey lost a rod and reel and in some way it seems to me that someone must have found the outfit the following day. In any event, it was a noble gesture for Casey to think of replacing the rod and I would like to offer the beautiful outfit to him when you arrive here this summer. Fran and I are certainly anxious to have you and your entire family come and do some more fishing as we did last summer. I would suggest that you use the apartment at the farm and I think you would be more at home there and would get the utmost amount of relaxation. We can meet you in Milwaukee with the airplane and take you directly to Minocqua. Please let us know approximately the date that you could come. Sam and I are leaving for Minocqua in about an hour. It is a beautiful clear day. Everything here is green as the Garden of Eden.

Sincerely,

Mac

Mac Arthur, Arthur

June 5, 1958

Dear Mac:

It is much too long since we have heard from you. This is just a hasty note to say that Casey really did some work last summer and autumn to replace your fishing rod which he let go overboard.

I couldn't remember exactly the kind it was. He has today sent off a bait-casting rod which I hope will be satisfactory. The reel is a new Swiss development and I hope it works.

Do let me know when you come to town.

Sincerely yours,

Mr. Arthur Mac Arthur

MacArthur, Gen. Douglas

90 CHURCH STREET, ROOM 1303
NEW YORK 7, NEW YORK

4 February 1958

Dear Mr. Murrow:

I have received your letter of January 28th inviting me to participate in the camera recorded biographies which you are organizing. It is an experiment in which my participation would be doubtful.

As I understand it, the record might be used in two ways: present audiences now, and future generations later. Both potentials would present embarrassment to me.

Rightly or wrongly, it seems to me that in national crises, such as the present, one who has filled a public position but does so no longer can best serve the Republic by maintaining silence. What he says, whether wise or not, can but add to the general confusion and bewilderment. Only those vested with authority and its consequent responsibility command the necessary prestige and publicity to carry confidence and conviction. Others merely muddle the waters. Since my relief from active military service I am one of those others.

As far as future history is concerned, I feel that the immediate contemporary record is the only reliable source. The statements of interested principals, made some years after the event, cannot fail to be influenced by the aftermath of actual developments. No matter how objective one may want to be in the abstract the temptations of the "Monday morning quarterback" will assail. Human nature, being what it is, will almost universally cause the narrator to slant and color the story to his personal benefit. I would hesitate to face such a temptation, especially as the immediate contemporary records are voluminous.

Mr. Truman's appearance on Sunday seemed to me to illustrate almost classically the historical dangers involved in aftermath and afterthought statements. He made statements entirely incompatible with the incidents as reported at the time of occurrence. So incomprehensible with the truth were some of his comments that at times he seemed to me almost like a clown rather than as one who had been the Chief Magistrate of this great country. It was entertainment but not history.

Among the falsities and fallacies of his claims, I recall the following items in his denunciation of me in an apparently desperate effort to relieve his conscience of the dreadful aftermath resulting from his Korean mishandlement:

1. He suppressed an indiscreet letter from me to Dave Lawrence, a partisan political editor and publisher. This is entirely false. I have never written to Lawrence at any time. A strategic analysis of the military value to the free world of the Island of Formosa made by me at the request of a veteran group to which I belonged was the cause of his wrath.

2. He claims I misled him about the entrance into the Korean war of Red China. He has the cart before the horse. It was he who misled me. As a field commander my intelligence was limited to my own front. I had no means of knowing what was the political policy of Peking. That was a responsibility of Washington and its authorities assured me that there was no indication of intervention.

3. He insists that I was insubordinate. Yet every witness from the Pentagon swore before a Congressional Committee to the contrary. Actually, the order and accompanying statement relieving me refutes such an allegation which was made only years after the incident.

4. He states that I disobeyed his order. This is false. I do not even know to what he refers; but I have never knowingly disobeyed, either in letter or spirit, any order given me in my fifty-nine years of military service. This is the first time Mr. Truman has made such a charge.

5. He justifies his action by recounting the approval of General Bradley and Secretary Marshall, both sworn enemies of mine. General Bradley, according to Truman's own statement in his memoirs, was a candidate to replace me. He was embittered by my refusal to give him a command in the Far East because I questioned the errors he committed in Europe, especially the debacle of the so-called "Battle of the Bulge". He recently stated, however, in a magazine article that my concept of victory might, after all, have been right.

6. He quotes Lincoln's removal of General McClelland and Polk's removal of General Scott as precedents. Neither has any semblance of similarity to my own case. McClelland

went because of his timidity and non-aggressiveness. Lincoln relieved him because of a belief he could not win. Polk relieved Scott because of his belief that Scott was a candidate for the Presidency and was using his military position to enhance his political chances.

The real reason for my own relief is that I believed victory to be essential. Truman did not. He failed to comprehend the most basic principle of statesmanship--that a big country that enters upon war and does not see it through but accepts a stalemate must ultimately suffer all the consequences of defeat. The truth is he lost his nerve just when victory was within his grasp.

At that time we had the bomb, they did not. We would not have had to fight globally--the threat of the bomb would have been sufficient to force the enemy to yield. His knowledge that we would not was the very signal for his intervention. Truman in his concentration on the center in Europe failed to see that the Reds were turning our north flank in Asia and our south flank in Africa. And we are now beginning to reap the bitter result of all this. We see Red China building up a military strength to become the balance of military power in the world and to perhaps tip the scales of the future control of the world towards the Soviet. We see the dreadful cost in money to prepare against this menace and we realize the dreadful sacrifice in life which our half-hearted effort in Korea produced. For to recklessly enter upon war and then to even more recklessly stop makes the sacrificed dead look like something resembling murder.

At this point you will say, probably, that my television appearance would give me a complete chance to present my rebuttal. But I believe the spectacle of two old men with their careers behind them assailing each other on past events which have been fully discussed in controversy of years ago would be detrimental to national interests at this time when unity is so essential. The public would, I am sure, be distressed.

For the above reasons I think it would be unwise for me to accept your invitation.

Thank you for your birthday greetings and for the record of Churchill's speeches.

Most sincerely,

Douglas MacArthur

DOUGLAS MacARTHUR.

EDWARD R. MURROW WITH THE NEWS
THE COLUMBIA BROADCASTING

FRIDAY, MAY 4, 1951
7:45 - 8:00 PM EST

This is the news:

General Ridgeway said today: whatever the enemy does he will get more than he reckoned for. On another visit to the quiet battlefront the General said: the war will last as long as the Communists are willing to pay the bloody price they have been paying. He wonders how long the enemy troops will put up with empty Communist promises to throw the United Nations forces out of Korea and destroy them. He thinks the only thing the Communists have succeeded in doing so far has been to destroy tens of thousands more of their own men. There was very little action on the front today. For a third day our tank patrols probed to the north seeking enemy strongpoints. (A few communist pockets were wiped out.)

In Washington, General MacArthur spent another long day answering hundreds of questions from two senate committees. Perhaps the most newsworthy question came from Senator Fulbright of Arkansas. He asked the general if he'd be surprised to learn that Secretary of State Acheson "vigorously" opposed MacArthur's dismissal. The General said he never attributed his dismissal to Acheson..doesn't know him...hasn't the faintest idea whether or not Acheson had anything to do with it...believes his dismissal was "the judgement of one individual" (presumably the President). The General denied that he was taking a slap at the State Department in his letter to Representative Martin, in which he said: "Here we fight Europe's war, wile the diplomats fight it with words". The General said this was simply a statement of the actual facts. He said the Martin letter was "routine"...he turned them out by the hundreds. He also said his message to the Veterans of Foreign Wars— the one the President asked him to recall—had great weight in changing Washington's estimate of the strategic value of Formosa.

Country Club Atmosphere of Schools Blasted by Hank Zivetz

A statement delivered by Hank Zivetz before the Board of Education in Los Angeles recently is so pertinent to a situation which exists in most school districts in the state that we have chosen to reprint it here, almost in its entirety. Hank is executive secretary of AFT Local 1021. The statement follows:

"Madame President, Members of the Board of Education, Mr. Superintendent:

"A seemingly insoluble problem facing all Boards of Education is that of satisfying the mounting pressures to improve our educational system in face of equal pressure to keep taxes down. We in the American Federation of Teachers have always maintained that on the scale of values, no amount is too great to be spent on the improvement of our public schools. Today, however, we offer a proposal that would accomplish that, without the spending of a dime, and without the necessity of adding hours to the school day or days to the school year.

"During the past year this Board of Education has done a magnificent job in trying to keep pace with the burgeoning school population. . . . Ostensibly, million dollar plants are erected for the purpose of educating our youth. To the best of our abilities, we teachers are trying to do just that, but sometimes we wonder whether our efforts are superfluous. For many of our students, the bright as well as the slow, learning is secondary to the multitude of distractions constituting the school day. It is truly difficult for an adolescent to be challenged by academic interests in the social atmosphere of a junior country club. . . .

"First, there are the drives. In addition to the many collections for Community Chest, Red Cross, and Harlan Shoemaker now being considered by this Board, there are cookie drives, paper drives, PTA drives, annual drives, ad infinitum, depending on the imagination of those in charge. Each drive represents man-hours spent by teachers to organize the drives, man hours spent by teachers in the classroom organizing support for these drives, man hours spent by teachers collecting funds and keeping records for these drives. And then, to climax any drive there is the usual award assembly for those students who sold the most cookies, PTA memberships, etc. And the greatest incentive for the student to participate in the drive is the well advertised fact that the assembly will be held during school hours, which means getting out of classes for the student and disruption of the teaching schedule for the teacher.

"Next, we have the assemblies. There are welcome assemblies, pep rallies, exchange assemblies, patriotic assemblies, sweater assemblies, installation assemblies, GAA assemblies, reward and award assemblies and many more, too numerous to mention. Into these assemblies go many teacher-student hours of preparation, decoration, and rehearsal, mostly at the expense of class time. Prior to and during each assembly long lists of students to be dismissed from class are circulated to all the teachers. The time for an assembly is taken at the expense of regular class periods which are generally shortened or sometimes completely eliminated. At my own school we are on extended session with close to 4,000 students. We must hold four separate assemblies over a two day period in order to accommodate the entire student body. This means that the schedule of classes is disrupted and the length of the classes shortened for two days out of the week whenever we have an assembly. Thus far, we have managed four in the first five weeks of school.

"Finally, we have the encroachment of athletics on the classroom program. Any high school teacher with a last period class will testify to the almost total disruption of a teaching program caused by early dismissals to afternoon football games, track meets, baseball games, or to any of the paid athletic attractions sponsored by the school. Many students cynically refer to their "support" of the team as a means of "buying their way out of class."

"I find that most teachers are completely disgusted with the situation and that most students are completely indifferent to these activities carried on purportedly in their interests. Even the justification for these activities on the grounds that this is what the public wants is refuted by the constant clamor for more basic education in our schools. . . .

"If we are to make any fundamental changes in our educational program we need first to decide what those buildings we erect are for. If education is to be taken seriously, and if our teachers are expected to educate, then we must divorce from our regular school day all activities that are not classroom activities. I subscribe to a full program of assemblies, drives, clubs, and athletics. These, however, must be truly extra-curricular, and must be carried on after regular school hours as separate programs on an entirely different budget, with special remuneration to the skilled certificated people who are willing to carry on these programs.

"At the state level there are strong considerations for an extended school year. Even locally, the Superintendent's Curriculum Committee has expressed an interest in the extension of the school day. This school district can accede to these meaningless gestures toward school improvement for the sake of public opinion; or it can face up to the problem with courage and honesty. We teachers can do the job within our present shcedule if only the atmosphere of our schools would reflect the serious nature of our job, which is, to educate."

Southern Crisis

(Continued from Page 3)

dent, our jewels are our children. They deserve better of us. I hope you will therefore give the enclosed proposal of the Executive Council of the Executive Council of the California State Federation of Teachers serious consideration.

Sincerely yours,
Ben Rust, President
Calif. State Federation of Teachers
781 Ventura St., Richmond, Calif.

San Diego Board

(Continued from Page 3)

of the teachers would be permitted to use school mail facilities — a device for denying the teachers' union a privilege enjoyed by the administrator-dominated association. However, when the union requested an election to determine their qualification under the Board policy, the request was denied on the grounds that such an election would be illegal!

More recently the Board announced as one of its "basic policies and goals" . . . "to achieve a regular school year of at least ten months' duration, with a daily schedule and curriculum providing priority and primary emphasis on the basic required courses and the development of sound moral, ethical and spiritual values. The school day to be long enough to provide all the time necessary for the basic required courses, with elective courses being scheduled on a not-to-interfere basis. In this regard it is our goal that an eight-hour day, including a half-hour lunch period, be attained in our high schools."

The city school administration promptly countered the devastating impact of the board's pronouncement by a soothing statement that the policy did not contemplate any increased hours of work for either teachers or students! Even the casual observer must conclude that there is plenty of room in the San Diego system for development of some "sound moral and ethical values."— FBL

Dear Mr. Murrow:

We at WFBG have joined forces with other broadcast and news media in the city to promote, as a public service, a community boosting campaign.

The purpose of the campaign is to combat the negative and pessimistic thinking which has pervaded the area.

We are attempting, in other words, to help the community help itself.

Your tape recording of the enclosed spots will lend the campaign the punch and bite that only name personalities can convey.

We very much appreciate any assistance you lend this community.

Sincerely,

Leo M. MacCourtney
Promotion Manager

DEW ASSOCIATES
WILLIAM B. MACDONALD

9 November 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York 22, New York

I have just finished rereading the text of your speech to the Radio and Television News Directors' Association, printed in The Reporter: congratulations. The speech is a most eloquent statement of the responsibility of the broadcaster both explicitly in its phrasing and implicitly in its delivery and printing.

The question which naturally leads from this is "What next?". I would like, with your permission, to send reprints of the speech to the corporate heads of the thirty odd corporations who represent the primary radio/television time in an effort to stimulate a direct response. Included with the reprint would be the enclosed cover letter.

I would like to take this opportunity of introducing you to the Social Sciences Broadcasting Council. This is an organization of social scientists and broadcasters, still in its embryonic stage, which was instituted because of a growing concern with the material of mass media programming. Basic to this is the fact that everything which comes through the mass media, consciously or otherwise, is educational in that it is representative of a system of values.

The special concern of the social scientist is that the mass media consistently present an inadequate and often distorted view of social problems and conditions. The Social Sciences Broadcasting Council will function primarily in two ways:

1) as a producing organization to make available on film, kinescope, tape, and live programs the material of life in dramatization and documentary in adequate and unbiased presentation;

2) as a service organization to make available to broadcasters the findings of the social sciences by representative membership of the most competent people in the country.

I would take exception to your speech on one point. You make it sound as if reality were a bitter pill that one gags down because it is good for him. I think, on the contrary, that the only thing which gives life a genuine meaning is the degree to which it is based on reality. I have just finished recording

two interviews with Frank Lloyd Wright. If the Old Man has anything to say about architecture it is that it can only reach maturity as an art through the recognition of the nature (reality) of whatever is to be dealt with. If there is to be an art of life, this too can only reach its maturity through a recognition of reality.

I most sincerely hope that you will grant me permission to forward reprints of your speech. I shall welcome any changes or additions you may wish to make in the cover letter. Also, I look forward to communication with you about the Social Sciences Broadcasting Council when it is fully organized and functional.

Sincerely yours,

William B. MacDonald

COVER LETTER, to be included with reprint of Edward R. Murrow's speech delivered before the Radio and Television News Directors' Association

Dear Sir:

I have taken the liberty of sending you, with Mr. Murrow's permission, a reprint of a speech which he delivered before the Radio and Television News Directors' Association, as it appeared in The Reporter, as a means of bringing his ideas to your attention. This speech reflects, in its delivery and printing, the ideals of freedom and responsibility of which Mr. Murrow speaks so eloquently.

That I hope for your support of these ideas in the form of air time is obvious. This support implies a trust, a faith in both the audience and the networks: a trust for which there is ample evidence in both instances.

To speak more concretely for this proposal in terms of your corporation and the necessity it faces in selling products, there are specific advantages to be gained through this donation of air time. First, the national attention which would be drawn to any sponsor offering his air time for this kind of public service would be worth at least twice the cost of whatever time is donated. Second, the importance of any given program to an advertizer lies not only in the number of people who watch/listen but also in the number of person to person contacts involving the program which occur after the broadcast. The memorability of a given program and the degree to which it is talked about are in direct proportion to its significance.

Measuring the public relations function of an offer such as Mr. Murrow suggests is difficult. The values here are not quantitative but qualitative: values which will continue to be associated with your company, through its concern for the public well being, for months or perhaps years after the broadcast.

Let me urge that you contact Mr. Murrow and his staff at once for consultation on procedure. And please accept, at this time, the gratitude of at least one member of the audience.

Sincerely yours,

William B. Macdonald
468 West Deming Place
Chicago 14, Illinois

MacKenzie, Ian

August 27, 1959

Dear Mr. MacKenzie:

Your note of August 17th arrived after Mr. Murrow had departed for Europe. We regret to say that he did not have an opportunity to read A FEVER IN THE BLOOD by William Pearson before leaving.

Sincerely yours,

Fall 1948.

Dear Mr. Morrow,

For my 10,000 word senior thesis I have chosen the George Polk case. I have a special reason for this since George was a close friend of my family. In collecting material for the paper, I frequently ran across your name. It seems that you were a great factor behind the solving of his murder. I wonder if you could send me any information about the case; bulletins, a list of books printed about him, and, perhaps, any pertinent, unpublicized facts which you might know.

I'm sorry to take some of your valuable time, but I do hope you can help me. Hoping to hear from you very soon,

Yours truly,

Ross Mackenzie

P.S. I do not return to school(the above address) until September 15, so if you should get to this before then, my home address is:

Dear Mr. Murrow:

Eighty zillion words have been written and spoken about the recession by Congressmen, tycoons, labor leaders and everybody else...but an automobile dealer in Denver may have said something in the attached advertisement that's much more significant than anything that's been said so far.

The automobile business appears to be not unlike the motion picture business...after World War II the motion picture business was so good a producer could have Clark Gable reading a phone book and he wouldn't be able to fly around the money the picture would take in. So the producer got the idea he was a genius...as a result he got so fat he could float all the way across his pool with no hands. From then on he spent so much time being a genius that he had no time for his work...you know what's happened to the motion picture business.

The same thing is true in the automobile business. After the War the automobile dealers had to barracade the doors to keep the customers out, and those he did let in had to pay a premium for the chance to buy one of the new beauties. So, like the motion picture producer, he too became a genius. He began running the business from his yacht... and of course the salesmen took after their bosses...they spent more time leaning against fenders looking at their nails than they did after the customers...and before anybody knew it the customers had disappeared.

Anyway it seems clear that what we need as much as a tax cut and Government spending is a good dose of some old-fashioned, high pressure American salesmanship. According to the letter attached such a formula paid off for a guy named Aaron Mosko in Denver. Please read the ad and you'll see what we mean.

Sincerely yours,

Paul MacNamara

Paul MacNamara

We believe the attached letter from Goliath's dealer in Denver will be of interest to the entire automobile industry.

RECESSION.

"I know that a lot of people all over America are talking about the recession, particularly in the automobile business . . . I read where certain economists claim that the automobile business is really the key to the recession . . . they say as soon as the automobile business picks up, everything will pick up.

It's my theory that if there's anything the matter with the automobile business it's because the majority of the dealers, sales managers and salesmen have forgotten how to sell . . . but I have the evidence that proves that if a man will work, and has a good automobile to sell, he doesn't have to worry about any recession.

Let me tell you my story . . . I began selling GOLIATH automobiles in the city of Denver in October 1957. Everybody told me the Volkswagon had the market sewed up in the small car field. I wasn't bright enough to believe this so I started out with a car that cost a little more — but I thought it was a lot better — The GOLIATH, built by the famous Borgward-Werk Company in Bremen, Germany, the car has 4 cylinders . . . a front wheel drive . . . 4-wheel brakes . . . true, it costs a couple hundred dollars more than the Volkswagon, but after I'd tested the GOLIATH I was sure I could sell it — it had everything . . . the ruggedness of a jeep . . . the riding quality and roominess of a $5000 American car . . . and the economy of a motorcycle.

Next I decided that the practice of demonstrating automobiles had become a lost art and that I was going to bring it back. I worked out a 2½ mile demonstration route which started at the front door of my showroom.

The first mile is down a badly paved, very rough side street . . . then into and across a vacant lot . . . then up a good steep hill that has no road. During the winter the lot and hill is covered with snow or mud — this I call the "Goliath Testing Grounds"

The picture on the left shows the "Goliath Testing Grounds" in Denver created by Mr. Mosko (that is Mr. Mosko standing next to a Goliath Station Wagon).

The picture above shows part of the Goliath display area on South Broadway in Denver. Not shown in the picture is the big glass-fronted showroom and the well-equipped service department in the rear that completes the GOLIATH setup in Denver.

. . MY FOOT!

(see cut). Next I take my Customer along at 60 miles an hour on a very narrow, high crown back country road with 2 wheels on the crown and 2 wheels in the gutter and do the driving with 2 fingers on the wheel . . . I top off the whole show by driving the car up over a curb across the sidewalk and off a curb and wind up with a flourish in front of my showroom.

When I get out of my car I say to my customer: "Now, you can see what the GOLIATH will do, let's take your car and drive the same course." So far I haven't had a single prospect willing to drive his car over the route—I've just taken the GOLIATH. My salesmen and I each average approximately 150 trips per week.

Meantime, with this demonstration and a lot of other old-fashioned hard hitting ideas—I've sold a lot of GOLIATHS—true I've worked like a dog and so have my salesmen . . . but we're selling *GOLIATHS.*

Oh yes, the "recession"—I made money in November—lots of money—the same in December—January—February and March—now with Spring and some good weather ahead my business for the rest of the year looks great.

GOLIATH was second in imported car sales in the city of Denver for the month of December . . . and in January . . . GOLIATH was *FIRST!* (and the other dealers had cars so we didn't win because the other boys were in short supply). So if there is a depression or a recession in the automobile business we haven't heard of it . . . To be really accurate I should have said: "Recession . . . My Feet," because I'm using up an awful lot of shoe leather and so are my salesmen. But we found the answer to the whole thing . . . It's a simple four letter word . . . W-O-R-K!"

AARON MOSKO • GOLIATH DEALER • DENVER, COLORADO

GOLIATH CARS THAT MAKE MR. MOSKO'S STORY POSSIBLE

THE TIGER

THE 1100 SEDAN

There are 4 models in the GOLIATH passenger line—the 2-door Sedan . . . the Station Wagon . . . a special De Luxe Sedan, "The Empress" . . . and a new De Luxe Sports Coupe, "The Tiger". . . plus a full line of trucks including delivery vans, busses and pickup trucks. (Incidentally, the GOLIATH sedan is 5″ wider and 7″ longer than the other popular German car.) GOLIATH prices start at $1995 port of entry.

MICHIGAN STATE UNIVERSITY

OF AGRICULTURE AND APPLIED SCIENCE • EAST LANSING

THE BASIC COLLEGE • DEPARTMENT OF COMMUNICATION SKILLS

Dear Mr. Murrow:

Thank you so much for your detailed letter of May 1, outlining possible TV newsmen I might approach for my case-history study.

I am upset to think that you did not receive my first letter and enclosed articles which would have made my purpose and viewpoint clear to you. I have finally rounded up other copies of the magazine articles and am sending them to you, along with a copy of my original letter, so that at least you will be able to understand what I am up to.

When I received no answer to my letter of February 18 to you, I was forced to approach other newsmen, with whom I am now trying to arrange a case-history investigation; so it is not proper at the moment for me to approach any of the men you suggested. If I do not succeed with others, I will come back to CBS if possible. Unfortunately, time is now pressing me because my university grant will soon expire.

I knew that you did not handle a TV news program of the kind that would furnish me with a 2-5 minute film clip report of the kind I want to study in complete process. But I wanted if possible to approach a newsman through you, because I know of your active concern with the very sort of problems I am trying to illuminate with my study.

Sincerely yours,

Ken Macrorie

Ken Macrorie
Assistant Professor

29 May 1957

Mr. Edward R. Murrow
CBS
485 Madison Avenue
New York, New York

copy of letter
which you never
received

Dear Mr. Murrow:

Mr. Gerhart Wiebe, who shares some of my notions about the complex notions of objectivity and responsibility in reporting, has suggested that I write you for help in locating a TV newsman who might allow me to make a case-history of one of his reports, as I did of a newspaper report of Mr. Peter Kihss of the New York Times. I enclose the case-history, printed in the magazine ETC.

I have a university grant that would enable me to travel to New York or Chicago during the last week of March to do this work. I want particularly to follow every step of a filmed TV news report that takes uponly a few minutes (less than five, probably), so that I can consider all the selections involved, including those affected by time pressures and actual film editing.

I enclose also an article from the Antioch Review, which I think shows how much I agree with your notions of objectivity outlined by Mr. Charles Wertenbaker in the New Yorker, December 26, 1953.

One of my freshman students, asked to give an example of a mature TV show according to Harry Overstreet's criteria of maturity, last week wrote:

> Edward R. Murrel the comentator - He gives a bases for critical thinking. You can agree or disagree with what he says about the news.

Sincerely yours,

Ken Macrorie

18 February 1957

Mr. Edward R. Murrow
CBS

Macrorie, Ken

May 1, 1957

Dear Professor Macrorie:

I regret to say that your letter of February 18 and the material you mention having enclosed, was not received in this office.

You say that you want to make a case history of a very short news report, by which I assume you mean something less than 15 minutes. I am not myself familiar with this type of program, but I do know that the shortest news report we carry on television is from 7:00 to 7:05 PM Monday through Friday. This is normally handled by Robert Trout, but is currently being done by Stuart Novins during Trout's vacation. However, this is carried only locally in New York, so you obviously cannot sample it to see whether it contains what you need unless you happen to be visiting the city.

The only television news reports carried on the network are as follows:

8:45-9:00 AM EDT, Monday through Friday - Richard Hottelet.
6:45-7:00 - 7:15-7:30 EDT, Monday through Friday (evenings) Douglas Edwards.
11:00-11:15 PM EDT - 1:00-1:10 PM EDT - Walter Cronkite.

As far as the Hottelet and Edwards programs are concerned, you will have to check your local station in order to find out which of the alternative periods are carried.

I trust this information will be of some use to you.

Sincerely yours,

Professor Ken Macrorie
Michigan State University
Lansing, Michigan

OF AGRICULTURE AND APPLIED SCIENCE • EAST LANSING

THE BASIC COLLEGE • DEPARTMENT OF COMMUNICATION SKILLS

Dear Mr. Murrow:

I hate to write you again about a letter that you have not answered, because I realize you may not wish to reply. But then again, you may not have received my letter or considered it yet.

On February 18, 1957, I wrote you (enclosing an article from the Antioch Review and one from ETC., the semantics magazine, on objectivity) to ask whether you could recommend to me a TV newscaster who would consider letting me make a case-history of a very short news report. I am particularly interested in observing film editing steps.

I thought that my work on objectivity and responsibility might interest you because you and Mr. Sevareid were recently concerned in incidents involving these difficult notions. I have held up asking several other newsmen awaiting an answer from you. I would appreciate even your saying just "no" on the enclosed postcard, so that I can be sure that I should go on to ask other persons for their help.

Sincerely yours,

Ken Macrorie

The Objective Reporter

By KEN MACRORIE

"OBJECTIVITY," says psychologist Erich Fromm, "does not mean detachment, it means respect: that is, the ability not to distort and to falsify things, persons, and oneself."

This surely changes the old meaning of *objectivity*, a word long sacred to newsmen, who away back in 1923 wrote themselves Canons of Journalism which demanded reports "free from opinion or bias of any kind." But it turns the word in the right direction for them at last. They have had it threaded around their necks far too long. And their critics have lost no chance to tighten it, ever reminding newsmen that they were the ones who put it there in the first place.

The newsmen who formulated the Canons of Journalism wrote them as if they were going to be framed on office walls, where they hang today, gathering dust. Reporters and editors asked too much, and so did outside critics—the reporters because they wanted to be perfect, and the outside critics because they didn't know the first thing about the real process of reporting a news story. Both must face up to facts that many other observers have already confronted. The human animal just can't *detach* himself from the world he lives in and come up with reports about it that reflect no interest, preconception, or opinion on his part. Psychologists have proved in the laboratory what many old women have known for centuries—that man perceives on the basis of three things: his past experience, his anticipation of

---

The present article is based on research which KEN MACRORIE undertook for a Ph.D. dissertation on "Objectivity and Responsibility in Newspaper Reporting" at Teachers College, Columbia University. In addition to studying the concept of objectivity, Mr. Macrorie made three complete case histories of news reports, following reporters through every step of news stories that appeared in the New York *Times*, the Hartford *Courant*, and the Ridgewood (N.J.) *News*. He is now Assistant Professor in the Department of Communication Skills at Michigan State University.

Reprinted from *The Antioch Review*, Fall, 1956 issue. Copyright 1956 by The Antioch Review, Inc., Yellow Springs, Ohio.

what he will perceive, and whatever is before him. Albert Einstein, physicist, Walter Lippmann, political philosopher, Allan Nevins, historian—to mention just a few—have said that this is the way they perceive in their fields, which are more controllable than the newsman's.

If we ever have useful canons of journalism, they will be written on the street corner, in the phone booth, or at the reporter's typewriter, by men who understand how human beings perceive. Perhaps they will be written by men like this editor, who describes the actual process of his job:

> About three weeks ago three young college boys, all members of reputable families, got together one night, made five bombs and drove through five of the surrounding communities, including B——, tossing the homemade bombs from their car. No one was hurt, but it scared hell out of many residents. The boys also left crude banners behind lauding the benefits of Communism and signed "Comrade Ivan."
>
> The three boys were caught and had to face charges in each of the five municipalities. The last hearing was just last week.
>
> The father of one of the boys is a prominent attorney. The fracas took place on Friday night, and early Saturday morning he was busy trying to throttle the story. I happen to know he contacted police officers, judges, and our paper's lawyer. He probably also got in touch with several other papers in the area, although I don't know that.
>
> I had sent a man up to get pictures of the boys when they were booked and pictures of the banners they'd left behind, etc. He didn't get the shot of the boys.
>
> The father involved asked our lawyer, whom he knew quite well professionally, if we intended to use pictures of the boys. I pointed out to the lawyer that the only reason we weren't using pictures was because we didn't have them, and that I would continue to send a photographer to each of the hearings in an attempt to get pictures. The lawyer was a little baffled as to just what he should do, and the publisher was away on vacation.
>
> I ran the story as the lead that Sunday, with a picture of one of the banners, on Page One. [This paper was published only on Thursday and Sunday.] All the other papers in the area also carried it on Page One, and a couple of them also used it as the top story.
>
> Although the father involved had apparently managed to get the charges in each municipality changed from "possession of and exploding bombs" to "exploding fireworks," the boys did get stiff fines and lectures from each of the judges before whom they were arraigned.
>
> At the third hearing one of our photographers managed to get a picture of two of the boys. One had his coat over his face, but the photographer

caught another with his bare face hanging out. I used the pictures on Page One, because it was the kind of art any good city editor is looking for. Also, we were the only paper in the area that finally caught a picture of the boys. Several others had been trying. As a newspaperman I would have been stupid not to have used the picture.

Just before the final hearing—and we had covered each one, of course—the publisher, general manager and business manager and I were having lunch one day when our lawyer walked in. Near the end of the lunch, at the tail-end of the coffee conversation, the publisher asked the lawyer to give me his views on the bomb hearings. It was obvious that the lawyer had been talking to the publisher. Shortly thereafter, just as I was beginning to blow my stack, the publisher excused himself and hurried to an important engagement. But we kicked it around for two hours.

The lawyer maintained that he thought we were overdoing it. He said that, after the initial story, he saw no point in staying with it. He also claimed that he saw no point in rehashing the whole thing in each story.

I explained as calmly as I could, that each court hearing was another story, and we would be falling down on our job as a newspaper, besides looking stupid, if we didn't cover each arraignment. I also explained that as far as rehashing the thing was concerned, in my mind each individual news story should be complete enough to stand alone. That is, a writer can't assume that any given reader knows the entire background on something and therefore slide over the thing with only the latest action. How about the reader who hasn't seen another word previously on the story? For that reason, each story must be complete in itself. It must be so complete that if a reader never heard or read a word about the subject before, he can still read that story and know what it's all about.

I think I made my point, but I found it frightening to learn that newspapers can engage lawyers, and frequently do, who have no basic conception about the real responsibilities of a newspaper. The good thing that came from the whole affair was the fact that, if there had been any doubts in my mind as to whether the publisher would back me up in a test of newspaper integrity, they were removed. We covered the final hearing, completely uninhibited, and ran a complete, wind-up story.

What canon of journalism would the outside critic have the newsman follow in reporting this story? Suppose he said to the newsman, "Just give the facts." Maybe they went like this:

George Smith, 18, Jack Jones, 20, and Wilbur Williams, 19, sons of Homer Smith, president of the B——— City Bank, John Jones, tax lawyer, and Harold Williams, vice-president of the Ring Tire Manufacturers, last night exploded five bombs in B——— and vicinity. One bomb damaged the door of Harry's Diner, Main Street and Fourth Avenue. After the explosion,

> Harry Sullivan, owner of the diner, ran down the street after the boys, shouting, "You bastards!"

It's a fact that Harry called them bastards. Jim Ripley, copy boy, was drinking coffee at Harry's just then and heard him say it. But the word would burn the ears of the gentle women of the town if printed. And it might hurt Harry's reputation. After all, he isn't the subject of this story. Now it is true that the newsman regularly gets his lunch at Harry's Diner. If he decides to leave Harry's vulgar word out of the story, he may be favoring Harry. But perhaps some readers wouldn't be offended by the word; they like to know the truth. They might approve of the name he called the boys and enjoy reading the story, saying to each other, "I'd have done the same thing if those bastards had—"

Some experienced newsmen would laugh at this debate over the use of the word "bastards," saying that no veteran reporter would ever consider using the word, because a newsman never offends his readers unless the offensive word or fact is a crucial part of the story. But if these newsmen read their own reports closely they will find that they often print such nonessential offensive words. And when does a word become crucial to the story? The newsman has no Geiger counter that tells him this.

If the newsman puts the fathers' names in the very last sentence of the report, rather than the first, someone is sure to say he is covering up for the rich and powerful. Perhaps the boys' names and acts are the "real" story. Perhaps he shouldn't mention their fathers' names at all. He may decide to call the bomb a "firecracker," as one father did. When does a homemade firecracker become a bomb?

When the editor learns that John Jones, prominent attorney, tried to get police officers, judges, and the paper's lawyer to throttle the story, he must act. He can't let Attorney Jones get away with that or soon the citizens, not he, will be running the paper; and murder, corruption, and good deeds will all go unreported.

Attorney Jones apparently asked the paper's lawyer to suppress pictures of the boys. Should the newsman report to the public the attorney's visit to the lawyer? He might do the community and the paper a service by exposing a man who tries to suppress news—which the people have a right to. Yet it's not part of the story. This Attorney Jones is the one the newsman was reading about last week in some

old issues of the paper. He had been mixed up in some shady legal deals in a nearby town about fifteen years ago. It's not part of the story. But it is part of the whole truth.

The names and pictures of the boys who threw the bombs (or fireworks) are also part of the whole truth, but do they belong in the story? If the newsman prints them he may ruin the boys' lives. Rich kids as well as poor become juvenile delinquents. What good will it do the town to know their names? He might crop the pictures so that readers see the boys holding bombs, but can't identify their faces. If he did, someone would be sure to say that he was protecting rich kids whose fathers had put the squeeze on the publisher.

If the newsman treated everyone connected with the story in the same way, leaving out nothing, perhaps he would solve his problem. One of the reporters who talked to Attorney Jones's wife said that she didn't really think the boys' "fireworks escapade" was so bad after all. Hadn't older men in town played pranks like that when they were kids? A woman said that Jim Brown, the boy next door to the Jones's, admitted to the police that he had planned to join in the ride, but his mother made him stay home and practice piano. If the newsman prints everything, he will have to include these items. But he is not sure that the woman reported accurately Jim Brown's plans; only yesterday he himself misquoted a man in a statement he thought he had taken down verbatim. And the boy—if he didn't go on the raid, he's not in any way responsible. But his comment seems connected with the story. The whole truth. But about what? and whom? Where does an action leave off? What exactly is *the story?*

Perhaps by now the outside critic begins to see the weakness of the old ideas of objectivity—detachment, freedom from bias, just the facts, the whole truth—and the strength of Erich Fromm's definition: respect, no distorting or falsifying things, persons, and oneself. Another way of saying that is to ask newsmen to be *responsible to persons.* In this case, responsible to Harry who runs the diner, the parents of the boys, the boys themselves, the police, the courts, the newspaper, the press in general, and the newsman himself. But which person should he be the most responsible to, and on what grounds?

Before he can answer that question, the newsman who described the bomb-throwing incident must examine himself. For he, like all human beings, of necessity perceives events partly through what he

believes—his value system—which he has built up through long years of experience. He believes in the free press: he resents Attorney Jones's attempt to control it. He believes that profane language is part of real life and that people should admit its existence: he doesn't want to be prudish—as his mother was. His family was poor when he was a boy: he resents free-wheeling rich boys. He likes the honesty of Harry's Diner, no false advertisements, just good food: he resents an act of violence against such a man. All these feelings, and more, are part of the screen through which he perceives the event.

Some of the early upholders of the ideal of objectivity asked that the newsman be neutral, completely detached, without opinions or commitments of any kind. But a man who tries to search with a completely open mind will find nothing. He would not think that the bomb landing against Harry's door was any more worth reporting than the fact that Sally next door skinned her knee while jumping rope. If he is to produce anything of significance, man must have a system of values and write with belief.

Gerhart D. Wiebe, former research psychologist for the Columbia Broadcasting System, has said that, "To the degree that communicators are morally certain that their value system, as projected in their communications, is consonant with democratic living, their orientation should be a matter of pride." Whatever a good newsman's values or assumptions built out of past experience may be, he will have them, and they will affect his perceptions. He cannot escape his humanity. What he can do is know these formative influences in his own life and be aware of his preconceptions and values. Jerome Frank, judge of the United States Court of Appeals, Second Circuit, emphasized these problems in discussing impartiality and objectivity in court trials. He said: "To speak bluntly, I urge that each prospective judge should undergo something like a psychoanalysis." Newsmen need not go this far in inspecting the basis of their assumptions, but they should become conscious of them as much as reflection will allow.

Those persons who believe that Negroes should live in every respect like other men in the United States see an event like the Sugar Bowl controversy over segregation of the football spectators differently from those who hold another set of values. Differences in perception exist between all persons. Are we to ask our newsmen all to hold the same value systems so that they will perceive alike? We

cannot do that, but perhaps we can think about what kind of values would be most "consonant with democratic living," as Mr. Wiebe puts it.

One of my friends, who has worked as a chaplain and psychological counselor at mental hospitals and federal penal institutions for more than ten years, has come to the following conclusion after listening to thousands of men in trouble: The healthy person achieves *a working balance between independence and dependence.* He sometimes is looked up to by others as competent or comforting; he sometimes goes to others for help and comfort. He respects and is respected. He loves and is loved.

Perhaps this observation can illuminate larger social relationships as well—by suggesting that a realistic person does not attempt to create either a society of absolute individualism or cooperation, but one in which both are valued for their special virtues. I think that the good newsman has a greater humanity, or humanness, than most men. Whether he knows it or not, he believes that man and environment are not separate oppositions, but each is a part of the other, so that any change in one will affect the other. The question then becomes not whether man should attempt to control his environment, but how and where he will attempt it.

I would not suggest this idea unless I had observed that great men seem to act as if this were their general system of values. And so great news reporters have acted, I believe. Men like Lincoln Steffens, Vincent Sheean, Edward R. Murrow, Elmer Davis, and Eric Sevareid, for example, do not condemn men's individualistic or cooperative actions because they are individualistic or cooperative, but only on their own merits. They are men who perceive phenomena more accurately and significantly because they have an interest—even a passion——for life in its growth, creativeness, and love.

Their objectivity comes from respect, not detachment.

MacVane, John

February 10, 1959

Dear John:

Herewith checks for $12.00 in payment for three reservations at the "London Night Dinner" February 12th.

These are for Mr. and Mrs. Narrow and myself.

Sincerely,

Mr. John MacVane
Chairman
"London Night Committee"

Dear Ed:

A few months ago, you were kind enough to say you'd have a look around to see whether C.B.S. might need another good analyst or correspondent as I believe the term is there.

I hardly know John Day. Met him only once at a party or something. Is there any point to my seeing him or sending him a side of one of my U.N. shows? Or have you yourself cased the joint + drawn a blank?

myself. I know more than I ever did. I'm better on the air, both old-fashioned wireless & TV than I ever was. But all the people who realize it seem to be engineers, directors, newsmen or something of the kind, with not a sponsor or an agency V.P. in the lot. And having an engineer say "you're a real pro" is nice — but it won't buy groceries.

Well, I just felt like giving & picked you out of Devonshire Street. Do keep the eye open.

All the best
John

Madsen, L. C.

February 10, 1959

Dear Mr. Madsen:

Thank you for your letter and your nice comments.

I am sorry to say that I do not know how to help you in connection with your manuscript. I think your best bet would be to contact a publishing house.

It was nice of you to write and tell me about it.

Sincerely,

Mr. L. C. Madsen

January 14, 1959

Mr. Edward R. Murrow,
CBS Radio Station,
485 Madison Ave.
New York, N. Y.

Dear Mr. Murrow:

Many times I have seen and heard you over T. V. and I always say, "I think so much of you"-.

I was born and raised in the country of Denmark and in the town of Odense, the same town where Hans Christian Anderson was born, and sometimes I think that I also can tell a fairy-story, but this is not a fairy-story.

From the time I was a small boy and up to now, at the age of 71, I have studied native life and I love it; I have traveled over big part of this globe and studied nature as I traveled and this wonderful and most needed nature of ours, I can see how it is going backward. Many times I am feeling bad to think about it. I think that I can answer most any question correctly - any that is conneated with nature, no matter how difficult.

I have prepared a manuscript, entitled "Just outside my door", which I am interested in having published. ~~It is entirely~~ about nature and much in it ~~is about birds. I do~~ not know how or where to find a publisher who would be interested and I thought that perhaps you could help me?

First, I was thinking of the National Audubon Society in New York, but I found out that they just want short stories for the Audubon Magazine and can not be interested.

My wish is, to have this manuscript prepared for a book, but I am in need of pictures, which I think I can get. This book, well illustrated will be both interesting and understandable to all and should be a book to be used in schools for educational purposes as it is all about what all childred should know as well as all others.

Not a few, but many people have asked me to publish this book. I know what pictures I need and I also understand that it will cost quite a lot to get the book completed, but it will be worth it. I do not have the money so that I can do it myself, so it should be a publisher who can be interested. I will be glad to send my manuscript to such. Hope to hear good news from you. I am

Most Sincerely yours,

L. C. Madsen

ANN ARBOR, MICHIGAN

Dear Mr. Murrow —

We live now in Ann Arbor, where Robert teaches and studies for his PhD. I was afraid of campus life but it is not bad, not bad at all.

Now that Robert has retired into the academic life — I would like very much to make a surprise present for him — a few of autographed photographs of his colleagues of the days when he was

a newsman.

You can help me with my project - by sending your photo - Please do!

It was good to see you at the Marion Anderson lunch.

Mrs. Ethridge working like a mad on book about her trip to Russia. I hope it will funny book!

Happy New Year Nila

Mahanna, John

August 28, 1958

Dear Mr. Mahanna:

Very many thanks for your cordial letter of August 10th and for sending me a copy of MUSIC UNDER THE MOON.

It was a most enjoyable experience to visit Tanglewood - an experience which I hope to repeat next year.

Do let me know if you are coming to New York.

With all good wishes,

Sincerely,

Mr. John G.W. Mahanna
THE BERKSHIRE EAGLE

The Berkshire Eagle
PITTSFIELD, MASSACHUSETTS

Aug. 10,1958

Dear Mr.Morrow:

I am sorry we missed each other after the Boston Symphony concert this afternoon but it was difficult bucking a wall of human flesh, plus the rain, trying to get out to my car in the box section to get you a copy of the book I promised to hand to you before leaving the Berkshires.

later on I discovered you were seeing some friends in Lenox,but felt there must be a time when people in your position should be left alone and consequently did not try to contact you there.That is why I did not request a photograher visit your box - it would have caused a lot of curious people to start making inquiries.

After six weeks of covering the Festival I was a little tired too and wanted only to get home and relax for a short time , so decided to wait until tonight at the office to send the book on to you.

As you know 20th Century Fox has signed a contract to do the Tanglewood story next summer, based on a screenplay by Agge and Taubmann.Henry Ephron is the producer and Lian O'Brian , the writer.

If you find there is anything in my book of interest to you,I will be happy to come to New York at any time to discuss it with you. It was nice meeting you,Mrs. Morrow

The Berkshire Eagle
PITTSFIELD, MASSACHUSETTS

and your guests.

I am enclosing a couple of clippings which may be of interest and if you should want to make a check in the CBS family about me, I would suggest you call on Bob Dixon, who does the Tide commercials and a few others.

Hoping to hear from you soon, I am,

Sincerely,
John G.W. Mahanna
John G.W.Mahanna,
County Editor.

'Music Under the Moon'

John Mahanna's New Book Covers History of Festival

JUL 6 1955

Announcement was made today by the Berkshire Symphonic Festival Inc. of the publication of a new book, "Music Under the Moon," written by John G. W. Mahanna, county editor of The Eagle.

John G. W. Mahanna

The first edition of 5,000 copies is now at the printer's and is expected to be off the presses in time for distribution the weekend of July 15, the second week of the Festival's six-week season.

"Music Under the Moon" is described by the author as an early history of the Festival, drawn from official minutes of the meetings of the corporation from 1934 to 1945 when the $100,000 Music Shed at Tanglewood was presented as a gift to the Boston Symphony Orchestra.

48 Pages of Illustrations

In addition to 30,000 words of text, the 125-page book contains 48 pages of illustrations. Many of the nearly 100 photographs are being published for the first time. These include photos taken in the early days of the Festival in a horse show ring at the Hanna Farm, later in a tent at Holmwood, Mrs. Alfred Gwynn Vanderbilt's estate, and at Tanglewood before the Shed was built in 1938.

An epilogue in "Music Under the Moon" covers high lights from 1945 to the present. Included are the establishment of the Berkshire Music Center, the retirement and death of Dr. Serge Koussevitsky, the engagement of Charles Munch as conductor of the orchestra and successor to Dr. Koussevitzky as musical director ending with the tribute paid by the Boston Symphony Orchestra last year to Miss Gertrude Robinson Smith, president of the Festival and the board of trustees of the organization for their part in founding the outdoor concerts and their ultimate success.

Covered Festival News

"Music Under the Moon" stems from a series of articles written last summer by Mr. Mahanna and published by The Eagle in its weekly supplement, The Weekender (now the Berkshire Week). Mr. Mahanna, who started his newspaper career in 1933 as correspondent for his home town of Lenox, site of the Festival, has been associated with the news coverage of the Festival concert center since its inception. He served on the county and city staffs of The Eagle prior to being appointed county editor in September, 1947. The only break in his newspaper service was from 1942 to 1945 when he was in the Navy, part of that time being in combat duty with the Pacific Fleet which he reported in special dispatches to The Eagle.

The Eagle Printing & Binding Co. of this city is printing "Music Under the Moon," and the engravings are by the Eagle Engraving Co. Copies will be distributed to county book stores, and the Tanglewood Music Store by the Pittsfield News Co. as well as to book stores in Boston, Cape Cod, New York and the Albany area.

History of Berkshire Festival Is Published

Newspaperman Authors Book

By EDGAR S. VAN OLINDA

TANGLEWOOD—John G. W. Mahanna, New England newspaper correspondent whose book, "Music Under the Moon," a complete illustrated history of the Berkshire Symphonic Festival from 1934 to 1955, has been placed in the bookstores of the Berkshire and Albany Metropolitan Areas.

The history of the Berkshires in Western Massachusetts can be roughly divided into three parts. First came a genteel literary invasion in the 19th Century, sparked by Nathaniel Hawthorne, who wrote "The House of the Seven Gables" at Tanglewood.

In the early 1900s, the elite of the nation came to the Berkshires each summer, erected a magnificent chain of castles and chateux (now inns, schools and monasteries) which dotted the hills. The third and current phase is music. Tanglewood now ranks with Salzburg, Austria, as a world music festival, attracting visitors from all over America, Canada, Mexico and Europe. Some connoisseurs have even referred to Salzburg as European Tanglewood.

COMES OF AGE

The Berkshire Symphonic Festival has now come of age with the opening of the Big Shed this month and the 104-piece Boston Symphony Orchestra week-end concerts, Friday and Saturday nights and Sunday afternoons, through August 14. The Albany Times-Union can claim a modest share in the success of the Berkshire Festival of Music. This newspaper has consistently and faithfully chronicled everything which was to take place and which has happened since that summer of August, 1934. The history of the Berkshire Symphonic Festival, titled: "Music Under the Moon" has just been placed on sale ,the dedicated work of John G. W. Mahanna, County Editor of the Berkshire Eagle in Pittsfield.

FIRST EDITION

The first edition of 5,000 copies came off the presses last Friday and is being distributed to the bookstores of Berkshire County, the Music Store at Tanglewood, in Boston, Cape Cod, the Albany Metropolitan Area and Boston. The price of the book is $2.50.

"Music Under the Moon" is described by the author as an early history of the Festval, drawn from official minutes of the meetings of the corporation from 1934 to 1945, when the $100,000 Music Shed at Tanglewood was presented as a gift by the Berkshire Festival to the Boston Symphony Orchestra.

In addition to the 30,000 words text, the 125 page book contains nearly 100 photographs in 48 pages of illustrations, many of which are being published for the first time. These include photos taken in the early days of the Festival in a horse show ring at the Hanna Farm, later in a tent at Mrs. Alfred G. Vanderbilt's estate, and at Tanglewood before the Shed was built.

FRONTSPIECE

It is right and proper that the frontspiece should be a photograph of Gertrude Robinson Smith, with the dedication:

"Whose rare combination of vision, tact and determination transformed an idea into historic reality."

Miss Smith is still the inspiration for the Festival and occupies her box at each performance by the orchestra.

An epilogue in "Music Under the Moon" covers high lights from 1945 to the present. Included is the establishment of the Berkshire Music Center, the retirement and death of Serge Koussevitzky, the engagement of Charles Munch as conductor of the orchestra and successor to Dr. Koussevitzky as musical director.

THE AUTHOR

Mahanna, who started his newspaper career in 1933 as correspondent for his home town of Lenox, site of the Festival, has been associated with the news coverage of the Festival concerts since their inception, with time out when he was special agent with the Office of Naval Intelligence and two years of combat duty with the amphibious forces of the Pacific Fleet.

Mahanna is married to the former Evona Kennedy of Pittsfield. They have two children, Joan and Jonathan. Mahanna is correspondent in the Berkshires for the New York Times, and New York Herald-Tribune, and the Hearst newspapers in Boston.

Tanglewood To Star in Movie To Be Produced by 20th-Fox

Tanglewood and the Boston Symphony Orchestra will play integral parts in a "romantic, fictional" movie which will be filmed next summer at the Berkshire Music Center in Lenox, according to an agreement signed yesterday by 20th Century-Fox and the orchestra trustees.

The script for the movie, titled "A Tanglewood Story," was written by the late Pulitzer Prize winner, James Agee, and Howard Taubman, music critic of the New York Times. The story has been described as a "tale dealing with the crucial period in the lives of young musicians between completion of their training and the start of their professional careers. Tanglewood helps them to make this transition."

Buddy Adler, executive producer of 20th Century-Fox, said "It is my belief that this is the time for a really fine film dealing with good music. The Tanglewood school provides the place and the ideas to achieve it. Young musicians in all fields are to be found there and it is our plan to integrate this student body at work and play within our damatic story. Its diverse audiences from all over the country stress our democratic way with music. We have a top orchestral group in the Boston Symphony and Dr. Charles Munch, and our romantic story will, I believe be fundamentally true to life."

To Start July 1, 1959

Henry Ephron will produce the movie, and filming will start July 1 of next year. It will continue all through the festival season, and the entire facilities of the Berkshire Music Center will be put at the disposal of the studio. The director and members of the cast will be named at a later date.

Henry B. Cabot, president of the Boston Symphony Orchestra, said: "Dr. Munch and the trustees of the Orchestra take pleasure in joining with 20th Century-Fox in bringing the Boston Symphony Orchestra and the Berkshire Music Center at Tanglewood to the public through the medium of motion pictures."

20th Century-Fox Sends Advance Team To Tanglewood

4/4

The advanced team of 20th Century-Fox arrived at the Curtis Hotel in Lenox today from Hollywood to make preliminary plans for "A Tanglewood Story" to be filmed at the Berkshire Festival next year, starting July 1.

Henry Ephron, producer, Leon O'Brien, writer and Jack Painter, photographer, checked into the Curtis for a week's stay while visiting the scene of the movie and conferring with Dr. Charles Munch and officials of the Boston Symphony Orchestra.

Mrs. Mahanna Heads Series Of Concerts

APR 2 1958

4 Berkshire Nights Scheduled Again At Tanglewood

The Tanglewood Advisory Committee and Boston Symphony Orchestra Mgr. Thomas D. Perry Jr., today announced the appointment of Mrs. John G. W. Mahanna of this city as chairman of the Berkshire Nights Committee for the Friday

Mrs. John G. W. Mahanna

night concert series at Tanglewood this summer. She succeeds Mrs. Edward H. Cumpston Jr., who now resides in Schenectady, N.Y.

As chairman of the committee, Mrs. Mahanna will spearhead local promotion of the concert series designed especially for Berkshire County residents and others within easy driving range of Tanglewood.

The Berkshire Nights series was inaugurated last season at the suggestion of the Tanglewood Advisory Committee. The same plan is being offered again this summer. It calls for the offering of a subscription to four Friday evening concerts in the Music Shed by the Boston Symphony Orchestra, with a suitable price reduction for those nights.

Compaign April 15-June 1

Mrs. Mahanna will appoint a committee of area residents to assist in promoting the plan. The campaign will run from April 15 to June 1.

A graduate of the College of Mount St. Vincent-on-the-Hudson in New York, Mrs. Mahanna has been active in social and civic affairs of the city. A member of the board of directors of the South Mountain Assn., she is a member of the Young Audiences committee, the Tanglewood-on-Parade committee and is one of the sponsors of the Berkshire ballroom dancing classes. A former board member of the Girls Club, she was active in the building fund campaign and serves on the swimming and Camp Stevenson committees. She is also a member of the advisory board of the Pleasant Valley Sanctuary, the auxiliaries of St. Luke's Hospital and Pittsfield General Hospital, and for two years served as chairman of clubs and societies in the United Community Service fund campaigns. A past chairman of the annual sale for the blind in Pittsfield, she is also cochairman of The Eagle Santa Toy Fund.

A Dream

THE Berkshire Symphonic Festival Incorporated, a pioneer organization in the field of music, had its start in 1934—a time when the future was heavily clouded.

Here, in the United States the unemployment problem was becoming more desperate every day.

President Franklin D. Roosevelt had established the Civil Works Emergency Relief Administration. Adolf Hitler had been chancellor of Germany only a short time. In Canada the Dionne quintuplets had been born. The United States had recognized the Soviet government, bringing to an end a long period of estrangement. After 16 years of political power in New York, Tammany Hall had lost control. Prohibition had been repealed. Uncle Sam was walking a tight wire.

At this time, Dr. Henry Hadley, noted conductor-composer of the period, made known to Miss Gertrude Robinson Smith of Stockbridge, Massachusetts, a widely known summer resident of the Berkshires, his dream to give symphony concerts in the Berkshires "under the stars." Dr. Hadley revealed his wish to her one afternoon in May, 1934.

Thrilled with the idea, Miss Robinson Smith reserved her decision until she had time to confer with two close friends, Mrs. Owen Johnson, wife of the late novelist, who lived nearby, and Mrs. William Felton Barrett of South Egremont, a summer resident of the Berkshires. They took a compass, set it on a New England highway map, drew a circle covering a 40 mile radius of Stockbridge and decided to draw on that section for support. (Inside cover)

On her personal stationery, Miss Robinson Smith drew up a letter (Page 4) dated June 18, 1934, which was sent to 150 representative people within this radius, inviting them to a meeting at her Stockbridge residence to hear Dr. Hadley outline his proposal.

The response was most gratifying as 64 men and women turned out to get an insight into the project. Many accepted the invitation to become chairmen in their own localities. They quickly absorbed the enthusiasm shown by the leader, who methodically set the stage for one of the country's most successful musical events. A temporary organization was formed with Miss Robinson Smith at its head; an executive committee, composed of the temporary officers and sub-chairmen, was elected to spearhead a drive for other supporters of the plan.

MISS ROBINSON SMITH
THE RESIDENCE
STOCKBRIDGE, MASSACHUSETTS

Dear Mrs. Taylor:

I am sure you will agree with me that there are few things artistically more enchanting than listening to a beautiful symphony orchestra on a summer evening outdoors under the stars.

Such an opportunity is being offered the Berkshires by Mr. Henry Hadley, our own American composer and conductor, provided we can interest the necessary audience. The plan is to have the concerts at the Hanna Farm on Route 41 between Stockbridge and Lenox on August 23, 25 and 26. The subscription prices covering the entire Festival of three concerts would be $5 and $3 depending on location. Mr. Hadley will bring an orchestra of 64 men from the New York Philharmonic Symphony Orchestra and hopes at two of the concerts to be able to have well known soloists.

As the concerts seem to be of great interest to our community, I am asking a representative woman from each locality to come to my house on Tuesday, June 26 at 4 o'clock to hear Mr. Hadley outline the plan. There will be no guarantee funds asked from anyone. If, after careful discussion we all agree that we want the concerts, then we will organize to dispose of the moderately priced subscriptions to insure success.

It is my privilege to have been asked by Mr. Hadley to present the idea to our community. I am more than happy to do so and I hope that you will be interested and able to come to the meeting on the 26th.

Very cordially yours,

Gertrude Robinson Smith

June 18, 1934

Weekly report meetings were held. Men and women from all area towns traveled up and down the county, meeting the challenge to interest enough people to assure in advance the success of the concert series, tentatively planned for August 23, 25 and 26 at the Hanna Farm in Interlaken, between Stockbridge and Lenox.

The Berkshire Evening Eagle published in Pittsfield, Massachusetts, the county seat, opened its columns from the start to the concert idea. Through some well-planned publicity, engineered by the newspaper's county editor, George W. Edman, now serving with the information service of the State Department, the Festival story began to reach home. His newspaper articles and press releases found their way into the pages of the metropolitan press and a few trickled into some magazines.

The Eagle, in particular, stressed the importance of the plan to the Berkshires; the outside newspapers looked for another angle and got it. They slowly warmed up to the idea that "here could be another Salzburg."

On the home front, *The Eagle* directed its editorials to the resort towns of Lenox and Stockbridge, the two communities that needed a new industry after the great depression in 1929 had left its mark on the area.

Encouraging letters began arriving and other cultural enterprises in the Berkshires began to lend their support. F. Cowles Strickland, then director of the Berkshire Playhouse at Stockbridge, and Ted Shawn, director of the Jacob's Pillow Dance Festival in Becket, offered their services.

Subscription teams were given until July 30, 1934 to show whether the Berkshire people would accept this project—symphony concerts out-of-doors.

"Every effort is being made to keep the concerts within the reach of everyone," echoed the workers in their jaunts through the villages, towns and cities of the Berkshire area. They addressed civic organizations, Garden Clubs, Granges, service groups like Rotary, Kiwanis and the Lions, Chambers of Commerce, fraternal groups and anyone who would listen to them. As an added inducement, they assured everyone that if the drive failed, the subscribers would be refunded their money.

An account was opened in the Housatonic National Bank at Stockbridge. Funds were received from neighboring communities, but the goal was a long way off. Estimated expenses for the first Festival concerts amounted to $11,420. Subscription prices, covering the series of three concerts, ran from $2.75 to $5.50; a limited number of tickets were offered for reserved seats at $7.50 for the three performances.

The million dollar Hotel Aspinwall fire in Lenox in April, 1931, had resulted in a heavy financial loss to the town and county. The owners of palatial estates in Stockbridge and Lenox had been economizing since the 1929 crash.

Some put their Rolls Royce, Pierce Arrow and other luxurious limousines in dry storage. A few discharged their faithful and long-time chauffeurs and footmen, some of whom had been with them since the days before the horseless carriage. These were not the only employees on the great estates who began to feel the pinch. Skilled workmen, gardeners, laborers and other employees in the area soon joined the army of the unemployed.

The biggest industries in Berkshire County like the General Electric Company in Pittsfield, the paper mills in Lee, the textile plants in Housatonic, Adams, North Adams and Pittsfield, and a number of smaller manufacturers felt the pressure of the times. Relief rolls continued to mount in every section. There were no bread lines, but it was a gloomy picture.

The Berkshire Symphonic Festival idea was accepted in some sectors as a miracle. It gave new hope, new faith for the small businessmen and homeowners who were facing disaster.

Outdoor concerts by a huge symphony orchestra? That was something new for the Berkshires. Mrs. Elizabeth Sprague Coolidge, the fairy-godmother of chamber music, had put Pittsfield on the musical map of the country with her chamber concerts at the South Mountain Music Temple, but an outdoor concert by a great symphony orchestra seemed to offer so much more to the cultural life of the Berkshires.

Knowing the Berkshire residents had to be sold to the Festival idea by giving them the opportunity to enjoy fine music out of doors, *The Berkshire Evening Eagle* on June 28, 1934 commented editorially on the plan.

Under the heading, "Music Under the Moon," *The Eagle* editorial said:

> Anyone who was fortunate enough this spring to hear, either at Carnegie Hall or over the radio, the music of Richard Wagner—the love music from "Tristan" or the breath-taking conclusion of "Gotterdammerung"—as interpreted by the New York Philharmonic, under Maestro Arturo Toscanini, knows to what incomparable heights that great orchestra is capable of rising. And it seems almost too good to be true that 65 members of the Philharmonic, conducted by Henry Hadley, frequent guest conductor of the Philharmonic Society in New York, will give concerts for three days beginning August 23 in Stockbridge.

Wagner, Beethoven, Liszt and the more modern European and American composers will be offered, so the taste of the oldsters, who are convinced that no music worth listening to has been written since Wagner laid down his pen in 1883, and the taste of the youngsters, who look with easy tolerance on the nineteenth century, but who, of course, cannot enthuse over anyone more antiquated than Richard Strauss, will both be satisfied.

In recommending the summer concert season at the Lewisohn Stadium in New York, Lawrence Gilman, erudite critic of the *Herald Tribune* says it should be relished especially by "those who enjoy listening to music in what Beethoven so delectably called an 'unbuttoned humor.' What marvelous advantages will be given this 'unbuttoned humor' at Stockbridge! Not only will the concerts take place in an open-air amphitheatre on the Dan R. Hanna estate, but all the lights will be turned off, allowing the listener unlimited opportunities for the flight of his imagination and the comfort of his body. The moon, by way of reassurance, will be full during the concerts.

The enthusiasm which greeted the similar open-air series of the New York Symphony under Nicholaid Sokoloff at Weston, Connecticut, last season and promised to be duplicated this year, should certainly be expected for the Stockbridge concerts in such a reputedly intellectual mecca as Berkshire County. The series is being sponsored by a large group of Berkshire women, under the general chairmanship of Miss Gertrude Robinson Smith of Stockbridge. The county is indebted to them for their musical enthusiasm and appreciation which, we hope, will prove spontaneously contagious far and wide.

A Day of Decision

JULY 30, 1934 was the day of decision for the future of music under the moon in the Berkshires.

When the chairman called for reports of the subscription sale, despair fell over the faces of the workers who attended this all-important meeting. The drive was $4,400 short of its goal!

Disheartened, but not discouraged, the group decided to extend the campaign an extra week, hoping against hope for success. Seven days later, following an intensive tour of the area, the workers met again but only $500 more had been reported.

Faced with the possibility of abandoning the whole idea, the sponsors explored every conceivable avenue to find an answer to their problem when suddenly, eight generous members of the executive committee volunteered to underwrite the budget to the extent of $500 each to guarantee its success.

The guarantors were Mrs. C. C. Griswold, Clarke W. Tobin and John R. Hopkins of Stockbridge; Mrs. John Bross Lloyd (nee Caroline Davie) and Norville H. Busey, Jr., of Lee; Mrs. Halstead Lindsley and Mrs. Arthur F. Schermerhorn of Lenox, and Mrs. Bruce Crane of Dalton.

Their generosity opened the door for great symphony concerts out-of-doors in the Berkshires.

Renewed and increased efforts were made during the next few days "to assure the guarantors that the entire expense of the Festival would be met through the sale of tickets." As they continued their work, committee members still found many who considered the project ultra-ambitious and doomed to financial, if not artistic failure. But the workers persisted.

Owen Johnson, who was close to the Roosevelt Administration, had succeeded in getting Federal aid. The Civil Works Emergency Relief Administration agreed to provide labor to build the stage and shell for the orchestra and benches for the audience in a horse show ring on the Hanna Farm in Interlaken. (Once the home of Dan R. Hanna, son of U.S. Senator Mark Hanna, the property is now the Stockbridge School, a private institution.)

Unemployed electricians, carpenters, plumbers and laborers from Stockbridge, Lee and Lenox were assembled into an efficient organization and started getting the property ready for the symphony concerts. Assist-

ing Mr. Johnson with the work were two Stockbridge residents, Frank Reusch, who was named foreman and Richard K. Thorsell, the ERA representative.

The Berkshire Symphonic Festival's budget was greatly reduced, thanks to the efforts of these men working under the ERA. Cost to the three towns for carpenters and laborers amounted to $570.55 for Stockbridge, $360 for Lee and $278.50 for Lenox. The only expense to the Festival was for the lumber used in constructing 500 benches, the shell, stage and box office. This amounted to $1,295.50.

Now that the first concert series had been assured, the executive committee took steps to incorporate. The late Attorney Milton B. Warner of Pittsfield, United States Commissioner in the Berkshire district, offered his legal services as his contribution in incorporating the Festival as a non-profit corporation.

On August 6, 1934, seventeen days before the first scheduled concert, the incorporators were named. They were: Owen Johnson, Miss Gertrude Robinson Smith, John C. Lynch, Mrs. Carlos M. deHeredia, George W. Edman, Edward S. Rogers and Robert K. Wheeler.

By-laws were drafted and a board of trustees was elected. Meetings of the incorporators and trustees followed later that day. The by-laws were adopted, officers elected and the papers of incorporation were formally filed with an application for tax exemption on Festival tickets.

As set forth in the by-laws, the purpose of the organization was:

> To organize, conduct and support an annual music festival; to provide opportunities for developing musical and artistic talents; to engage in any other activities that will legitimately aid and foster art.

The first officers of the Berkshire Symphonic Festival Inc., elected after the incorporation papers were filed with the Secretary of the Commonwealth at the State House in Boston, were:

Honorary Chairman
Mrs. Elizabeth Sprague Coolidge

President
Miss Gertrude Robinson Smith

Vice Presidents
Mrs. Carlos M. DeHeredia
Mr. Norville H. Busey, Jr.

Clerk
Mr. George W. Edman

Treasurer
Mr. Walter L. Clark

Board of Trustees

The Officers and

Mr. William L. Bull, Lenox
Mr. Halstead Lindsley, Lenox
Mrs. Arthur F. Schermerhorn, Lenox
Mrs. Bruce Crane, Dalton
Mrs. W. M. Crane, Dalton
Mr. Laurence R. Connor, Pittsfield
Mrs. Henry Francis, Pittsfield
Mr. Clarke W. Tobin, Stockbridge
Mrs. Charles C. Griswold, Stockbridge
Mr. Owen Johnson, Stockbridge
Mr. John C. Lynch, Stockbridge
Mrs. John Bross Lloyd, nee Caroline Davie, Lee
Mr. Edward S. Rogers, Lee
Mr. Albert Spalding, Great Barrington
Mr. Robert K. Wheeler, Great Barrington

Among the trustees added later were Mrs. Myron Taylor, Miss Mary Parsons, Joseph Franz, John F. Noxon, Mr. and Mrs. William Felton Barrett, James Phinney Baxter, 3d and Professor Phillip Marshall Brown.

With the formalities of organizing over, the officers found themselves faced with a number of other problems. Concert days were upon them but the workers never let up in the ticket campaign.

Twelve days later—only five days before the opening performance—approval was given to exempt taxes on tickets. The following post card was mailed to subscribers:

> As the Berkshire Symphonic Festival has been incorporated for the purpose of education in the arts, and especially music, the tax exemption has been granted on tickets.
>
> If you wish us to return the 10 per cent tax you paid on your tickets, kindly write us immediately. If we do not hear from you by August 23, we will assume you wish to contribute this amount as a guaranty for the financial success of the concerts.

Dr. Hadley, encouraged with reports from the Berkshires, scheduled rehearsals for his 65 hand-picked musicians at Carnegie Hall, New York.

The First Steps

These carpenters, painters, electricians, plumbers and laborers, under the direction of Owen Johnson (in white knickers and blue jacket) built the first stage and shell as well as benches for the first Festival concert held at the Hanna Farm in 1934. The shell is still in use at the Tanglewood Music Shed.

The Trustees of the Berkshire Symphonic Festival Inc., who successfully directed the concert idea in the early years met frequently at The Residence in Stockbridge, the home of Miss Gertrude Robinson Smith, Festival president from the time it was organized in 1934. Shown outside of her home are left to right, the late U.S. Commissioner Milton B. Warner, the late Mrs. Carlos M. deHeredia, Mrs. Owen Johnson, Miss Robinson Smith, the late Mrs. Henry Francis, the late John C. Lynch, the late Owen Johnson, Mrs. Charles C. Griswold, the late William L. Bull and George W. Edman.

More than passing interest is being displayed by these three men in the foreground, who are thinking of last minute details before the first concert in 1934. At left is John C. Lynch of Stockbridge, the Festival treasurer for many years and at right, Henry W. Dwight of Stockbridge and George W. Edman of Pittsfield, board members.

These members of the Junior League of Pittsfield ran the first concession at the Festival. Left to right, Miss Virginia Rhodes, Miss Elizabeth Gamwell (now Mrs. Theodore W. Jones), Mrs. Ethel Eaton Colt, Miss Jean Whittlesey (now Mrs. William A. H. Birnie), Mrs. H. Severance Sawyer, Miss Elizabeth Bliss and seated at the cash register, Mrs. Fred T. Francis, Sr.

A near crisis developed at the Festival in its first season when paint on the benches in the horse show ring at the Hanna Farm failed to dry by concert time. The day was saved when the seats were covered with heavy duty paper to protect the clothing of the music lovers. In the background is the former Dan Hanna barn which was destroyed by fire.

This was the setting in the horse show ring for the first afternoon concert held at the Hanna Farm by the New York Philharmonic Orchestra under the direction of Dr. Henry Hadley.

Notables in the box section at one of the first Festival concerts, included Mrs. James Roosevelt, mother of the late President Franklin D. Roosevelt, at left, talking with Ambassador-at-Large Norman Davis of Stockbridge.

In 1935, William Miles, director of the Berkshire Playhouse, arrived on the Berkshire scene and engaged Ethel Barrymore to star during Festival week in "Declassee". They are shown in a box at the 1935 Festival.

When the orchestra members arrived in the Berkshires on the day of the first concert, the social life of Lenox and Stockbridge suddenly took a new twist. The dark, dreary days of the depression seemed to slide back into the past. Hope sparkled in everyone's eyes.

"This is it," thought many with their fingers crossed. The towns looked like the Lenox and Stockbridge of old. Cocktail parties, dinner parties, garden parties, house parties and get-togethers of all descriptions seemed to erase from the minds of many of the Berkshireites that there ever had been a depression.

Fresh in their memories were the gay parties held in the mansions and "cottages" by the Alfred Gwynne Vanderbilts, the Henry Whites, the Newbold Morrises, the Winthrops, Laniers, Folsoms, Bonsals, Griswolds, Fahnestocks, Sloanes and others in the summer colony.

The economic value of the Festival already was being felt in the Berkshire communities. Hotels, inns, garages and stores were enjoying new-found prosperity. Even homeowners discovered a new source of revenue, renting rooms to visitors attracted to the area by the concerts.

Members of the orchestra were delighted with the hospitality of the Berkshire people. Heaton I. Treadway, son of the late Congressman Allen T. Treadway, and owner of the historic Red Lion Inn at Stockbridge, entertained as his guests 15 of the musicians. Robert K. Wheeler of the Festival board made it possible for others to stay gratis at the attractive Berkshire Inn in Great Barrington. The rest were guests at smaller inns and homes in Southern Berkshire and Pittsfield.

August 23, 1934, is a memorable date in the musical history of the Berkshires. The first concert was due to begin. Jittery officials kept one eye on the weather, the other on the box office as they walked nervously around the grounds of the Hanna Farm, checking every detail to make sure there would be no hitch in the plans. A crowd of 2,500 was expected.

Police, headed by Chief Walter Stannard, and firemen, under the direction of Chief Edward Pilling from Stockbridge arrived early to assist state police in handling the traffic and parking. Program girls, dressed attractively in evening dresses, took their places at strategic spots in the horse show ring, eager to exhaust their supplies of concert material. (Page 13.) Young men, wearing dark jackets and white trousers, manned their stations to usher ticket holders to their seats.

One by one the cars started to enter the make-shift parking lot, which, only a few days before had been a favorite grazing ground for cows from nearby farms.

In the distance, early arrivals could hear the screeching of sirens. State police were opening the way to the Festival grounds for the chief executive of the Commonwealth, Governor Joseph B. Ely, and Mrs. Ely. From another direction, police furnished an escort for United States Ambassador-at-Large Norman Davis and Mrs. Davis from their estate on Prospect Hill in Stockbridge, (now the Indian Hill Music Workshop.)

Soon the pattern began to take shape. The serious minded music lovers selected choice seats toward the middle of the outdoor concert hall; the more curious either sat in the front section where they could watch every movement of the conductor, or walked aimlessly about to get a glimpse of the notables. A few were intrigued with the glistening jewels and gowns of many of the wealthy with whom they were rubbing elbows.

The weatherman had been kind. Shining brightly above the amphitheater was the moon, full in all its splendor. The sponsors had made good their promise of "Music Under the Moon."

When Dr. Hadley lifted his baton to open the first performance with Berlioz' "Overture, Carnaval Romain," there were close to 3,000 persons in the audience. Many had never listened to a symphony concert, except over the radio or on recordings, but they were a serious, intent crowd. Some applauded between movements, but the more experienced concert-goers tried to ignore the outbursts of well-meaning enthusiasm. It was a new experience for the Berkshire folk, but they seemed to like it.

Festival officials were "delighted" with the result of the first concert. They gathered more strength after Governor Ely expressed his reaction to the press.

Upon leaving the grounds, the governor commented:

> "The Festival is destined to become a notable Berkshire institution of far-reaching importance in attracting people to this wonderful section of the country . . . I congratulate the committee in charge."

Tired administrative workers went home late that first night exhausted after two solid months of hard work. There were two more concerts scheduled. The pressure was still on.

What will the weather be like? Did Dr. Hadley and the New York Philharmonic come up to expectations at the first concert? What are the critics saying? Will the benches be dry? Should we have a wrecker available to haul cars out of the muddy parking lot?

These and many more bothersome questions were passing through the minds of the leaders of this green, untried organization. They appeared

to be more worried about the paint drying on the benches in the horse show ring, than they were about the reaction of the audience to the programs Dr. Hadley had selected.

Few in the audience realized the catastrophe that nearly spelled defeat for the Festival only a few hours before "the curtain went up" on this great musical venture. The benches in the horse show ring, constructed of green lumber, were covered with paint the day before the first concert but they weren't dry in time for the opening. Low hanging clouds over the mountains, and mist from nearby Stockbridge Bowl did little to help the situation.

A hurried conference was called just before concert time. As a result, a hasty trip was made to Pittsfield for a big order of heavy coated paper which was cut to size and placed over every bench in the horse show ring. The day was saved.

Fortunately the following morning the sun was strong enough to dry the benches in time for the second concert.

Attendance at the concluding concerts stayed abreast of opening night.

Weekend celebrities included Mrs. James Roosevelt, mother of the President, who was escorted to her box by Ambassador Davis and Miss Robinson Smith.

Miss Sophie Braslau, the contralto soloist, scored a tremendous hit at the second concert in De Falla's "El Amor Brujo." Her rave notices in the metropolitan dailies were a joy to the press department.

When the first series ended, the Festival seemed to be destined to become a reality. No time was lost in taking advantage of the support which came from all sections of the area. In keeping alive the enthusiasm manifested in its first attempt to bring "Music Under the Moon" to the Berkshires, the Festival had this printed in its next appeal for further support:

> "At first it was just an idea, this music festival of ours—a provocative and tantalizing idea, to be sure, but one quite unreal and apparently as impossible of fulfillment as those charming pipe dreams which afford a few hours of pleasant speculation and then are necessarily put aside, quietly, firmly, forever."

The first annual concert series ended with mixed feelings. The promoters were more than satisfied with its success, but a few local residents still needed convincing the plan would work another year. Although the financial sheet had not been prepared, the Festival leaders were determined to carry on. The next meeting would tell the story.

Time For Promotion

LESS than two weeks passed before the Board of Trustees started discussing the prospects for the second annual Berkshire Symphonic Festival.

At this meeting it was reported the 1934 Festival had ended with a deficit of only $413.30, meaning that each of the eight guarantors who made possible the 1934 event, was assessed only $51.67 each.

Satisfied that the Festival idea was accepted in most quarters of the Berkshires, the executive committee recommended to the trustees that a second Festival be held. A hurry-up meeting was called. Without a dissenting vote, the board agreed to carry on. They began mapping plans at once.

Dr. Hadley was invited to a subsequent round-up conference with the board. Armed with his report on the 1934 season, he offered several suggestions for improving the next series. He was aware of some criticism leveled at him for the selection of the first year's programs and was prepared to defend himself.

In his report to the board, Dr. Hadley said:

> "My many years of experience in preparing and building programs for audiences of all types, the selection of music suitable for the various tastes of different cities and countries all over the world, has sharpened my intuition and judgment to what will succeed in a particular place.
>
> "One of my first questions among the ladies was 'What will you play?'
>
> "My first choice was and always would be the type of the last program, the Wagner, Beethoven—a program worthy of the audience and the artists' performance. However, after much discussion it was thought best to ask the patrons for suggestions, which we did.
>
> "The programs were formed after these suggestions, and therefore were not altogether an index to my taste and to whatever skill I possess in program building, but was rather a temporary yielding to the popular suggestions. The success of the last program completely vindicated my judgment and convinced me that only the greatest works of the masters should be presented on these programs.

"I look forward to a far greater Festival from a musical standpoint next season. I earnestly desire these Festivals, which we give in the Berkshires, to be hailed as the finest symphony orchestra concerts in the world. With this great orchestra we can soon establish an enviable reputation. This reputation, I assure you, will go a long way in facilitating the sales at the box office.

"I shall always be happy for suggestions as to programs, but it is my ambition to have these concerts signify in the symphonic world, what Mrs. Coolidge's South Mountain concerts do in the realm of chamber music—the finest—in which case we need never worry about success. It will be assured. I wish to go on record as saying that next season we will include only those masterpieces which we would play on a similar program at Carnegie Hall."

After a brief discussion of Dr. Hadley's report, the trustees made known their desire to increase to 85 musicians the orchestra for the 1935 concerts. This the conductor agreed to do.

The board also wanted to advance the dates of the 1935 series when "the moon will be full and the weather a little warmer." It was not for Dr. Hadley to make this decision. Mrs. Charles Guggenheimer, the chairman of the Stadium concerts in New York, held the answer.

Miss Robinson Smith, a woman of action, immediately contacted Mrs. Guggenheimer in New York, arranged an appointment and in a matter of a few days presented the Festival plan to her. Mrs. Guggenheimer was sympathetic, but she told the Festival president it would be impossible to advance the Stadium concerts to suit the Berkshire audiences. The New York dates had been set. In another few days, the Festival dates were, too—August 8, 10 and 11, but the advanced schedule meant the Berkshire event would not have the services of the New York Philharmonic.

However, through the co-operation of Ernest Wagner, representing the New York Philharmonic, Dr. Hadley agreed to select an orchestra of 85 men for the 1935 series, drawing on the Metropolitan Opera House Orchestra and other musicians in New York. Dr. Hadley had previously indicated there were many unemployed musicians in New York. He felt confident he would experience little trouble in urging them to come to the Berkshires for three outdoor concerts. It did mean, however, an increase in the budget allowed for an orchestra of 85 men, 20 more than the first year.

Extra fees for the first instruments, the contractor, baggage man, librarian and the rental of Carnegie Hall for two rehearsals brought the

price up to $7,065, an increase of $1,255 over the estimated budget. The board had made allowances for a 10 per cent leeway of $1332 in the budget. All members felt the increase was justified—if it meant improving the concerts. The total budget for the coming season was set at $14,637.50, an increase of about $3,000. It was hoped to obtain $7,500 from patrons, $5,000 from sustaining members, $1,000 from program advertising and $500 from a food concession.

Included in the budget was a new item this year—hiring a publicity man to handle national publicity. The board engaged a New York newspaperman, Elmore Leffingwell, who came to the Festival highly recommended by promotion agencies and music critics. Mr. Leffingwell agreed—at $50 a week for five months—to write two releases a week for 250 metropolitan newspapers and contribute special articles to magazines. He went a bit beyond his contract and interested several advertising firms in New York to secure sponsors of radio broadcasts of the Festival concerts.

Mr. Leffingwell searched the files and records of the Festival for possible outlets to national publicity. One afternoon while going over the by-laws, he noted that Article 12, relating to "disposition of the property upon dissolution" offered a natural lead.

The by-law stated:

> "If the Berkshire Symphonic Festival Inc. is dissolved, all money in its treasury and all its assets, after payment of all legal obligations, upon dissolution, shall be paid over to the American Red Cross, with its headquarters in Washington, D. C., to become part of the general fund."

Jumping at this opportunity to spread the word of the Festival, Mr. Leffingwell contacted the editor of the Red Cross publications in New York. He wrote an article on the Festival for the Red Cross Courier, which then had a circulation exceeding 20,000.

While Mr. Leffingwell started digging into Berkshire history to form a background for his news releases, the Festival announced another promotion scheme—a stamp bearing a picture of a pine tree at one side, with the Berkshire Hills in the background and the moon above. Titled "Berkshire Symphonic Festival," the stamp bore the dates of the 1935 series and at the bottom "Music Under the Moon." One half million stamps were ordered at a cost of $230. Each sheet contained 48 stamps. Believing the publicity value was greater than the money at this time, the executive com-

mittee decided to sell the stamps for 10 cents a sheet. The supply was quickly distributed through the efforts of the local chairmen, some of whom interested large manufacturers in using them on all out-of-town mail.

An added feature to attract new faces to the 1935 concerts came in the form of announcements from the Festival office carrying out a Christmas and New Year's theme. The announcements, on a white background, trimmed with red and green, suggested that the public give as a Christmas present "a sustaining membership to your family and friends." In all, 1500 were mailed and the response was more than satisfactory. The trustees followed up by sending out hundreds of circulars, inviting music lovers to become patrons and sustaining members. Patrons were invited to pay $100 a year, for which they received a box for all three concerts; sustaining members $5 annually, entitling the holder to one seat in the blue section or two seats in the rear section for three concerts.

The Berkshires were soon covered with posters, drawing attention not only to the 1935 Festival but, "in a spirit of co-operation," to five other attractions: The Berkshire Playhouse, the South Mountain Quartet, the Gordon String Quartet, Ted Shawn, and The Playhouse in the Hills at Cummington.

William Miles, fresh from a successful season of summer stock at Nantucket, appeared on the Berkshire scene after the Playhouse at Stockbridge the year before had suffered one of its worst seasons. He took over the summer theater, succeeding F. Cowles Strickland as director, and moved quickly to offer assistance to the outdoor concert plan. His first act was to announce he would schedule for Festival week the top star of the 1935 season and engaged Ethel Barrymore to appear in "Declassée." Ted Shawn promised an attractive program at Jacob's Pillow Dance Festival; the South Mountain Quartet in Pittsfield and the Gordon String Quartet in Falls Village, Conn., scheduled afternoon concerts before the evening Festival programs.

The railroads began to show more than passing interest. The General Electric Company's radio station (WGY) in Schenectady, N. Y., began carrying programs relating to the Festival, as did WQXR. The Berkshire Hills Conference pushed the concerts in all of its advertising copy appearing in the metropolitan press. A Berkshire Symphonic Festival Quarterly Bulletin was prepared for distribution through the sub-chairmen and their workers.

Because of an ever increasing amount of clerical work, the Festival board established in Stockbridge an information bureau, which served as

Miss Gertrude Robinson Smith, president of the Festival, congratulates Dr. Henry Hadley after the first performance by the New York Philharmonic at the initial outdoor concert in the Berkshires.

Dr. Henry Hadley, at left, looks on as the chief executive of Massachusetts, Governor James M. Curley, center, extends the Commonwealth's welcome to the 1935 Festival to Rhode Island's Governor Theodore F. Green.

Rain insurance for the 1935 Festival concerts was taken care of by this tent which was erected on the Hanna Farm grounds for emergency use. It proved to be a good move as rain sent the audience into the shelter before the weekend ended.

This canvas-covered auditorium was not entirely satisfactory to Dr. Serge Koussevitzky when the Boston Symphony Orchestra first entered the Festival picture, but it served its purpose until a better "concert hall" could be constructed.

Dr. Koussevitzky found the Berkshire humidity was too uncomfortable during one of his early performances with the BSO in a tent at Holmwood. For the first time in his long career as conductor of the noted orchestra, he took off his coat to complete the program.

The maestro had no complaint during the evening concerts in the tent. The cool Berkshire nights were more to his liking.

Although heavy rains poured through the pole holes in the tent, many music lovers came to the concerts prepared to keep dry with umbrellas and raincoats.

After a torrential rain, thunder and lightning storm on August 12, 1937, the Festival president, Miss Robinson Smith, mounted the platform to issue an appeal to the audience to offer financial support to a drive in the Berkshires to raise $100,000 to build the great Music Shed at Tanglewood. The instantaneous response made it possible for the Festival to proceed with the building plans.

the base of operations for the committees scattered throughout the area. Miss Elizabeth Downing was named executive secretary to direct the office work.

Several new committees were set up in towns. A few extended into Connecticut as far south as Kent and Sharon, to the east as far as Springfield and Holyoke, to the north as far as Bennington and Rutland and to the west as far as Albany.

Letters went out from the headquarters to all chairmen, explaining the origin of the Festival "to provide the best of classical music for the general public in the unusual setting of a lovely meadow-like amphitheatre with imposing wooded hills for a background."

Small groups started organizing for another subscription campaign. Following a few meetings of the board in Stockbridge and New York, the trustees announced "June 15 is the deadline for enrolling 1,500 sustaining members."

When that date arrived, the committees, after working through the winter and spring, were able to enroll only 440 sustaining members and 26 patrons. The drive fell $8,000 short of its goal.

In the meantime, the Junior League of Pittsfield offered to take over the food concession, agreeing to give 50 per cent of the net proceeds to the Festival. The proposition was quickly accepted. Miss Robinson Smith returned to the Berkshires from her New York home, and ordered "full steam ahead" in her appeal to the workers to enroll the 1,500 members.

Feeling the need for arming the workers with new ammunition in their sales efforts, she sent out an announcement guaranteeing the concerts would be held on August 8, 10 and 11 "rain or shine." She followed this with another bulletin, informing the public that a huge tent had been rented for the second annual Festival to be used only in case of rain. The tent was capable of seating 3,000 people. These two announcements seemed to stimulate the subscription drive.

To keep within the requirements of the Federal Government to obtain relief funds to build equipment for the Festival at the Hanna Farm, the Berkshire group worked hand in hand with the Selectmen of the town of Stockbridge.

The Hanna Farm's superintendent, Henry W. Dunne, leased to the town (and not the Festival) the huge estate "for the purpose of promoting and holding a musical Festival upon the premises on August 8, 10 and 11,

1935, and for such other public activities as the Selectmen may determine for the benefit of the community and the county." In consideration of this agreement, the Festival paid the town $1 for the lease.

Leaving nothing untried, the promoters obtained lists of golfers who had been invited to participate during the concert days in Berkshire County tournaments, and sent them form letters enclosing Festival leaflets and other literature of Berkshire activities.

Realizing the summer camps brought into the Berkshires some 4,500 boys and girls, the Festival sent literature to the children's parents, most of whom lived in New York City, New Jersey and Pennsylvania. They offered the camps and schools in the Berkshires single tickets to the concerts, in groups of 10 or more at $1 each.

Plans were progressing smoothly until mid-July when the Festival suffered its first serious blow. Miss Robinson Smith was called suddenly to Europe to be with her mother because of the sudden death of her uncle.

Torn between two loves—her family and the Festival—Miss Robinson Smith had no choice but to be with her mother in this hour of sadness. Before leaving Stockbridge, however, she methodically put her house in order for the period covering her absence from the Berkshires. She appointed the vice-president, Mrs. Carlos M. de Heredia of Lenox, to assume the duties of acting president, and named George W. Edman chairman of a co-ordinating committee to continue the concert plans. Before sailing from New York, Miss Robinson Smith left detailed instructions for the officers and committees.

The show went on. The trustees invited the governors of the six New England states and the governor of New York to be their guests at the opening concert on August 8. Only two accepted, Governor James Michael Curley of Massachusetts and Governor Theodore F. Green of Rhode Island.

Added to the weekend plans were two special attractions—a recital on the off-day, Friday, by Marjorie Edwards, 12-year-old violin pupil of Kathleen Parlow, famed woman violinist at South Mountain; and a dance recital on the morning of August 10 by Ted Shawn and his men dancers from Jacob's Pillow. ("Artistically, the two performances were successful," the Festival records reveal, but "financially they were not so good.")

Acceptances of invitations to become honored guests by two of the New England governors helped the press department in promoting the approaching concerts.

The main house on the Tanglewood estate, built by the Tappan family in 1849, looked like this in 1937 when the historic 200-acre property was given to Dr. Koussevitzky and the Boston Symphony Orchestra by Mrs. Gorham Brooks and her aunt, Miss Mary Aspinwall Tappan of Brookline.

The Finnish architect, Eliel Saarinen of Bloomfield, Mich., presented this model of buildings for Tanglewood. The estimated cost of the layout was $232,000.

No time was wasted in breaking ground for the Music Shed after the 1937 season ended. With snow covering the ground these workmen set up headquarters for the construction project at Tanglewood in late December.

In order to have the Music Shed built in time for the 1938 concert series, it was necessary for workmen to start digging holes through the frost during the winter for the 78 steel piers in the huge building.

For weeks during the spring of 1938, the Bethlehem Steel Corporation, shipped tons of steel over the rails to the Lenox railroad station where it was loaded on trucks and transported to Tanglewood.

↑ *Steel workers in warm clothing toiled through the wintry Berkshire months in 1937-38 to start setting up the framework for the Shed.*

Trusses measuring 90 feet in length and weighing 16 tons were hauled to Tanglewood over a muddy lawn in the early spring to enable workmen to keep on schedule. ↓

↑ *Huge cranes were pressed into operation to handle the steel piers which were dropped into 78 holes.*

The interior of the Shed looked like this in the spring of 1938 when Festival benches used at earlier concerts were taken to Tanglewood for the first concert series in the permanent auditorium. ↓

Meanwhile, the Hanna Farm was being put in readiness for the concerts. Owen Johnson, who the year before supervised the work on the grounds, was unable to continue a second year. He was succeeded by Joseph Franz, a Stockbridge engineer, who was added to the board of trustees.

Ticket booths were set up in Stockbridge, Great Barrington, Lenox and Pittsfield. The Greenock Inn at Lee was reopened to accommodate the musicians. Banners bearing the dates of the Festival were strung across the main streets of Lenox and Stockbridge.

A month before the first scheduled concert the Festival's bank account still lacked funds necessary to meet the 1935 budget. The eight guarantors who put up $500 each were joined by three others, Mrs. Elisabeth C. T. Miller, C. S. Comstock and Miss Robinson Smith.

Two days before the first concert, workmen erected the huge "circus tent," with a 3,000 seating capacity, on a strip of land near the horse show arena. It was not to be used unless rain forced the audience from the open air theater to the rented shelter which Festival authorities described as "rain insurance."

On the afternoon of the first concert, threatening weather kept officials wondering what conditions would be like at night.

By 7.30, an hour before the performance was scheduled to start, the clouds parted. The moon shone down on the grounds. The unreserved seats began to fill early. As the starting hour neared, a mile-long line of automobiles was being shunted into the parking spaces.

For the first time in its short history, the Festival sold standing room only for 50 cents. The plan was popular among scores of men and women.

The late arrival of the evening's two distinguished guests—Governor Curley and Governor Green caused more than a ripple of displeasure among the trustees. They weren't alone. The conductor, musicians and members of the chorus who were compelled to stand around off-stage until the notables found their seats, also displayed their annoyance at the delay.

Finally at 9, a half hour after the concert was slated to begin, the orchestra and chorus filed into their seats on the stage, followed by Dr. Hadley. Before them was an audience of 3,500, the largest to date in the short history of the Berkshire Symphonic Festival.

As the conductor tapped on his rack to call his men to attention to play the Bach organ fugue in G, stillness settled over the grounds.

Afterward Dr. Hadley relinquished his baton to Mr. Horace Hunt of Dalton, whose beautifully trained chorus of 200 voices from the Berkshire Musical Association, responded admirably to his direction.

The appearance of the Berkshire chorus proved to be a good move. Besides offering an innovation to the Festival, it attracted hundreds of newcomers, many of whom were either relatives or friends of the chorus members.

Richard Hale, a versatile actor, had become the "matinee idol" at the Berkshire Playhouse. Few, however, realized he had any musical talents until the Festival announced he would be the soloist on the program at the opening performance of the 1935 concerts.

Mr. Hale's performance, eagerly awaited by the audience, was nearly cancelled because of the late arrival of the dignitaries. As things turned out, Dr. Hadley was compelled to shift his program slightly, so Mr. Hale could sing the baritone solo in the coronation scene from "Boris Goudonoff," and return to the Playhouse in Stockbridge in time for his entrance in Ethel Barrymore's starring vehicle, "Declassee." At the conclusion of his solo, Mr. Hale was rushed to a waiting car, and with the aid of a state police escort, made his entrance on the theatrical stage just in time to catch his cue.

At intermission, the two New England governors were introduced to the audience. Governor Curley was in his glory. He stole the show. In full dress, he was escorted to the platform by his military aides, shook hands with Dr. Hadley, waved to the audience and bowed to the musicians.

Governor Curley, the silver-tongued orator of Massachusetts, quickly sized up his audience. He knew they would welcome support from anyone, particularly the chief executive of the Commonwealth.

As he stepped before the microphone, Governor Curley, as only Governor Curley could do, congratulated the "local committee" on its achievements. At the same time he expressed his own appreciation for the arts.

He entered into the spirit of the occasion, informing the startled, but appreciative audience, that upon his return to the State House, he would "direct the proper authorities to allocate $5,000 to aid the Berkshire Symphonic Festival." From this remark, he drew thunderous applause. Then using every page in his book of dramatics, Governor Curley read, with appropriate feeling, greetings from "Salzburg in the Old World," to "Salzburg in the New," sent by Max Reinhardt in Austria. (To this day, the Festival has never heard a word about the $5,000, but it was worth almost that much in the publicity it brought.)

The Berkshire Symphonic Festival spent $77,768 to get the Shed looking like this in 1938.

After the first season, because of the lack of funds, the Shed was left exposed to the weather.

However, the next year, sufficient money had been raised by the Berkshire organization to enclose the structure.

This hitherto unpublished aerial view of the Festival grounds, with Stockbridge Bowl in the background, emphasizes the beauty of the Tanglewood property.

Dr. Koussevitzky made popular the Saturday morning rehearsals of the BSO which are now held for the benefit of the orchestra's pension fund. Here he is at a typical rehearsal.

On a sunny afternoon at Tanglewood, it is not unusual to see crowds of 12,000 to 15,000 listening to a performance of the Boston Symphony Orchestra. The overflow crowd from the Shed, finds the spacious lawns ideal for listening, while the more fortunate music lovers in the Shed get a better view of the conductor and the orchestra.

These interior views of the Music Shed and Colonnade show that all the seats in the enclosure are occupied long before concert time.

Rhode Island's Governor Green, a more modest public official, spoke briefly, pointing to his own presence as evidence that the importance of the Berkshire Symphonic Festival "has already spread beyond the boundaries of the county and state."

The Rhode Island governor had arrived early in the Berkshires for his visit. In the afternoon he visited the Berkshire Musem at Pittsfield, where a number of paintings from his own collection of Chinese art were included in an earlier exhibition.

The first night of the second series was a marked success—artistically, socially and to those who took Governor Curley seriously—financially.

The weatherman continued to co-operate for the second concert, Saturday afternoon, when Dr. Hadley and the orchestra presented before another record-breaking audience, the works of Dvorak, Tuthill, Rimsky-Korsakoff and Caeser Franck.

Their luck didn't hold out, though. On the day of the final performance, Sunday evening, the skies all afternoon flitted uncertainly from half brightness to lugubrious sombreness. Everyone kept his eyes on the weather and the sky looking for some kind of encouragement. The orchestra rehearsed in the morning outdoors under broken clouds.

As the musicians moved off of the grounds back to Lee's Greenock Inn to rest before the evening performance, the officials remained "on guard" to watch the weather. They decided to wait until 3 o'clock before moving a bench. The huge empty tent, which had been standing idle and unused since opening night, was ready to fulfill its need. When 3 o'clock came, the Festival "jury" was still undecided about making a change. They agreed to wait until 5 before announcing a decision. When 5 o'clock came, the weather was still doubtful. Concert time was less than four hours off. Reluctantly they acquiesced to the ominous clouds and ordered benches, piano and other paraphernalia indoors under the tent for the evening concert.

The move proved to be a wise one. The tent's acoustics seemed a vast improvement over the outdoors. Those who wished to remain outside were supplied benches. Overhead, the full moon beamed its approval.

Dr. Hadley opened the Sunday evening concert with Wagner's Bacchanale from "Tannhauser," followed by Tchaikovsky's piano concerto in B flat minor, Op. 23, with Rudolph Ganz of Chicago as soloist. The soloist's exciting performance gained more publicity for the Festival than any single symphonic performance up to that time.

The final concert drew 3,000 persons, bringing the total to about 9,000 for the week-end, a big increase over the initial series. The record crowd, however, was insufficient to help the Festival break even. The budget was up $4,000.

The executive committee met after the final concert to make a hasty study of the 1935 picture. In a statement released late that night, the group gave its first indication of any dissatisfaction with Dr. Hadley and his orchestra.

The statement, in part, follows:

> "If the Festival is to continue, as we hope it will, we must strive for perfection. Perhaps another year will bring an *entire established orchestra*, the expense of which we realize is a tremendous obstacle."

Subsequently George W. Edman, clerk of the board, and chairman of the co-ordinating committee during Miss Robinson Smith's absence in Europe, made several observations in his report to the trustees.

Mr. Edman commented:

> "The opening concert was not up to Dr. Hadley's usual standard. Because of this, your committee feels the gate receipts for the two remaining concerts suffered materially."

Other members of the staff revealed other complaints—most of which had to do with the height of the grass leading to the parking area, as well as the soggy condition of the ground after cars plowed tons of mud over the property.

Dr. Hadley's Final Bow

UPON her return from Europe, Miss Robinson Smith lost little time in resuming her role as head of the Festival. She spent days reading reports of the 1935 series, looking over news clippings from the nation's press and visiting friends to get a broader picture of the second annual Festival. She was pleased that the idea was being accepted locally, and learned also the public was ready for a change. They wanted better programming and an established orchestra. This was borne out more in a summary from the Festival's press agent, Mr. Leffingwell, and a report by the chairman of the co-ordinating committee, Mr. Edman. They reported a majority of the music critics and editors agreed there was room along the eastern seaboard for a Salzburg of America, but found few that thought the Festival served the purpose in its present form.

The consensus among the music writers, it was reported, "seemed to be that the programs chosen for this year's event might have been better selected and that even the leadership could have been improved upon."

The music-loving public, Mr. Leffingwell added, "has reached a point in America where it likes leavened programs or balanced selections." He felt also "the programs should include modern American music, such as Paul Whiteman and Vincent Lopez conduct in their more inspired moments."

Supporting Mr. Leffingwell's criticism, the co-ordinating committee suggested that the trustees look about the country for a more unified orchestra, adding "we must another year, secure if possible, an outstanding orchestra unit like the Detroit, Boston or Cleveland symphony orchestra."

A few days later the trustees passed the following resolution:

> That the Board of Trustees of the Berkshire Symphonic Festival Inc., express to Dr. Henry Hadley their deepest gratitude and appreciation for initiating the idea of the Berkshire Symphonic Festival, and for his unselfish and enthusiastic support during these initial years, while likewise conveying to him its sincere regret that after two years of experimentation it seems advisable to make two decisions:
>
> 1. That any orchestra engaged in the future shall not be assembled, but either be an entity or a complete part of an established orchestra.

2. That as a matter of policy, with special regard for the publicity value of new attractions, no conductor shall serve continuously for more than two years.

Upon receipt of the resolution, Dr. Hadley bowed out with this letter of resignation which was presented at a board meeting on September 25, 1935:

> You of course know that I have been greatly gratified at the success attained by the Berkshire Festival in the last two years, and particularly appreciate the co-operation the board has given me in my part of the work.
>
> Another year is coming on and much attention must be given soon to plans for the next Festival. While nothing could please me more than to be able to look forward to acting as conductor of the orchestra in August, 1936, I have made other plans which will preclude my being with you.
>
> Please present to the board, my very best wishes and my thanks for their consideration.

After the resignation was read, the board unanimously carried the following motion:

> That the Board of Trustees recognize that it is Dr. Hadley's vision that created the Berkshire Symphonic Festival and his counsel and unselfish and enthusiastic support that have brought it to the point of being a credit to the Berkshires. His name will always be associated with it and the Board of Trustees extend to Dr. Hadley their deep gratitude and appreciation while with regret accepting his resignation.

The Berkshire board members then started considering various musical organizations throughout the country. Mrs. Elisabeth C. T. Miller, a member of the board, offered to approach the Cleveland Symphony Orchestra conducted by Arthur Rodzinski. Unfortunately she was unable to obtain any information of the orchestra's availability because the Cleveland board was not scheduled to meet for several days.

At the same time, Mr. Edman, clerk of the board, succeeded in interesting George E. Judd, manager of the Boston Symphony Orchestra and a conference was hastily arranged at the president's house at which were present Mr. Judd, Miss Robinson Smith, John C. Lynch, treasurer of the Festival, and Mr. Edman.

Fully informed of the details, Mr. Judd returned to Boston, and acquainted the Boston Symphony Orchestra trustees and the orchestra's

musical director, Dr. Serge Koussevitzky, with the proposal. He made an appointment for Miss Robinson Smith to confer with Dr. Koussevitzky to discuss the plans. Her appointment with the maestro was arranged for 15 minutes, but they talked for nearly two hours.

Returning to Stockbridge, Miss Robinson Smith, beaming with enthusiasm, called a meeting of her board. She found on her Boston trip that Dr. Koussevitzky, and the orchestra, would entertain the idea to give three concerts at the 1936 Festival, adding that the Boston Symphony Orchestra trustees were likewise enthusiastic about the plan—provided the Festival could meet certain requirements.

In order to have the right to use the name of the Boston Symphony Orchestra, the Festival had to agree to engage at least 80 men. The fee for the conductor and orchestra for three concerts covering a four-day period would be $9,000. The Festival would be obliged to stand the expense for board and lodging of the musicians, and provide transportation from their hotel to the Hanna Farm and return.

Dr. Koussevitzky had hoped the concerts would be held in an auditorium, but when a tent was suggested, he agreed to give it a try—temporarily.

The Festival faced a big task. The board had to make a decision on their conditions within a few days and present the detailed plan to the trustees of the orchestra. The Boston group wanted an answer by October 9. A tentative budget of $16,037.50 was drawn up after the trustees of the Festival agreed to the demands of the Boston Symphony Orchestra trustees.

On October 10, the Boston Symphony Orchestra's popular manager, George E. Judd informed the Berkshire organization his board had approved the proposal, but asked a short delay in making the public announcement until the Boston musicians were told of the summer plans.

With the agreement reached, the Festival authorities, committed to a secret, had to think up ways of making an announcement to their workers. They decided to have the president send a letter to the advisory board placing the members on call for a "meeting of great importance."

The letter (Page 44) gave some inkling of the nature of the meeting, and nine days later the word was sent to the advisory board to meet in Stockbridge. Simultaneous announcements were made in Boston and the Berkshires (Page 45). It didn't take long to spread the good news that the Boston Symphony Orchestra would appear at the 1936 Festival on August 13, 15 and 16.

THE BERKSHIRE SYMPHONIC FESTIVAL, INC.
STOCKBRIDGE, MASSACHUSETTS

To Members of the Advisory Board:

October 12, 1935.

Dear Mrs. Giddings:

Within a few days you will receive either a telegram or a telephone call, asking you to come to a meeting of great importance.

After the Board of Trustees had accepted Dr. Henry Hadley's resignation, they discussed in detail the Festival for 1936. Their decision was to make every effort to engage a major orchestra with its conductor.

We have, therefore, made several contacts, and expect within a few days to be able to report definite progress, but before entering into any contract for next year we want to discuss the orchestra, the conductor and detailed plans with our Advisory Board.

This letter is to prepare you for the "hurry call" you will receive, and to urge you to be present. We hope to have the meeting Thursday, the 17th, Friday, the 18th, or Monday, the 21st, depending, of course, on when we hear from the manager of the orchestra we hope to engage.

The meeting will be held here at my house, The Residence, in Stockbridge, and the hour will be three o'clock, sharp.

I know you will be thrilled over our news, and I'm counting on you to be here, even if it may be at some personal sacrifice, for after all, our decision may or may not mean pleasure for thousands of people. The minute we hear from "our orchestra" we will communicate with you.

Sincerely yours,

Gertrude Robinson Smith

President

P. S. If you cannot be present, please send someone to represent you.

October 17, 1935

Dear Subscriber:

The Board of Trustees has the great privilege of announcing that Dr. Serge Koussevitzky will conduct the Boston Symphony Orchestra at the 1936 Festival on August 13th, 15th, and 16th. You certainly must be as happy about this rare and unique opportunity as we all are. Dr. Koussevitzky is tremendously interested and sees a great future for the Festival.

The Board of Directors of the Boston Symphony Orchestra, before requiring us to sign a contract, have most kindly given us until January 15th to ascertian whether our public will support the Festival. For this reason we are asking you, as a subscriber, to become a member immediately and to enclose your 1936 dues of $5.00 or to pay them without fail before December 15th.

Your dues entitle you to one ticket in the front section or two tickets in the rear section for the three concerts.

Boxes may be bought for $75, and there will be a limited number of reserved seats sold in both sections.

All dues received will be put in a special account and returned, should the Festival be abandoned because of lack of support.

If you plan taking anyone with you, may we suggest that they also become members now. No memberships will be accepted after the contract is signed on January 15, 1936. After April 15th subscription tickets will be sold at $6 and $3, which is more expensive than membership dues.

We are enclosing several membership blanks for your convenience. Anyone who secures ten new paid-up members will be given a ticket for the three concerts in the rear section.

Sincerely yours,

Gertrude Robinson Smith

President.

A Musical Glory

BENTLEY W. WARREN, the president of the Boston Symphony Orchestra, and a summer resident of nearby Williamstown, expressed not only his personal satisfaction that the orchestra was to play in the Berkshires, but emphasized the widening influence of the orchestra, adding:

"The extent of the service which the Boston Symphony Orchestra renders each year to New England, and indeed to the whole northeastern part of the country can only be realized by examining the orchestra's itinerary. No education center is overlooked. Now the Boston Symphony Orchestra is to add to its schedule of winter symphonies, spring pops and free Esplanade concerts, a summer festival of unrivaled importance, both from a musical and from a public point of view."

Miss Robinson Smith warned, however, that the appearance of the celebrated orchestra was conditional on the immediate response of the community.

"This response," she said, "must be made soon to assure the Festival trustees that there is sufficient interest to go ahead. We want to build for the future and eventually have in the East something that no other region can offer. With the Boston Symphony Orchestra and its great conductor, we present an opportunity that exceeds our fondest hopes. If the public responds, we will go ahead.

"It requires no great stretch of the imagination to visualize what this opportunity means to the Berkshires. It means, first of all, great music in every sense of the word. Dr. Koussevitzky and the Boston Symphony are synonymous with great music. It means nation-wide attention focused on this region through the press and magazines. It means an appeal to thousands of persons who will want to attend the concerts."

If the trustees considered the response sufficiently enthusiastic by December 15, they planned to extend the time limit for becoming members to January 15 when the contract was scheduled to be signed.

Two of Berkshire County's most distinguished residents, Albert Spalding, the eminent violinist of Great Barrington, and Ambassador-at-large Norman Davis, instantly applauded the announcement.

Mr. Spalding described the Boston Symphony Orchestra and Dr. Koussevitzky as "One of the musical glories of America," predicting "this will be an event of great musical importance."

Route 183 (West Street) from the Curtis Hotel corner in Lenox to Tanglewood is the busiest road in the area during the concerts. Strangers are learning more and more about alternate routes to the Festival grounds.

Unsheltered visitors to the Festival are a hardy lot. This group refused to leave their spot on the lawn during a concert as rain poured down on Tanglewood.

Amateur photographers of all ages never leave Tanglewood without recording some unusual picture.

↑ *On hand for the formal opening of the Berkshire Music Center in 1940 were Olin Downes of The New York Times congratulating Dr. Koussevitzky, and Miss Robinson Smith, the Festival president, talking to the late Albert Spalding.*

Soon after the BSO acquired the Tanglewood estate, Dr. Koussevitzky and Henry Cabot, one of the BSO trustees, came to the Berkshires to inspect the property with officials of the Festival. At right are two Festival board members, Robert K. Wheeler of Great Barrington and Henry W. Dwight of Stockbridge. ↓

Three popular artists who helped to make the Festival a great musical center, left to right, Gregor Piatigorsky, cellist, of the Music Center faculty and frequent soloist at Tanglewood; Dorothy Maynor, whose vocal talents made Dr. Koussevitzky proclaim her as "another Flagstad"; and the late Albert Spalding, the noted concert violinist, who lived in nearby Great Barrington.

One of Dr. Koussevitzky's prize conducting pupils at Tanglewood was Eleazar de Carvalho, the youthful Brazilian musician, who has appeared frequently with the BSO at the Festival concerts.

The metropolitan press carried the news on its music pages, but the Boston Transcript used the announcement on Page 1, stating the Festival "will emerge into national prominence with the engagement of the Boston Symphony and Dr. Koussevitzky, who regularly spends his summer abroad and who will be making in this instance, his first summer concert appearance since he came to America 11 years ago."

Fund drives of one form or another were beginning to be an old story to many of the loyal, faithful Festival workers. Their belief in the concert idea from the beginning continued to serve as the backbone of the organization.

Late in October a campaign was opened for 1,500 sustaining members. On paper the "concert hall" was divided into two sections, the blue and the red.

As an incentive to bolster the drive, it was agreed to give one subscription ticket in the red section for every 10 new memberships secured by any one person.

On December 17, 1935, at a special meeting of the co-ordinating committee held at Miss Robinson Smith's New York home, the board was informed that the membership drive "to date" had resulted in 66 patrons and 740 sustaining members.

Gratified with the response to the drive, and confident the goal would be reached, the co-ordinating committee recommended that the trustees proceed with plans for the 1936 Festival. They suggested that the Festival enter into further negotiations with the Boston Symphony Orchestra preparatory to signing a contract on January 15, 1936. The papers, however, were not signed until February 13, 1936.

The Boston Symphony Orchestra agreed to provide between 80 and 90 men of the orchestra and Dr. Koussevitzky for three concerts; to furnish a reasonable supply of photographs and press material, music stands and music.

In consideration of these services, the Berkshire Symphonic Festival agreed to pay to the Boston Symphony Orchestra before the first concert, $4,750 and the balance of $4,750 at the conclusion of the three concerts. The orchestra also stipulated that within a month after the close of the 1936 season, the orchestra would receive one half of any net receipts from the Festival after it had met all obligations, including the 1935 deficit of approximately $3,500.

The Berkshire Symphonic Festival further agreed to furnish a suitable stage—a canvas-covered auditorium with proper seats— chairs and eleva-

tions for the stage, and to provide the musicians and conductor with clean dressing rooms near the stage, as well as storage space for their trunks, instruments and a watchman for their protection.

In addition, the Berkshire Symphonic Festival was called upon "to furnish from luncheon at noon on Thursday, August 13, to breakfast, Monday morning, August 17, (both inclusive) desirable hotel accommodations, including meals, for all the musicians, the librarian and two baggage men."

Up to this point, the corporation was faced with an expense—unlike any they had ever experienced. This represented only half of the gamble the Festival was compelled to assume in order to make a dream a reality.

The Berkshire Symphonic Festival organization, only two years old and running in the red, backed by a small group of determined men and women, also agreed to the following:

> To pay for the cost of railroad transportation of not more than ninety (90) persons, Boston to Pittsfield and return, also to provide sufficient buses to transport the musicians comfortably between the hotel and the auditorium at the place of the concerts, these buses to be ready for use in time to arrive at the auditorium forty-five (45) minutes before each rehearsal and concert and available for the return within twenty (20) minutes after each rehearsal and concert.
>
> To furnish, subject to consultation with the management of the orchestra, the necessary tickets, ticket-takers, and attaches for all these performances, and to make the stage and auditorium available for any rehearsals which may be required.
>
> It is mutually agreed that the arrangement of the three programmes which are to constitute the Festival shall be entirely in the hands of Serge Koussevitzky, and that these concerts shall *not* be broadcast by radio or otherwise.
>
> That the house programmes are to be provided by the said corporation, the analytical notes for which may be reprinted from the Bulletin of the orchestra.
>
> That one page of the programme is to be available without cost for an announcement by the Orchestra of its 1936-37 season. It is further understood and agreed that the Corporation will publicize this Festival extensively, advertisements if any and publicity in this connection to have the approval of the management of the Orchestra.

It is further mutually agreed that if, on account of illness, accident, or for any cause beyond the control of said orchestra, Serge Koussevitzky or any of the musicians are unable to appear, the orchestra shall not be liable for such non-appearance. If because of any of the above reasons Serge Koussevitzky is unable to conduct at any or all of the three concerts, then the approval and consent of the corporation must be secured before a guest conductor can be engaged.

Now that the Festival and Boston Symphony Orchestra had ironed out the initial problems, the Berkshire organization had to tighten its belt and move ahead. The success of the new venture was far from a certainty. More money was needed to meet the budget. Added to this problem was a rumor that the Hanna Farm—site of the Berkshire Symphonic Festival had been sold!

At a board meeting on April 26, 1936, Mrs. Bruce Crane of Dalton, one of the trustees, was asked to take steps to confirm or spike the report. A committee of three, George W. Edman, Laurence R. Connor and Attorney Milton B. Warner, was appointed to make an immediate investigation. A transfer of ownership of the Hanna estate was confirmed. The new owners demanded a rent of $700 for the use of the property, prohibited parking in the field and insisted that the food concession be abandoned. This, of course, meant an end to the Festival—at the Hanna Farm at least.

The board was compelled to remove from the farm all of the benches and other equipment used for the concerts. Where to store them was a problem.

Just at that time, the Oxford Group moved into the Berkshires to awaken the world to "moral rearmament," under the leadership of its founder, Dr. Frank Buchman. The advance team promised an attendance of more than 10,000 persons from all parts of the globe. The Berkshires knew little about this religious group when they descended on the countryside, but they knew a lot more before they left. It didn't take long to realize the Oxford Group had a tremendous following. Hotels, inns and homes began to fill. Small tent communities sprang up in available meadows surrounding Stockbridge—the headquarters for this international assembly.

There were no auditoriums in the Berkshires large enough to accommodate the Oxford Group, but the weather was ideal for outdoor meetings. When planning the assembly in the Stockbridge area, the Oxford Group had hoped to use the Festival site at the Hanna Farm. They were disappointed, however, upon arriving to find the property had been sold.

Consequently, sectional meetings were arranged in Lenox, Stockbridge, Lee, Great Barrington and Pittsfield. Unfortunately in each place, because of the influx of visitors, there were insufficient seats to accommodate the thousands who showed up for the meetings.

This proved to be a perfect out for the Festival officials, who had benches on their hands and no place to store them. The Oxford Group volunteered to transfer the benches from the Hanna Farm to their public meeting places, with the understanding the Festival would collect them when they left. This gave the Festival a breathing spell for a few days. At least, it gave them time to look around for another site for the 1936 concerts. After all, the Berkshire organization *had* entered into an agreement with a renowned orchestra and was under obligation to carry out its part of the contract.

While the Oxford Groupers were busy hauling benches from the Hanna Farm to focal points for their religious meetings, efforts were made to find a suitable site. Finally, Mrs. Margaret Emerson, the former Mrs. Alfred Gwynne Vanderbilt, who owned Holmwood, was contacted. Mrs. Emerson, who had not occupied the estate overlooking Laurel Lake for some time, consented to allow the Festival the use of her property.

Holmwood (now the site of the Foxhollow School for Girls), was ideally situated. It was close to U. S. Routes 7 and 20 and was easily accessible for music lovers. (Geographically, the mansion itself is located in the township of Lenox, but the rest of the estate lies in Stockbridge and Lee.) A good-natured break developed over the change of location between the towns of Lenox and Stockbridge. The latter claimed the Festival as its own; Lenox was quick to grasp an opportunity to get its name back on the map because of the new location. Both towns strung banners across their main streets, calling attention to the Festival in both communities.

Meanwhile, Joseph Franz, who succeeded Owen Johnson as "grounds superintendent" engaged a few workmen to take down the stage and shell at the Hanna Farm and erect them at Holmwood. When the Oxford Group assembly ended, the benches were transported to Holmwood. A few days later the huge tent was erected on the terrace in front of a beautiful grove of pines. The Chamber of Commerce of Pittsfield, one of the many organizations offering help, supplied strings of lights which were installed on the grounds near the tent. It was too expensive to extend the lights to the parking area, but acetylene torches were placed around the grounds. The Massachusetts Department of Public Works supplied red flares to mark the

approaches to Holmwood. A high fence surrounded the property to keep non-paying guests away from the concerts.

The coach house, at the rear of the mansion, was put in readiness for the musicians to store their instruments and trunks. A large dressing room was constructed behind the shell and at one end a private dressing room was built for Dr. Koussevitzky.

Everything seemed to be in order except one important item—a box office. After hearing of the Festival's plight, a Lee insurance man, Clarence N. Durant, donated a small portable building large enough to serve as a ticket booth and headquarters on the grounds for the staff.

A Cricket Greets The BSO

WITH the physical plant for the 1936 Berkshire Symphonic Festival assured, Dr. Koussevitzky offered many suggestions to help the public get acquainted with the programs he had selected for his debut in the Berkshires.

He recommended that Olin Downes, of the *New York Times*, considered the nation's top music critic, be invited to give a series of lectures on the works to be performed. As a result, the Festival contracted with Mr. Downes for three lectures at the Berkshire Playhouse in Stockbridge.

Excitement was running high "between Lenox and Stockbridge" as the time arrived to raise the curtain on the 1936 Festival. On the night of the opening, August 13, state police reported early to their posts on the main highway. J. Bruce McIntyre, High Sheriff of Berkshire County, assembled his volunteer American Legion men in the parking lots to handle the hundreds of vehicles pouring on to the grounds. Willard M. Sistare of Pittsfield was kept busy giving last minute instructions to his volunteer corps of ushers, program girls and ticket takers, who came from the neighboring towns. Even the Boy Scouts were called in to serve as messengers and guides.

Crowds started pouring into Holmwood from all directions. Soon, they overflowed the huge tent to the outside benches and the close-cropped lawn of the beautiful estate.

The brilliantly lighted tent, the busy box-office, the Thursday Mornings Club's refreshment tent and the candy wagons gave a carnival atmosphere to the pine-surrounded grove before the concert started. There was a low buzz of conversation among the 5,000 people under and around the tent until Dr. Koussevitzky strode across the front of the shell and rapped his baton on the podium.

The applause which greeted the conductor grew in volume as the concert progressed, until at the end, the great tent billowed with the roar of the crowd, who wanted more.

During the first performance of the Boston Symphony Orchestra in the Berkshires, a cricket in the tent, unannounced and invisible, played an obbligato and nearly stole the show as Dr. Koussevitzky was leading the orchestra in the Second Symphony of Sibelius.

While the rest of the orchestra was giving the right of way to the woodwinds, the stray cricket apparently thought that high frequency tones, emanating from oboes, flutes, clarinets and bassoons, were the voices of friends of his. He shrilled a loud, long greeting. The instruments, to his way of thinking, cheered him on, and he repeated. The audience whispered divided opinions as to whether the cricket obbligato was orchestral or accidental.

Suddenly Dr. Koussevitzky brought a thundering series of chords from the entire orchestra. Nothing further was heard from the cricket. It must have shattered his eardrums and left him dumb, for he was never heard from again.

Dr. Koussevitzky was pleased with the reception he and the Boston Symphony Orchestra received on the first night. He wasn't too happy, however, about the hard and brittle tone which the thin shell in the tent gave to the instruments. Nature took care of that. The following day—the offday of the weekend—rain pelted the tent for hours. Water leaked through the openings near the poles, giving the shell a thorough soaking which mellowed the tones of the brass instruments in the concluding two concerts.

Musical history was made when the curtain was drawn on the Boston Symphony Orchestra's first Berkshire Symphonic Festival appearance. The total attendance for the three performances reached about 15,000, an average of 5,000 per concert. The receipts appeared to be sufficient to meet the budget. It began to look as though the Berkshire Symphonic Festival would soon go into the black.

The struggle was over. At the next meeting of the Festival's Board of Trustees a profit—the organization's first—was reported. With its colorful musical director, the Boston Symphony Orchestra's entrance into the picture had turned the trick. Receipts totaled $21,194.42 and expenses, $18,259.

Encouraged with the financial success of the 1936 event, the board realized the out of door concerts were more than a local event. The Berkshire Symphonic Festival had propelled itself into an artistic affair of national importance.

From this point on, the two organizations—the Berkshire Symphonic Festival and Boston Symphony Orchestra—became partners in a sense, with the usual differences of opinions and problems. The Boston Symphony and Dr. Koussevitzky were invited to return for another season, perhaps for two weekend series of concerts, rather than one.

Negotiations were started. The estimated cost for six or seven concerts would be $26,000, the manager of the Symphony, Mr. Judd, reported. Included in the proposal was the same sharing clause if the concerts showed a profit.

Dr. Koussevitzky was excited about the plans to extend the season another year, but he renewed his wish to have the concerts in an auditorium. To meet this demand, the Berkshire Symphonic Festival alone was faced with the task of obtaining property by long term lease or gift suitable for the construction of a shed or auditorium.

Consequently, on October 1, 1936, the board put the proposition squarely up to the businessmen of the Berkshires, pointing out that the cost of such a project would be about $100,000. At this meeting the board drew up the following resolution addressed to the business leaders of the Berkshires:

> WHEREAS The Berkshire Symphonic Festival Inc., has successfully conducted a symphonic festival in the Berkshires for the last three summers, and with marked financial success in the year 1936;
>
> WHEREAS the Board of Trustees had hoped to arrange for further concerts to be given by the Boston Symphony Orchestra under the leadership of Dr. Koussevitzky;
>
> WHEREAS a conference has been had with Dr. Koussevitzky and with the board of trustees of the Boston Symphony Orchestra at which it was decided that a contract would be entered into with the Berkshire Symphonic Festival, Inc., with the following conditions:
>
> > First: That six concerts are to be given next year and an increasing number each successive year.
> >
> > Second: That a shed or building capable of seating 5000 people for the purposes of such concerts be erected.
>
> WHEREAS to meet these conditions, it would be necessary to obtain property by purchase or long-term lease or by gift suitable for the construction of such shed or building;
>
> WHEREAS the Board of Trustees of the Berkshire Symphonic Festival, Inc., believe it has been proved that a symphonic festival such as the one given in 1936 can be successfully maintained and will be an economic value to the community; that such efforts as are being made for the benefit of Berkshire by the Berkshire Playhouse, Ted Shawn, The South Mountain Quartet, the Gordon Quartet, the Oxford Group and the Berkshire Symphonic Festival Inc., should be encouraged;

Lukas Foss, a member of the Music Center faculty, who has made many appearances with the BSO as piano soloist, bows to the Music Shed crowd after one of his performances as Richard Burgin, left, the concertmaster, and Dr. Koussevitzky display their enthusiasm.

Leonard Bernstein acknowledges an ovation from the Festival audience following one of his many conducting performances with the BSO. At left is Richard Burgin, the concertmaster and at right, Joseph de Pasquale, first viola.

As three members of the Berkshire Music Center faculty study the score for the opera, "The Tender Land," students at the Tanglewood school rest during rehearsals on the lawn outside of the Theatre Concert Hall. In the foreground are Frederic Cohen, guest composer, Aaron Copland, assistant director of the school and Frederic Waldman, guest conductor.

Pierre Monteux, former conductor of the Boston Symphony Orchestra, has been a popular guest conductor with the BSO at Tanglewood since Charles Munch took over as musical director for the Festival concerts.

Queen Juliana of the Netherlands, who spent the summer of 1942 in Lee with her mother, Queen Wilhelmina, attended one of the concerts during her Berkshire stay. Beside her is Mrs. Charles Robinson Smith and standing in back of her is Miss Robinson Smith. Back of Mrs. Robinson Smith is the queen's secretary William Von Tets.

Fritz Kreisler, the famed violinist and Mrs. Kreisler, second from left, take in many of the Festival concerts while spending their summers at Heaton Hall in Stockbridge.

Mrs. Franklin D. Roosevelt visits Dr. Koussevitzky backstage in the Music Shed following one of the Festival concerts. Looking on is Jerome Greens, BSO trustee.

← *When Artur Rodzinski was the conductor of the Cleveland Symphony Orchestra he was a summer rssident of Stockbridge and spent much of his free time at Tanglewood visiting the BSO conductor, Dr. Koussevitzky.*

Mrs. Elizabeth Sprague Coolidge, who sponsored the chamber music concerts for many years at Tanglewood, smiles as she is presented a bouquet of flowers in appreciation of her generosity. At her left are Mr. and Mrs. Louis Speyer. ↓

WHEREAS the Board of Trustees of the Berkshire Symphonic Festival, Inc., has assumed a financial budget of these concerts for the past three years and is willing to do so provided the business men of the Berkshires raise a minimum of $100,000 for the erection of said shed or building and acquiring of the necessary land to be used by the Berkshire Symphonic Festival Inc., for such musical festivals as heretofore have been had, and that such building be available for use by other groups and organizations at such time when it was not needed by the Berkshire Symphonic Festival Inc., payments of rent for such use to be made to the Berkshire Symphonic Festival Inc.;

NOW, THEREFORE, it is resolved:

First: That if land is purchased or secured and a shed such as is required be constructed and the foregoing conditions be complied with, the Berkshire Symphonic Festival, Inc., will carry on the musical festivals as herein set forth and as heretofore it has done.

Second: That if such land and shed are not provided as herein set forth, the Berkshire Symphonic Festival Inc., will discontinue its activities.

Writing in the *New York Times*, Olin Downes agreed with Dr. Koussevitzky that "an auditorium is absolutely essential for the best interests of the Festival," and in a letter to Miss Robinson Smith, he made his point more emphatic, stating:

> "In spite of the good results obtained with last summer's tent, it is essential acoustically, and seems to me to be the only practical measure which can insure the concerts being given regardless of conditions of weather. There is no question, moreover, that if the Festival is to be developed to constantly higher standards of production, as well as performance, that an enclosed auditorium is indispensable."

The Festival officials pondered the question for days. They were given until November 1, to give Dr. Koussevitzky an answer. In a public announcement Miss Robinson Smith declared:

> "If we tell him we are ready to build for the future, he will refuse some very interesting invitations, such as the coronation at London, appearances at Salzburg, as well as others abroad and in this country. He is not pretending that his idea is just for symphonic concerts. There are all kinds of things that can be done musically. Let your imagination go as far as you like and you will not go too far."

Conferences followed with leading businessmen, who saw the value of the Festival reflected in their respective businesses the summer before. They were told that unless the $100,000 was raised, the Festival would not attempt to continue the concerts in 1937, unless Dr. Koussevitzky could be prevailed upon to direct his orchestra again in a tent.

Worried Berkshire businessmen agreed to make a study of the proposal and report to the Festival before the November deadline. Sixteen men were named to a committee with instructions to explore the area and report on a fund drive.

Their findings follow:

1. A sites committee found that three desirable parcels could be secured either by gift or purchase for a reasonable amount.

2. A building committee found that estimated cost of a steel building seating 5,000 would be approximately $60,000 without grading or a floor.

3. A finance committee found in a preliminary canvass that no more than $25,000 could be raised from commercial interests alone. This committee thought that a considerable sum might be secured for the project from individuals interested in the Festival, and from foundations which fostered similar projects. But the committee made no estimate of the sum that might be raised.

The committee, headed by William A. Whittlesey of Pittsfield, congratulated the Festival authorities for making the concerts "a widely known and commercial success," and expressed the hope that the trustees "may find it possible to continue their splendid work on some other basis than that laid down in the resolutions."

Accompanying Mr. Whittlesey's letter was another from a committee of three, Laurence R. Connor, president of the Agricultural National Bank in Pittsfield, Gardner S. Morse, president of the Berkshire County Savings Bank at Pittsfield, and Donald B. Miller, publisher of *The Berkshire Evening Eagle* in Pittsfield.

Their letter follows:

> The committee that you appointed . . . to make a survey as to the possibility of raising the sum of $100,000 on or before November 1, 1936, to purchase land and construct a building to house the future activities of the Berkshire Symphonic Festival, wishes to report as follows:
>
> It was agreed by the committee that this sum of $100,000 could only be raised from three sources—

First—The residents of Berkshire County.
Second—The wealthier summer people of Berkshire County.
Third—Musical Foundations located in New York or Boston.

Your committee then came to the conclusion that the maximum amount which could be raised from the residents of Berkshire County would probably be limited to the sum of $25,000. We then decided the next step was to ascertain how much interest the summer residents had in this project, both from the viewpoint of the desirability of having an enlarged Symphonic Festival and from the viewpoint of how much they would be willing to contribute to this fund of $100,000. Consequently, a meeting was held which was attended by approximately 30 to 35 of these people and we feel that the conclusions were that these people questioned very much the desirability of having an enlarged Symphonic Festival and definitely did not feel that they would care to subscribe any money towards such a project.

We therefore feel, without going any further with the matter, that there is a grave question as to the desirability, from the viewpoint of the summer residents of Berkshire County, of having an enlarged Berkshire Symphonic Festival, and your committee also feels that they must report that, in their opinion, it will be impossible to raise this sum of $100,000 at the present time.

Two weeks later, the Festival trustees, voted this resolution:

Be It Resolved:

That the Berkshire Symphonic Festival Inc., adhere to its plan of giving concerts in August, 1937, provided the Boston Symphony Orchestra and Dr. Koussevitzky can be secured.

And be it further resolved:

That because of the magnitude of the proposal to erect a shed to cost $100,000 and because of the advance report of the Businessmen's Committee on this proposal, the executive committee of the Berkshire Symphonic Festival believes it advisable for its board to assume the tremendous responsibility of said proposal on such short notice.

But be it resolved:

That the executive committee of the Berkshire Symphonic Festival requests the Boston Symphony Orchestra to present its 1937 concerts in a tent in order to provide an opportunity for a complete and thorough study of the larger proposition.

And be it resolved:

That the executive committee of the Berkshire Symphonic Festival is of the opinion that three concerts in 1937 would be more advisable with the enlarged program held over until 1938.

And be it resolved:

That the trustees of the Berkshire Symphonic Festival on their part would provide a permanent location for the 1937 Festival; that they would make a careful study of plans for the best possible type of shed; that they would endeavor to procure a person or persons to raise the funds for the shed; that they would attempt to complete for 1937 suitable approaches to the permanent location and make necessary improvements to the shell.

Be it further resolved:

That the trustees of the Berkshire Symphonic Festival on their part negotiate with the Boston Symphony Orchestra, Inc., for a contract covering a period of five years.

Disappointed with the adverse report of the Berkshire businessmen, the Festival board nonetheless was determined to carry on and negotiations were resumed with the Boston Symphony Orchestra's trustees to reach a decision on the 1937 concert plan.

Only the top-level authorities of both organizations were "in" on the shed proposal. While these discussions were going on, scores of volunteer workers for the Festival were trying to enlist patrons and sustaining members for the fourth annual concerts.

War clouds were hanging over Europe, and conditions on the home front didn't help too much in getting the public to focus real attention on a music festival. But the Berkshire organization, which had succeeded in making people forget at times about the depression, capitalized on the European situation.

"Now is the psychological time to institute a music festival of the highest rank in America," declared Miss Robinson Smith in a pep talk to her workers.

The Berkshire organization was determined to go ahead with the endeavor, with or without the Boston Symphony Orchestra. A few Festival officials were ready to open negotiations with the Philadelphia or Cleveland Symphony Orchestra to come to the 1937 Festival.

In a few days, Dr. Koussevitzky came to the Berkshires. He hadn't given up hope for an auditorium, but neither did he comment on whether he would consent to conduct another season in a tent.

During intermission at one of the concerts, Pierre Monteux spends a few minutes with his friends, Miss Gertrude Robinson Smith, center, and Mrs. Olga Koussevitzky, widow of the BSO conductor.

The late John Shepard of Palm Beach and Lenox and Mrs. William Huntley walk toward the box section for one of the concerts in the Shed.

When he found a few minutes from his busy schedule at Tanglewood, Dr. Koussevitzky liked to return to his estate on Bald Head Mountain to relax in his study by reading and keeping up with his correspondence.

This group took part in the opening exercises of the Berkshire Music Center in 1940. Left to right, Reginald Foster, chairman of the Friends of the BSO, Olin Downes of The New York Times, Miss Robinson Smith, Dr. Koussevitzky, Ernest B. Dane, former BSO president and Albert Spalding, a trustee of the Festival.

Dr. Koussevitzky shows the strain of conducting a full concert at Tanglewood during his last season with the BSO.

Dr. Koussevitzky looks down on Tanglewood from his Seranak estate overlooking Stockbridge Bowl.

Going over final details before a concert are the BSO conductor, Dr. Koussevitzky and George E. Judd, manager of the BSO until 1955.

Dr. Koussevitzky confers with E. Power Biggs, the BSO organist, while the Music Shed organ is being installed through funds from the Rockefeller Foundation.

Miss Robinson Smith and the Boston Symphony director made a last ditch tour of the area looking for possible sites. They inspected property near Laurel Lake in Lee, the Berkshire Hunt and Country Club (now the Cranwell School), Mrs. Emerson's Holmwood estate and a parcel of land off Route 20 between Lenox and Pittsfield.

Just then, Mrs. Elisabeth C. T. Miller, owner of the Hanna Farm, offered her property to the Festival for the consideration of $1. The Boston Symphony Orchestra's manager, Mr. Judd, notified the Festival that Dr. Koussevitzky had agreed to extend the time on the shed decision. More conferences followed.

As a result of these meetings, the Festival passed a resolution on November 7 "requesting the Boston Symphony Orchestra to present its 1937 concerts in a tent in order to provide an opportunity for a complete and thorough study of the larger proposition." Added to this was another resolution that "the executive committee of the Berkshire Symphonic Festival is of the opinion that three concerts in 1937 would be more advisable with the enlarged programme held over until 1938."

The board agreed to make a complete study of the permanent site and offered the Boston Symphony Orchestra a contract covering a five-year period.

The Festival authorities succeeded in convincing the Boston Symphony trustees the shed could not be built "at this time," but both groups finally agreed there should be six concerts.

Meanwhile, Mr. Judd invited the clerk of the Festival board, Mr. Edman, to make a western trip before Christmas with the orchestra. On this tour, Dr. Koussevitzky, Mr. Judd and Mr. Edman consulted the maestro's close friend, Eliel Saarinen, noted architect of Bloomfield Hills, Mich., and head of the Cranbrook Academy of Art, about drawing plans for a great musical center in the Berkshires.

In the meantime, Miss Robinson Smith contacted John Price Jones in New York to interest him in having his fund-raising organization make a preliminary study of a drive to obtain $100,000 the following year.

The Festival had not officially accepted Mrs. Miller's offer to hold the concerts at the Hanna Farm, but it seemed to be the only available site. Posters were distributed, using the Hanna Farm as the location, and then—

The Tanglewood Gift

TANGLEWOOD was offered to Dr. Koussevitzky as a permanent home for the Berkshire Symphonic Festival as a gift from Mrs. Gorham Brooks and her aged aunt, Miss Mary Aspinwall Tappan, long-time summer residents of Lenox. They had closed their mansion the year before for the first time since it was first occupied by the Tappan family in 1849.

The offer was made known to Miss Robinson Smith one wintry afternoon in Boston when she and other Festival board members conferred with the Boston Symphony Orchestra's trustees over the 1937 plans.

The historic 200-acre estate was given to Dr. Koussevitzky by these two summer residents, because they felt it was ideal for a music center. They knew of the Festival's problems in obtaining a site, and both, in their quiet ways, had been strong supporters of Dr. Koussevitzky and the Boston Symphony Orchestra, much to the surprise of some of the Boston Symphony Orchestra trustees.

Dr. Koussevitzky's popularity as the musical director of the Boston orchestra frequently resulted in having close friends and followers making gifts directly to him in his name. In the case of Tanglewood, he turned the property over to the Boston trustees.

The attractive mansion overlooking Stockbridge Bowl, the formal gardens, long driveways lined with ancient hemlocks and tall pines made a perfect setting for a music festival.

The estate was created by Miss Tappan's father, William Aspinwall Tappan, a Boston banker and merchant. He bought several farms in 1849 and incorporated them into a gentleman's estate.

One year later, the famous novelist Nathaniel Hawthorne went to Tanglewood in Lenox, driven by politics away from Salem. With the advent of Gen. Zachary Taylor to the Presidency in 1848, Hawthorne was removed from his office in the Salem Custom House. He then started to write *The Scarlet Letter*, which appeared the following spring.

Prior to his removal from office, Hawthorne had talked of moving to the Berkshires. According to his son, Julian, it was just by chance that *The Scarlet Letter* was not written at Lenox. Hawthorne was impoverished upon arrival at Tanglewood. Recognition and remuneration from his book were slow in coming.

After the Hawthornes were in Lenox for about a year a change of fortune came to them. Checks began to overmaster bills. Longfellow, Holmes, Melville and Fanny Kemble, who lived in the area, visited Hawthorne with tokens of appreciation. Hawthorne took heart again and started while in Lenox to write *The House of Seven Gables*, and then turned to writing *The Wonder Book* which he finished in the incredibly short space of five weeks. In 1851, he also edited and wrote the preface for a third edition of his *Twice Told Tales*.

Tanglewood Tales, a supplement to *The Wonder Book*, although not published until 1853, was planned while Hawthorne was in Lenox.

Once in describing the view from Tanglewood, Hawthorne wrote:

> "There is a glen between this house and the lake through which winds a little brook with pools, and tiny waterfalls over the great roots of trees. The glen is deep and narrow and filled with trees, so that it is all a dense shadow of obscurity. Beyond the lake is Monument Mountain, looking like a headless sphinx wrapped in a Persian shawl, when clad in the rich and diversified autumnal foliage of its woods; and beyond Monument the dome of Taconic, whose round head is more distinct than ever in winter, when its snow patches are visible but which generally is a dark blue unvaried mountain top."

The scenery about his little red house so fascinated Hawthorne that he once said:

"I cannot write in the presence of that view."

From 1850 to 1851 Hawthorne's house was a hive of literary industry. He was 46 years old when he arrived in this "jungle of literary lions."

Hawthorne and his family found the winters were too severe for them, and they left Lenox in 1851. The original little red house was destroyed by fire June 22, 1890.

On one of Dr. Koussevitzky's first visits to Tanglewood to inspect the property, he visited the site of Hawthorne's house, which had been marked by a stone memorial placed near the remains of the foundation in 1929 by the late Courtlandt Field Bishop of Lenox.

As he walked back toward the mansion, Dr. Koussevitzky turned in the direction of the beautiful lake and whispered to friends:

> "This is wonderful. We make beautiful music here. Festivals of music grow up for various purposes and on a scale commensurate with their surroundings."

The gift of Tanglewood to Dr. Koussevitzky and the Boston Symphony Orchestra presented a complex problem for the Berkshire Symphonic Festival.

Miss Robinson Smith and members of the board were not too happy about the situation. In a letter to the orchestra's trustees, the Festival president sought some clarification of the Berkshire organization's part in the new set up.

Replying to her inquiry, Ernest B. Dane, one of the Symphony orchestra's trustees, wrote:

> You have asked under what conditions the trustees of the Boston Symphony Orchestra would allow you the use of the Brooks estate, Tanglewood, for a yearly Boston Symphony Orchestra festival.
>
> Tentatively, the trustees would look favorably upon allowing your association the use of the property for your Festival for a period of years, provided suitable structures are erected by you, and that you meet all the expenses of the upkeep, and such taxes as may be assessed on the property.
>
> Should the conductor's plan for a summer academy be realized later, of course there would be a joint use of the property, which would mean an adjustment of the expense of upkeep.

Mr. Dane's letter didn't set too well with the Festival board. At a subsequent meeting of the executive committee, a letter was sent to Bentley W. Warren, president of the Boston Symphony Orchestra, informing him that the committee under no circumstances could assume the conditions as set forth in Mr. Dane's letter.

The letter follows:

> Dear Mr. Warren:
>
> At a meeting of the executive committee of the Berkshire Symphonic Festival Inc., held today (January 29, 1937) in New York, Mr. Dane's letter of January 12 was considered and discussed. It was the unanimous opinion of the committee that under no circumstances can they assume the conditions as set forth in that letter, namely, that they "meet all the expenses of the upkeep and such taxes as may be assessed on the property."
>
> They feel this especially in view of the availability of other desirable properties in the neighborhood.
>
> After the successful festival of 1936, the Board of Trustees enthusiastically accepted your proposition of six concerts for 1937

Reading the inscription on a boulder marking the spot where Nathaniel Hawthorne lived on the Tanglewood estate from 1850 to 1851 are Dr. Koussevitzky and Mrs. Guy P. Gannett, president of the National Federation of Music Clubs.

Mrs. Gannett, who spearheaded a national drive to raise funds for the construction of a replica of Hawthorne's house on the original site, inspects the sign on the side of the structure before it was completed.

Hawthorne's house as it looked in 1850 when he lived in Lenox (above) and the replica as it appears today (below).

at a cost of $26,000. They were interested in your proposal to erect a permanent shed and stage and were desirous of meeting the proposal in every way possible. After a careful investigation of the situation in the Berkshires, they realized the impossibility of carrying out the project in its entirety this year. They have, however, agreed to try to raise $25,000 this year and to erect as much of the shed as this will pay for and to proceed with plans to complete the project in time for the concerts the following year. All of this is of course to be on the basis of a suitable contract with the orchestra for concerts for a reasonable number of years.

Therefore, while appreciating the complex problem facing both boards, and realizing that Mr. Saarinen's plans may not be completed, we nevertheless must ask you to give us a definite answer by Saturday, February 6, as to the acceptance of our modified proposal. If we do not receive a favorable reply by that date, we will regretfully assume that we are free to make other plans for the 1937 Festival.

(Signed) President
Miss Gertrude Robinson Smith
Clerk
George W. Edman

On February 5, the day before the deadline, Mr. Warren set forth an offer from the Boston Symphony Orchestra, proposing to acquire Tanglewood with the risk of having to carry it if the Festival failed of realization; to make the contract for six concerts in 1937, and to give six concerts a year in the following four years, if a suitable auditorium were provided.

After this proposition was offered, the Festival board called a special meeting in New York and took formal action on the 1937 plans. They sent a letter of appreciation and thanks to Miss Tappan and Mrs. Brooks for their gift of Tanglewood to the Boston Symphony Orchestra "which guarantees the permanence of the Berkshire Symphonic Festival;" elected Mrs. Brooks to the Board of Trustees; and voted Eliel Saarinen as the architect to enter into a contract for five years with the Boston trustees for the property, including the music shed and the school project.

The Berkshire board made it clear, however, that the Festival would assume only the responsibility of constructing the shed, and was in no way to be held responsible for the construction of any part of the school project or any other project. The trustees then agreed to lease from the Boston Symphony Orchestra at Tanglewood, the land lying between Hawthorne

Street and West Street, the site of the proposed shed. They further voted to enter into a contract for five years with the Boston trustees for the orchestra and its accredited leader; to construct the music shed and all roads and parking spaces in ample time for the 1938 Festival; to build an improved stage and shell and rent a tent "for the protection of the public" for the 1937 concerts. All of this resulted in the appointment of a building committee to study the architect's plans and to present their recommendations to the Board of Trustees of the Berkshire Symphonic Festival and after approval, present them to the Board of Trustees of the Boston Symphony Orchestra.

This action by the board helped to set the record straight—for a while at least—and the two organizations started concentrating on the 1937 concerts scheduled to be held the first two weekends in August.

Press releases started flowing out of the Festival headquarters in Stockbridge, calling attention to the fact that the trustees of both organizations had drafted an agreement for use of the Tanglewood property as a great Festival center.

Mrs. George W. Edman, the energetic executive vice-president of the Festival who helped mobilize supporters from far and wide, immediately started the tremendous task of enrolling new members. She kept in close contact with community chairmen throughout the area and helped to set up an efficient organization. Soon memberships began pouring into the headquarters and by mid-summer the advance sale of tickets indicated the Festival was due for a banner season.

Announcements were made that the Berkshire Symphonic Festival hoped to make a substantial start on a building for the concerts. The Festival president reported several gifts of $1,000 each for the building fund. In a statement to the press, Miss Robinson Smith said:

> "I can conceive of no place in this country where a great Festival could be more admirably located as far as tradition and background are concerned. It will be an American festival in New England with a great orchestra from New England conducted by an eminent leader, Dr. Serge Koussevitzky. We should be most happy to have anyone who is interested in our ambition for a great Festival center in America to join us in raising our building fund."

Rain fell over Tanglewood on the afternoon of the opening concert at the first series, but it stopped just before the performance started. Despite the rain, 5000 persons turned out. The musicians and audience were less fortunate at the Sunday afternoon concert. The weather was hot and

humid. Strings began to snap on the musicians' instruments and on top of this, they were most uncomfortable on the oven-like stage.

Dr. Koussevitzky, for the first time in his 12 years as musical director of the Boston Symphony Orchestra, no longer could stand the heat. He put down his baton, wiped his brow, stepped to the edge of the stage and said to his audience:

"It is awfully hot. You will excuse if we remove our coats."

With a roar of approval, the sympathetic audience settled back in their seats as the maestro, coatless, completed the concert. This performance was the crowning climax to Dr. Koussevitzky's fast-growing popularity with the Berkshire audiences. At the conclusion of the first weekend concerts, the crowd under the tent unleashed a turbulent manifestation which ended only when the conductor, near exhaustion, could no longer accept for himself and the men of his orchestra the applause the ecstatic music devotees accorded them.

The $100,000 Storm

HISTORY was made at Tanglewood on the opening night of the second series—August 12, 1937. The biggest crowd in the history of the Berkshire Symphonic Festival had been attracted to Tanglewood for an all-Wagner program.

When the orchestra started to play the "Ride of the Valkries," the heavens opened up, lightning streaked through the sky, thunder clapped overhead and heavy rains bombarded the canvas roof of the tent. The roar it created within the shelter completely drowned out the music coming from the stage.

Koussevitzky surrendered to the elements, and, as one critic described the incident, "even the French horns were shipping water."

The audience was in fine humor, even though many sitting near the main poles were drenched. Dr. Koussevitzky started a second time when the storm quieted for a moment, but before the trumpet reached its second call in the introduction of the "Rienzi" overture, rain pelted the canvas roof again, compelling the conductor to wave his arms in submission. The applause from the audience was a mixed expression of pity and happy sympathy.

The orchestra started a third time and Dr. Koussevitzky succeeded in carrying the musicians through the first half of the program. At intermission, the Boston Symphony Orchestra manager, Mr. Judd, mounted the platform to announce a few changes in the second half, made necessary because of the damage to some instruments by the storm.

Just as the concert ended, Miss Robinson Smith made her way to the front of the tent, climbed up on the stage and declared to the audience:

> "*The storm has proved conclusively the need for a shed. We must raise the necessary $100,000 to build it.*"

The enthusiastic response to her appeal indicated she had picked a psychological time to make such an announcement. Immediately $30,000 was pledged. Later that night, after arriving at her Stockbridge home, the Festival president prepared a circular to be printed the following morning for distribution at the two remaining concerts. The leaflet was directed to the public to support the building fund, but it also appealed for people to become patrons and members of the Festival. The response to these folders at the next two concerts proved once and for all that the public wanted to make the Berkshire Symphonic Festival a permanent reality.

Because of the storm and the effectiveness of the leaflets, the study and recommendations made by John Price Jones for a fund drive to build the shed were abandoned. Nature had taken over. From that time on the Berkshire Symphonic Festival stepped up its own campaign for the building fund.

A few members of the Berkshire board, as well as representatives of the Boston Symphony Orchestra, were not in agreement on the location of the proposed shed at Tanglewood. The architect, Eliel Saarinen, during an inspection of the property in the fall of 1937, felt strongly that the shed should be located in the field near the adjoining estate of Mrs. William Norton Bullard. This met with Dr. Koussevitzky's approval, as well as some members of the Festival board. The Boston Symphony trustees disagreed. They wanted it under the pines on the site used by the tent the summer before.

At this point, the Festival trustees took matters into their own hands. After all, they were raising the money to foot the bill for its construction. When a vote was taken on the location, only two members of the Festival board went along with the Boston Symphony Orchestra.

The location was finally settled, but the plans called for an expenditure in excess of $100,000 estimated by the Festival. Mr. Saarinen's original plans called for an initial outlay of $167,000 for the pavilion alone. Additional structures on the property brought his estimate up to $232,000. He was asked to modify his plans to keep within $100,000. Though skeptical about it, he agreed to give the matter careful study and report as soon as possible to the executive committee.

After working over his drawings and plans, trying his best to reduce the cost, Mr. Saarinen could not bring the figure down lower than $125,000, excluding such expenses as plumbing, lighting, roads and parking space. By the middle of November, 1937, the Berkshire Symphonic Festival had raised $77,000 from 675 contributors. They had hoped for more and at times thought of abandoning the whole project and return the contributions to the donors. They delayed this action until a special committee had time to confer with the Boston Symphony Orchestra officials to see whether they would accept a building which could be erected with the funds on hand. The Boston trustees finally agreed and another effort was made to have Mr. Saarinen modify his plans further.

On October 20, 1937, Mr. Saarinen sent this letter to the Board of Trustees:

> "I am not as quick in sending the revised plans for the Tanglewood Pavilion as your Committee perhaps expected. But, believe me, my work has not been easy.

"As I told you at Stockbridge, I was much worried because my problem was to have two ends meet: the capacity of the pavilion as to seats, and the costs. Of course, a solution could have been easily had by erecting just a shed without any consideration as to good proportions, good architectural qualities, and a proper fitting into the landscape. And as any builder could accomplish this, why then, hire an architect. But, on the other hand, I know perfectly well that you would not be satisfied with such a result, nor would the members of your committee.

"As things are, the only thing I had to do is this:

"I have undertaken a revision of my previous scheme; then, I studied how the pavilion could be built—step by step— so that the final result would be satisfactory and permanent, and in good correlation with possible future features; and then I have tried to find out what the first step might be. In other words, I had to conceive a future picture of the pavilion, and then take an extract of the design—a mere skeleton—that could be erected for the available money, and for the coming season's use. Moreover, I had to design the skeleton so that possible future problems could be met, this particularly in so far as the stage is concerned. Even the problems of acoustics I have tried to meet in a flexible manner so that the ceiling has the possibilities of being formed in many different ways, depending on the advice of the acoustical expert.

"And so I have finally arrived at the solution—an extracted one—that I am now sending for your approval.

"Likewise, I am sending an estimate of the costs of the pavilion, excluding the accommodation for the members of the orchestra, which part can be constructed in cheap material and in a simple manner—perhaps temporarily. Of course, the seats too are excluded, for I assume that the old benches will be used next summer.

"Due to the fact that I am not familiar with price levels in Massachusetts, particularly in the country, the estimate is bound to be approximate. The cost of the steel skeleton—being the main item—however, has been estimated by the Bethlehem Steel Co., including transportation to and erection at Tanglewood.

"The steel contract requires a time of about four months, conservatively speaking, and must therefore be settled, say, in January. This, in my opinion, is of more importance than the pouring of the foundation: in any case the delivery of steel will happen first late in the spring."

A few days later, Joseph Franz of Stockbridge, a member of the board and the engineer in charge of the project, was asked to visit Mr. Saarinen in Bloomfield Hills, Mich. The Stockbridge man took with him a set of modified plans which he had made for the construction of the shed. The major changes were placing three columns in the middle of the shed, thus reducing the weight of the steel in the building, simplifying the steel structure by having 78 steel piers instead of 90, and substituting a wood deck on the roof instead of the gypsum block recommended by the architect.

On his visit to Michigan Mr. Franz learned Mr. Saarinen had anticipated most of the modifications, but was strongly opposed to adding three columns in the pavilion.

Feeling unable to continue, Mr. Saarinen by the end of December resigned, but "graciously consented" to allow the Berkshire Symphonic Festival to use his plans with such changes that were necessitated by the financial resources of the corporation.

Satisfied that the shed could be built by Mr. Franz with his modified plans, the Board of Trustees on December 20, 1937 instructed him to call for new bids.

The Bethlehem Steel Corporation was requested to restudy the blueprints and came up with an offer to construct the steel work for $38,000 "if competitive bids are not sought." The executive committee, serving also as the building committee, then decided to go ahead with the plans to build the shed at a cost not exceeding $81,000.

Several bids were received and the board members were more than pleased when the lowest came from a local contractor, Graves & Hemmes of Great Barrington, for $77,768.

Ground was broken on December 31, 1937. Frost made digging through hardpan and clay a major problem. As workmen started opening 78 holes for the steel piers, they were forced to cover each one with hay at night to keep the bottoms from freezing.

On March 12, 1938, the first carload of steel started arriving from the Bethlehem Steel Corporation, a week ahead of schedule. Six days later the first rivet was driven. When spring arrived, heavy thaws turned Tanglewood into a sea of mud. Trucks carrying steel trusses—90 feet long and weighing 16 tons—became mired in the mud, freed only when bulldozers were pressed into service.

To cover the 1½ acre roof of the Shed, the contractors had ordered 150,000 feet of firwood, which was shipped from the West Coast, through the Panama Canal, around to the Atlantic Coast and up to Albany. It took two weeks to transport the entire shipment in 6,000 foot lots from Albany to Tanglewood.

During the construction period, Mr. Franz, carrying out the project within the scaled-down budget, made many additions to the Shed. Nine hundred and fifteen square feet of floor space were added to the apex of the building so the stage could be set further back and the seating capacity increased from 4,300 to 6,025.

The formal gardens at Tanglewood are sometimes used for outdoor opera scenes during the Festival season and other times they form the setting for parties such as the one below in honor of Dr. Koussevitzky's 75th birthday.

These Berkshire County children were enrolled in the Laymen's Music Course, sponsored by the Berkshire Symphonic Festival. They were transported by bus each Saturday morning during the concert season to attend the rehearsals of the Boston Symphony.

After the end of hostilities in World War II, the State Department sent a radio staff to Tanglewood to broadcast over the Voice of America a description of the workings of the Berkshire Music Center and the Festival. Students from many foreign countries were interviewed on the State Department program.

Before the Tanglewood on Parade programs were held for the Berkshire Music Center, the Berkshire Symphonic Festival arranged benefits for Allied Relief, British War Relief and Russian War Relief. Crowds of more than 10,000 filled the Music Shed to overflowing.

Mrs. Frederic Schenck of Lenox was chairman of prizes for the British War Relief benefit concert at Tanglewood in 1941.

Featured speaker at the Russian War Relief benefit concert in 1942 was columnist Dorothy Thompson, shown addressing the crowd in the Music Shed. At right is Jerome D. Greene, president of the Boston Symphony Orchestra.

The Shed Goes Up

ALL of the benches used in the first four years of the Festival were placed in the Shed, but there weren't enough to fill the spacious auditorium. The benches were then arranged in the rear of the box section and new chairs were purchased for the front at a cost of $6,848.

As construction neared an end, Professor Richard Fay of the Massachusetts Institute of Technology was engaged to study the acoustics in the Shed. Following many tests, it became necessary to install a sound reflector in the rear to eliminate echoes.

The great Music Shed was completed on June 16, 1938, a month ahead of schedule. It created nationwide attention and set the stage for the opening of the 1938 season when Dr. Koussevitzky highlighted the program with a chorus and soloists for the performance of Beethoven's Ninth Symphony.

On the night of August 4, 1938, the Music Shed at Tanglewood was dedicated with a tremendous crowd on hand for the great event.

Speaking before the overflow audience, Miss Robinson Smith, the proud president of the Berkshire Symphonic Festival, said:

> Had a clairvoyant predicted five years ago that today the Berkshire Symphonic Festival would be inaugurating this great Music Shed, no one would have paid the least attention. It is, however, an inspiring reality.
>
> But nothing worth while ever happens without someone having dreamed a dream. It was the late Henry Hadley who had this dream, feeling as he did that the Berkshires were an ideal spot for symphonic music "under the moon and stars." The residents of the Berkshires became intrigued with this idea and put their shoulders to the wheel to make it a success. After two summer Festivals, Dr. Hadley resigned because of failing health and the Trustees of the Berkshire Symphonic Festival approached Dr. Koussevitzky and his great orchestra, the Boston Symphony.
>
> Words cannot express the enthusiasm that greeted his acceptance. His vision for the development of a great musical center and his understanding of the hunger for music in the summer of a large music-loving public was an inspiration to everyone.
>
> Dr. Koussevitzky's first Festival, of three concerts, was given in 1936 in a large tent at Holmwood, Lenox. People came from all

parts of the country and we realized that what had started as a comparatively small affair had now taken on national importance. A permanent home was necessary. Various places were visited, and then Mrs. Gorham Brooks solved the problem by giving to the Boston Symphony Orchestra her beautiful property, Tanglewood, overlooking the lovely Stockbridge Bowl.

Dr. Koussevitzky appreciated from the beginning the importance of a permanent building and his friend, the well-known architect, Eliel Saarinen, was consulted and was asked to draft tentative plans. It was impossible, however, to complete the construction in time for the 1937 Festival and so the six concerts were again held in a huge tent.

Most of you know what happened one night last summer when the elements and Wagner got into conflict. This seemingly tragic event proved a blessing in disguise for immediately after it the Board of Trustees decided to start a campaign for money to build this Music Shed. Many of you responded most generously. A month ago, thanks to Mr. Joseph Franz, the engineer, the Shed was ready for the 1938 Festival. Mr. Saarinen's conception was the basis for this Music Shed which we are this evening so happily dedicating.

This does not mean that it is entirely completed—there is still much to do to make it as beautiful and perfect as it should be for the perfection Dr. Koussevitzky and his orchestra are entitled to. It is true that a fine roof covers one acre and a half of land, thus permitting nearly 6,000 people to sit within the building proper; that half of the public can sit on chairs; that the musicians have a fine tuning room; and that Dr. Koussevitzky has his own suite. But still more important is the excellent study on the acoustics made by Professor Richard D. Fay, of the Massachusetts Institute of Technology.

In these recent years of financial strain when the federal government has spent tremendous sums of money in an attempt to support the hard-hit sphere of culture, the Berkshire Symphonic Festival has followed the older American tradition of aiding culture by individual patronage and support. It has been a struggle but the results achieved thus far have justified the effort. Today the concerts are self-sustaining through the sale of tickets. But the building has come from private contributions and future improvements must come the same way.

We are in need of $58,000.00 to carry out essential improvements:—we need iron roll curtains to close in the Shed against storms—we need permanent chairs—we need permanent lighting in the parking fields, and we would like to beautify the grounds around the Music Shed. It is our conviction that music-lovers who believe in the old American tradition of individual support of culture in America will help us in the future and help us *now*.

The Trustees of the Boston Symphony Orchestra and the Berkshire Symphonic Festival work in the closest cooperation. Dr. Koussevitzky is always an inspiration. His orchestra is too much loved throughout the land for it to be necessary to eulogize them.

There is, however, behind the scenes of the Boston Symphony Orchestra, a great lawyer who is its guiding spirit, a summer resident of the Berkshires and a true friend of the Berkshire Symphonic Festival. It is my privilege to present the President of the Boston Symphony Orchestra, a distinguished man and a loyal friend of distinguished music in America, Mr. Bentley Warren.

Then Mr. Warren stepped to the speaker's stand and revealed publicly for the first time, plans for the establishment of the Berkshire Music Center in connection with the Festival concerts.

His speech follows:

The Boston Symphony Orchestra rejoices in this opportunity to bring its tribute of appreciation and praise to the Berkshire Symphonic Festival for its foresight, energy, and success in making available this adequate and admirable auditorium. With such a result of only three years of cooperation between the two organizations, who can predict how great may be the contribution of Berkshire to the musical culture of America?

In 1881, a beloved citizen of Boston founded its Symphony Orchestra. Alone and unaided he promoted and supervised its activities and met its annual deficit for thirty-seven years. His objective was not merely to enrich the musical culture of his own city; he wished also to further the appreciation and enjoyment of the universal language of music throughout the country. At the age of 82 he retired from this most fruitful work. Since then the present corporation organized under his direction, has, with the financial support of generous patrons of the concerts, continued his purposes and policies. The number of excellent orchestras now in America, yearly furnishing music of the highest merit from the

Atlantic to the Pacific, proves the soundness of his confidence that the American people were eager for a national music culture.

Throughout its existence the orchestra has constantly broadened its field of activities. At the beginning there were only 24 concerts a year, all in Boston. Both locally and over the country this number has been greatly multiplied. Instead of appealing to local audiences only, the Berkshire Festival is now offered to a national public.

The gift of the beautiful Tanglewood estate by Mrs. Gorham Brooks, in memory of her parents, has provided a perfect setting for these concerts. It has also opened a wide vista of increasing usefulness. Our distinguished conductor, after 14 years in this country of his adoption—for he has now become an American citizen—has long cherished a vision of a music centre of the first importance. He is convinced that America is now ripe for it. Here he believes it is possible to develop orchestral conductors as accomplished as any that Europe can provide. The personnel of the orchestra contains artists unexcelled anywhere as teachers of advanced pupils in the use of the various instruments. After experience with many amateur choruses, Dr. Koussevitzky believes that the possibilities of choral and community singing are almost unlimited if properly trained leaders are made available. What does all this suggest?

It is the hope of our conductor—a hope, I am happy to say, shared by the Berkshire Symphonic Festival Corporation and the Boston Symphony Orchestra—that the annual Festival may be supplemented by a school or academy holding annual sessions, preceding the concerts themselves, and devoted to the cultivation of the highest standards in the work of orchestral conductors, choral leaders, and separate instrumentalists. Tanglewood is the ideal location for such a school. The mansion house and other buildings included in Mrs. Brooks' gift will furnish the facilities immediately needed. This auditorium cannot be excelled as a place for the instruction of prospective orchestra conductors with a small but adequate orchestra of some of the members of the Boston Symphony itself, augmented by students attending the school for instruction in the use of their special instruments.

This fortunate combination of circumstances, and the existence of an adequate initial plant, will greatly reduce the amount of money needed to realize the conductor's programme. Indeed, the

greatest need will be for scholarships. These will be indispensable because many of the most promising students are themselves without the means to pay the cost of the higher and specialized instruction for which their talents will qualify them. No one can doubt that from some source the necessary funds will be forthcoming; and it is expected that the detailed arrangements for the school can be completed so that its first session may precede the Berkshire Festival of 1940.

We all believe that here stands such an opportunity as Mr. Henry Lee Higginson (whose family ties were strong in Lenox), seized when he founded the Boston Symphony Orchestra, and as Miss Robinson Smith and her associates have realized in the establishment of these Berkshire concerts.

The opportunity transcends by far any local limits of Boston and the Berkshires. Happily the music-lovers assembled here constitute no merely local audience. Surely many will agree with Dr. Koussevitzky as to the national value of the musical enterprise that he envisions. May not the Tanglewood concerts become historic, as forerunners of a great artistic and educational reality—the establishment of an outstanding summer musical center for this country!

That the Music Shed itself is a product of the Berkshires is reflected in a breakdown of the county's contribution to the building fund. Berkshire County residents gave a total of $52,724, of which $34,460 came from the summer residents of Lee, Lenox, Great Barrington, Pittsfield, Stockbridge and Williamstown. Festival trustees alone donated $36,110 or 40.75 per cent of the $78,142.30 that was raised. Eighty-one per cent of the money collected came from donors within 50 miles of Stockbridge.

As the Berkshire Symphonic Festival slowly progressed into a national institution, the trustees, mindful that it all started as a Berkshire undertaking, sent to the City Council of Pittsfield and the Boards of Selectmen in Lee, Lenox, Stockbridge, Great Barrington, West Stockbridge and Richmond, the following resolution:

We the Trustees of the Berkshire Symphonic Festival, respectfully ask that you give this resolution careful and earnest attention for these reasons:

1. Because, the Berkshire Symphonic Festival has become an institution of national importance.

   After years of ceaseless and devoted labor, there has come into existence an institution which is recognized to

be one of America's foremost musical events. Thousands of people come from all parts of the United States and Canada, year after year, to hear the Boston Symphonv Orchestra at Tanglewood. A great orchestra, under the leadership of its remarkable conductor, Dr. Serge Koussevitzky, has made the Berkshires one of America's foremost summer musical centers at the very time when America is experiencing a great musical awakening.

2. Because there has already been invested in the physical properties of the Berkshire Symphonic Festival over $100,000 and because more will be invested in the future.

   The construction of the Music Shed at Tanglewood represents a joint investment of people who live permanently in the Berkshires, of those who spend their summers in this beautiful recreation area, and of hundreds of people who come to the Berkshires only for the concerts. This joint investment has been made in the Berkshires because this region by virtue of its natural beauty, its peace and quiet, is ideally suited as a summer musical center.

3. Because the Berkshire Symphonic Festival has already had important direct and indirect economic effects on the Berkshire region and will year by year have even greater economic effects.

   During the concert season of 1939, about 36,000 people attended the concerts at Tanglewood. For hotels, restaurants, tourist homes and garages, this meant a very sizeable volume of new business for the entire Berkshire region. There can be no question whatever but that the Berkshire Symphonic Festival is the biggest single event in the Berkshire region. In a 10-year period, the full economic significance of the Festival will reveal itself. Even now summer house rentals have already been affected by the increased demand for homes conveniently located within easy access of the Music Shed.

4. Because the Berkshire Symphonic Festival began as a Berkshire undertaking.

   The generous co-operation of the officials of the Berkshire towns has made the Berkshire Symphonic Festival possible. Without the voluntary services of the members of the board, the sub-chairmen and others, as well as the

ushers and parking men, the Festival could not have become self-sustaining. All the towns have helped in the enterprise and all have, we hope, enjoyed the cultural and the economic benefits of the Berkshire Symphonic Festival. It is now a national institution and the safeguarding of its future should enlist the help of all Berkshire people.

It was a matter of great satisfaction that the Festival of 1938 showed a profit to be divided between the Boston Symphony Orchestra and the Festival, this being the first time that the Boston Symphony Orchestra had received any sum over and above their regular fee. This was in spite of the fact that the actual expense of the Festival, including the chorus and soloists was $1648 over the estimated budget. This increase, however, was more than accounted for by the unexpected expense of labor and gravel necessary to make the parking fields usable after the first concerts.

The operating income for the 1938 Festival was $58,354.38; the operating expense, $54,083.58. The income included $56,786.91 from the sale of tickets.

As for the local reaction to it all shortly after the close of the concerts, the selectmen of the Town of Lenox, in which Tanglewood was partly situated, offered the trustees the use and occupancy of a part of the Town Hall, formerly occupied by the U. S. Post Office for the general offices of the Festival throughout the year, for $1 a year.

At the same time the Board of Selectmen of the Town of Stockbridge, where the president of the Festival had a summer home, did her the honor of appointing her "the outstanding citizen of our present generation as a reward for the great accomplishments of establishing the Symphonic Festival here."

"We cannot estimate how much help this has been to our people during these trying times," said the Stockbridge officials who also offered to arrange for a Festival office in their town free of expense.

Subscription drives, meetings, lectures, broadcasts, feature articles in newspapers and magazines were important to the success of the Festival, but outside the framework of this great organized effort were two groups that gave material benefit to the concert plan.

The Layman's Music Course, headed by Miss Alice B. Riggs of Stockbridge, and the Festival Clubs, under the direction of Mrs. Bruce Crane of Dalton. The laymen's course stemmed from a suggestion made in 1936 by

Festival officials "to do something for the school children, and give them an opportunity to appreciate music."

Because of the building program and other major problems, the plan was not crystallized until three years later when Miss Riggs was appointed to establish the necessary organization. She went to New York, conferred with Madame Olga Samaroff Stokowski, who originated the course in the Manhattan schools, and returned to the Berkshires filled with enthusiasm. Miss Riggs made the rounds of the county schools, talked with musical authorities and started to put the machinery in order to institute the courses.

Miss Harriet Johnson, artistic director of the course, and head of the music department at Foxcroft School in Middleburg, Va., came to the Berkshires to open a 15-week program in the schools. The courses were correlated as closely as possible with the Festival programs, giving the children a better musical understanding and thereby greater appreciation of the concert program.

The course was underwritten by the Festival at an expense of $1200. County students taking part in the initial program represented Stockbridge, Lee, North Adams, Pittsfield and Dalton. Before long other school officials requested the course for students in their institutions. In broadening the program, Dr. Koussevitzky permitted the students taking the course to attend the Saturday morning rehearsals of the Boston Symphony. When this was done, schools in Adams, Williamstown, Lenox and Great Barrington joined the course and by 1941 more than 1500 children were enrolled.

Feeling the need to better acquaint adults with classical music, Mrs. Crane organized throughout the county several Festival clubs. Adult members went to their libraries twice a month to listen to recordings of the programs scheduled for subsequent concerts. The Magnavox Corporation of New York loaned the groups eight recording machines. Dues from the members paid for the records played at each session, and the Junior League of Pittsfield rented records to the club members from its library.

Not only did the adult members benefit from this innovation in the Berkshires, but the libraries throughout the county found the project helped to build a strong foundation for the circulation of music scores, books on music and a demand for classical recordings.

Watching his students on parade at one of the Music Center benefits is Dr. Koussevitzky in white suit, surrounded by members of his family and officials of the school. From left to right, Frederick Fennell, Aaron Copland, Ralph Berkowitz, Irving Fine, Mrs. Joseph de Pasquale, Dr. and Mrs. Koussevitzky and Mrs. Henriette Hirshman. At right, Boris Goldovsky, head of the opera department, announced the opening of the events given by each of the departments at the Music Center.

A bugler calls the students together as Aaron Copland instructs them to start performances in their respective departments on the Tanglewood campus.

Personalities

Two of the original members of the Festival board, Laurence R. Connor of Pittsfield, right, and the late Norville H. Busey, Jr., of Lee, meet during one of the early concerts.

George E. Judd
His 40 years' service as manager of the Boston Symphony Orchestra was climaxed in 1954 when he retired after building Tanglewood into the greatest musical center in the country.

Eliel Saarinen
His estimates were too high.

George W. Edman
His promotion work paid off.

Joseph Franz
He built the Music Shed.

Familiar faces at all Festival activities are these veteran workers, left to right, Louis I. Plass, David M. Cullen, Mrs. Alexander J. Young, Willard M. Sistare and Orin P. McCarty.

Rudolph Ganz
One of the first Festival soloists.

Willard M. Sistare, head of the Music Shed personnel, center, goes over the seating arrangement in the huge auditorium with a few of his early assistants. Left to right, Harry R. Birt, James H. Kimball, Jr., Mr. Sistare, Walcott Fuller and Gordon Crane. Seated are John W. Talbot and Bruce Alexander.

John Shepard, Jr.
He gave the chairs to the Festival for the box section.

Hugh Ross
The head of the Music Center's choral department acknowledges an ovation following one of his many appearances as conductor of the BSO and the Festival chorus.

Husband and wife, Richard Burgin, concertmaster of the BSO and Ruth Posselt, go over the score for one of their combined performances at Tanglewood.

Arthur Fiedler, conductor of the Boston Pops Orchestra, is a crowd pleaser at the Tanglewood on Parade events with his lighter musical programs.

Professor Phillip Marshall Brown of Williamstown, at right, and the late Albert Spalding, served for many years on the Festival's Board of Trustees.

Thomas D. Perry
New Manager of the BSO

The Misses Mary and Margaret Dewey of Great Barrington, operated the Thursday Morning Club's concession in a tent at Tanglewood before the BSO set up a canteen on the grounds.

Miriam Hopkins, one of the many Hollywood celebrities attracted each year to the Festival.

Robert Shaw relaxing on the grounds before one of his performances with the Festival chorus.

Ted Shawn at one of the first concerts in the Shed visits with the late Mrs. Cornelia Coltor Hollister of Cleveland, Ohio, a long time summer resident of the Curtis Hotel in Lenox.

Dr. Charles Munch, left, and Dr. Koussevitzky, discuss Festival plans soon after the latter retired as conductor of the BSO.

With Mrs. Koussevitzky at the formal opening of the Berkshire Music Center are, at left, the BSO manager, Thomas D. Perry, Jr., and at right, Dr. Charles Munch.

Dr. Munch rehearsing the Boston Symphony Orchestra.

'Our Best Wishes'

THROUGH the gift of Tanglewood, building of the Shed, execution of a five year lease and an agreement between the two organizations, the Berkshire Symphonic Festival became firmly entrenched.

According to the terms agreed upon by both organizations, the lease would not terminate until the concerts "are not so managed, promoted or given by the Berkshire Symphonic Festival Inc."

The public was not aware of the internal difficulties being experienced by the two boards. In spite of the unrest Dr. Koussevitzky went ahead with plans to carry out his part of the program. He was determined, more than ever, to bring into reality a lifetime ambition—to provide a musical center where young musicians could add to their professional training and artistic experience under the guidance of eminent musicians and teachers.

Dr. Koussevitzky characterized the activities of the Berkshire Music Center to his students as "a summer of living and working in music."

As the Music Center began to take its place as an important development at Tanglewood, the Boston Symphony Orchestra's trustees began to feel the burden of the additional expense in the Berkshire operation. It resulted in the Boston group making new demands on the Festival people who were running the Shed concerts and totally out of the picture as far as the school was concerned.

This complicated situation was responsible for the Boston trustees to point out that the original contract between the two organizations had been drawn before the shed was built.

"There are several things in the contract which do not fit present circumstances," the orchestra's trustees argued.

During an exchange of letters with trustees of the orchestra, the Festival's finance committee reviewed the original aims of the Berkshire organization, calling to the attention of the orchestra's officials that the Festival was incorporated by residents in the Berkshires, "and only the efforts and energy of the Berkshire people made these Festivals possible."

Furthermore, they insisted, the permanency of the Festival was assured when the Boston Symphony Orchestra leased part of Tanglewood to the Berkshire group. The lease, they added "runs for a long and indeterminate term, to wit, so long as the Berkshire Symphonic Festival Inc., manages and promotes and is able, ready and willing to manage and pro-

mote the annual symphony concerts by the Boston Symphony Orchestra at Tanglewood."

To strengthen its position, the Festival's finance committee further stated that "relying upon the good faith of the trustees of the Boston Symphony Orchestra Inc., which entered into this lease, the Berkshire Symphonic Festival Inc., alone and unaided, at great effort, raised forthwith in the Berkshires the large sum of $90,000, and pursuant to its obligation, but also at the urgent demand and driving insistence of the Boston Symphony Orchestra, Inc., built and constructed at its own expense upon the leased land, owned by the Boston Symphony Orchestra, a suitable stage and auditorium or shed, in all respects satisfactory to and approved by the Boston Symphony Orchestra, and likewise placed therein its own seats, platforms and property and has since each year added to and improved this shed and its furnishings, so that the Berkshire Symphonic Festival Inc., now has buildings and property, which is all upon land belonging to the Boston Symphony Orchestra Inc., of a book or cost value in excess of the sum of $120,000."

Again referring to the five year contract, the Festival officials produced records to show that the Boston Symphony Orchestra had received not only its annual expenses as provided by the terms of the agreement, but also received large sums in addition to its share of profits from the concerts.

A breakdown of the expenses paid to the Boston Symphony Orchestra, plus shares of distributable profits covering the period from 1936 through 1941 showed the following:

1936	$11,294.00
1937	26,000.00
1938	37,543.83
1939	37,000.00
1940	75,961.68
1941 (estimated)	80,000.00
Estimated total	$267,799.51

On September 5, 1941, the board authorized the Festival president, with the advice and assistance of the finance committee, to offer to purchase from the Boston Symphony Orchestra, the parking lot at Tanglewood and the lot on which the Shed was erected, together with the right to use the supplementary parking lot for a sum not to exceed $10,000. As a further consideration, the board proposed to grant the Boston Symphony Orchestra the right to use the Shed and parking lot, as well as other facilities in con-

nection with the work of the Berkshire Music Center, "provided such use shall not interfere with the conduct of the annual festivals of the Berkshire Symphonic Festival."

The next day, Miss Robinson Smith, acting on a vote of the Berkshire board, informed Jerome D. Greene, president of the Boston Symphony, that the local group had voted "to make every effort to work out a fair and reasonable contract with you for the future."

The problem became more serious by the hour. The Festival requested that the Boston trustees consent to negotiate a contract along the lines of the one made five years before, rather than "to offer us an arrangement which either now or in the future will result in our ultimate dissolution."

A week later, Mr. Greene's reply was received at Festival headquarters. Through him, the Boston board notified the Berkshire group that "under no circumstances will the orchestra consider the sale of any part of the Tanglewood property to the Berkshire Symphonic Festival."

At the same time, Mr. Greene reasoned that the operating agreement of 1939 "did not provide satisfactory machinery for carrying on a festival and a musical center in the form and size to which the enterprise has grown."

Three days later, Mr. Greene, following up his original letter, explained that "a certain conclusiveness" in his letter "simply means that our contractural relations have come to an end and have not been resumed."

He added that "I have not meant to give the impression that we on our side would be unwilling to discuss any proposition that might be put forward."

Continuing he wrote:

> I wish I could gain your sympathy with the idea that the two main factors in the situation, namely, our acquisition of Tanglewood and the development of the Berkshire Music Center in which both the Festival and school are coordinated and inseparable, have imposed a responsibility on us as trustees of the Boston Symphony Orchestra which is quite incompatible with the method of joint operation implied by our previous contractural relations.
>
> This fact, however, does not in the least diminish the importance of the sponsorship of the local group, not only for the Festival concerts, but also, I should hope, for the Tanglewood enterprise as a whole. Its potentialities for the good of music in this country seem to us very large and of a nature such as to impose the

main responsibility on the Boston Symphony Orchestra, as a corporation which is actually managing the year round a musical organization of the greatest importance. As I have said before, while we are prepared to take all the responsibilities of ownership, management and promotion, all the advantages your group possesses for the purpose of promotion remain valid and, our preference was decidedly in favor of continuing the sponsorship of your group in that field.

An exchange of letters, all relating to various aspects on the Festival lease at Tanglewood and title to the Music Shed, failed to bring the two groups any closer together.

The 1941 season set new attendance records and the net income of $51,886.83 was split between the Boston Symphony Orchestra and the Festival. Despite this successful summer, the two governing bodies were slowly drifting apart. However, plans for another season went on just the same. Then came the Japanese attack on Pearl Harbor. The country was in a state of confusion with blackouts, censorship, draft boards and ration books the chief topics of conversation. The Boston Symphony Orchestra trustees wanted the 1942 programs called off, but in April they met opposition from not only the Festival but several Berkshire residents who urged the continuation of the concerts for another season.

Through the late Congressman Allan T. Treadway of Stockbridge, arrangements were made in Washington for Festival officials to seek aid from Petroleum Coordinator Harold L. Ickes, Price Administrator Leon Henderson, Ralph K. Davies, deputy petroleum coordinator of the Department of Interior and other federal authorities.

Some encouragement was received from Washington when it was suggested that "a special arrangement may be made for busses serving the Berkshires" to transport music lovers to Tanglewood for the concerts. Miss Robinson Smith journeyed to Washington herself in an effort to save the Festival from being abandoned.

As late as May 8, 1942, the Festival's trustees at a special meeting in Pittsfield voted to continue negotiations with the Boston Symphony Orchestra to present the summer concerts and with nearly $40,000 worth of tickets sold by that time, they did not think "that it is yet the opportune time to agree to mutually abandon the concerts."

Dr. Koussevitzky released to the Festival the programs he had selected for the 1942 season. They were given to the press with an explanation that "in view of the immediate uncertainties of the current situation," the

Festival officials were determined to carry on for the present time. This resulted in a division of opinion among many on the Berkshire scene. A total of 343 residents of the county had signed a telegram addressed to the Festival president, urging the Berkshire board to continue the concerts. *The Berkshire Evening Eagle* in Pittsfield took a stand opposing continuance of the concerts and the *Springfield Republican* took the opposite view, calling for the Festival officials to "keep the flag flying at Tanglewood."

At the same time, Dr. Koussevitzky in a letter to Miss Robinson Smith asserted "It is the patriotic duty of the trustees of the Boston Symphony Orchestra and the trustees of the Berkshire Symphonic Festival to preserve the continuity—even if on a smaller scale—of the Festival and the Berkshire Music Center which stand high and unique in all the world. Music is one of the vital needs of our time—not for morale alone? If we must conserve gasoline, rubber and cash 'as our life blood,' we must preserve music and the arts as the lasting cultural values of a nation."

Continuing he wrote:

> Let us remember that, in the course of this cruel and devastating war, innumerable art treasures have been lost and scattered. America is the only continent today where artistic life is still normally possible. It is our duty to protect it. No effort and no sacrifice is great enough for those who realize and who believe in the value of art and culture in our life.
>
> Certainly we must all willingly cooperate in the restrictions on gasoline and tires which the government finds right and necessary, and no one would ask for special favors in behalf of the Festival. But in spite of the inconvenience, sacrifices and even hardships, people will find their way to Tanglewood, seeking there the spiritual strength and inspiration that they will need now more than ever. This is especially true of the several hundred students who are willing to do almost anything in order to study six weeks at the Berkshire Music Center; and it is also true of thousands who are looking forward with hope and longing to the Festival concerts.

James Phinney Baxter, 3rd, president of Williams College, and a member of the Festival's Board of Trustees, took another view of the situation from his wartime post in the Office of the Coordinator of Information in Washington.

Mr. Baxter, in a letter to the Festival president, said he agreed with Mr. Greene that "if an appreciable economy, primarily in gasoline and

secondarily in tires, can be gained by giving up the Festival, the sacrifice must be made."

Mr. Baxter informed Miss Robinson Smith that "There is a grim, but rather pertinent saying current in Washington at this time that the gasoline used for pleasure is too often mixed with the blood of sailors on our tankers."

Both organizations continued to hold special meetings throughout the spring. The Boston Symphony Orchestra was firm in its stand to abandon the concerts, but the Festival officials were just as firm in their attempt to keep the concerts alive.

In mid-May, Mr. Greene informed the Berkshire board that the Boston trustees "are convinced not only that the concerts should be abandoned but also that the decision should be made promptly and promptly announced."

Telegrams were hurriedly sent by the Festival to Congressman Treadway and Price Administrator Henderson pleading for information about bus transportation to Tanglewood. Mr. Henderson replied that the OPA policy on using charter busses would prohibit them from being used to Tanglewood, but he suggested the Festival authorities delay final action until the Office of Defense Transportation issued a policy covering bus transportation.

Meanwhile in Boston, Henry Parkman, Federal Administrator of Rationing in Massachusetts and J. W. Farley, executive director of the Massachusetts Committee on Public Safety, urged the Boston Symphony Orchestra to abandon the Festival plans for the summer.

At a meeting of the Festival finance committee, the group discussed the possibility of assuming the entire liability for the 1942 concerts by the Boston Symphony Orchestra. This was estimated at about $85,000. The figure seemed out of the question for the Festival and the committee voted to see whether the orchestra would consider the possibility of holding the concerts on the basis of a guarantee comparable to the amount of $62,500 guaranteed them in 1941, before June 15.

The next day a press release was prepared, quoting Miss Robinson Smith to the effect that the Festival corporation had voted to agree with the Boston Symphony Orchestra trustees in their request that the nine concerts scheduled to begin at Tanglewood on July 30 should not be given.

In her statement, the Festival president explained that the two boards had an agreement "providing that if one of the parties wishes to give up

the concerts for this season, the other must agree to give them up, or else continue them by assuming all expenses of both organizations." She went on to point out that the Festival found it impossible to assume the orchestra's budget of $85,000, "in addition to our own budget, and we therefore have no alternative but to agree."

The statement further stated that the Festival had offered at any time up to June 15 to reconsider the issue and to discuss with the Boston Symphony Orchestra the possibility of holding the concerts on the basis of a budget for the orchestra of $62,500 "which we guaranteed and paid them for the 1941 Festival."

In conclusion, the Festival president said:

> We have reached our decision very reluctantly and only after the most thorough consideration of all the facts now available. We have been making every effort possible to go ahead with the Festival concerts this season, and we have given the most careful thought to all the problems and principles involved, both economic and patriotic, and in keeping with our earnest desire to preserve the values of art and music which the Festival represents in the cultural life of our nation.

By early June reports from Washington indicated that the war-time necessity of conserving gasoline and rubber would soon be tightened more than ever. An order from the Office of Defense Transportation eliminated charter bus service for other than war needs. Consequently the Festival made a public announcement of the "definite cancellation" of the 1942 concert programs and notified the Boston Symphony trustees that further discussion of operating on a reduced budget was unnecessary.

The next step for the Festival was to make a new contract with the Boston Symphony Orchestra to manage and promote the Festival concerts at Tanglewood "to cover a period of years." When this request was made to the Boston trustees, Mr. Greene replied that the Boston Symphony Orchestra preferred to hold their plans in abeyance, explaining that "While the trustees of the Boston Symphony Orchestra have no other thought than that of securing the continuity of summer concerts at Tanglewood, so far as conditions created by the war permit, they do not see the necessity of making their plans at this time."

Dr. Koussevitzky, however, wanted to continue some musical activity at Tanglewood. He sought permission from the Festival trustees to use the Shed for the school term in connection with the activities of the Berkshire Music Center. It was at this time he established the Koussevitzky Music

Foundation. Dr. Koussevitzky later changed his plans to use the Shed and instead announced that a Mozart Festival would be given in the Theatre Concert Hall, capable of seating 1180. The orchestra consisted of the principals and other players of the Boston Symphony Orchestra. Soloists included Dorothy Maynor, soprano; Ruth Posselt, violinist and wife of Richard Burgin, the concertmaster of the Boston Symphony Orchestra; Robert Casadesus, pianist and the paired pianists, Luboshutz and Nemenoff.

War conditions became worse the following season and Dr. Koussevitzky succumbed to the times, calling off all other activities at Tanglewood. He was anxious, however, to give a few recitals in the Lenox area and sponsored the performances at Sedgwick Hall in the Lenox Library for the benefit of the Red Cross. Appearing with him at times at these events was Leonard Bernstein, who two seasons before came to the Berkshire Music Center as the maestro's top student in his composer-conductor class.

Correspondence kept moving across the Commonwealth between officials of the Boston and Berkshire boards in 1943 as attempts were made to bring the two organizations closer together for the time when the concerts would be resumed. As months passed it became obvious the Tanglewood operation no longer could serve two masters. There was a proposal to establish a joint non-profit organization, but it failed to meet with approval. Counter offers were made but these proved unsatisfactory. There even was talk of instituting legal proceedings to establish the title to the Shed.

The Festival board met from time to time in 1944 hoping to arrive at some constructive arrangement to continue the concerts with the Boston Symphony Orchestra when the war was over. The Boston trustees, likewise, conferred periodically, eager to reach some amicable agreement. It became almost hopeless on both sides and finally on October 4, 1945, at the annual meeting of the full Festival board in the historical room of the Stockbridge Library, this report of the finance committee was unanimously accepted by the Berkshire board:

> Your Finance Committee has carried on according to your instructions at the last annual meeting.
>
> You will recall that for the last four years, we have endeavored to reach a joint decision with the Boston Symphony Orchestra. During these years their proposals to us and ours to them have proven unacceptable. We have therefore been unable to reach any decision which was mutually satisfactory and which seemed to us in the best interests of music in the Berkshires.

When children's voices are needed to augment the Festival chorus, the Boston Symphony Orchestra's musical director draws on nearby camps in the Stockbridge Bowl area. The group rehearsing above are from Camp Mahkeenac and below, the Indian Hill Music Workshop.

Sunday afternoon crowds find listening comfort on the spacious lawns outside of the Theatre Concert Hall during the Bach-Mozart events.

Visitors to Tanglewood spend hours enjoying the scenic walks around the attractive grounds which reflect credit on the veteran grounds superintendent, Ward J. Gaston.

The
BOSTON SYMPHONY ORCHESTRA
Charles Munch, Music Director

presents this evidence of its gratitude to
GERTRUDE ROBINSON SMITH
who twenty years ago led the Berkshire Community
in establishing the Berkshire Symphonic Festival

and to the TRUSTEES *of the*
BERKSHIRE SYMPHONIC FESTIVAL, Inc.
whose vision and efforts made the concerts possible

Presented at Tanglewood
August 13, 1954

Trustees of the Boston Symphony Orchestra
Henry B Cabot *President*

This scroll was presented to Miss Robinson Smith in 1954 by the trustess of the Boston Symphony Orchestra.

After the Music Shed was presented to the BSO by the Berkshire Symphonic Festival this tablet was placed on a wall in the auditorium by the orchestra's trustees.

As a non-profit organization, our only desire during the past eleven years has been to present symphonic music. Nine years ago we were fortunate to interest Dr. Koussevitzky and the Boston Symphony Orchestra in the Berkshire Symphonic Festival and it is thanks to their interest that we have been able to establish a Festival that has become of world wide importance. It is thanks also to the loyal support of the members of this Board of Trustees, to the generosity of those who made possible the building of the Shed, and to all those volunteers who gave so freely of their time.

After due consideration, the recommendation of this committee to the Board of Trustees is that the Berkshire Symphonic Festival, Inc. make a gift of all its rights, title and interest in the Music Shed, its contents, and any other personal property which may be attached to or on the property known as Tanglewood, to the Boston Symphony Orchestra with the following conditions:

A—That original patrons, members and subscribers should be given the opportunity of subscribing for their regular seats before any public sale.

B—That in the event the Boston Symphony Orchestra should decide at any future time to discontinue Music Festivals at Tanglewood, the Shed would then revert to an authorized committee of Berkshire citizens, the formation of this committee to be decided upon before the signing of the deed, and that the President, Miss Robinson Smith be authorized to make this gift in the name of the Corporation.

This committee will be glad to answer any questions that the members of this board may care to ask regarding this recommendation.

That same afternoon, Miss Robinson Smith sent to the president of the Boston Symphony Orchestra, Mr. Greene, this telegram:

It gives me great pleasure to notify you that the Board of Trustees of the Berkshire Symphonic Festival at their annual meeting held today in Stockbridge, voted unanimously to make a gift of the Music Shed and its contents at Tanglewood, to the Boston Symphony Orchestra, thus giving them entire control and management of future Festivals at Tanglewood. Only two conditions are attached . . . Our best wishes to your trustees, your great conductor and your fine musicians for many years of happy and successful Festivals.

Replying to the Festival president's message, Mr. Greene said:

Your telegram has deeply gratified us all. Our own announcement will make very clear what the Festival owes to you and your associates. The continued cooperation of Berkshire friends is indispensable to an enterprise in which the interests of the orchestra and local public are so closely identified. May I add my personal thanks for the kind expressions of your message."

Epilogue:

ALTHOUGH inactive since turning the Music Shed over to the Boston Symphony Orchestra in 1945, the Berkshire Symphonic Festival Inc., is still in existence.

The Festival idea to give outdoor concerts "Under the Moon," has grown into one of the greatest musical events in the world, bringing new fame to the Berkshires.

The cold hard figures of the box office have shown through the years a steady, solid gain. Since the first concerts in 1934, the attendance has skyrocketed from an audience of about 5,000 at the Hanna Farm in Interlaken, to an all-time high in 1954 of 135,775 at Tanglewood. Indications are that performances by the Boston Symphony Orchestra in the years ahead will reach 200,000 for a summer of music in the Berkshires.

The popular Bach-Mozart concerts, instituted by Dr. Koussevitzky, the varied programs offered by the students of the Berkshire Music Center and the appearance from time to time of celebrated soloists, have helped to strengthen the foundation which has kept Tanglewood on solid ground.

Chamber music concerts, sponsored in recent years by the Elizabeth Sprague Coolidge Foundation and since her death by the Boston Symphony Orchestra, have attracted scores of notable artists from this country and abroad, adding to the increasing popularity of the so-called smaller concerts.

When Dr. Koussevitzky selected his staff for the Berkshire Music Center in 1940, he insisted on having "the best talent available" as heads of the various departments. He named the American composer, Aaron Copland assistant director and engaged the services of such musical personalities as Gregor Piatigorsky, the noted cellist to handle the chamber music group; Hugh Ross, the choral department and Boris Goldovsky, the opera department.

Under Mr. Goldovsky's direction, the Berkshire Music Center students have been giving many American premieres of operas at Tanglewood. They have included Mozart's "Idomeneo," Benjamin Britten's "Peter Grimes," and Mozart's "Titus." Other operas heard at Tanglewood have included Rossini's "The Turk in Italy"; Tchaikovsky's "Pique Dame"; and Gretry's "Richard the Lion Hearted."

The enrollment at the school has been averaging 400 in recent years, drawing on students from practically every state in the union as well as 18 or more foreign countries.

Leonard Bernstein's presence on the "campus" each year seems to electrify the students. They are familiar with his career, realizing his big break came as a student at Tanglewood under Dr. Koussevitzky. Young artists like Lukas Foss, Eleazar de Carvalgo, Robert Shaw and others have enjoyed the same experience at Tanglewood.

After the death of Dr. Koussevitzky's first wife, Natalya, in 1942, he announced a gift of $100,000 in her memory to the Koussevitzky Music Foundation in the Library of Congress, stating at the time that "I have known complete poverty and great wealth, much discomfort and all conveniences and I tell you they make little difference."

He was concerned over the choice being made by young musicians who were showing a preference for brass instruments over strings. Too many children in high schools and preparatory schools were directing their musical interests toward instruments that would get them into college bands rather than symphony orchestras. To this end he started making plans to establish a scholarship fund at the Music Center for students of string instruments. Soon he found financial assistance coming from Jascha Heifetz, who donated his fee from Festival concerts at Tanglewood to be matched by the Boston Symphony Orchestra to "deserving students of string instruments."

When Dr. Koussevitzky retired at the end of the 1948-49 season as conductor of the Boston Symphony, he was succeeded by Charles Munch, but continued as musical director of the Berkshire Music Center. Although ailing in the summer of 1950, Dr. Koussevitzky shared the conducting honors at Tanglewood with the Italian conductor, Victor de Sabata, who had been the regular conductor of the Monte Carlo Orchestra, the Opera at La Scala, Milan and appeared as a guest conductor at the Bayreuth Festivals.

On June 4, 1951 Dr. Koussevitzky died of a virus infection at the New England Medical Center in Boston at the age of 77. He had attempted to conceal his condition to avoid cancelling his plans to conduct at Tanglewood during the summer. Only his second wife, Olga Naumoff, his longtime secretary and niece of his former wife, was at his bedside when he died.

Dr. Koussevitzky had been in failing health for several months, following a guest conducting tour across the United States to the Hollywood Bowl, to Cuba, Brazil and Israel.

Less than a week after his death, the trustees of the Boston Symphony announced that Mr. Munch had curtailed his European engagements and

would return July 1 to open the Berkshire Festival. On June 16, Mr. Munch announced a revision of the programs at Tanglewood, including two numbers in memory of the late conductor—the final chorus from the St. Matthew Passion at the opening Bach concert, and Mozart's funeral music at the opening concert in the Music Shed. He invited Eleazar de Carvlho and Leonard Bernstein, the late conductor's prize students, to appear as guest conductors with him.

Mr. Munch took over the duties as conductor of the orchestra. Mr. Bernstein returned from a leave in Mexico to take over Dr. Koussevitzky's task as head of the Berkshire Music Center. The following year, Mr. Munch became the Center's musical director in charge of the entire operation at Tanglewood.

Under Mr. Munch's direction, Tanglewood has carried on brilliantly. The concert series have been extended to six weeks and activities at the school have broadened in scope. During his few years with the Boston Symphony, Mr. Munch has given several first performances of much modern French music and when conducting in France during the off-season he has returned the compliment by introducing to France, works by American composers.

Working closely with him in his first few years with the Boston Symphony Orchestra was George E. Judd, manager of the Boston Symphony who retired in 1954 after 40 years of service with the orchestra. Following in Mr. Judd's footsteps is his former assistant, Thomas D. Perry, Jr., who served also for several years as executive secretary of the Berkshire Music Center.

Not only did the year 1954 mark the end of a successful career for Mr. Judd, who helped to build Tanglewood as the musical capital of the United States, but it also marked the 20th anniversary of the founding of the Berkshire Symphonic Festival. During the Tanglewood on Parade benefit that summer, the trustees of the Boston Symphony Orchestra paid tribute to the work of Miss Gertrude Robinson Smith, president of the Festival and the trustees of the Berkshire organization "whose vision and efforts made the concerts possible."

Dr. Lewis Perry, national chairman of the Society of Friends of the Berkshire Music Center, in presenting an attractive leather-cased scroll to Miss Robinson Smith, commented that "She faced initial deficits, thunder storms and temperaments of varying degrees of impossibility, but she emerged triumphant and gave leadership and victory to this Berkshire community."

In her acceptance, the Festival president said:

It gives me a very deep sense of gratification to accept this scroll from the Trustees of the Berkshire Symphonic Festival and all of those citizens of this county, who so generously gave their time, effort and enthusiasm to make possible this great musical event.

It was 20 years ago this summer that Dr. Henry Hadley conceived this idea of "Music Under the Moon" and the machinery was set in motion.

Eighteen years ago, the Boston Symphony Orchestra, with its outstanding conductor, Dr. Serge Koussevitzky, joined forces with the Berkshire Symphonic Festival.

From that time on musical history has been written, giving the Berkshire Symphonic Festival national and international importance.

Today—on its 20th anniversary—the much beloved French conductor, Charles Munch, and his admirable musicians are giving joy and happiness to thousands.

One can only hope that these annual weeks' music will continue for years and generations to come.

And while expressing this hope—I feel it is appropriate to take this opportunity of paying a heartfelt tribute to our loyal and faithful trustees who have died, and who, because of their confidence in this fine community project, gave us the courage, inspiration and determination to carry on.

I refer to:

William L. Bull
Norville H. Busey, Jr.
Mrs. Carlos M. De Heredia
Mrs. Elizabeth Sprague Coolidge
Mrs. Henry A. Francis
Dr. Henry Hadley
Mrs. Andrew H. Hepburn
John C. Lynch
Mrs. Elisabeth C. T. Miller
Miss Mary Parsons
Edward S. Rogers
Albert Spalding
Milton B. Warner

and Serge Koussevitzky, who though not a trustee, was the animator who made for the success of many phases of the present festival.

I am profoundly moved in accepting for them and all of us, this gracious tribute.

An Appreciation

The author wishes to acknowledge the assistance given by the president and Board of Trustees of the Berkshire Symphonic Festival Inc., for their cooperation in providing many early photographs and the minutes of their meetings from which the factual material in this book was taken; by The Berkshire Evening Eagle for the use of news clippings and photographs; by the Boston Symphony Orchestra's press representative Walter Alford for supplying recent photographs of Tanglewood activities; by Kingsley Rex Fall for his help with the pictorial layout; by photographers Howard S. Babbitt, Jr., William Plouffe, Gene Mitchell, Peter Blau, William Mahan for many of the photographs in this publication; by Evona K. Mahanna and Mary Jane Gross for the manuscript typing.

$25,000 Music Festival Assets Go to Local Scholarship Funds

By JOHN W. MAHANNA

The Pittsfield Community Music School and the Berkshire Music Center Revolving Scholarship Fund will benefit financially from the Berkshire Symphonic Festival Inc., upon its dissolution by Dec. 31.

This was announced today by Miss Gertrude Robinson Smith of Stockbridge, president of the Festival corporation and the prime mover behind the original plan for outdoor concerts in the Berkshires, following a meeting at her home yesterday afternoon of the board of trustees.

The board voted to give $5,000 to the Berkshire Music Center Revolving Scholarship Fund and approximately $20,000 to the Pittsfield Community Music School Inc., from assets of the Berkshire Symphonic Festival Inc., accumulated from profits through the years from 1934 to 1945.

Gave Shed to BSO

In 1945 the Berkshire Festival organization turned over its physical assets, including the $80,000 Music Shed at Tanglewood, to the trustees of the Boston Symphony Orchestra. Since that time the Tanglewood operation has been conducted solely by the Boston Symphony Orchestra, including the Berkshire Music Center, founded in 1940 by the late Dr. Serge Koussevitzky, for 25 years musical director and conductor of the BSO, who was succeeded by Dr. Charles Munch.

Dr. Koussevitzky retired at the end of the 1948-1949 season as conductor of the BSO but continued as director of the Music Center until his death on June 4, 1951, at the age of 77.

President's Report

In her final report to the trustees yesterday, Miss Robinson Smith proposed, and the trustees approved, the following:

1. That the sum of $5,000 be given to the Berkshire Music Center Revolving Fund, the income to be used for scholarships to be known as the Berkshire Symphonic Festival Scholarship. (The president and trustees expressed the hope that this amount will be matched by the Rockefeller Foundation grant and that this matching fund will become an integral part of the Berkshire Symphonic Festival Scholarship Fund). Miss Robinson Smith, in making the proposal, told the trustees that this move was made "in order that the name of this great Festival, founded in our Berkshires, shall remain alive and be an inspiration to all students receiving scholarships."

Free of 'All Strings'

2. That the balance of the financial assets of the corporation, which may approximate $20,000, be given to the Pittsfield Community Music School Inc., that it be placed in the Agricultural National Bank of Pittsfield in an account to be known as the Berkshire Symphonic Festival Scholarship Fund and that Laurence Connor, or an officer of the bank, be a trustee of this fund, along with two or more members of the board of the Pittsfield Community Music School Inc. (The Festival president proposed, and it was approved, that: "It would further be the wish connected with this gift that the board of the Pittsfield Community Music School be free to give one or more scholarships each year to those scholars they deem sufficiently talented and that they may decide quite freely when and how these students are to benefit." The board of trustees of the Berkshire Symphonic Festival wish this gift to be free of "all strings" in order that with changing conditions in the years to come, the persons then in charge of the Community Music School may act and decide in accordance with then existing conditions. It is to be hoped that the total sum donated may be considered as capital and that only the income will be used for scholarships. Should any persons in the future care to make a financial addition to this fund it may be accepted, provided the name of the scholarship fund is in no way changed.)

3. That the interest of the Berkshire Symphonic Festival in the book, "Music Under the Moon," a history of the Festival, written by John G. W. Mahanna, be turned over to the Pittsfield Community Music School and that the account now established in the trust department of the Agricultural National Bank be transferred after Jan. 1, 1957 to the Berkshire Symphonic Festival Scholarship Fund of the Music School.

In 1934 when the Berkshire Symphonic Festival was organized by a small group of Berkshire men and women, spearheaded by Miss Robinson Smith, the first and only president, the bylaws specified that all assets of the Festival, upon dissolution, should become the property of the American Red Cross in Washington, D.C. However, because the purpose of the organization was to encourage education in the arts in the Berkshires and to develop musical and artistic talents in this area, Miss Robinson Smith pointed out to the board in her report that there now is in Berkshire County the Pittsfield Community Music School, whose purposes are similar to those outlined in the Festival bylaws. In view of this, the board members approved her proposal to establish the Berkshire Symphonic Festival Scholarship Fund.

Expresses Appreciation

In closing, the Festival president's report said:

"Were I a great poet or even a prose writer, I would know how to express myself at this last meeting of the board of the Berkshire Symphonic Festival. But you all know me too well to think for a minute that I could be able to put into words the many feelings of appreciation and affection I have in my heart for you members of the board and the many Berkshireites who have been the known and unknown supporters of our efforts.

"Just let me thank you and hope that I may, for many years, be among you all. Thanks for taking me in with you and thanks for letting us help one another to make possible this great and beautiful Festival which is now being carried on successfully by others."

"MUSIC UNDER THE MOON" - - - $2.50 PER COPY

Mallinson, Hort

200 So Broadway
Tarrytown, NY
April 11,59

Dear Ed,

Further re the Good Neighbor thing, my interest goes back more years than I can recall. In prep school my interest in the Spanish language language was inordinate.

In the sanitorium in Saranac Lake many of the patients were from that general area and lasting friendships were developed.

I've championed the Puerto Ricans in N Y for many years - they are, for the most part, a sober, hard working, family prizing group who are badly and undeservedly maligned.

In 1953 I clipped the New York Herald Tribune, the only morning New York paper obtainable in the Adirondaks, for approximately two months. The results were, to me, disgusting; very little more than reporting of bus and rail disasters and the like.

I've had a tentative date with Bixby, the governors press secretary, for some time - I'm sure that with his investments in Venezuela Rockefeller would not be cold.

My purpose in talking with you is simply to get your reaction. As I told Miss Hogg, I'll be in the Scarsdale office of Encyclo. Brit. every morning and shall have the afternoons for other things, such as the column idea, samples of which Jap has. I had had reason to think that the Westchester Group was buying, but no. Now I'm wondering about the Long Island Newsday or Whitney's Herald Tribune together with the suburban radion outlets he has acquired.

I felt really bad about Bill Henry going back to the Coast; I can't help but feel that he was given a rather poor deal.

Shall look forward to seeing you when the pressure subsides a bit.

Sincerely,

Hort Mallinson

Good Neighbor Through Good Health

It has long been the conviction ofthe writer that the United States has not only neglected its neighbors to the South, but had deported itself like an oaf in theg general field of relations.

It seems that approximatley every two years there is a rash of activity and the fact that we have millions of what should be at least good neighbors, if not almost fellow citizens, comes into the limelight. We rush important members of the government to Central and/or South America, whose perigrinations are given front page space in the press. Paens of praise are heaped upon the heads of the governments (in some cases embarrassment results) everlasting accord is emphasized and more recently insults in verbal and more material forms have been circumvented if possible.

Will we, supposedly a country composed of the most clever most prosperous, most successful, most magnanimous people on this earth, ever learn? It might be well worth a try. There are three Americas; North, Central and South, but is it not really one big America? Europe is experimenting or at least giving serious thought to the measure of some of the international boundaries. The complication of the language barrier is not inconsiderable. In the Western hemisphere there are only three languages; English, Spanish and Portugese. One day there will be a highway from one extremity to the other. How many decades or generations ago was it started?

In 1954 A. T. Steele did a series of five articles which appeared across the country. It was entitled "Communism in Latin America". How many do you suppose even recall that it appeared?

You may be reasonably certain that the picture, which was exceedingly unattractive then, is considerably less tasteful now. The Kremlin doesn't forget fertile fields; its memory is much sharper than ours.

It is this citizen's suggestion that an entirely new approach be seriously considered. It would be based upon the elemartary principle that good health is the greatest gift an individual or a people could receive. This nation enjoys a state of physical well being which is the envy of the balance of the world. We could prove our regard for our southern neighbors by helping them to achieve a better health standard; by simply sharing with them the knowledge of medicine, the wonder drugs we have developed and the incomparable equipment we possess.

To go a long, long step farther, we might develope a genuinely effective plan basde upon the following outline:

Proposed Plan Outline

1. Periodic symposia or, if possible, seminars.

Such to be available to practicing physicians of Central and South America and the Caribean Islands.

2. Establish many more fellowships for young doctors and interns.

Permit them to work in our sanitoria and hospitals for six months or longer.

3. Set up a completely integrated exchange arrangement for students.

Students of both medicine and the other sciences would be very carefully chosen and equal care would be exercised in the selection of the schools. For example, a Peruvian from a remote community would not be enrolled in a school in one of our large urban centers where the surroundings might prove distracting. The students from this country might be studying mineralogy or majoring insomething else in which their presence in Central or South America would be advantageous.

4. Supply drugs and equipment particularly to expand the efforts against tuberculosis, a disease which still takes a very high toll. Send technicians to supervise the installation and operation of the equipment.

5. Secure funds for this undertaking by appealing to ten or twleve of the largest industrial and business enterprises in this country. Th e good will accruing would repay them many times over. Private enterprise is best fitted to create and follow through on such an undertaking.

'GO SLOW' THE CUE IN LATIN AMERICA

Young Farm Folk, Back From Jobs in Area, Advise U. S. Visitors to Cease Hurrying

Special to The New York Times.

WASHINGTON, April 14 — Americans, when in Latin America, should "Go Slow."

That word of advice came today from three young New York State farm pepole. They had returned from six months of working on Latin America farms and had brought back some definite ideas for making the United States better understood in other countries and for promoting in Americans a better understanding of other countries.

Marjorie J. Dunn, 22 years old, of Hornell, N. Y., who was in Panama, summed it up this way:

"Americans 'hurry, hurry, hurry.' You can't force people to do things our way in a rush. We must learn to understand we are dealing with different customs. We shouldn't call them underdeveloped countries.

Mary Lue Morgan of Linwood, N. Y., and Paul H. Wiley of Johnsville, N. Y., nodded agreement.

Paul, who celebrated his twenty-first birthday in Peru, said:

"The technical people we send down there should be half a step ahead. But if they get too far ahead, they lose the people. And if they slip back to the level of the work the people there are doing, they won't get anything accomplished. The main thing is not to run away from the people with what we are trying to show them."

Mary Lue, who was in Chile, recalled that the canal from the Pacific Ocean to inland northern Peru was ten years in the making.

"We could have built it in six months," she said, "but what good would that have done? The people learn by doing."

With them was another New York State farmer, R. Dale Bell of R. F. D. 4, Cortland. He had spent six months in Australia working on a dozen sheep ranches.

"You have to learn the languages there, too," he remarked with a grin.

The four were among twenty-two young farm people from fifteen states who went to ten countries under the International Farm Youth Exchange, a people-to-people program arranged by the National 4-H Club Foundation and the Federal-State Cooperative Farm Extension Service.

Soviet Trade 'Fizzle' Seen

Special to The New York Times.

BOSTON, April 14—Walter Muller, Chilean Ambassador to the United States, asserted today that the Soviet trade offensive in South America was a "fizzle."

Left wing parties in South America, he said, had made "great propaganda out of Russian trade offers" but, so far, "the offers were all talk and no action."

The Ambassador spoke at a luncheon in the Sheraton Plaza Hotel marking the opening of a five-day New England conference on world trade.

CABLE ADDRESS: FORAFFAIRS, NEW YORK

May 22, 1959

Dear Ed:

I hope very much that you can come to dinner at the Council on Friday evening, June 5, at 7:30 o'clock, to meet the Honorable Paul G. Hoffman, Managing Director of the United Nations Special Fund.

Mr. Hoffman will speak on the purpose and scope of the Fund's operations. There will be the usual discussion following his remarks. Mr. John J. McCloy will preside.

Besides Council members, we shall have with us representatives of the Council's affiliated Committees on Foreign Relations which are located in twenty-nine cities throughout the country. During June 5 and 7, the Committee representatives will be holding their annual conference at the Harold Pratt House.

As a convenience to our out-of-town guests, business dress will be worn.

Please let me know whether you can be present.

Sincerely yours,

Walter H. Mallory

NOTICE TO MEMBERS

The annual general meeting of the Council on Foreign Relations will be held at 3:00 P.M. on Wednesday, October 8th, 1958, at 58 East 68th Street, New York, for the election of Directors of the class of 1961.

The following gentlemen have been nominated for Directors by the Nominating Committee:

Hamilton Fish Armstrong
Thomas K. Finletter
David Rockefeller
Whitney H. Shepardson
Charles M. Spofford
Adlai E. Stevenson
John H. Williams

A formal proxy is enclosed. In case you approve of this slate, it is requested that you fill in and return to me this proxy with the understanding that I shall cast your vote for the election of the above nominees.

Very truly yours,

W. H. Mallory

tape sent Oct. 9.

Dear Mr. Murrow:

Enclosed is a copy of the script for the film "Deep Sea Survival" which we are producing for the U.S. Air Force. It is an important film in that it will give Airmen some taste of what they will be up against should they ever be forced down at sea. The film relates four authentic stories of survival at sea.

Both the Air Force people and I felt that the narrator who introduced these case histories should have the sober, factual, voice of authority which is characteristically yours. We would appreciate it greatly if you would consent to do the narration.

Your part would be that of the "First Narrator" whose voice introduces the film, concludes it, and returns intermittently through the film. The total length of this narration is only about three minutes. We could record it "wild", without picture, and consume no more than 15-20 minutes of your time. For your convenience we might do it at one of the CBS studios in your building, if that could be arranged. (I've marked in red the sections of narration which concern you.)

We are recording the other narrators whose voices are heard in the film on Monday afternoon. If Monday is not convenient for you, we would suggest a date two weeks later, after I have returned from an out-of-town trip.

I may be contacted at our New York editing room: EN 9-2002 or at PL 7-3638. Incidentally, the fee allotted in our budget for this narration is necessarily low: $75. I hope that this is not a stumbling block.

Sincerely yours,

Lawrence Mollot

APPROVAL CERTIFICATE

PROJECT 19255 - DEEP SEA SURVIVAL

1. I have read the attached script and find that it meets the requirements of the Requesting Agency, is technically correct and conforms to established procedures.

2. The script, however, does not satisfy current training aid requirements which demonstrate HOW to survive. To cover these requirements FILM TRAINING AIDS will be requested to cover such specific training problems such as:

a. How to prepare for water entry from parachute with A-1 Series Kits attached. This will include instruction on operation of canopy quick release; timing, etc.

b. How to board one-man rafts fully inflated and how to repair and inflate damaged one-man rafts.

c. How to repair and care for multi-place rafts at sea.

d. How to right and board multi-place rafts which have capsized in high seas.

e. How to erect canopies and sun shades on all rafts.

f. How to use Mark 13 Modo Day-Night flare from Mae West and from raft when blinded with oil, etc.

g. How to signal from water or raft with signal mirrors.

PROJECT 19255

DEEP SEA SURVIVAL

PURPOSE OF FILM AS STATED IN ORIGINAL REQUEST

Acquaint aircrew personnel with the violent conditions to be faced in survival at sea, and with approved methods which can help the survivor to endure his situation.

INTENDED AUDIENCE

Experienced aircrew personnel.

PRODUCTION SPECIFICATIONS

Type of film: 35mm color.
Length: estimated 29 minutes
Photography: 100% off-screen narration.
Location: Ramey AFB, Puerto Rico.

FILM CONTENT

1. Introduction.
2. Story of one pilot who ejected over North Atlantic.
   a. Boarding one-man dinghy in heavy weather.
   b. Signalling
3. Story of eight men on 20-man raft.
   a. Inflating and boarding the raft.
   b. Group morale
   c. Operation of Gibson Girl (visual demonstration only)
   d. Rationing of water (visual demonstration of solar stills)
   e. Results of drinking sea water.
4. Story of four men on 6-man raft.
   a. Sea sickness
   b. Capsizing, righting and trimming of raft.
   c. Discomfort; salt sores, cramps, sunburn, rigging sunshade, etc.
   d. Catching and storage of rain water.
   e. Dangers of landing through reefs and in surf.
   f. Difficulties of trying to maneuver raft.
   g. Catching sea bird for food.
   h. Signalling.
5. Story of 20-day survivor in one-man raft.
   a. Foraging from the sea.
   b. Maintenance of morale
   c. Exercise
   d. Shark danger.
6. Conclusion; i.e. with courage and endurance an airman can survive if he knows how to use his survival equipment and if he has the will to live.

PROJECT 19255

DEEP SEA SURVIVAL

FADE IN:

A. STANDARD USAF CREDIT TITLES
(see specifications)

(MUSIC:
Ominous music suggestive of wind and sea such as FINGAL'S CAVE OVERTURE by Mendelssohn; or La Mer Suite by Debussy.
Take music under for narration).

FADE OUT:

FADE IN:

1. MLS EXT DAY
SEASCAPE TWO AIRMEN IN FOUR-MAN RAFT.
Big rolling sea. Airmen on raft will only be seen now and then, as waves in front of camera subside and as they reach crest of a wave.
Sunshade is rigged on the raft. They each wear Mae Wests. One wears helmet, one wears fatigue cap with handkerchief tucked in around the edges. They are both bearded.

FIRST NARRATOR

The files of the Air Force, Navy and Marine Corps are filled with case histories of men who have survived on the open sea.

The happenings in this film have been taken from the factual accounts of hundreds of survivers.

CUT TO:

2. MS EXT DAY
TWO AIRMEN IN FOUR-MAN RAFT

Same business as above.

The purpose is to give you an idea of the ordeal of deep sea survival - to show you that survival is more than luck; to show you that it takes courage, endurance, a thorough knowledge of how to use your survival equipment and - above all - the will to live.

CUT TO:

3. MCU EXT DAY
TWO AIRMEN IN FOUR-MAN RAFT
(same business as above

DISSOLVE TO:

4. MS EXT NIGHT EFFECT - HIGH ANGLE
PILOT STRUGGLING IN WATER: RAFT
The pilot is floating in the water; struggling to pull his raft towards him, which is attached to his harness by a lanyard. His parachute is floating around him.

CUT TO:

5. CU EXT NIGHT EFFECT
PILOT: RAFT
PILOT STRUGGLING WITH CHUTE:
GETS RID OF IT.

CUT TO:

Our first story is about a fighter pilot who had to eject over the North Atlantic.

(Continue Narration through optical)

(SNEAK MUSIC OUT)
(WATER EFFECTS IN SYNC WITH ACTION. CONTINUE THROUGHOUT PICTURE WHENEVER SCENE DICTATES)

SECOND NARRATOR (FIGHTER PILOT)

If I hadn't been wearing my exposure suit, I'd have died in 10 minutes in that cold water. Wearing that suit was one thing I did that was right. But I hadn't operated my quick-release buckles properly and the canopy was still with me.

Either I got rid of it or it would have drowned me. If I'd been able to see, it would have been easier, but it was too dark and my panic button was pushed all the way down.

6. MC EXT NIGHT EFFECT
(Same as scene #3, different angle)
PILOT: RAFT

Pilot tries to pull himself into stern of raft. Fails but holds on.

I'm not sure how I got clear of the chute but I did; and then I tried to get into the raft.

CUT TO:

7. CU EXT NIGHT EFFECT
PILOT: RAFT

Tries to get into raft again; falls over.

It was the hardest thing I ever did. I couldn't see it in the darkness; and I could barely feel it with my half-frozen hands.

DISSOLVE TO:

8. LS EXT DAY
SWIMMING POOL, RAMEY AFB

In foreground, same pilot as in previous scenes trying to get into dingy. Other class members (four or five) lining edge of pool, laughing and shouting advice. Pilot is almost in dingy when it capsizes. Everybody laughs; -

During our survival training it had been just fun. It only took a couple of tries to get in and out of a one-man dingy. It was so easy then.

CUT TO:

8a SWIMMING POOL RAMEY AFB
(CU)
Tries again and makes it.

I had on a bathing suit; the water was warm; I wasn't exhausted and scared sick.

DISSOLVE TO:

9. MS EXT NIGHT EFFECT
(same as scene #4
PILOT GETTING INTO ONE-MAN RAFT
IN OCEAN
He "comes to" and gets his second strength. He now slowly works his way into the one man raft.

But everything was different in the North Atlantic.

10. CU EXT NIGHT EFFECT
PILOT GETTING INTO RAFT.
HE IS SUCCEEDING.

Finally I got the hang of it, - and finally the strength to do it.

DISSOLVE TO:

11. MLS EXT DAWN
OCEAN SWELLS (SUBJECTIVE CAMERA)

This is a view as seen by the pilot on the raft. We (camera) ride from crest to trough. Suggest holding camera by hand in small boat; include feet of pilot in lower f.g. and bit of raft (prop.) Keep horizon as level as possible.

By dawn I had managed to get the sea anchor out and sit up. But now I was afraid of capsizing. I'd let a little air out of the raft to make it ride lower; and I remembered what the book said.

CUT TO:

12. CU EXT DAY
BOTTOM OF RAFT: PILOT'S LEGS.

Raft is full of water sloshing over pilot's legs.

"Filling the raft with water improves its stability." That's a joke! You can't keep it out!

CUT TO:

13. MC EXT DAY
PILOT IN RAFT

Pilot is hauling in his kit. He is an exhausted man trying to think, trying to do something with numb hands. He's fighting but clumsy. He takes radio out of kit and zips the kit closed again.

He starts operating radio.

CUT TO:

14. CU EXT DAY
PILOT IN RAFT, using radio.

Raft suddenly capsizes and pilot goes over, losing radio. He struggles to pull the raft back to him.

He starts crawling aboard again.

Pilot struggling to board raft.

SLOW DISSOLVE TO:

As soon as I could see I hauled in the kit to get the radio, and I did one more thing right. After I took the radio out, I zipped the kit closed again, - even before I tried to get a signal off.

I didn't get much broadcast time. A gust of wind came barrelling out of nowhere and caught me by surprise.

(pause)

The radio was lost, - sunk - and a lot of my morale sank with it; but I still had the raft, - she was clipped to my "Mae West."

All I had to do was get aboard again!

(pause)

15. MS EXT DAY
PILOT IN RAFT

He flops into raft.

You can do it if you have to.

(pause)

Now it was time to be sick.

Actually I'd been feeling sick for hours but with a belly full of sea water in my stomach I went into the heaves.

Pilot's back is to camera as he leans over the stern and simulates vomiting.

DISSOLVE TO:

16. CU EXT DAY
PILOT IN RAFT

Pilot lies exhausted. No movement.

An hour or more later I was still vomiting.

(SOUND EFFECT: OVER WATER NOISES THERE IS THE SOUND OF AIRCRAFT IN FLIGHT. THE DISTANT AIRCRAFT SOUND INCREASES AND THEN DECREASES. KEEP SOUND OF AIRCRAFT UNDER PILOT'S VOICE.)

Once I heard a plane circling but I didn't even look up. I guess I didn't care. I just lay there and thought about it.

Pilot's body moves, only slightly. Then he rolls over and struggles to sit up.

But I knew the boys were shooting the works to find me, and they wouldn't have a chance unless I helped. I had to do something!

CUT TO:

17. MLS EXT DAY
PILOT IN RAFT.

Pulls in kit; un-zips it; this is a struggle.

ACTION CONTINUED

He takes flares out of kit and fumbles with them.

The water was too rough for a sea-dye marker; the day too gloomy for a signal mirror.

Flare! Okay, but I could hardly think, and my hands were as stiff as stumps.

18. OMITTED.

DISSOLVE TO:

19. MS EXT DAY
PILOT IN RAFT

He is holding up and waving smoking flare and looking skyward.

By the time I got the flare up I thought I was too late. The boys might be off looking somewhere else.

(pause)

But I was wrong, - all wrong! - Thank God!

Aircraft is seen flying over pilot away from camera.

(SOUND OF AIRCRAFT ENGINES COMING CLOSER. SNEAK MUSIC IN. AIRCRAFT SOUND RISES AS AIRCRAFT SWEEPS OVER PILOT AND RAFT, WAGGING ITS WINGS; AND THEN ACFT SOUND FADES OUT)

(BRING MUSIC UP WITH BEGINNING OF FADE: HOLD THROUGHOUT OPTICAL)

FADE OUT:

FADE IN:

(Take music down with FADE IN; and under for voice of First Announcer)

20. MLS to MS EXT DAY HIGH ANGLE
EIGHT AIRMEN IN WATER
ROLLING OCEAN: BRIGHT SUN

Men: Captain (pilot)
1st Lt. (co-pilot)
2d Lt
T/Sgt.
S/Sgt.
Airman-First
Airman-Second (Rogers)
Airman-Second

The men are in the water; kit for 20-man raft and "Gibson Girl" are floating with a man in charge of each.

Man in charge of 20-man raft pulls release handle and raft inflates fully.

CUT TO:

21. MS EXT DAY
20-MAN RAFT: EIGHT AIRMEN

The men swim to the boarding stations and struggle aboard, helping one another as much as possible.
(This is a rugged action)

CUT TO:

22. CU EXT DAY HIGH ANGLE
ONE AIRMAN CLIMBING IN BOARDING STATION

(This may be any one of the men)

Shoot this from camera boat.

CUT TO:

FIRST NARRATOR

Recent Air Force and Navy records are full of stories of whole crews surviving.

These eight men survived a rough ditching in tropical waters. ~~Lt.~~ Capt. Springer, the co-pilot, kept the log. Here is the story in his own words.

(Music out; sneak in water and and wind sound)

THIRD NARRATOR'S VOICE (1st LT)

We had a rugged time boarding that raft from the water. It isn't easy when you're in top condition, and we were banged up to begin with.

23. CU EXT DAY
ONE AIRMAN CLIMBING IN BOARDING STATION

(Camera is now on board 20-man raft)

Airman squeezes and struggles over into the raft. Turns immediately (on his stomach); reaches back to help in another one of the men; and heaves a line to another.

CUT TO:

I can't even remember too clearly how we did it. But I do remember that everybody helped everybody else.

24. MS EXT DAY
20-MAN RAFT: FIVE AIRMEN.

They are all in. Two of them are helping the last man in. One is pulling in the "kit"; another is pulling in the "Gibson Girl," etc.
Captain giving orders as he works.

CUT TO:

Neither can I recall how long it took for all of us get aboard. It seemed like hours, but maybe it was only a matter of minutes, and it took all the strength we had.

25. CU EXT DAY
1st LIEUTENANT & CAPTAIN

Lt is lying prostrate holding his left arm.
Captain is feeling it, moving it gently.
Captain is tough but pleasant; so is Lieutenant who grins back at the captain and makes some flip remark.

CUT TO:

But Captain Wallace didn't give us a chance to sag. He kept us busy. Only my left arm was broken so he told me to keep the leg and handle the signalling mirror!

26. MS EXT DAY
ALL MEN ON RAFT

They are obviously dazed but busy.
Captain is giving orders to everybody.
One airman (Airman Rogers) lies prostrate. Captain gets hold of him to keep him from sliding around.

CUT TO:

It was one order after another. Get your boots off! Get rid of anything sharp enough to cut the raft. Haul the kit aboard!

27. CU EXT DAY
CAPTAIN

Tired, soaking wet, exhausted but giving orders quietly. (he only gives a few orders in this shot. Don't try to imitate or sync lip movement to narration). He is still holding on to Airman Rogers.

Inflate the boarding stations.

Let's get that canopy up.

CUT TO:

28. MCU EXT DAY
CAPTAIN AND AIRMAN ROGERS.

Captain turns airman over on his back; talks pleasantly to him but not sympathetically. Gives him a soft punch in the shoulder. His attitude is "Don't let it get you down, boy. Let's go."

He kept pushing us, and he was right. That was no time to sit around and think. Somebody might get to feeling sorry for himself.

CUT TO:

29. MLS EXT DAY
ALL AIRMEN ON RAFT

Canopy going up.

Everyone of us was sure we'd be picked up in a few hours, but the Captain kept us working as if we were going to be out there for weeks - and he was almost right.

SLOW DISSOLVE TO:

30. MLS EXT DAY
ALL AIRMEN ON RAFT: CALM SEA

Raft canopy is now up. When we get close enough to see it, the raft is shipshape, clean, with all gear stowed.

On the third day the situation toughened up a bit. We hadn't seen a ship or a plane. Airman Rogers was beginning to talk to

30. CONT'D.

1st Lt's arm is in a sling. Sgt has his head bandaged. The "Gibson Girl" antenna is aloft and the Sgt cranks it. Solar Stills are operating. All men are fishing. All men are bearded.

CUT TO:

31. MS EXT DAY
ALL AIRMEN ON RAFT:

(Same business as in scene 21 above, except that camera is now on the raft under the canopy.)

1stLt. suddenly jerks his line and yells. All try to help him pull in his fish.

CUT TO:

32. CU EXT DAY
1st LIEUTENANT & CAPTAIN

The Captain is helping the lieutenant pull in his fish. Lt reaches down over side of raft to catch fish with his right hand.

CUT TO:

himself and in spite of careful rationing, all food and fresh water were gone.

Captain Wallace was still keeping us busy. I kept the signal mirror sweeping the horizon; We took turns with the Gibson Girl. We played games, - spelling games, memory games, - anything to keep us going. Some of us fished all the time, - but no luck until I made the great catch.

For this fish I won two prizes. He was the <u>first</u> and the <u>biggest</u> we caught.

33. ECU EXT DAY
FISH IN 1ST LT'S HAND

The fish is flapping; he is hardly bigger than the Lt's hand.

For eight men he wasn't much but he gave us hope. Where there was one there must be more. He convinced us we would not starve.

DISSOLVE TO:

34. CU EXT DUSK EFFECT
1stLT AND SGT

Sgt takes slug of water distilled by Solar Still, then passes it to Lt who takes his ration. Lt. then passes last bit of water to Airman Rogers who is "behind camera."

Just before dark we divided the precious water distilled during the day. There wasn't much to go around.

CUT TO:

35. CU EXT DUSK EFFECT
AIRMAN ROGERS

He reaches for water; give container a disappointed look then gulps it down; and throws container into bottom of raft.

Nobody complained except Rogers. He never seemed to get enough. At first we thought he was still suffering from the shock of ditching, but his temper wasn't improving.

FAST FADE OUT:

FAST FADE IN:

36. MS EXT DAY
ALL AIRMEN ON RAFT: UNDER CANOPY

As before everybody fishing and busy. Only airman Rogers is down; curled up in the bottom; face and head covered with hands as if hiding. (Center on Airman Rogers)

The next day he was much worse - retching and feverish.

36. CONT'D.

Suddenly Rogers rocks to his knees; intent, excited. He begins shouting and pointing off scene.
The other men look but realize he's seeing things. They force him back and try to calm him.

At noon he saw an island with pine trees that wasn't there.

CUT TO:

37. MCU EXT DAY
CAPTAIN, LIEUTENANT & ROGERS

Lt tries to calm Rogers; pillows his head with gear of some sort. Captain scoops up sea water with a container and pours it over Rogers' clothes.

We thought the sun and dehydration had been too much for him. We decided to keep his clothes wet with salt water so that he'd lose less body water by evaporation.

Captain scoops up another container of sea water and is about to pour it on Rogers clothes when the Airman suddenly sits up; grabs the container from the Captain; and gulps the sea water.

That's where we discovered the truth. Rogers had been sneaking drinks of sea water at night!

CUT TO:

38. CU EXT DAY
CAPTAIN & AIRMAN ROGERS

Captain grabs container of sea water away from Rogers. (Center on Rogers). Rogers yells at the Captain.

He said he's been drinking plenty of it. He said he'd go on drinking it.

CUT TO:

39. MS EXT DAY
ALL AIRMEN ON RAFT: UNDER CANOPY

2d Lt is holding Rogers down.
Captain and other men are staring down at Rogers.
We see the faces of only Rogers and the Lt. The other men have their backs to the camera; they are as motionless as the swaying of the raft permits. They are horrified.
Rogers is still babbling.

The Captain had told us about drinking sea water. He had forbidden us to even try it. Now we could see what it did to a man.

CUT TO:

40. CU EXT DAY
AIRMAN ROGERS & 2d LT

Airman Rogers stops babbling and falls back exhausted.

But Rogers was lucky - mighty lucky. We had only a few more hours on the raft.

DISSOLVE TO:

41. MLS EXT DAY
AIRMEN ON RAFT: CRASH BOAT

Rogers is strapped to stretcher which is being hoisted by a sling to the crash boat.

We all survived.....but Rogers did it the hard way.
When we were picked up, he wasn't quite dead or totally mad, - but almost.

CUT TO:

42. CU EXT DAY
ROGERS STRAPPED IN LITTER

Litter is being hoisted aboard Crash boat.
Rogers is struggling deliriously.

(NO SOUND)

FADE OUT:

(MUSIC:
Bring in music; take it up full and hold through optical)

FADE IN:

43. LS EXT DAY OVERCAST
6-MAN RAFT: FOUR AIRMEN AFLOAT

Capt Sykes: Pilot
Lt. Ricci, co-pilot
T/Sgt, Webber
S/Sgt McDill
They are aboard in a rough sea; sea anchor out.

CUT TO:

44. MLS EXT DAY
6-MAN RAFT: FOUR AIRMEN
(Same as preceding scene #34)

Two men are sitting in the bottom of the raft; knees up; legs intertwined.
The Lt and one Sgt are leaning over the raft vomiting. Their backs to camera.

CUT TO:

45. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN
(same as preceding scene #35)

(Take music under for narrator)

FIRST NARRATOR

In a four or six-man raft, men face all the hazards of deep-sea survival with a few variations.

Exposure, - balance, - and cramped positions have to be added to the problem. This crew of a C-47 made it to the raft because ~~Captain~~ Major Sykes, the aircraft commander, had made sure they were well drilled in ditching.

(sneak music out)

(FOURTH NARRATOR'S VOICE)
(VOICE OF PILOT TELLING STORY)

It wasn't a good ditching.
We had had to ditch in a hurry in the late afternoon. We weren't even sure our MAYDAY had been heard and a low ceiling made for lousy visibility.
But still we had some luck. We had managed to get aboard our raft with the Gibson Girl, - and nobody hurt.

46. MCU EXT DAY HIGH ANGLE
6-MAN RAFT: FOUR AIRMEN

Lt and S/Sgt still hanging over the raft sick. Captain and T/Sgt are trying to fly the kite carrying the Gibson Girl Antenna. All are clean shaven.

After we put out the sea anchor, I wanted to get the Gibson Girl working. But Sgt. Webber and I couldn't get the kite up. It was water-soaked. Lt Ricci and Sgt McDill were too sea sick to help.

CUT TO:

47. CU EXT DAY
T/SGT
Sgt drops kite he's working on and turns to heave over the side.

I don't think anyone could have been out there and not got sick. It was Sergeant Webber's turn next;

CUT TO:

48. CU EXT DAY
CAPTAIN
Still trying to put the kite together; fighting sea sickness; then finally turning himself over the side to be sick too.

and then mine.

CUT TO:

49. MLS EXT DAY
6-MAN RAFT FOUR AIRMEN
All prostrate.

Funny? Seasickness can take away your will to survive faster and easier than anything that will happen to you.

DISSOLVE TO:

50. MLS EXT DAY
6-MAN RAFT: FOUR AIRMEN
All prostrate.

(Move camera boat in toward raft during this scene.)

We didn't move for more than two hours. We couldn't. I was trying to remember I was ranking officer. Lives depended on me; but all I wanted to do was die. It was the easy way out.

CUT TO:

51. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN

Raft capsizes. Captain holds on. Sgt Webber starts after Gibson Girl. Captain grabs him and pulls him back. The other two men hold on to raft.

Then suddenly we were back in the sea. Webber tried to get the Gibson Girl, but in that sea he wouldn't have had a chance. We'd have lost him, too.

CUT TO:

52. MS EXT DAY HIGH ANGLE
FOUR MEN & RAFT
The raft is capsized. The men set about righting it. The Lt gets hold of the grips and struggles to right the raft.

Hard work, cold water, and the absolute necessity to get back in that raft were good for us, - I suppose.

CUT TO:

52a. CU EXT DAY (INTERCUT)
Lt rights raft.

(NO SOUND)

CUT TO:

52b. MS EXT DAY HIGH ANGLE
FOUR MEN & RAFT

Captain and one man on one side of raft hold it down, while one of the two men on the proper side climb in one at a time.
Then Captain and man on his side work their way around raft and re-board.

(NO SOUND)

CUT TO:

53. MCU EXT DAY
6-MAN RAFT: FOUR AIRMEN ABOARD

Captain, the last man, climbs aboard; everyone else balancing and helping. Sgt. McDill slumps exhausted, sick.

Now we were twice as wet and five times as cold, but oddly enough only half as sea sick. Three of us were doing better. Only McDill was still down.

CUT TO:

54. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN

We added weight to the sea anchor; and let some air out of the raft. She began riding better and then there was noting for us to do but sweat it out.

SLOW FADE:

(during optical bring up sound of water and wind under Captain's voice; and continue narration)

We had a rough night; - cold; - wet; - cramped; - sick; but we didn't dumped again.

SLOW FADE IN:

55. MLS EXT DAY BRIGHT
6-MAN RAFT: FOUR AIRMEN
(calmer sea than in preceding scenes)

Men are trying to undo the kit. Sgt McDill is supported by one of the men. Solar stills are out. Men are showing day old beards.

The next morning we were kind of beat up. That galloping bathtub and rubbed sores in our butts and backs. But two things gave us new hope.

CUT TO:

56. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN
Same as preceding scene.

We still had the equipment in the kit; and more than anything else we had lost our fear of the raft. Even when it was sloshing with water, we knew it would support us.

CUT TO:

57. MCU EXT DAY
6-MAN RAFT: FOUR AIRMEN
Men are eating; helping McDill.

We ate a little of the candy ration, and I would have given a year's pay for a drink of fresh, ice water.

CUT TO:

58. MLS EXT DAY
6-MAN RAFT: FOUR AIRMEN
Sun shade is being rigged.

Now the sun was going to be our biggest problem. Already our faces and necks were feeling hot and sore.

CUT TO:

59. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN
T/Sgt Webber and Lt are rigging sun shade and Captain is smearing ointment on Sgt. McDill.

We rigged the sun shade and smeared ointment from the kit over our salt sores and exposed skin.
That reflected sunlight, however, was as bad as direct sun. It burned us under the chin and nose, behind the ears and on the upper eyelids.

DISSOLVE TO:

60. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN
All airmen have covering over their heads and faces made from T-shirts.

Captain points right frame out to sea. Sgt Webber and Lt look where he pointed. And begin taking down the sun shade, frantically.

(WIPE RIGHT TO LEFT)

WIPE TO:

By noon we had that problem under control. We made hats and face coverings out of our T-shirts. But even protected from the sun it was hot out there and our eyes were dry and burning.

Then came the rain squall!

61. CU EXT DAY (RAIN)
6-MAN RAFT: FOUR AIRMEN

The four airmen are holding the paulin over their knees. They empty the first rain water topour off salt brine, and then let it fill.

(use fire hose for rain; rain is coming from right)
They hold their faces up to the rain.

CUT TO:

Although the rain hit so hard it hurt, still it felt good. Even McDill began to feel better. We filled every available container with fresh water.

62. CU EXT DAY (RAIN)
Sgt Webber and Lieutenant

They are filling one-half of their Mae Wests with water.

(WIPE RIGHT TO LEFT)

WIPE TO:

I thought surely we'd be picked up that second day, but it was no time to take a chance. Each of us filled half of his Mae West with fresh water; and we drank all we could.

63. MLS EXT LATE AFTERNOON EFFECT
6-MAN RAFT: FOUR AIRMEN

Raft has sun shade rigged again; Sgt McDill is still a sick man but trying to sit up now. The other three are pointing and looking

It was long after the rain squall had passed that we sighted the island. We'd flown over it the day

63. CONT'D.

off screen. (Pointing in the opposite direction from which the rain squall came.)

before, and I was kind of expecting to see it.

CUT TO:

64. ELS EXT LATE AFTERNOON EFFECT
ISLAND IN THE DISTANCE

Everybody was crazy to get out of the raft and get ashore, - but I was scared, - scared all the way through.

CUT TO:

65. MS EXT LATE AFTERNOON EFFECT
6-MAN RAFT: FOUR AIRMEN

All three men (even McDill) are arguing with the Captain. The Captain is shaking his head and telling them "no."

I knew it was one of those Carribean Islands with high-cliff shore lines surrounded with coral and heavy seas.
The raft was torture but it was safe as long as it was in deep water.

CUT TO:

66. MLS EXT EVENING EFFECT
ISLAND IN THE DISTANCE

At sea we'd survive somehow, - but we could be smashed, cut up and drowned in one quick minute on a shore like that.

CUT TO:

67. CU EXT EVENING EFFECT
6-MAN RAFT: FOUR AIRMEN
Arguing furiously; the captain holding his ground.

I wanted to get ashore as badly as they did, but I figured we had a good chance of being picked up, and it wasn't worth the risk of landing.

CUT TO:

68. MS EXT EVENING EFFECT
SHORE OF ISLAND

Waves crashing against coral.

I tried to tell them. You can't maneuver a raft! You can't sail it! You can't control it! It has no keel! Get in too close and you'll be caught between surf and cliffs; and in rip tides and coral.

No, sir! No Landing!

CUT TO:

69. MLS EXT LATE EVENING
6-MAN RAFT: FOUR AIRMEN
Island in far background. The argument is over.

They were good troops, and they accepted the "hard word."

CUT TO:

70. MS EXT LATE EVENING
6-MAN RAFT: FOUR AIRMEN
Airmen are silently watching the island go by.

But with another night ahead of us, and the island so close, - it wasn't easy to pass it up. I could only hope my decision had been right.

DISSOLVE TO:

71. MS EXT NIGHT EFFECT
6-MAN RAFT: FOUR AIRMEN

Men huddled together with sunshade pulled around them.
One man bailing.

That second night seemed worse than the first. Soaked to the skin with spray and fanned by a steady night wind, we huddled together feeling half frozen. We continuously shipped cold sea water, and bailed it out as best we could.

CUT TO:

72. CU EXT NIGHT EFFECT
6-MAN RAFT: FOUR AIRMEN
Same as above, closer angle.
Center on man bailing. He is exhausted but determined.
If possible show Sgt McDill lying half across the Captain's lap.

The raft bucked and banged us, and rubbed new sores into us for ten hours of darkness. I was afraid McDill wasn't going to make it, . .

DISSOLVE TO:

73. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN

Captain and Lt are trying to give Sgt McDill a drink of water.
Beards are more evident.

. . . but at dawn he was still alive.

CUT TO:

74. CU EXT DAY
Lt & Captain & Sgt McDill

Captain holding Sgt's head.

Lt grabs Capt's arm, and points behind him.

He wasn't in good shape but he was better than I expected.

CUT TO:

75. CU EXT DAY
STERN OF RAFT: SEA BIRD

A sea bird is perched on the stern of the raft; Sgt Webber is moving slowly toward it. (Capt Flint says Gooney Birds are available for this purpose and can be secured by their feet to the end of the raft) Sgt Webber makes a grab at the bird's feet.

Our first visitor was a welcome sight, - and Sergeant Webber made like an Indian.

CUT TO:

76. CU EXT DAY
SGT WEBBER HOLDING BIRD BY FEET

This gave us all a big laugh. But it wasn't just the "act" that pleased us. This was dinner.

CUT TO:

77. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN
Sgt is still holding bird; and has his knife in his hand.

We planned it carefully. Wring his neck; clean him and skin him. We'd save the entrails for fish bait.

(Pause)

For awhile we thought we wouldn't need this bird.

Sudden excitement.
Almost as one man they all look off to one side. Sgt Webber hands the bird to McDill.

78. LS EXT DAY
AIRCRAFT (SA -16) IN FLIGHT
Aircraft in distance flying from left to right screen.

(excited)
That SA-16 was flying a careful pattern but he was a long way off and he hadn't seen us yet!

CUT TO:

79. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN

Capt. grabs URC-4 radio and begins operation.
Lt starts flashing with signal mirror. Sgt Webber frantically gets sea marker overboard and gets smoke flare up.

I got on the radio! Ricci tried to hit the co-pilot in the eye with a flash of light! Sgt. Webber got the sea marker out and the smoke up!

CUT TO:

80. CU EXT DAY
6-MAN RAFT: FOUR AIRMEN
They are all doing something to attract attention. Capt shouting into radio; Lt flashing mirror and cursing to himself; Sgt Webber waving smoke signal and stirring water; Sgt McDill waving T-shirt.
Captain realizes radio is not functioning; shakes it; tries it again; throws it in the raft.

We cursed, prayed, shouted, waved and splashed water as if it would help.
I discovered the radio was water-soaked and useless.

CUT TO:

81. LS EXT DAY
AIRCRAFT (SA-16) IN FLIGHT

Flies on in distance, getting smaller and smaller.

Lt Ricci must have missed with the mirror.

CUT TO:

82. CU EXT DAY
6-MAN RAFT: FOUR AIRMEN

One by one they give up signalling. Finally only Sgt Webber is left holding his smoke flare.

The sea was too rough to spot dye marker from that distance; and the smoke flare must have been terribly small in that big ocean. I have never felt so low in my life and I know the others did too. For a while it seemed like the end of all hope.

DISSOLVE TO:

83. MLS EXT DAY
6-MAN RAFT: FOUR AIRMEN

Canopy being rigged.
They finish rigging canopy.

But we had to get the sunshade up again, and as soon as we started doing something we began to think again, - and to hope again.

CUT TO:

84. MS EXT DAY
6-MAN RAFT: FOUR AIRMEN

Sgt webber and Lt Ricci are carving the sea bird, and laying strips of meat on the gunwales to dry.

Getting the bird ready for eatingkept Ricci and Webber busy. I told McDill to stand look-out duty. He was getting worse fast now and this gave him something to <u>try</u> to do.

CUT TO:

85. CU EXT DAY
6-MAN RAFT: FOUR AIRMEN
Sgt Webber and Lt are slicing sea bird meat. Sgt. Webber is trying to watch for airplanes but his head keeps dropping forward like a man desperately trying to keep awake.
Captain pats him on the back.
Obviously all men are on look-out duty.
Sgt and Lt suddenly begin undoing sunshade. The captain is shouting.

Of course all of us were on the look-out for that SA-16.

When we saw him again he was closer, - much closer, -

CUT TO:

86. MLS EXT DAY
6-MAN RAFT: FOUR AIRMEN

Everybody signalling, shouting, and splashing.
Lt and Captain with mirrors;
Sgt webber with smoke flare and sea-marker; Sgt McDill with T-shirt.

and we were ready for him.

CUT TO:

87. LS EXT DAY
AIRCRAFT (SA-16) IN FLIGHT

Flying from background toward right screen.
Suddenly veers towards camera and drops down toward camera.

FADE OUT:

FADE IN:

88. ELS EXT DAY
AIRMAN IN 1-MAN RAFT: CALM OCEAN

This shot is to accentuate the smallness of one man against the sea. When we get closer to him we see that he is wearing his crash helmet; is clean shaven; and fairly rested. i.e. he has just been downed.

CUT TO:

89. MLS EXT DAY
AIRMAN IN 1-MAN RAFT

(same as preceding scene)
Airman is going through his kit, taking inventory.

CUT TO:

When he made that turn I knew he'd seen us.

It was the most beautiful sight I ever saw.

(BRING MUSIC IN AND UP WITH FADE OUT)

(Take music under for FIRST NARRATOR'S VOICE)

FIRST NARRATOR

The sea is not only a violent environment. Just the loneliness of it can be terrifying when a man must face it by himself.

It demands not only physical but Mental endurance as well.

Your mental attitude is one of the most important factors in your survival. The less a man worries and the busier he keeps himself, the better he'll do.

90. MS EXT DAY
AIRMAN IN 1-MAN RAFT

(same as preceding scene)

Going through his kit.

This pilot survived for twenty days! - Alone!

(Music out)

FIFTH NARRATOR'S VOICE

91. CU EXT DAY HIGH ANGLE
AIRMAN IN 1-MAN RAFT

(same as preceding scene)
We can see now, however, his store of food in the raft:

6 cans of pemmican; 3 chocolate bars; 1 small jar of malted milk; jar of vitamin tablets and 3 pints of water.

When I landed in the sea, I had 6 cans of pemmican; 3 chocolate bars; a small jar of malted milk, vitamin tablets and about three pints of water.

CUT TO:

92. ECU EXT DAY
PROVISIONS STACKED ON PILOT'S LEGS

(shoot this from the pilot's eyeview)
His right hand is also in the frame holding a knife. Provisions are 6 cans of pemmican; 3 chocolate bars; 1 small jar of malted milk; jar of vitamin tablets; and three can of water.

I decided to ration my food to make it last for at least twelve days.

DISSOLVE TO:

93. MLS EXT DAY
AIRMAN IN 1-MAN RAFT: CALM OCEAN

When we get close enough to him we will see that he is wearing a makeshift head covering (Arab type); that he is heavily bearded; haggard and sun-burned.

But of course it wasn't enough and I had to learn to forage from the sea. I picked over every floating thing for life of any sort.

CUT TO:

94. MLS EXT DAY
AIRMAN IN 1-MAN RAFT: CALM OCEAN

He is pulling a blob of sea weed into the boat.

Floating timber often had crabs clinging to it; and always barnacles. I cut the barnacles off with my knife and sucked out the meat.

CUT TO:

95. MS EXT DAY HIGH ANGLE
AIRMAN IN 1-MAN RAFT

(Same business as above)
Pulling in seaweed.
Grabs at a small crab.

Seaweed usually meant a really good dinner. Crabs, shrimp and sometimes minnows hiding in the weed were easy to pick out.

CUT TO:

96. CU EXT DAY
AIRMAN IN 1-MAN RAFT

Airman is holding crab so that it is plainly visible. There is no celebration here at all. He tears leg off of crab, cracks the claw and eats it. (Tech. Advisor, Capt Flint will see to the staging of this scene).
Opens body of crab with knife and prepares to eat that.

Tasted good too. There just wasn't enough of them.

DISSOLVE TO:

97. MS EXT DAY
AIRMAN IN 1-MAN RAFT

He has caught a seabird, and is ripping the skin off it.
Hands are bloody.

I couldn't have made it without the seabirds. They perch on the raft to rest. They're easily caught, and they usually have some fresh-caught fish still in their gullets.

CUT TO:

98. CU EXT DAY
BIRD CUT OPEN: AIRMAN'S HANDS

Airman's hand reaches into gullet and pulls out a fish.

These partly digested fish are tender and tasty. They were perhaps the best thing I had to eat next to my regular rations.

CUT TO:

99. MCU EXT DAY
AIRMAN WASHING FISH OFF IN SEA WATER

He washes it off; holds it up by the tail and drops it into his houth. (this can be a sardine)

(NO SOUND)

DISSOLVE TO:

100. MS EXT DAY
AIRMAN IN 1-MAN RAFT:

He is cutting up sea bird meat into small chunks. At the same time he is chewing.

The actual meat of the seabird tasted terrible - it stunk. I ate the liver and cut the meat up into small pieces, - very small, -

CUT TO:

101. CU EXT DAY
AIRMAN IN 1-MAN RAFT

Cutting meat into very small pieces. (this can be liver) Drops one into his throat and swallows it.

and I swallowed them whole. I had to force it down, but I knew I was getting nourishment.

CUT TO:

102. MS EXT DAY HIGH ANGLE
AIRMAN ON 1-MAN RAFT

He goes on preparing meat; and eating tiny mouthfuls.

Although my rations were scanty I kept my body in fairly good condition by foraging in the sea, and I lost only twenty pounds in twenty days.

DISSOLVE TO:

103. MLS EXT DAY
AIRMAN IN 1-MAN RAFT

He is looking up at the sky studying clouds and wind; and singing.

When I wasn't actually looking for food I tried not to think idly. I made myself do mathematical problems; -

104. MS EXT DAY
AIRMAN IN 1-MAN RAFT

He begins cleaning up the raft and continues singing.

CUT TO:

and day after day I sang all the songs I could remember.

105. CU EXT DAY
AIRMAN IN 1-MAN RAFT

Singing.

CUT TO:

Singing seemed to help more than a one sided conversation with birds and porpoises.

106. MS EXT DAY
AIRMAN IN 1-MAN RAFT

Exercising carefully. His knees seem to bend stiffly and his leg movements are cautious and awkward. His arm movements are more limber.

CUT TO:

I exercised only a little to save my energy, but I exercised regularly; and of course I always kept a lookout for rain squalls.

107. CU EXT DAY
AIRMAN IN 1-MAN RAFT

(same business as above)
Exercising carefully.
Then stops suddenly and remains very still.

CUT TO:

Toward the end, in spite of my exercises, I lost all feeling from the waist down.

108. MLS or MS EXT DAY
SHARK FIN CUTTING THROUGH WATER

This should be available in calm water round the Ramey AFB.

Some of my visitors were not too welcome.

CUT TO:

109. MS EXT DAY
AIRMAN IN 1-MAN RAFT

Sitting still and watching to one side apprehensively.

Usually I just sat there quietly and watched, and after a while the sharks left. But once a big blue character seemed too interested in me and my raft, -

CUT TO:

110. CU EXT DAY
AIRMAN IN 1-MAN RAFT

Picks revolver out of kit which has been wrapped in a rubber bag. He unknots the rubber bag; rolls it carefully off revolver.

- much too interested!

CUT TO:

111. MS EXT DAY
AIRMAN IN 1-MAN RAFT

He aims revolver over side, apparently holding it close to water.

Revolver jumps, as he fires.

I held the revolver only six inches away from his head, and I let him have it.

(Sound of revolver shot)

I watched him go down, and then the big silence crowded in around me again.

DISSOLVE TO:

112. ELS EXT DAY
FREIGHTER AT SEA

The freighter is coming toward the camera.

The last few days I'd seen things that couldn't be true. Once there was another fellow suddenly in the raft with me. Once I saw a city with lights. I was getting so I didn't believe what I saw, - but that freighter! It kept coming closer and closer.

(sound of deep whistle from freighter)

CUT TO:

113. MLS EXT DAY
(reverse angle)
AIRMAN IN RAFT

Airman waving shirt joyfully. (keep camera moving in as if it is on freighter and freighter is coming to the rescue.)

Finally I had to admit it was real. "Son," I said to myself, "You've hacked it!"

(Bring music in and up full)

FADE OUT:

FADE IN:

(MUSIC UNDER)

114. LS EXT DAY
SAME AS OPENING-LIVE-BACKGROUND SCENE
TWO AIRMEN IN FOUR-MAN RAFT: ROLLING OCEAN

FIRST ANNOUNCER

~~Since World War II~~ thousands of men have been forced into the sea and survived. Some have drifted for as long as ~~forty-eight days, and some even longer~~ 160 days, - but most

114. CONTD.

CUT TO:

115. MS EXT DAY
2 AIRMEN IN 4-MAN RAFT

SAME SCENE AS PRECEDING

have been rescued within 5 days.

Plan now to survive later. Study ~~deep~~ sea survival. Know your equipment and check it carefully. Every day your chances are better but Deep Sea Survival always will take courage, endurance and the will to live.

Dear Mr. Murrow,

This is to tell you that your room at the Grand Hotel is confirmed for the night of September 2, which is your arrival date in Gothenburg. If you want to postpone it a day, so that you do not have to rush through Sweden, please let us know. We suggest that you go by way of Gränna and stay overnight,x) between the 2nd and 3rd. The suggested route is indicated on the enclosed map.

Sincerely yours,

Lars Malmström

New York, N.Y.

Dear Mr. Murrow,

My friend, Holger Lundbergh, has told me about your forthcoming trip to Sweden and we are as enthusiastic as he about you and your family seeing our country and meeting with those people who may give you a picture of Sweden's cultural and political life. We understand that you are sailing on the M/S Gripsholm from New York on August 25 and we have written to the Grand Hotel and asked for reservations. As soon as we get their answer we will let you know. We have also written to the Royal Automobile Club and asked them to help you clear your car on your arrival. (Are you a member of AAA?) Enclosed please find an Esso map and a booklet "Sweden by Car".

We are also enclosing some literature on Stockholm and on Visby, which we hope you will have a chance to visit, if only for an afternoon. It takes one hour by air and it is extremely worthwhile, not only from sightseeing, but also from a cultural point of view. It is the only place in Sweden where you can see the evolution from the Viking times to the 20th century.

You will hear from us again and please let us know if we can do anything else to make your trip as interesting and exciting as it should be.

Cordially,

Lars Malmström

Lars Malmström
Assistant Director

Malone, John A.

February 7, 1958

Dear Mr. Malone:

Thank you for your letter of January 29th calling my attention to the story, "On My Own" which appeared in the February 8th issue of THE SATURDAY EVENING POST.

I read it with a great deal of interest, and I appreciate your taking the time to write me about it.

Sincerely yours,

Mr. John A. Malone

Dear Mr. Murrow:

In reading Part One of Eleanor Roosevelt's story, "On My Own," in the February 8 issue of The Saturday Evening Post, it occurred to me that her widowhood carries a greater responsibility than generally realized.

However, she makes no complaint about the unusual aspects of her life since F.D.R. died on April 12, 1945. Instead, she takes you behind the scenes in a matter-of-fact approach which adds up to quite an experience.

Her report begins on page 19 of the attached advance copy of the magazine. I thought you might like to have it called to your attention.

Sincerely,

John A. Malone

Malow, Richard

Delta Sigma Phi Fraternity

4/29/59

Alpha Theta Chapter
2009 Washtenaw Avenue
Ann Arbor, Michigan

Dear Mr. Murrow,

This past weekend the University of Michigan held its semi-annual Spring Weekend. This is always the biggest campus event of the year.

The weekend comprises many varied contests between the numerous fraternities and sororities here at Michigan. Each fraternity picks a sorority with which to work, and we chose Kappa Delta.

One of these contests was a skit which was given this past Friday evening. When work began on the play, we decided to do a "take-off" on your program "Person to Person." Our version changed this title to "Point to Point," with a character called Abe Gawkins, as the hero of West Point.

We were fortunate enough to win third place that night, and we thought that you might enjoy reading the script.

Of course, it seemed more than coincidental that your program is featuring Pete Dawkins this Friday, only one week later.

We at Delt Sig certainly hope this small theatrical adventure does not offend you, and we would also be more than pleased if you could drop us a line sometime in the future.

With warmest regards,
Richard Malow

Spring Weekend
1959

Good Evening - This is Wayward R. Burro. (Girl comes out and lights cigarette) This evening Point to Point takes you to East Point for the story behind the Abe Gawkins legend. (drag on cigarette) East Point is the spawning ground of America's future generals, leaders, and statesmen. Not since the class of 1915 with names of Eisenhower, Bradley, James Van Fleet, and Alfred E. Newman - not since this star-studded class of 1915 has the Academy on the fertile banks of the Hudson, had one figure that has dominated the public fancy as Abe Gawkins - Abe Gawkins is more than a cadet, more than an athlete, more than a scholar, more than a man (puff) - which has led many people to wonder what is Abe Gawkins? This evening we will attempt to answer this question. Born in Royal Oak, Mich. son of a (puff) nobody, Abe rose from an obscure boyhood of newsboy, eagle scout, and pusher, to the exemplary image of the ideal American youth.

He is now a member of the ethical practices committee of the AF of L CIO. He was selected to this post after being chosen an outstanding son of a Michigan DAR. He is the founder and Leader of the men's auxillary of the WCTU, and for ~~one summer~~ he worked with the Arthur-Murray Highway Construction Co., for which he has (light on Abe) been chosen a Rhodes Scholar. (Abe almost on stage)

(Abe begins push ups at 96, 97, - 100) (Wayward gives with a whirl of the chair)

(Way) Good evening Cadet Gawkins, (puff) or may I call you Abe?

(Abe) Yea, - Yes, you may have that liberty, Sir.

(Way) Tell me Abe, what made you come to the point?

(Abe) Gosh, Mr. Burrow, Sir, I like what the Point has to offer. (Smile)

(Way) What does the point have to offer?

(Abe) (Blank look now - pause) I like the color, bugles, parades, flags, kissing rock, uniforms and above all Mr. Burrow - Sir, I came here for the glory, Sir.

(Way) You can drop the sir - Abe.

(Abe) Thank you sir.

(Way) No sir

(Abe) What Sir

(Way) Let's forget it (puff ------)

MOOSE ENTERS WITH A GIRL

(Way) I see that the roommate situation has improved here, in the last decade.

(Abe) Well Mr. Burrow-Sir, I would like you to meet (says softly "get that dame out of here) Cadet Brazzilowski, Moose Brazzilowski.

(Way) How do you spell that Cadet?

(Moo) M-O-O-S-E Brazzilowski with two Z's

(Way) I see

(Abe) Moose and I have a third roommate - J. Ludlow Fontz (one Z) - but we haven't seen him since he took the Kinsey Report out of the library. He must be fighting through in the true tradition of the Point.

(Way) Yes, Well we all know that the academy is steeped - in traditions. Would you care to enlighten our viewing audience?

(Abe) Yes, sir - we have a statue donated to us by the same people who gave the museum lions to the University of Mich., except here the flag waves, the cannon roars and the boy salutes the young lady, and the trees tremble, bowes fall, and down will come baby, cradle and all. (carried away)

(Way) Hmmmmm - We've heard something about a rock, which seems to be one of your famous landmarks.

(Abe) Do you mean the kissing rock? Sir?

(Way) No, I don't think so.

(Abe) Sir? You're kidding, Sir. That is, we've been planning on it, Sir. Really, Sir, we scrubbed it down this morning. Oh please sir. the cameras and technicians are out there.

Light on Kissing Rock

(Way) I had no idea it meant that much to you son. Let's have a look at your rock.

LIGHT ON ROCK - J. LUDLOW FONTZ AND GIRL 2 or so beer cans.

(Abe) About our third roommate. Light off

Light on General

(Way) Hmmm - (puff) Now that we have talked to some of the cadets and seen some of your traditions, let's meet one of the men responsible for the administration of this unique institution. General Delivery are you there?

GENERAL AT DESK WITH SECRETARY SITTING ON DESK ALSO

(Gen) There I was with four battalions around me and the corporal came to me trembling, and with icy nerve I calmed his fears saying, "Don't give up now, we know where they are. Then (one and on)

(Way) Excuse me general,

(Gen) Oh pardon me, Mr. Burrow, (Slaps with swagger stick on rump the secretary, she jumps up, smile, goes back to her typing)

(Way) You were discussing some of your past battle exploits. Could you tell us a little about them in relation to the mementos on your desk and wall.? Take that horn for instance.

(Gen) (Begins looking, among his piles of papers - can't find it)

(Way) To the right, there.

(Gen) Oh, yes. This is one of my most cherished possessions. Its from the battle of the little big horn - O ho, no pun intended. This horn was used by my great-grandfather; (pause) .... on my great grand-mother. (mutters) Look at the dent there.

(Way) Seriously, did he use the bugle for a charge?

(Gen) No, but great-grandmother did. (points to arrow) As you can see by the arrow, the fighting was fast and furious; the next one got him, heh, heh.

(Way) Is there any significance attached to that flag, general?

(Gen) No not especially; It covers up the cracks in the wall there.

(Way) I see, well, what about those two cannon balls on your desk.

(Gen) Oh, those; no luck there either, Mr. Burrow; those are 5&Dime book ends. They had another pair attached by a chain, but they were too expensive.

(Way) I see that you have quite a number of ribbons. Would you care to tell us something about them, especially that one to the left.

(Gen) Right

(Way) No left

(Gen) Oh yes, heh, heh, This is a ribbon from the European theatre, this one from the Asian theatre, and this one . . . (pause) heh, heh, from the Lydia Mendelson theater (pulls ticket off coat, rips in two, lets it fall to ground) Boy that was a good performance, do you remember when the Sultan . . .

(Way) (Interrupts) I didn't see the show, general.

(Gen) Oh

(Way) Now then, would you explain some of your other medals.

(Gne) Yes, I'd be glad to. The silver star here is for sercuring the beach at Normandy, this bronze medal is for taking the beach at Anzio, and the gold star is for securing the beach at Fort Lauderdale - sometype of local uprising.

(Way) In your modesty, you've neglected to mention your purple heart, general.

(Gen) Its sort of ironic but, our whole company, was strafed by the Luftwaffe, one day, and I was the only one to survive, simply because of my wine flask, up here, heh, heh,- a bullet, 100 proof vest, you might say, heh, heh.

(Way) That's alright - we understand. Now general, could you tall us something about the curriculum here?

(Gen) Well, (playing with Queegs ball bearings), our men, I don't like to brag, but, our men have to prove themselves. They must learn a great variety of things in many diversified areas. For someday, they will be the military leaders of our country. Their curriculum includes marching 102, path finding 9, Astro-physics, advanced thermo-nuclear inferential, differential, ... (pause) (Scowl) general math is what it is. Besides eight hours of class a day the cadet is allowed 2 hours for meals, 2 hours for remedial marching, 4 hours of building men to build a better America. And then we try to allow an hour study time for every hour in class and 1 hour free time.

(Way) But general, you already mentioned 25 hours and you haven't mentioned sleep - general-general.

(Gen) ZZZZZZZZzzzzzzzzzzzzzz

(Moo) Hi ya - uh, (He can't remember Burrow's name)

(Way) Its Burrow

(Moo) Oh, thats right, Mr. Burrow, Sir

(Way) By the way, I don't seem to recall your name, cadet.

(Moo) Moose Brazzilowski, 2 Z's

(Way) Lets escort our audience to the kissing rock. We'd like to interview cadet Fontz He was occupied when we saw him earlier. light off Moose, another on rock

(Moo) Ok, Mr. Burrow (And then wanders back to the room)

(Way) Fine. . . and thank you cadet. (Switch to rock where Ludlow and friend are still preoccupied) I don't remember this in the generals schedule.

(Fon) The General has his schedule and I have mine.

(Way) "Unique" (to audience) I understand there is to be an inspection this afternoon.

(Fon) (comes out of clinch) Thats right Mr. Burrow, (goes back in clinch) light off

SWITCH TO ABES ROOM WHERE WILD PARTY IS GOING ON

(Way) We are just outside Cadet Gawkins room where we find Exchange Officer Leftantant Sigmund Gooch- who has informed me that he has chosen this room to use for a mock inspection. light on room

(Sig) (thick english accent) You see, Mr. Burrow, Sir- This inspection is known in the vernacelor as a white glove inspection. The function of the white is somewhat obvious ey what? A bit of dust here and there you know.

(Sig. walks into room sees party and walks out quickly closing door behind him) "Bad scene, good show, (then knocks on door and goes in again)

(Abe) Room attention

(Sig) As you were

(Moo) Do you really mean that sir.

(Abe) Sir, we prepared for the inspection.

(Way) What are you going to inspect first?

(Sig) The locker over here, its quite an appropriate place to start, don't you think. An interesting thing about this locker; here at the point, we call it a knicker bocker liquor locker, a little humor there, you know.

(Way) Yes it didn't come any too soon, either

SIG APPROACHES LOCKER. BLOWS ACROSS TOP, BIG CLOUD OF DUST

(Sig) Oh well you can't always tell a book by its cover, lets look at the table of contents.

OPENS DOOR THERE IS GIRL INSIDE

(Sig) Pardon me (clears throat)

(Moo) Hidden talent

(Sig) Beastly waste.

(Abe) Doesn't look to bad to me (in proportion to the rest of her)

SIG GOES TO NYLONS ON BACK OF DESK CHAIR AND PICKS ONE UP

(Sig) This is all highly irregular according to paragraph 9, sec. 2, art 13, of Marshall Rommels field manual.

(Moo) Uhh, whats da madder? Oh its got a run in it.

SIG DROPS NYLON

(Fon) Sorry I'm late, I just couldn't break away.

(Moo) You mean, she couldn't break away - huh, heh, huh.

(Way) Would you please speak into the mike Moose

no spot on Wayward

(Moo) Hah, there aint no Mike Moose in here.

(Abe) Quiet, hambone.

(Abe) Mr. Burrow, I'd like you to meet our 3rd roommate, J. Ludlow Fontz. Mr. Burrow oh, Mr. Burrow, Sir?

(Light on empty chair - cigarette burning)

(Light to kissing rock)

(Way) Good night wish me luck. (He is with sultry "Miss Monitor")

EDWARD R. MURROW

Voice & Eye Of the News

THE voice over the radio comes in low and deep. *This* (pause) *is the news.* Each word is said carefully and slowly. You feel that the man behind the voice must know all that *can* be known about the news.

The man is Edward R. Murrow. Tall, dark, and serious, he seems to be a living picture of what a newscaster should be.

Five days a week millions of Americans listen to his news programs on radio. Once a week they see *Person to Person,* as Mr. Murrow takes them into the homes of famous people for a friendly chat and pleasant visit. Each month they watch *See It Now,* a TV show which captures the sights and sounds, persons and events which shape the news of the world.

To many people, Edward R. Murrow *is* the news.

ASIDE from his voice and appearance, Mr. Murrow has two qualities which make him an outstanding reporter. The first is his love of hard work. To be idle is torture for him. He is happiest when he is busiest. His energy has enabled him to carry on his programs, deliver speeches, publish books, make record albums on the beliefs of famous people, and travel hurriedly about the world in search of important news.

The second reason for Mr. Murrow's success is his accuracy and fairness. He believes that a good reporter will get all the facts and present them clearly. It is then up to the public to look at the evidence and make its own decisions.

His honest reporting has brought Mr. Murrow over 100 assorted prizes and honors. Four colleges have asked him to be their president. When in England, he usually drops in for a chat with Sir Winston Churchill. He has played golf with President Eisenhower. Once he was given an award just for "being himself."

THE road that led to this fame and success was not an easy one. Mr. Murrow was born in 1908 in a log-slab house near Pole Cat Creek, N.C. Life on the farm was hard. Said Mr. Murrow recently, "I can't remember when I didn't have to work."

When Mr. Murrow was six, his family moved to a logging camp near Seattle, Wash. Here he could earn money and concentrate on his schooling. In high school and at Washington State College, he worked in his spare moments at odd jobs. His summers he spent at logging camps. Hard work became a habit, but it paid off. He was an honors student and headed many student organizations.

AFTER graduating, Mr. Murrow spent two years arranging trips to Europe for college students and making speeches about the trips. In 1932 he went to work for an organization which exchanged students and professors between Europe and America. In this way, he saved many German scholars from Hitler's con-

centration camps. On one trip he met and played tennis with a girl from Connecticut named Janet Brewster. They were married in 1934.

Then he was hired by the Columbia Broadcasting System. In one of the important moves of his life, he went to London, England, in 1937. Here he achieved real fame for his reporting of the events that led to World War II and his wartime broadcasts home.

During this time, he invited danger by dodging German bombs on London streets and rooftops. In spite of protests by his boss at CBS, he flew on about 25 combat missions over Europe. His great desire to be in the thick of things puzzled even his best friends. Yet by being right at the scene of action, he was able to create a vivid picture of the war and the people who fought it.

ON RETURNING home, he was made vice president in charge of CBS news. After a year and a half he resigned. Paper work and budgets were much too tame, and he longed to recapture the excitement of his London days. He traded his pencil for a microphone and resumed his broadcasts.

In 1954 Mr. Murrow ran a *See It Now* on the late Joseph McCarthy, then a Senator from Wisconsin. It showed Mr. McCarthy making speeches and holding investigations on the dangers of Communism. Many people said that the program gave an unfair picture of the Senator. Many others came to Mr. Murrow's support, stating that Senator McCarthy was hurting innocent people. Although Mr. Murrow insists that he was fair, the program is remembered as the one time when he took sides on a question.

MR. MURROW'S favorite form of relaxation is work, but he likes to spend every possible weekend with his wife and son Casey. He has a dairy farm in Pawling, N.Y., where he can teach Casey to hunt, ride, and handle farm machinery. Despite all the famous people he knows, he still rates Casey as his best friend.

In the meantime, he is always searching for better ways to present the news. You can be sure that when something important happens, he will report it—sleeves rolled up, necktie loose, wearing red or green suspenders, and looking exactly like Hollywood's idea of a reporter. It seems evident that Ed Murrow has never forgotten his mother's favorite motto: *It's better to wear out than to rust out.*

Whenever possible, Mr. Murrow goes to his dairy farm in Pawling, N.Y. There he can relax and practice the farming skills he learned as a boy. In this picture he is teaching his son Casey how to drive a tractor. In spite of a very busy life, he never overlooks the duties and pleasures of being a father.

Manchester, William

April 8, 1958

Dear Mr. Manchester:

I have your nice letter of April 1st asking me to serve as a consultant in connection with your classroom newspapers, CURRENT EVENTS, OUR TIMES, and EVERY WEEK.

I regret very much to have to tell you that I cannot do as you request. The fact is, the pressure of my radio and television schedule makes it impossible for me to undertake any extra-curricular activities whatsoever.

Thank you again for asking me.

Sincerely yours,

Mr. William Manchester

no time

Mr. Edward R. Murrow
Columbia Broadcasting Company
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

I am writing you in behalf of Wesleyan University, which, as you may know, publishes three classroom newspapers each week for high school students: CURRENT EVENTS, for grades 7 and 8; EVERY WEEK, for grades 9 and 10; and OUR TIMES, for grades 11 and 12. Established in 1902, these papers now circulate in all 48 states and in 24 foreign countries.

Each year we prepare, in connection with our papers, a series of special issues dealing with current affairs. These sections are just four pages in length, but they serve as teaching units in social studies classes throughout the United States.

During the two-year period now drawing to a close, our special issue consultants have included Walter Lippmann, Red Smith, Mrs.Woodrow Wilson, John Gunther, Merriman Smith, Peter Drucker, Bruce Catton, Dag Hammarskjold, Harrison Salisbury, Wernher Von Braun, Eric Sevareid. Another CBS correspondent who has served as one of our consultants is Walter Cronkite.

We are now making plans for the next school year and have decided on a special issue in late August entitled "Our November Elections." We think that this is a timely topic and one that should be widely discussed among young people.

We intend to stress the fact that this election may forecast the leadership in our affairs at home and abroad. The special issue will present sketches of the Republican and Democratic leaders, with their roles; political maps showing "borderline" districts; and a summary of campaign issues as each party sees them.

By unanimous decision of our editorial staff, we would like you to serve as consultant for this special issue. We agree not to impose on your time. As a consultant, you would be asked for just two bits of assistance:

1. To write a brief message in letter form of 300 words to the high school students of America on the importance of this topic to the United States and to the world.

2. To review the manuscript written by our staff and make whatever comments seem to be appropriate.

We sincerely hope that this contact with the young people of America will appeal to you.

For your assistance we shall be delighted to extend an honorarium.

I shall be glad to have you, or a member of your staff, telephone me collect at our editorial offices here in Middletown, Connecticut--Middletown, DIamond 6-9625. We hope for your consent and shall be glad to answer any specific questions you may have.

Sincerely,

William Manchester

William Manchester
Managing Editor

WM/vj

P.S.

I am enclosing copies of Issue 17 and 19 of CURRENT EVENTS, this year, containing messages from Eric Sevareid and Wernher Von Braun, two of our consultants this year. Also enclosed is the first proof of a biographical sketch of you which we are preparing in connection with these publications. I thought you might be interested in it. If you have any comment, I should certainly like to have it.

Stirring Up a STORM

Everybody Talks About the Weather. Scientists Say Now That Something *Can* Be Done About It!

Man-made snow was created for the first time in 1947 in this "cold chamber" of the General Electric Research Laboratory (left). The experiments led to the seeding of clouds with particles of dry ice or silver iodide to bring about rainstorms. The seeding is done by airplanes flying above the clouds or from "blowers" on the ground.

SUPPOSE you tuned in your radio or TV set and heard this broadcast:

"Sunny and dry throughout the United States. There has been no rain for over a year. The whole land is turning into a desert. More industries have shut down.

"We know now that Russia is diverting moisture-bearing clouds to her part of the world. She is using the weather as a weapon. She—one moment, please!

"We interrupt this program to bring you a bulletin. Russia has just announced that unless we sign an agreement on her terms, London and New York City will be buried under 40 to 100 feet of water. She is ready to melt the North Polar ice cap with hydrogen bombs. As we know, their intense heat could cause the ocean level to rise and wipe out many coastal cities."

Does this sound like science fiction? So did space travel, only a few months ago.

Weather Warning

Four years ago, Congress set up a committee to make a study of weather control. Its experts gave special attention to artificial rain making — the "seeding" of clouds with chemicals to make them drop their moisture.

The committee ended its study on December 31. It reported that it *may* be possible to increase rainfall over limited areas by artificial means.

Before we can really control the weather, however, the committee said we must expand and speed up our research. We need to know much more about the effect of sunspots on weather; the movement of air currents and clouds around the earth; how large-scale storms are born and how they move.

Captain Howard T. Orville, head of the committee, said there is reason to believe that Russia has launched a huge secret research program into weather control.

He added, "If an unfriendly nation gets into a position to control the large-scale weather patterns before we can, the results could be even more disastrous than nuclear (atomic) warfare."

His warning has been repeated by Dr. Edward Teller, the "father of

(Continued on next page)

Special Section

MAPPING TROUBLE SPOTS

New maps of six places in the news

Pages 131-134

ERIC SEVAREID • CONSULTANT

THE WEATHER BUREAU HAS AN 88TH BIRTHDAY

● On February 9, 1870, Congress set up a "weather warning" service as part of the Army Signal Corps. Its job was to gather reports and warn of storms along our seacoasts and inland lakes.

Farmers found these reports most helpful. In 1890, the Weather Bureau became part of the Department of Agriculture. Demands for its services grew. Railroads, airlines, ships at sea, and many big industries wanted its forecasts. In 1940, the Bureau was transferred to the Department of Commerce. Francis W. Reichelderfer is its head.

Today, the Bureau has nearly 4,000 employees working around the clock at 321 stations in this country, Hawaii, and Alaska. Weather ships in the Atlantic and Pacific help check the weather far out at sea.

Stirring Up A Storm

(Continued from front page)

the H-bomb," in testimony before a Senate committee.

Dr. Teller said, "Please imagine a world where the Soviets can change the rainfall over Russia . . . and influence the rainfall in our country in an adverse (harmful) manner. They will say, 'We are sorry if we hurt you. We are merely trying to do what we need to do in order to let our people live.' "

Weather-Wise

Four times a day, all over our country, hundreds of weathermen study thermometers, barometers, and instruments that record wind velocity and moisture. They telegraph their findings to one of eight district offices scattered over the United States.

At the same time, from dozens of weather stations, balloons are sent high into the upper air to measure wind speed and direction. Some carry special equipment and tiny radio broadcasting sets to send signals back to earth.

From airfields all over the land, pilots hop into their planes and take off into the "blue yonder" to record other weather information.

All this information is marked on a big map in each district office. Then weather experts use their knowledge to predict the weather for the next day or even the next week. Some district offices are using electronic "brains" for such forecasting. Results show, however, that an expert weatherman is often better than the "brain."

During the IGY (International Geophysical Year), all sorts of tests are being made—at the Poles, on mountaintops, in the tropical "hurricane belt"—to add to our knowledge of weather.

Satellites, such as Russia's sputniks, will tell us much. They will let us measure the heat balance of the earth. We'll know from hour to hour how much heat the sun pours on the earth and how much is lost again into space. The satellites also will be able to map the entire cloud system of the earth every 12 hours. We'll know a great deal more about why and where storms start.

Change in the Weather

What are some of the things scientists think we might do when we learn more about weather and its control? Here are a few.

● **Seeding Clouds.** The Orville committee found that seeding winter clouds over mountainous parts of the West Coast had increased rainfall by an average of 10 to 15 per cent. It estimated that there are 29 states with the proper conditions for such artificial rain making.

● **Clouding Up.** We may be able to open large holes in the clouds over an enemy country in case of war. Our planes could have a clear target. On the other hand, we might thicken the clouds, shutting out the sun over enemy croplands.

● **Melting Ice.** Hydrogen bombs could thaw out large areas of ice at the North and South Poles. Ways might be found to melt this ice by changing the path of the warm ocean currents. Regions of permafrost (permanently frozen ground) might be warmed up for crops by spreading coal dust or some other dark coating over the snow to absorb the sun's heat.

● **Stopping Storms.** Some experts think hurricanes might be broken up by exploding H-bombs in their path. Others think a better way might be to set fire to fuel poured on the ocean. The updraft made by the heat might stop the storm.

● **Trimming Mountains.** By blasting off mountaintops with H-bombs, some experts think they could change wind patterns and, with them, the climate of many parts of the world. For example, Los Angeles, now shut in by mountains, might be swept clear of smog.

The experts warn that man should not tamper with big weather patterns until he can be sure of the results. They see the need of world co-operation, through the United Nations, if weather control is to be man's boon, rather than his doom.

MAKING THE GRADE

WORDS FOR THE WISE. After reading the story, explain the meaning of these key words or phrases. Try to get the meaning by the way in which they are used. If in doubt, consult a good dictionary or reference book.

research	**adverse**	**permafrost**	**smog**
artificial	**chemicals**	**cloud seeding**	**updraft**

GET THE FACTS. Test your memory by picking the correct word, figure, or phrase.

1. The Weather Bureau will soon celebrate its (A) 10th (B) 88th (C) 150th birthday
2. If the ice at the North Pole were melted, the ocean level might rise (A) 40 to 100 feet (B) 10 to 15 feet (C) over 1,000 feet.
3. The Orville committee reported that weather control may be within reach if we (A) add more weather stations (B) send up rockets equipped with instruments (C) expand and speed up our research.

TALK IT OVER. 1. How would accurate forecasts of storms, droughts, or cold spells benefit (a) citrus growers; (b) fuel and power companies; (c) city governments; (d) insurance companies? 2. Would you like your weather controlled by a national or international bureau? 3. How has weather affected *your* life in the past month?

THINGS TO DO. 1. You might like to tune in on "The Unchained Goddess," a program about weather in the Bell System Science Series on NBC-TV, at 9 p.m. EST, February 12. 2. For more about weather, send for the 48-page book, *Weather and You.* Send 25 cents for a single copy, 10 cents a copy in class lots of ten or more, to American Education Publications, 1250 Fairwood Avenue, Columbus 16, Ohio.

CURRENT EVENTS, in two editions, is issued weekly during the school year, except Thanksgiving week and three weeks at Christmas time, by American Education Publications, 1250 Fairwood Ave., Columbus 16, Ohio, and 11 W. 42d St., New York 36, N. Y. Wesleyan University, publisher. Entered as second-class matter at the post office at Columbus, Ohio. Previously entered, Springfield, Mass., 1902; New York, 1917. Single subscription, $1.20 a year. Special rates for school clubs. National edition published also in Braille by the American Printing House for the Blind, Louisville, Ky.

MAPPING TROUBLE SPOTS

Special Section

Our consultant for this map section is Eric Sevareid. He is chief Washington correspondent for the Columbia Broadcasting System. Millions listen to him each day on radio and television.

Mr. Sevareid was born Nov. 26, 1912, in Velva, N.D. His first job was as a copy boy for the "Minneapolis Journal." He is the author of "Not So Wild a Dream" and "In One Ear."

by Eric Sevareid

WE LIVE in a small world. To understand current history, we must realize that all nations, oceans, canals, and straits are joined together by air routes.

Therefore, popular notions must be changed regarding international relations and national defense. We can no longer think of South America as "over here" and Europe as "over there." Points of vital defense in Europe are as close to us as the capitals of South America. We have to think of those South American countries north of the Amazon jungle as part of the northern sphere. The African countries north of the Sahara are part of the Mediterranean and European sphere, not the African sphere alone.

We must think not so much in terms of the Eastern and Western Hemispheres as in terms of the Northern Hemisphere. The fate of all of us will be determined in the Northern Hemisphere. History which affects the world rarely happens below the equator, east or west.

Long-range bombers, atomic weapons, and ballistic missiles have brought about many changes in military thinking. Such small nations as England, Japan, and Germany can no longer be defended, however advanced they are in science and culture. In a truly world war, only those nations with great land masses—the U.S., Canada, Russia, China, for example—could hope to survive in anything like their present form. This bare fact is changing the policies of whole nations.

I suggest this merely to show the absolute necessity of keeping a clear picture of the closeness of the lands and oceans of this globe. All of us need such an understanding to grasp the meaning of today's complicated news. Keep this in mind as you study the maps in this special section.

Your editors have mapped six trouble spots or critical world areas which promise to make headlines in the months ahead. But news breaks quickly. We cannot know when some obscure place almost forgotten in the rapid flow of world events may suddenly appear as a new trouble spot.

1 Southeast Asia

A meeting of Red China's top leaders ends this week in Peiping (bā-pĭng), the capital. They met to make plans for the months ahead. The free world hopes that no plans were made to try to take Southeast Asia by force.

Since the "People's Republic" came into being in 1949, the Chinese Reds have plotted against the free countries of Southeast Asia. In 1954, they gained control of all North Vietnam. Today they're causing trouble throughout Southeast Asia, especially in Laos, Malaya, and Indonesia.

Red Chinese are settling in Burma at the rate of 1,000 a month. Red China's troops occupy border territory claimed by Burma.

The seven free countries of Southeast Asia are a treasure of natural resources. They possess a large part of the world's natural rubber and tin. They have rich stores of oil, coal, lead, zinc, copper, spices, and hardwoods. Their rice fields produce big crops.

Southeast Asia has over 150 million people. Most of them are desperately poor. In their plight, many are likely victims of Communist propaganda. Meanwhile, Red China's population (now over 600 million) multiplies rapidly. The Reds need more room, and they need raw materials and rice. As long as these needs exist, Southeast Asia is in danger.

MAPPING TROUBLE SPOTS -- Cont.

2 North Africa

Violence is no stranger to North Africa. For many years, France's three colonies there—Tunisia, Morocco, and Algeria—have been torn by terror and bloodshed. In 1956, Tunisia and Morocco gained almost complete self-rule after bitter warfare between the French and Moslem nationalists. Fighting has stopped, but France has 15,000 troops in Tunisia and 80,000 in Morocco.

Fighting rages in Algeria, where France now has half her army. French forces guard the streets and comb the hills for Algerian nationalists. The Moslem bombings, burnings, and murders continue. The war puts a burden on French taxpayers.

France seems determined to hold on to Algeria. It is a large colony (851,299 sq. mi.), four times the size of France. And it has oil—a fuel sorely needed by homes and factories in the mother country. Oil wells in the Sahara are expected to meet 40 per cent of France's oil needs by 1960—if the French can prevent rebel damage to pipelines and railways.

Moslem nationalists are also causing trouble in Spain's colonies in North Africa. Moroccans are waging a "hit-and-run" war against the Spanish in the Spanish Sahara, Ifni, and Spanish Morocco. Spain might be willing to give up Ifni, a tiny rectangle on the coast of Morocco. But she intends to keep her other holdings. The fighting is likely to continue unless the King of Morocco can put a stop to the nationalist raids.

3 Middle East

Two-thirds of the world's known oil reserves are in the Middle East. Great Britain and Western Europe need a constant flow of this oil to remain strong and prosperous.

Also, the Middle East is a land bridge between three continents. It occupies a key military position. It has the Suez Canal—the shortest sea route between the North Atlantic and the Indian oceans. The Middle East contains the shrines of three of the world's great religions.

For these and other reasons, peace in the area is important to the free world. But the Middle East is a "powder keg" which could explode at any time into World War III. It is an area torn by strife and hatreds.

At the center of the strife is Israel—the hard-working, rugged Jewish republic surrounded by a hostile Arab world. Twice within the past ten years the Jews have had to fight for their survival.

A pall of fear hangs over the Arab and Israeli people alike. The Arabs are jealous of Jewish progress and fear that the Jews will use force to get more territory. The Israelis fear that the Arab nations will some day try to wipe them off the map.

Two Arab nations—Syria and Egypt—are getting weapons and advice from the Soviet Union. They, aided by Russia, spread hatred of both Israel and the Western allies. The situation remains tense.

4 Soviet Satellites

Russia tells Africans and Asians that they should fight for freedom. The Western powers are called "imperialists"—nations that force their rule on others.

But the truth is that the Soviet Union is the biggest colonial power in the world today. The Soviets have taken away the freedom of over 20 million persons of Moslem origin in Central Asia and the Caucasus. They have swallowed Estonia, Latvia, and Lithuania. They made a captive of Outer Mongolia. They seized territory from Finland and Japan.

Today in Eastern Europe, 112 million people live under Communism. The Soviets dominate the governments of seven nations which were free before World War II. These seven Red satellites are shown on the "as-the-eye-sees-it" map at the right.

Communism in these satellites comes in many forms. Some have more freedom than others. Living standards vary. The satellite group has little unity except for that provided by Moscow. Albania is friendly to Bulgaria. Poland and Hungary are enemies. East Germany has no friends among the entire group.

Anti-Soviet revolts of any size have taken place in only three of the satellites—East Germany, Poland, and Hungary. The 1956 uprising in Hungary became a nation-wide revolution. It was crushed by Soviet force.

The Soviets rule each country as firmly as is required, watching always for any evidence of protest. But the people of Eastern Europe prefer freedom to tyranny. The Soviet bloc of satellites will remain a trouble spot as long as tyranny exists.

NORTH AFRICA *has large numbers of Arabs and Europe stretches across Asia and into parts of Europe. Here an lowers of Mohammed. Most of the Arabs in North Afri held by Europeans. The Moslem nationalists are tryi*

EASTERN EUROPE *is cut off from the rest of the continent Iron Curtain. After World War II, Russia swallowed six there and part of another. Crosshatched on the map are Eu nations in NATO, Western defense alliance against Comm*

IN AREA *the seven satellites cover 393,000 square miles. They have a total population of 94 million. Yugoslavia is also a Communist power, but is independent of Soviet rule. Behind the satellites is Russia—world's largest nation and top military power.*

5 Divided Germany

After Germany's defeat in World War II, Russia and Poland were given more than 60,000 square miles of German territory. The main bulk of the country was divided into two separate states—West Germany (94,634 sq. mi.) and East Germany (41,700 sq. mi.). The question of German unification is one of the unsolved problems of our time.

The map shows the occupation zones imposed on Germany after World War II. In 1955, the allied occupation zones in West Germany were ended when the Federal Republic became independent. However, allied troops remain in each zone under NATO command. Inset shows a Soviet plan for making Germany part of a neutral "no man's land" in which no atomic weapons could be made or used. Czechoslovakia and Poland would also be part of the neutral territory.

6 Latin America

Colorful and many-sided, Latin America consists of 21 independent countries and a number of foreign-owned territories. Each country and territory has its own customs and traditions. Nearly all have a stormy political history. In 1958, Latin America is almost as stormy as ever.

Four countries are ruled by dictators—Cuba, the Dominican Republic, Paraguay, and Venezuela. At present, the Dominican Republic and Paraguay are as quiet as a graveyard. In Cuba and Venezuela, the dictators are in trouble. They've been unable to crush the revolutionary groups that hope to overthrow them.

Political unrest exists to a degree in most of the countries of Latin America. The map shows where unrest is both widespread and intense.

Causes for unrest include far-reaching poverty, inflation, booming populations, lack of education, and unfair distribution of land. Poverty is at the root of most of Latin America's problems. Her people are held back by remains of the feudal system introduced by the Spaniards and Portuguese in the 16th century.

But progress is being made. A new nation just came into being in the Caribbean. This month ten West Indies islands became the West Indies Federation, an independent dominion in the British Commonwealth.

LATIN AMERICA *is a vast area. It reaches more than seven thousand miles from our southern border to Cape Horn. It has 21 republics. Ten are in South America. Eleven are in North America. In area, Latin America is nearly three times the size of the U.S.*

ITS POPULATION, *now over 175 million, is growing faster than that of any other area in the world—4,400,000 persons a year. The Caribbean islands, with seven million people, are growing fastest of all. Some of these islands are already overpopulated.*

Test on Map Section

FILL IN BLANKS

1. The capital of Red China is _____.
2. The seven Soviet satellites in Eastern Europe are _____.
3. The four Latin American countries ruled by dictators are _____.
4. Latin America consists of _____ republics with a total population of more than _____.
5. The Middle East has about _____ of the world's known oil reserves. Its leading Arab power is _____.
6. The seven free countries of Southeast Asia are _____.
7. The southernmost of the seven is _____.
8. Red China borders the following countries of Southeast Asia: _____.
9. The shortest sea route between the North Atlantic and the Indian Ocean is the _____.
10. Newest nation in Latin America is the _____.

TRUE OR FALSE? Circle "T" or "F." Key words and figures are *italicized.* If statement is false, write another key word or figure in blank to make statement true.

T F **11.** In 1956, Tunisia and *Morocco* gained almost complete self-rule from France. _____

T F **12.** France's largest colony in North Africa is *Ifni.* _____

T F **13.** Latin America's largest country is *Mexico.* _____

T F **14.** In 1954, the Chinese Reds gained control of *South* Vietnam. _____

T F **15.** In 1956, an anti-Soviet revolution took place in *Yugoslavia.* _____

T F **16.** Number one trouble-maker in the Middle East is *Egypt.* _____

T F **17.** West Germany is *smaller* than East Germany. _____

T F **18.** In Eastern Europe today, *212 million* people live under Communism. _____

T F **19.** Revolts threaten the dictatorships in Cuba and *Venezuela.* _____

T F **20.** Red Chinese troops occupy border territory claimed by *Thailand.* _____

Answers are given in your teacher's copy of CIVIC TRAINING.

IF THE world gets any worse, we may all have to go back to the caves.

Does it surprise you to learn that many people won't mind? In fact, they'd rather be in a cave than anywhere else. They're called spelunkers. They organize into clubs to explore the mysteries underground.

No proper spelunker takes chances. He wears a helmet to guard against falling rocks. He carries at least two light sources. He always tells someone where he is going and when he expects to be back. Caves can be dangerous for amateurs.

During the war, spelunkers helped our War Department by counting the nation's caves. They found more than 3,000 really big ones. These could be used for factories, bomb shelters, or storage if war ever came to our shores.

Frankly, I prefer to think of caves as fun rather than shelters. I've seen some beautiful sights far underground—regular fairyland scenes.

And last summer I heard a cave give a concert! It came from a big organ in Virginia's Luray Caverns.

The organ used stalactites (stə̆lăk'tīts) instead of pipes. As you know, a stalactite is a kind of "icicle" of rock hanging from a cave ceiling. It was formed by water dripping and evaporating for many centuries, leaving a hard mineral formation.

Inventor Sprinkle sits at his stalactite organ.

Back in 1954, Leland W. Sprinkle, an electronic scientist with the Air Force, took his five-year-old son to the caverns. The boy bumped his head on a stalactite. It gave off a musical note.

Mr. Sprinkle got the idea of striking stalactites of different sizes and tones, wiring them electrically, and playing them from an organ console.

He has worked on this project for three years, tuning and connecting more than three octaves. Rubber-tipped electric hammers strike the stalactites. They are connected by five miles of wiring.

The sound is rich, full, and beautiful. Before long, they tell me, you can buy recordings made by this Stalacpipe Organ. Personally, I'd rather watch those rocks roll out their music. It's solid, man, solid!

SMILE AWHILE

Susie: "Mama, you know that vase you said had been handed from generation to generation?"
Mother: "Yes, dear."
Susie: "Well, this generation has just dropped it."
—Judy Fedchena, Somerville, N.J.

Busy executive: "Miss Smith, where is my pencil?"
Secretary: "It's behind your ear."
Executive: "Come, come. You know I'm a busy man. Which ear?"
—Virginia Selzler, Selz, N. Dak.

Driver: "My car is like 7 into 20."
Mechanic: "Why?"
Driver: "It won't go."
—Thomas Vanyo, Warren, Minn.

Junior: "My father is a doctor, so I can be sick for nothing."
Terry: "Well, my father is a preacher, so I can be good for nothing."
—Rebecca Hopkins, Peoria, Ill.

First student: "I got so used to sleeping in my classes that I have trouble sleeping at night."
Second student: "How's that?"
First: "I keep waking up every 50 minutes."

Why not send us your favorite joke? Address it to Joke Editor, CURRENT EVENTS, 356 Washington St., Middletown, Conn.

QUESTION BOX

QUEEN ELIZABETH . . . *What is Queen Elizabeth of England's last name? What was her maiden name?*—8th grade class, Anderson, Indiana, and others

Ans.—The present royal family of England is known as the House and Family of Windsor. Elizabeth is a member of that family and retains the name even though she is married. A member of the royal family is never addressed by the family name, but always as Queen Elizabeth, Princess Margaret, Princess Royal, etc.

If you have a question which you cannot find in your textbook, encyclopedia, the *World Almanac*, or other available reference books, address your inquiry to The Question Box, CURRENT EVENTS, 356 Washington St., Middletown, Conn.

THE NEWS IN A NUTSHELL

• **DOOR.** The door may be open to top-level talks between Russia and the West. Premier Bulganin sent notes asking for such talks (page 122). President Eisenhower replied that he would welcome them if the way were first prepared by officials at lower levels. Without careful preparation, he argued, the world might only be disappointed once more in its hopes for peace. He suggested that Russia live up to her promises to let Germany unite after holding free elections. He asked for a strengthening of the United Nations by a more limited use of the veto. (Russia has used her power of veto 80 times.) Mr. Eisenhower also urged an agreement to use outer space only for peaceful purposes.

• **BUDGET.** Congress is now studying the President's budget message —printed in a book weighing nearly four pounds. It calls for the spending of $73,900,000,000 in the fiscal (financial) year beginning July 1 and running to June 30, 1959. Of this, about $39,779,000,000 will be earmarked for defense. In order to balance the budget—to spend no more than the Government takes in by taxes—there are proposed cuts in aid to farmers, in pensions for the aged, in projects to increase water supplies in the West, and in public works of many kinds, including the construction of hospitals. Some lawmakers are already questioning the wisdom of such cuts. • • • It is estimated that *your* share of the budget —and the share of each man, woman, and child in the U.S.—is $427.86. Of this, $30.67 will be spent for missiles.

• **APPEAL.** A petition signed by 9,000 scientists of 43 countries has been handed to Dag Hammarskjold, U.N. Secretary General. It had been circulated by Dr. Linus Pauling of the California Institute of Technology, winner of the Nobel Prize for Chemistry in 1954. It urged immediate action to stop all tests of nuclear (atomic and hydrogen) bombs. It said, "Each added amount of radiation causes damage to the health of human beings all over the world."

• **STORMS.** The Weather Bureau has picked the names of possible hurricanes occurring in the Atlantic and Gulf of Mexico during 1958. As usual, it has given them girls' names —in alphabetical order, to identify them. The "girls" are Alma, Becky, Cleo, Daisy, Ella, Fifi, Gerda, Helene, Ilsa, Janice, Katy, Lila, Milly, Nola, Orchid, Portia, Queeny, Rena, Sherry, Thora, Udele, Virgy, Wilna, XCAE,* Yurith, and Zorna.

• **TO PUT IT BRIEFLY.** Unemployment in the U.S. rose to a total of 3,374,000 in mid-December—the highest since 1949. • • • The United States has told India we are willing to lend her 225 million dollars to help her through her present economic crisis. • • • Lt. Gen. James Gavin will retire from the Army on March 31 because he feels he can "do more on the outside for national defense than on the inside." His position as head of Army research and development will be taken over by Lt. Gen. Arthur Trudeau. • • • A change in college football scoring rules (the first since 1912) allows 2 points for a conversion scored on a run or a pass, and 1 point if scored on a kick. • • • Dr. Vivian E. Fuchs and his party arrived at the South Pole January 19, after an eight-week battle with cold, crevasses, and sastrugi (high humps of ice).

*Frankly, we never heard of a girl called XCAE. Did you?

WHO'S WHO IN SPORTS

World's Fastest Human

JUST a year ago Texans were hailing Bobby Joe Morrow as "the world's fastest human." Their claim for their native son was no idle boast.

Bobby was the only American to win three gold medals in the 1956 Olympic Games at Melbourne, Australia. He tied an Olympic record by winning the 100-meter dash. He broke a record in winning the 200-meter dash. And he ran as anchor man (last runner) on the U.S. team which broke an Olympic and world record in the 400-meter relay. He scored his triple victory in just over 40 seconds of actual running time.

He continued his great racing during 1957. He tied the world mark of 9.3 seconds for the 100-yard dash in the National Collegiate Championships. Together with his teammates from Abilene Christian College, he set a world record of 40.2 seconds for the 440-yard relay race around a course with two turns.

As a reward, Bobby has been named the outstanding amateur athlete in America for 1957. He has won the James E. Sullivan Memorial trophy as the athlete who "by performance, example, and good influence, did the most to advance the cause of sportsmanship during the year."

Bobby grew up on a cotton farm near San Benito, Texas, in the Lower Rio Grande Valley. He is 22 years old, married, and the father of twins born just last month.

He hopes someday to do the 100-yard dash in nine seconds—the sprinter's equivalent of the four-minute mile.

Once he came close with a time of 9.1 seconds, but a seven mph tail wind helped him along. The performance did not count as a new record.

Freedom Tries a Comeback In Oil-Rich . . .

Venezuela

The big question now is whether democracy will be given a real chance to work among our neighbors of northern South America.

The nation's flag flies high above celebrating Venezuelans.

Jiménez

"WE NOTICED a plane taking off and flying over the city. Planes are not allowed to fly over the city. Suddenly we realized it must be the President—Pérez Jiménez (hē-mā'nāth)—leaving the country.

"Later, on every street corner there were crowds with flags. The people were joyous—shouting *viva la libertad* (long live liberty)."

An American businessman from Rhode Island was speaking. He was caught in Venezuela (vĕn'ē-zwē'lȧ) during the recent revolt. He brought back to the United States one of the first eyewitness accounts of the excitement.

The revolt started with a general strike January 21. It ended two days later when the Army sided with the strikers and forced Jiménez to flee to the Dominican Republic. More than 300 Venezuelans gave their lives for freedom, many of them in pitched battles with the hated secret police.

Today a junta, or ruling committee, governs the country. It is made up of military officers and leading civilians. The junta president is Admiral Wolfgang Larrazabal (lah-rah-zah-bahl'). Larrazabal has promised a return to democracy in Venezuela, including free elections next year.

Political leaders exiled by the dictator Jiménez have been allowed to come home. The burning question now is whether they can work together for the good of their country. Some are believed to be friendly to Communism. If they move too far to the Left, the military forces may seize power.

A new Jiménez would appear as ruler, and once again democracy would die in Venezuela. Like many other South American countries, Venezuela has a long history of political unrest and "strong man" rule. Dictators have headed the country for all but three of the 128 years it has been independent. In that time there have been 24 constitutions.

Why is our country watching events in Venezuela so closely? First, the revolution is another sign that democracy may be growing in South America.

In less than four years, five dictators have lost their jobs, including powerful Juan Perón of Argentina. Only three strong men are left among our southern neighbors—Gen. Rafael Trujillo of the Dominican Republic, Gen. Fulgencio Batista of Cuba, and Gen. Alfredo Stroessner of Paraguay.

Also, American businessmen have a big stake in Venezuela. They have spent $3,000,000,000 on oil fields, iron mines, and other ventures. About 40,000 Americans live and work there. In addition, Venezuela is

Scene on Lake Maracaibo, Site of Venezuela's Great Oil Riches

FREEDOM'S COMEBACK (Continued from front page)

second only to Canada as a customer for our autos, washing machines, and food products. She spent $1,000,000,000 in our country last year.

Geography

Venezuela is bigger than Texas and Oklahoma combined. She has 6,000,000 of South America's 120,000,000 people. Seven out of ten are *mestizos*—of mixed Spanish and Indian blood. One out of ten is a Negro.

Venezuela's minerals make her one of the world's richest nations. She is second only to the United States as an oil producer. Most of her oil is in the Lake Maracaibo (măr-ȧ-kī'bō) region in the northwest; 6,500 wells there produce 9 per cent of the world's crude oil.

Her iron mines in the interior are richer even than our own Mesabi Range in Minnesota. Most of the ore comes from a huge iron mountain known as *Cerro Bolívar*. The mountain, a four-mile ridge shaped like a loaf of bread, contains 500,000,000 tons of ore.

Diamonds, bauxite, manganese, and other rich deposits also lie in the area, called the "new frontier."

Two problems of the new government will be: (1) to see that more Venezuelans share in their country's wealth; (2) to get more people back on the farms so that the country will not have to buy food overseas.

History

Columbus discovered Venezuela in 1498, six years after he first reached the New World in the Bahamas.

Land of a Thousand Rivers

MORE than 1,000 rivers flow through Venezuela. The largest river is the Orinoco (ōr'ĭ-nō'kō)—1,700 miles, from its beginning in southern Venezuela to its mouth emptying in the Atlantic Ocean, opposite Trinidad.

The first European visitors to this rain-soaked jungle land admired the little stilt houses of the Indians on Lake Maracaibo (see picture at left). The houses reminded them of ones they had seen in Venice, Italy. They named the country Venezuela, meaning little Venice.

Angel Falls, highest in the world, is located in the *Gran Sabana*, or jungle highlands, of southern Venezuela. Its waters plunge a total of 3,212 feet—more than 1,000 feet farther than the next highest waterfall. Angel Falls is more than 15 times higher than our own Niagara Falls!

With her location, long coast line, and good harbors, Venezuela finds it easy to trade with North America.

The Spanish ruled the country until 1819, when it was freed by Gen. Simón Bolívar, the George Washington of South America.

Bolívar set up the Republic of Great Colombia which included Venezuela, Colombia, and Ecuador. Venezuela struck off on her own in 1830. She made Caracas (kä-räk'ȧs), Bolívar's birthplace, her capital.

Today Bolívar wouldn't know Caracas. The city has 1,000,000 people, broad highways, and tall, ultramodern buildings made of glass and steel and painted in bright colors. Money from oil and the tastes of a dictator have made Caracas what it is—one of the world's most striking capitals.

MAKING THE GRADE

THINGS TO DO. 1. Have someone read a biography of Simón Bolívar (left), the liberator of northern South America, and report on it in class. Compare his life with George Washington's. 2. Argentina can give Venezuela tips on mopping up after a dictator. What are some of the problems Argentina faces in changing from dictatorship to democracy?

WORDS TO THE WISE. The words below are used in the story on Venezuela. Find their exact meaning and learn how to use them correctly. If in doubt, refer to a good dictionary: **exile, venture, dictatorship, democracy, bauxite.**

ASK THE MAP. Choose the correct word or phrase and write its letter in the blank at the left.

____ 1. Venezuela shares the northern tip of South America with (A) Peru (B) Argentina (C) Colombia.

____ 2. The southern part of Venezuela is a vast jungle-covered wilderness known as the (A) pampas (B) steppes (C) Guiana Highlands.

____ 3. Most of Venezuela's oil comes from the swampy lowlands of the (A) Llanos (B) Lake Maracaibo region (C) Orinoco River Valley.

____ 4. An important farm crop which is grown in Venezuela's cool northern highlands is (A) rice (B) coffee (C) alfalfa.

TALK IT OVER. 1. Why is a revolution against dictatorship an exciting experience? Why is it also dangerous? 2. What European people staged a heroic revolt just over a year ago? How did it differ from the revolt in Venezuela? 3. Compare the American Revolution with the recent one in Venezuela. 4. Who among the three remaining dictators in Latin America is in serious trouble now? Who leads the fight against him?

SPECIAL SECTION WITH *Wernher von Braun*

In the wake of America's successful launching of the Explorer satellite, we take pride in presenting our special consultant this week, Dr. Wernher von Braun, top space scientist in the United States and the leader of the men behind the Explorer.

Message to Young Americans

"ALL ABOARD FOR SPACE" is an especially appropriate title for the accompanying article since it will be read by you, the youth of America. Today's teenagers will be the space pilots of tomorrow. Youngsters have always had that keen sense of the essential that grownups so frequently lack.

In order for you to prepare yourself for a part in man's most romantic adventure, you must have a well-trained mind and a healthy body. Participation in the Space Age will not be restricted to physicists and rocket engineers; there will be a need for well-trained people in other fields. Once laboratory area in manned space stations is for rent, there will be a need for all kinds of professions aboard. You could be an astronomer or an astrophysicist, a radiation expert or a medical researcher, a meteorologist or a reconnaissance man. You might work in the maintenance headquarters of an orbital ultra high-frequency message relay center, or a television relay station. And once man sets foot on the moon and the first voyages to our nearer planets are in preparation, new professions will join the cause of space flight. You might be a zoologist or a botanist, geologist or archeologist, a mapping expert or perhaps even an interplanetary mining prospector.

The Age of Space has dawned. It is only natural that you, as a student, will ask how you can best prepare yourself to take part in man's most glorious adventure. The answer is largely your own decision. You must prepare yourself thoroughly in school and college. After you achieve this goal, then devote yourself, body and soul, to a noble objective and completely absorb yourself in it. Getting completely wrapped up in an exterior objective will save you doctor bills, and is a dead-sure means of achieving satisfaction and personal happiness. If you will do this, you will have contributed your part to this adventure.

MAN is flexing his muscles for his greatest jump in history—to the stars. He is tossing satellites and rockets into space to test the conditions he will meet up there. A couple of his shots (tiny metal balls) have even sailed out of the earth's gravitational pull. They are now lost in space, racing at thousands of miles per hour.

All over the world, scientists are working on the problems of space flight—engineering problems, medical problems, etc. They are trying to find the answers to many questions about the mysteries of our universe.

The Russians are pondering the effects of radiation, "weightlessness," and high accelerations encountered during the ascent of the flesh-and-blood dog they placed in an orbit 500 miles above the earth. Americans are working on atomic fuels for interplanetary ships. British, French, Japanese, and other scientists are studying the danger of meteorites to space travelers and many other problems.

These efforts overlap. No one knows exactly who is working on what, or how far others have advanced.

Plans and visions run ahead of actual rockets. For instance, the Russians are talking of a rocket propellant of photon power; they claim it should move a rocket at nearly the speed of light, 186,324 miles per second.

Future historians may compare our step to the moon with the first toddle of a baby. But at the moment it is a breath-taking adventure. On the next pages you will see how it will be carried out—and how we shall move on into the solar system.

A worker in an air-tight space suit climbs from rocket ship to space station. He is speeding around the earth at thousands of miles per hour—but he has no sense of motion in empty space. Inside the space station he can take off his air-tight suit. The space station is supplied with air, water, and food by rocket ships from the earth.

In a New Age of Exploratio

Looking like a weird beetle, the moon ship soars through the heavens. It needs only a push from its rockets, then glides without power to the moon.

THE MOON SHIP. It's a long step to the moon—239,000 miles. Yet the moon is our closest neighbor in space. Man's first space ship will soar up to this rocky satellite, perhaps within the next ten years.

It will be a strange-looking craft, called a moon ship. It will not be bullet shaped, like the rockets we are used to seeing in newspapers and science books. It will be clumsy and angular. It will look like a rigid metal cage holding several giant golf balls (see above).

The reason for this odd shape is that the moon ship will probably take off, *not from the earth,* but from a space station 1,075 miles from the earth. Here there is no blanket of air to push through, so streamlining is unnecessary.

As a matter of fact, the moon ship will be *assembled* at the space station. Workers in space suits, propelled by tiny rockets, will put together the pieces as they are rocketed up from the earth. These workers will be part of the regular crew living in the space station.

THE SPACE STATION. Why the space station? Scientists know that with our present fuels and engineering skills, it would be difficult to send a large rocket ship nonstop from the earth to the moon and back. It takes tremendous speed to get an object out to the borders of the earth's gravitational pull—seven miles per second. It also takes vast amounts of fuel.

If we assemble our moon ship at the space station—above the atmosphere—we won't have to carry so much fuel. We can build more room for crewmen and more storage space for food. There will be space for the many scientific instruments.

Getting our space station in the sky will be the first job. For this we will use the "three-stage" rocket. It will be twenty-four stories high and shaped like a gleaming rifle shell. It will blast off the ground with fire and smoke.

In two minutes it will be traveling at nearly 4,000 mph. Empty tanks and booster rocket motors will drop away. The rocket will turn into a horizontal course and race on, gaining speed from the second stage. The second set of tanks and rocket motors will drop off. The rocket will zoom on until it hits a speed of 18,468 mph. Then the motors will stop and it will coast without power to an altitude of 1,075 miles.

After reaching this height, it will become a tiny "moon" to the earth, its speed exactly counterbalancing the pull of gravity. It will fly without fuel, because there will be no air to slow it down. It will be like the satellites that Russia sent aloft in 1957.

Workers in space suits will float out and start assembling the space station. They, too, will become satellites, whizzing around the earth. But in airless space they will have no sense of their great speed.

LIFE AMONG THE STARS. The space station will be assembled from many sections. When finished, it will look like a big wheel, 250 feet or more in diameter (see picture on opposite page). It will have room for over 80 scientists and crewmen. It will have observation rooms, telescopes, and laboratories. The space station will be supplied with air, water, and food by rocket ships from earth.

ON TO THE MOON. Once settled in space, we can prepare our moon ship for its historic flight. Its golf-ball-shaped tanks will be filled with fuel (probably hydrazine and nitric acid). It will blast off on full power—aimed at the moon.

In 33 minutes it will be traveling 19,500 mph. It will then be going fast enough to coast unpowered all the way to the moon. The motors will be shut off. Continuously losing speed, the ship will "fall uphill" till it reaches its destination on the moon.

THE LANDING. Hurtling toward the moon's surface under the pull of the moon's own gravity, the ship will meet no blanket of air to slow it down. The moon has no atmosphere. Prior to the landing, the ship will be turned around so it falls tail first. At the proper moment, the rocket engines will be turned on again to lessen speed. The moon ship will settle down on the lunar surface, its rocket jets blowing chunks of rubble away on all sides. A central shock ab-

It is sharply streamlined to pierce
destination: the circular space stat

ion Men Will Sail the Skies

et ship blasts off from the earth. to pierce the thick atmosphere. Its space station 1,075 miles up (right).

sorber and four adjustable legs will reach down to steady it. *Bump*—man has landed on a new world!

LAND OF DUST AND STONE. What will the moon look like? A desert of rock and lava. Ragged mountains. Deep craters. No water. No life. The moon is a savage land, not inviting to earth people.

Our business, of course, will be to explore. Swiftly we shall put together our prefabricated, airtight shelters. We shall erect them in a crevice to protect them against meteorite showers. Then, wearing space suits equipped with oxygen tanks and radios, we shall set out to unravel some of the secrets of this strange new world.

WE WILL FIND OUT MANY THINGS. First, we should like to know how the moon was formed. Was it a planet that smashed into the earth and bounced away? Or was it a belt of gases, or, maybe minerals that circled the earth like Saturn's rings? If we find traces of gas, we will know that the moon never could have been a molten, independent body—because great heat would have driven the gases off.

We should like to find the moon's magnetic field (that particular area that attracts a compass point) and compare it to the earth's.

We should like to see if there are traces of ice on the moon.

We should like to search for new minerals.

We should like to find out, by setting off explosions and measuring the vibration waves, what is the center of the moon.

We should like to determine the thickness of the lava layers on the moon's rugged surface.

BASE FOR FUTURE OPERATIONS? Would the moon make a good starting point for future sailings amid the stars? It might. Its gravity pull is weak compared to the earth's, so rocket ships could leave it more easily. It has plenty of area to set up colonies—provided the earth could supply water and air for them. It might even have some of the raw materials for rocket supply or construction.

VOYAGING THROUGH SPACE. After the conquest of the moon, men will know enough about space flight conditions to explore the planets. Mars and Venus are our closest neighbors. Even so, they are millions of miles away (Venus never comes closer than 25.7 million, Mars 35 million). Trips to them will take months, even though we travel at fantastic speeds. This means added problems of supply, human endurance, and accuracy of instruments.

But the rewards will be great. Does life exist on Mars? Do dinosaur-like beasts roam beneath the warm clouds hiding Venus?

We shall find the answers to these questions—and to many others.

WILL OUR BODIES STAND SPACE TRAVEL? Humans in rocket ships will have many strange experiences. At any time that the rocket engines are not working, we shall be weightless. We shall float inside the rocket cabin. Anything we touch—pencils, rulers, books—will drift into the air. We shall have to learn to strap ourselves to beds, to grasp firmly anything we reach for.

Even eating will be difficult. Liquid will not pour. We could shake milk out of a pitcher—but then it might form tiny globes and float along the ceiling! So we'll squeeze it out of a plastic bottle into our mouths.

More serious will be the effects of sudden changes in speed on our bodies. For instance, 40 seconds after our blast-off in the rocket our weight will be equal to a life-sized marble statue. A few seconds later it will be equal to a *solid iron statue.* Will our tissues stand this sort of strain? Tests are now in progress to see just how much scientists can expect from the blood and bone and muscle that we are made of.

WHY? Why are we going to all this expense and labor and peril? The main reason is man's never-ending curiosity. But there are other reasons—practical reasons. (Turn the page and you will see.)

Gleaming in naked sunlight, the space station wheels around the earth. It has been put together from prefabricated pieces sent up from earth bases.

HOW WILL IT HELP THE EARTH?

THE $$$ PROBLEM. Will space flight pay its way? The costs of building rocket ships and training crews will be so huge that many people do not see how we can afford it. They ask, "Are we going to get anything back on this gigantic investment—other than the national thrill of reaching new worlds?"

The answer is, "Yes"—at least, we hope so. The costs may be tremendous at first, but later benefits to mankind should more than outweigh them.

MILITARY BASES. In the first place, we *must* get to the moon before an unfriendly power does. It's a simple case of defending our way of life. The moon, rolling around the earth, has an eagle-eye view of all the nations. Any nation that builds an observation post up there will have an advantage over all the others. For the sake of world peace, we must not allow a lawless power to seize this advantage.

IRON MINES IN THE SKY. The first economic benefit from space travel might be the discovery of minerals. Asteroids (small planets flying in orbits in space) are often composed of almost pure iron-nickel. The crust of the earth is running short of this metal. The average asteroid is about 200 feet in diameter. On earth the metal it contains would be worth about *one billion dollars.*

It is highly possible that space men could attach rockets to asteroids and blow them out of their orbits. Perhaps the asteroids could be set on courses leading to the earth. After they had landed they could be mined and sold to industry.

Teams of geologists could roam space, finding and testing asteroids for other useful materials.

A RELAY SATELLITE? Telegraph and television contact across the earth's oceans could be cheaply and efficiently served by a number of satellites linked together by radio.

Television waves do not bend with the curvature of the earth. Hence, continent-to-continent broadcasts are not possible, because the waves tend to beam themselves off into space. But if the waves were relayed to whatever satellite happens to be simultaneously in line of sight of two continents, they could cross the oceans easily.

The satellite also could be used as a "star" to navigate by. Its radio signal could reach any ship's receiver in the ocean—through fog or gale—and enable a captain to plot his position.

WEATHER CONCERNS EVERYONE. Out in space we could easily detect a hurricane that was threatening to approach land, killing hundreds and wrecking property. Looking through powerful telescopes, we could see all the finer details of weather formations, cloud belts, and cold fronts, and so provide the people down on earth with a perfect weather forecast.

From this greater knowledge of atmospheric conditions, it might be only a short jump to man's control of weather. This control might be accomplished through use of chemicals or by atomic action.

MOVE MARS CLOSER? Most amazing of the wonders that could come from space exploration is Professor Fritz Zwicky's suggestion that we may be able to bring Mars and Venus closer to the earth. If the population keeps booming we may need more land to build cities and farms. If Mars and Venus cannot support human life, we may find minerals there worth bringing to our planet.

Professor Zwicky thinks we can "redesign" our solar system by the use of rockets, using the same "fusion" power that is utilized in the H-bomb. The fusion rockets would push the planets out of their present orbits. They would "jump the tracks" into new tracks closer to the earth. There they would continue whirling around the sun as before.

ANYTHING IS POSSIBLE. The Age of Space Travel is upon us. At a distant day, some of *your* eyes may look upon the craters of the moon—or see the swirling mists of Venus. *Your* hands may touch the levers that send huge rocket ships toward the stars.

It will be a fascinating time in which to live—an age of discovery that could make the age of Columbus seem tame.

Giant hydrogen explosion blows Mars closer to the earth.

SPACE QUIZ

1. Explain how the space station will be built. How far above the earth?
2. Why isn't it necessary to streamline the moon ship?
3. Pretend you are stepping out of a moon ship onto the moon. What kind of a place will you find?
4. What do we hope to find out about Mars and Venus?
5. Name two ways in which space exploration might help pay its costs.
6. How does Professor Zwicky think planets can be moved closer to the earth?
7. Name two of the things we would like to find out about the moon.
8. Why will the moon ship have to turn on counter-rockets as it approaches the moon's surface?

HI NELSON

At Home With A. Lincoln

LET'S go calling on a friend who was born 149 years ago this week. His home, the only one he ever owned, stands at the corner of Eighth and Jackson streets in Springfield, Illinois.

It's a pleasant house, with a frame and floors of sturdy oak, doors of black walnut, and laths of hand-split hickory. It is strong and honest, like the man who lived here.

Now it has two stories. When he bought it in 1844 for $1,200 in cash plus a vacant lot, it was only a story-and-a-half cottage. He enlarged it in 1856 to meet the needs of his growing family. Three of his four sons were born here, and one of them died here.

We go up the steps, as half a million visitors do each year. Inside, we see the double parlors, the dining room, the family sitting room, the kitchen, and the upstairs bedrooms. They are furnished very much as they were when the family still lived here. Even the wallpaper has been duplicated from sketches of the house published in a magazine in 1861.

Some things are exactly the same as they were then. One is the doorbell.

It rang one day in 1860. A committee was at the door. It had come to tell Mr. Lincoln that he had been nominated for the Presidency.

It rang many times on February 6, 1861. The Lincolns gave a party to which everyone was invited. It was their farewell to Springfield.

A little later, standing on the platform of the train that was taking him to Washington, Lincoln said: "To this place and the kindness of these people, I owe everything. . . . I now leave, not knowing when, or whether ever, I may return."

He returned only after his death. His body lies in an impressive tomb in Springfield's Oak Ridge Cemetery. Like the beautiful Memorial in Washington, it is a nation's shrine.

Somehow, though, I feel closer to him in his home than anywhere else. These walls echoed to laughter at his famous jokes. They knew his fears, his hopes, his prayers. Somehow, I can almost hear his words, "With charity for all."

It's good to have such a friend to visit.

LINCOLN'S HOME—*Plans are on foot to enlarge the grounds and add a museum and parking place. The house was given to the state of Illinois in 1887 by the President's son Robert.*

QUESTION BOX

GHANA FLAG . . . *Can you give us a description of the flag of the new nation, Ghana?*—K.W., Naugatuck, Conn.

Ans.—The new flag of Ghana bears three broad stripes of red, gold, and green, with a black star in the center. The red stripe is for those who work for her statehood, the gold is for her wealth, and the green is for her forests and farms. The black five-pointed star represents freedom.

BASEBALL . . . *What was the name of the first team of professional baseball players?*—J.K., Hawkinsville, Ga.

Ans.—In 1869 the Cincinnati Red Stockings turned professional and became the first salaried team in the history of baseball.

SMILE AWHILE

Flipper: "How did you make out in your car smash-up?"

Dipper: "Not too well; it was my word against hers, and she had thousands more than I did."

—Linda Rabon, Farmerville, La.

Customer: "When I bought this cat at your pet shop, you said it was good for mice. I'll have you know that it doesn't even go near them."

Clerk: "Well, isn't that good for mice?"

—Frances Lehmann, El Centro, Calif.

Two birds were flying in the air and saw a jet plane.

First Bird: "Boy, that bird is sure going fast."

Second Bird: "You would be too if your tail was on fire."

—James L. Harris, Wichita, Kans.

Doctor: "Didn't you see *poison* written on the bottle?"

Patient: "Yes, but I didn't believe it because right underneath it said *lye*."

—Mary Jane Happel, Hokah, Minn.

Jimmy: "May I have an apple?"

Mom: "Didn't you just have your lunch?"

Jimmy: "Yes, but an apple a day keeps the doctor away—and I just broke his window."

—Marvin Miller, Laredo, Texas

CROSSWORD PUZZLE

ACROSS

1. ? ? ?
8. ? ? ?
15. More spacious
16. Different
17. Mechanical man
18. Variety or kind
20. Short for butter substitute
21. Atop
22. Northwest Territory (abbr.)
23. First name of "Father of His Country"
25. Triangular piece
27. To admit
30. Russian state or province (abbr.)
31. Compass point
32. Athletic Association (abbr.)
33. French for "and"
35. Wheat that is to be ground
37. Broad, level land
40. Park in the Rockies
41. Cowboy circus
42. Spanish for "the"

DOWN

THE NEWS IN A NUTSHELL

● **ALPHA.** The first U.S. satellite, Explorer, is racing around the earth at 18,000 mph. The Army launched it from Cape Canaveral, Fla., late January 31 with a Jupiter-C rocket, after the Navy's Vanguard failed to get off the ground. This four-stage rocket was developed by Dr. Wernher von Braun (page 147). It is made up of the Redstone combined with 17 smaller Sergeant rockets. One of these is part of the satellite itself. • • • The Army's official name for the Explorer is "1958 Alpha." Alpha is the first letter of the Greek alphabet. The name means this is the first satellite to be launched in 1958. The Army has orders to plan a second launching soon. Russia is said to have her third sputnik ready to take off. • • • Our Explorer, or Alpha, is shaped like a slim bullet. It is six and a half feet long and six inches in diameter. It weighs 30.8 pounds. It is packed with instruments which are sending much information back to IGY scientists. Its radio signal is a high-pitched steady hum. Its egg-shaped orbit takes it about 1,700 miles from earth at its most distant point and about 200 miles at the closest point.

● **ZETA.** Some day in the future, a gallon of sea water may produce as much energy as 100 gallons of gasoline. The door to a world of plenty was opened by a report made on January 24 by British and American scientists. • • • The British have developed a doughnut-shaped machine called the Zeta (zero energy thermonuclear apparatus). In it, compressed hydrogen gas has been heated to five or six million degrees centigrade for periods of two to five thousandths of a second. At such temperatures, they think, hydrogen atoms are fused or melted together, forming new atoms and giving off energy. The sun gets its energy from such fusion.* • • • American scientists at Los Alamos, N. Mex., have conducted similar experiments with a device they call the "Perhapsatron." They, too, think they have fused atoms—though only for a few millionths of a second. • • • If higher temperatures can be held for a longer time, the tremendous power of the H-bomb can be tamed for man's use. An unlimited supply of power lies locked in the hydrogen of the earth's oceans.

● **EXCHANGE.** After three months of quiet talks, the United States and Russia have signed an agreement that may lead to better understanding. The two countries will exchange more radio and TV programs and movies. There will be an exchange of artists, athletes, technical experts, students, etc. It will be easier for tourists of one country to visit the other.

● **UNION.** Egypt and Syria have formed a union, to be called the United Arab Republic. It is expected to take form by next fall, with Cairo as the capital and Egypt's Nasser as president. (For a geography background story about the union, see next week's CURRENT EVENTS.)

*The atom bomb gets its energy from fission—the splitting apart of heavy atoms, such as uranium. The hydrogen or H-bomb gets its energy from fusion, the combining of light atoms. Man has already learned how to tame fission (page 103).

WHO'S WHO IN THE NEWS

What's O.K. With S.A.?

At the President's desk, Sherman Adams conducts "business as usual" during one of Mr. Eisenhower's illnesses.

● His hair is frosty white. His face has been compared to the granite of his home state, New Hampshire. Someone said his glance could "wither a rose in June."

Democrats dislike him. So do many Republicans. He has said "No" so often to requests by congressmen that they call him "The Abominable No-Man."

He takes a grim pleasure in such nicknames. He has only one desire—to do a good job. He works at it from six in the morning until eight at night—when he goes to bed.

His job is the second most important in Washington. He decides who gets in to see the President. He screens all papers and documents coming to the White House. Those marked "OK, S.A." are usually approved by Mr. Eisenhower.

The "S.A." stands for Sherman Adams, 58, former Governor of New Hampshire and one of the earliest Eisenhower supporters. His official title is Assistant to the President. Actually, though the Constitution does not provide for such a post, he serves as Assistant President. Mr. Eisenhower calls him "my right-hand man, my chief of staff—the only man who really understands what I am trying to do."

On January 20, the President opened the Republican political campaign with a speech in Chicago. He pleaded that defense be kept out of politics.

That same night, Mr. Adams spoke very differently in Minneapolis. He blamed the Democrats for everything from Pearl Harbor to the present state of our missile program. Such a speech by a man so close to the President raised many questions. The answer to most of them seems to be, "This is an election year."

27th October, 1959.

Dear Ed,

I am most appreciative of the telephone call from your secretary on Saturday. It was important to me that I got your statement to New York that night and I know you were pre-occupied with a great deal at the time. I am sure that the pre-occupation has increased if anything but I beg to pre-occupy you with an additional matter.

TIME is scheduling for next week a cover story examining the state of American television, the troubles it has run into, the possible ways of getting out of them and moving on to the achievements of which it is capable. The whole thing is a subject so close to your heart, and one in which you have so many constructive views, that it would be a shame for the story to lack the benefit of what you think about the matter. Would it be possible for us to talk about it sometime in the next few days, preferably before the end of this week? Naturally, I would like to be able to talk to you on the record but I would be willing to talk on any basis you prefer.

I think we were able to say some worthwhile things about television and, in particular, television journalism in the last big story on the subject, namely the TIME cover story on yourself. This time the face on the cover is to be Bob Kintner of NBC, but the subject really is the medium as a whole. I think it would be too bad if TIME were to run a cover story that did not benefit, either directly or non-attributably, from your thoughts and observations. To repeat, I know you are busy on this trip and I realize also that you may not feel like talking at length on the record. It is important, though, and I hope very much that you can spare a little time to see me.

Most sincerely,

Bob M.

Dear Sir:

I have in my possession a book set up in scrapbook format which is a chronological and numerical documentary record of Hitler's activities from 1 January 1940 through 31 August 1942 inclusive. The title of said book is:

GROSSDEUTSCHLAND IM WELTGESCHLAND - TAGESBILDBERICHTE 1940

Captions of each picture is written in German script and at the end of each months period, a summary page covering important phases and highlights of that period is included.

I have had the above mentioned book reviewed by Professors of several universities and private individuals who advised me that the photographs and information contained therein has never been released to the public.

Due to the historical value of information contained therein, I have decided to sell and have been advised to contact you along with other networks regarding sale of said book.

If you are interested, I may be contacted at the above address and the book will be made available for your inspection.

Jan. 25, 1959.

Dear Mr. Morrow:

This is to thank you for the truisms expressed in your address a brief condensation of which is in the February issue of Reader's Digest. It is something that should have been forcefully spoken of long ago, and I hope that you will not confine your remarks just to that occasion but keep on hammering away until it sinks into the thick skulls of some of our people.

Two weeks ago while in Washington I talked in the same vein to the chief editorial writer of the Scripps-Howard press, Mr. Stone. I berated him because our papers can afford to squander four and eight pages on infantile sports, on comics and funnies and the rest of the stuff that serves to moronize our people, but cannot spare a column to the subject of the Soviet challenge except now and then. When they are approached with an article written not by a professional scribe but one who has spent fifty years on the subject of Russia, who has septn 26 years in that country before and since the revolution, who has had vast experience with the government and people, they usually tell you: "We had an article about six months ago." They consider that as sufficient to enlighten a people being brainwashed by the moronic television shows, the creation of either morons or by those who consider the audience moronic. I have no TV set and will never install one as long as nitwits are in charge of the programs, as long as your sound advice remains a mere dream of people like you.

Your library no doubt has the Jan. 1, 1959 issue of Vital Speeches of the Day. By all means read my extemporaneous swansong recorded when I delivered it in Indianapolis, Ind. on Nov. 15th before the All-American Conference to Combat Communism headed by Dr. Dan Poling. The chief editorial writer of the Santurday Evening Post Called it "Prophetic and masterly." The same for Mr. Rebuben Maury of the Daily News. I mention this because the subject has never been heard on the TV. Yet when I delivered it before an audience of ordinary people there were many in tears, and many more came to me to demand why they don't hear such subject more often. Our people do not want to be narcotized or moronized. They want facts; they want to be told what to do about the causes of budgets which will ultimately bankrupt us.

Sincerely yours,

PROCEEDINGS AND DEBATES OF THE 85th CONGRESS, SECOND SESSION

What Do the People of Russia Think of Nikita S. Khrushchev?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 16, 1958

Mr. McDONOUGH. Mr. Speaker, the people of the United States owe a debt of gratitude and appreciation to Mr. J. Anthony Marcus for the following letter to the editor of the Washington Evening Star.

Mr. Marcus informs us from personal experience how we should treat Nikita S. Khrushchev if he should come to the United States for a summit conference. He also gives us firsthand knowledge of what the people of Russian think of this dominating, arrogant, disgusting dictator who did not hesitate to boast that "We will bury you."

I recommend that all Members of Congress and all readers of the CONGRESSIONAL RECORD read Mr. J. Anthony Marcus' letter carefully. In my opinion, I think he has done us a great service:

HOW TO HANDLE KHRUSHCHEV

To the EDITOR OF THE STAR:

If Nikita S. Khrushchev attends a U. N. summit meeting, it is imperative that we do not come out of this conference cheated and defeated as has been our fate in dealings with the Soviets since 1933.

And if Khrushchev does come to America, how should our press, radio, and television handle the event? Indeed, how would the Russian masses, at least 90 percent of them, want us to treat this unwelcome guest on American soil?

As a native-born Russian who has had extensive experience in the Soviet Union as representative of leading American industrial corporations and in close touch with happenings in Russia since 1917, I know that when the Kremlin mouthpieces Pravda and Izvestia laud a foreign government or people, the Russian masses consider them as mortal enemies of theirs. When the Soviet regime condemns President Eisenhower, Dulles and anyone else in the United States, the average Russian is glowingly happy and considers them as his true friends. American tourists can never hear this from the Russian people who hate and fear their tyrants.

Many a time during my business sojourns there, even high executives in the Soviet Government have said to me: "Why do you Americans come here to deal with our rulers? You are only enhancing their prestige and tightening the noose around our necks?"

En route from Minsk to Moscow in a sleeping compartment with a three-man Russian commission, one of them angrily said to me: "You foreigners fill your mouth with water when you reach this country. You are afraid to see our bitter life for what it is." His colleagues begged him to keep quiet for fear he might be overheard by some agents swarming the sleeping cars and all of them would have had to pay for it.

On the basis of personal experience in the Soviet Union over a period of several years, I would therefore counsel all United States organs of communication to clamp down the tightest boycott of Khrushchev and his entire entourage. There must be no interviews, no TV time at any price. We should ignore them completely. This has been the fate of our diplomatic representatives in Russia since 1933. Let us repay the compliment. We should shun them like the plague, for they are the carriers of the red plague. This would be the bitterest blow to Khrushchev in his own country. This is the only sensible way to handle the man who has warned us: "We will bury you."

And if we do this from now on and for all time to come, the Russian masses will bless us; they will rejoice and will regain courage to carry on the 40-year war with their oppressors. It is to our vital interest that this should be so.

What should our Government representatives do when facing in the U. N. the leader of the savage war against us?

Since the founding of the U. N. we have suffered endless abuse and insults at the hands of Gromyko, Vishinski, Malik, and the Suslovs. Our delegates have never known and do not know today how to handle them. They lack the necessary Russian background to put up with the Soviet delegates.

Therefore, President Eisenhower, Secretary Dulles, Ambassador Lodge, and their aids must come with ample ammunition. There is plenty of it in the Library of Congress and in the State Department. Most of all, there is priceless material in the reports by the House and Senate committees which have been investigating the Soviet barbarians for two decades. Let us use it on this important occasion, and effectively expose these gangsters before the whole world.

When Khrushchev talks about American imperialism, let us lay bare at the U. N. meeting the history of Soviet murderous imperialism in the once independent nations they have since enslaved, the millions of men, women, and children they have slaughtered. Let us remind them and the world of the 10,000 Polish officers they had buried alive in the Katyn Forest in Russia, the thousands of brave Hungarian fighters for freedom they had shot down and still are torturing in slave-labor camps in Siberia; the Lithuanians, Latvians, Estonians, etc., they have enslaved and exiled. All that and more should be flung into Khrushchev's face over and again. We must never permit them to forget this, and most of all we must not permit the so-called neutralists to forget lest all of us be engulfed by this Red conflagration.

This is how the Russian peoples would want us to act on the occasion of the U. N. meeting and on all other occasions. For years some of us have been urging this course, but to no avail. Our failure has helped embolden the enemy and has frustrated our friends behind the Iron Curtain.

There are plenty native people among us who are indulging in wishful thinking about the possibility of coexistence. This can never be our fate. Not even if we gave them half of the United States and all the gold at Fort Knox would they deviate from their goal—the communization of the entire free world. The tragedy is that the people in this country who have most at stake are the very ones who are helping dig our freedom's grave out of ignorance, stupidity, and either unwillingness or inability to understand the true nature of the Soviet beast.

Our back is now to the wall in all international arenas. There must be no retreat, no appeasement and no defensive action. We must go on the offensive, determined to carry on until victory is won. In this struggle there need be no American blood shed. The fighting and the dying will be done by the enemies of communism within the Soviet empire, if we will only show some backbone and imagination and stop hobnobbing with the tyrants, stop drinking toasts with them. The Red leopard can no more change his spots than the jungle leopard.

Let us not tremble about Kruschev going to war with us at this time. He is far more afraid of his own people if he starts a war and puts guns into the hands of the Russian masses than he is afraid of our nuclear weapons.

This is the message the Russian masses, the silent people, would want every one of us to have. Let us remember that the Russian people have never made peace with their illegitimate regime, have never recognized them, even though governments of free nations have made the blunder of the 20th century by becoming diplomatic bedfellows with the Soviet Communists.

New York City, N. Y.

Dear Mr. Murrow:

You may recall that we met several years ago when you appeared before the Senate Foreign Relations Subcommittee studying the overseas information program of the United States. Just as you were a little out of your daily field of activity in that appearance, I am a little out of the government field in writing you on the subject of a television program.

Be that as it may, Mr. Francis Valeo, a member of the Committee staff when I believe you also met at the hearings, Miss Nancy Hanschman, who has worked with you in her capacity as a member of the CBS staff, and I have, in our off-duty hours, worked out an idea for a television program. A production organization with the imagination yours has displayed might find this idea interesting. A proposed format is enclosed and we believe it is worthy of consideration.

We have not discussed this program idea with anyone else. Should you find it of interest, we would be highly honored to pour forth to you the rest of our thinking on the subject. If you are not intrigued, please let us know as we plan to try to market it elsewhere.

Very sincerely yours,

Carl Marcy
2600 South Hayes Street
Arlington, Virginia

Enclosures

PROPOSAL FOR TELEVISION PROGRAM

Title "What do you do for a living?"

1. Essence of program: The first thing two strangers talk about after the weather, is usually, what do you do for a living? What the program should do is to show how individual Americans earn their living and thereby satisfy a universal human curiosity: What is it like for the other fellow? What is it like to be a policeman, an airline pilot, a navy officer? How much does he earn? How does a steam-shovel operator do his job? What's a day like in the life of a chorus girl? How does a reporter get his stories? What does it take to edit a great newspaper? How does an engineer get his job and learn to bring a train in on time? How does a farmer spend his waking hours? What is it like to be a Senator for a day?

2. Potential audience: Everyone who has ever thought of doing some-

things for a living other than what they are doing. This includes just about everybody - especially on a lovely spring afternoon. All children who dream a new dream of a future occupation every other day. All people who want to know about commercial fishing or driving a trucking vertical bus, or something else that they have never. All people who are interested in how other people live.

2. Experimental approach: What we have in mind is a morning in the life of a single person - not an ordinary day, but the occasion of a day - with all that implies in the way of human interest, rollicking comedy and drama.

3. Educational value: Audiences will have an opportunity to learn about what goes into the work of their neighbors. What are the daily challenges, responsibilities, irritations, and rewards on the brick layer 20 stories up, or a fisherman off the Newfoundland banks, or the housewife or city lawyer, or soldier. What are the [illegible]

It would, in total impact, stimulate a deeper appreciation and respect of Americans for one another and a greater sense of unity in this country. It would help foreigners to understand America better. It would also be a good exportable film.

5. Possible Techniques of presentation: One occupation per program. Choose carefully by interview a person engaged in the occupation and combine his personal appearance on the program with a running functional film account of him on the job, gained from following him closely at his work.

6. Comparison with existing programs: This is not a documentary with emphasis on an industry. It is not a "what's my line" program with emphasis on idiosyncrasies of occupation and the perceptiveness of the quizzers. It is not a "person to person" program where the emphasis is on an outstanding personality. Rather, the proposed program combines some aspects of all these but it combines them in a manner to

which the ordinary guy, often one doing something [illegible]

any of us might have yearned to do at one time or [illegible]

is the focus of attention.

7. <u>Subject matter</u>: As wide as the activities of mankind.

Please Return S. Marks

THE WORLD AND US

NEW YORK, Mon., AAP. — A Melbourne man, Mr Stanley Marks, of 11 Boree-ave., Clarinda, has suggested the establishment of a council of youth as an integral part of the United Nations.

In a letter to the New York Times, published today, Mr Marks said mature young people, who must suffer and die in future wars, had the right to be heard in the world's councils.

"Surely two or three people in their early twenties (or even later) could be chosen to represent their own lands, as ambassadors. They could interpret what the young feel.

"Perhaps even the new Soviet generation could bring about a different attitude among their leaders, however slight.

Stan Marks, incidentally, is an enthusiast for youth. He would like to see a council of youth as an integral part of the United Nations. A letter he wrote suggesting this was published recently in the New York Times and has brought him many letters.

Clipping from
The New York Times
Date March 10, 1958

Council of Youth

To the Editor of The New York Times:

While the world's statesmen trying desperately to find a solution to the international situation, may I make a suggestion? Would not the establishment of a Council of Youth, as an integral part of the United Nations, contribute to better understanding?

Mature young people, who must suffer and die in future wars with little or no say have a right to be heard in the world's councils. Surely two or three people in their early twenties (or even later) could be chosen to represent their own lands, as ambassadors. They would come from every nation—maybe even those not now in U. N.—and discuss world problems, other common matters and interpret what the young feel.

A Council of Youth would act as a bridge between nations. It would carry suggestions and put these to their representatives in the higher council. Admittedly, the young would not have all the experience of adults—but they could still act as advisers and bring an important freshness of approach from a section too often taken for granted.

Perhaps even the new Soviet generation could bring about a different attitude among their leaders, however slight. Perhaps they could show that in the next "big bang" there won't be any real victor—we'll all lose. Maybe many of the young Soviets, as we have been led to believe, have other than war views.

Of course this would not be easy to organize, but in these perilous time it seems worth-while to grasp at any straw, especially when so many millions of young people are involved.

STANLEY MARKS.

Melbourne, Australia, March 7, 1958.

11 Boree avenue,
Clarinda, Melbourne,
Australia.
January 2, 1959

Mr. Edward R. Murrow ,
c/- CBS TV-Radio Network,
New York, N.Y.,
U.S.A.

Dear Mr. Murrow,

As an admirer of your programmes and views, I was wondering whether you would be interested in the enlcosed clippings which originated with an item in The New York Times.

I am a local writer who spent some time in your country (as New York correspondent for a group of papers) and on Commonwealth Exchange for young newsmen,on The Montreal Star and Toronto Telegram- in 1951-52. Both here and overseas (especially CBC, Canada) I have given numerous radio talks.

The enclosed carries a letter of mine published in The New York Times and two other items about it. The letter suggested establishment of an all-nation Youth Council as an integral part of the United Nations.

I feel that mature young men and women could contribute a great deal towards better understanding . Despite all the bodgies and widgies there are more young people at schools and doing courses than ever before. Local adult classes are flourishing.

I have worked out just how a Youth Council could operate, beginning at the school level. It could start in local communities and go right through to U.N. I have worked out details from choosing representatives to general membership.

There could even be scholarships for young men and women to spend a year or so at the U.N. headquarters. I have had many letters about the suggestion, including one from an overseas P.M.

Incidentally, I enjoyed your provocative article delivered in Chicago. We ran it in our Sydney TV magazine. It's even more topical here than over there. Some of our TV standards are really bad.

One of our TV stations (GTV9) must have given the quote of the century tonight.

It gave Australia as almost winning the second test cricket match as the main news item and then added an "equally important story"--- Russia's moon-bound rocket.

As you suggested, if they look back on this in 50 years they will really wonder about us.

Hoping the enclosed interests,

Yours sincerely,
Stan Marks

4 June 1958.

Dear Ed,

We are leaving tomorrow morning for Boston and thence to Canada and London, so this is just to say goodbye and what a great pleasure it was seeing you both and being able to discuss affairs in general with you. I am leaving the States largely encouraged by the immense vigour and great fund of goodwill that exists here, and partly fearful that ~~it~~ these will not find the right channels through which to express themselves in world terms. You are playing a great part in the search for those channels — and good luck to you.

With warmest greetings from us both to you both. Leo Marquand

P.S. We thoroughly enjoyed My Fair Lady, and for the sake of your

book keeping, I had better mention that I paid the broker for them though he tried hard to persuade me to put them on your account. Many thanks.

Leo

Marquith, Malcolm

MEMORANDUM

From **MALCOLM MARQUITH** 5/22/59

To: Mr. Edward R. Murrow
Edward R. Murrow Radio News Show
CBS

Dear Mr. Murrow:

Because of its importance, I thought you might be interested in the attached news release and "White Paper" on leukemia. A copy has been sent to CBS News Department.

Sincerely,

Mal Marquith

Marquith, M.

ADVANCE FOR RELEASE TO AMS OF WEDNESDAY, MAY 27, 1959

NEW YORK -- Leukemia mortality has been increasing at a rate faster than any other form of cancer except lung cancer, the American Cancer Society stated in a background report on the disease released today. Leukemia is a form of cancer of the blood-forming organs of the body.

The growing urgency and effort to control the disease, the report adds, have led to the development of new chemical agents which, in recent years, have increased the average span of life of the leukemic patient.

There are two classifications of leukemia -- acute, fast progressing, and chronic, slow progressing. Life expectancy in acute leukemias, which are found most frequently in infants and young children, "used to be a matter of a few weeks or months, but in recent years new therapeutic agents have gradually stretched life expectancy in the occasional case to as much as a few years," the report states.

Chronic leukemia usually occurs after the age of 25, and the survival period is much longer than in acute leukemia.

Although leukemia is often thought of as a children's disease, it strikes many more adults, according to the report's statistics. In the United States, leukemia now claims about 11,000 lives annually, nearly 2,000 of them being children under the age of 15.

"In 1930," the report continues, "the leukemia death rate among males of all ages was 2.5 for each 100,000 population. It climbed steadily to 7.4 in 1956. Among females of all ages, the increase in death rate was from 1.8 to 5.1 for the same period. A table appended to the report shows that the increase in the incidence of the disease has been greater after the age of 50 in both males and females, but greater in males.

The report attributes some of this increase in the incidence to improvements in techniques of diagnosis and reporting, and also to the increase in the proportion of older people in the population. "However," the report adds, "the steadily increasing incidence of leukemia cannot be entirely explained by improvements in diagnosis and by increased longevity."

"The determination to find out more about the disease has never been greater," the report declares. The American Cancer Society, it says, leads all private voluntary agencies in the subsidies made available for research on or indirectly related to leukemia. This year alone, the Society is supporting research on this disease to the extent of nearly $1,000,000. A breakdown of American Cancer Society allocations to investigators and institutions is attached to the report. Sizeable grants for leukemia research have also been made by the National Institute of Health of the United Stated Public Health Service and other agencies of the government, including the Atomic Energy Commission.

Other highlights of the report include:

-- The incidence of leukemia is greater in the more privileged than in the less privileged classes, and in urban as

against rural populations.

-- Leukemia is rarely present at birth. Only 20 cases of congenital leukemia are reported in medical literature.

-- The possibility that human leukemia might be caused by a virus is suggested by experiments performed on mice.

V. PROGRESS ALONG THE RESEARCH TRAIL	21
VI. APPENDIX -- NOTES, REFERENCES	26

I. EDITOR'S NOTE

The purpose of this report is to provide editors, writers, scientists, and others interested in public health with a general background summary of what is known about leukemia, what is being done in treatment, and what are some of the signs that point to the future control of this fatal disease.

Leukemia is a form of cancer of the blood-forming organs of the body, characterized by the disorderly growth of immature and abnormal white blood cells. These cells replace the normal cells of the bone marrow, the major site of blood cell formation. Other organs and tissues of the body also become infiltrated with the abnormal cells, notably the spleen, the liver and the lymph nodes. Thus, leukemia resembles other forms of cancer in several respects: unchecked growth and spread of abnormal cells; cause unknown, no known cure.

Leukemia ranks only 72nd, however, in the order of diseases causing death each year throughout the world. However, over the past 30 years leukemia mortality has been increasing at a rapid rate -- more so than any other form of cancer except lung cancer. For this reason, cancer researchers are taking a deeper interest in the disease than ever before. Why leukemia mortality rates are on the increase is not known, but there are many theories, some of them relating to environmental influences in the atomic age.

The growing urgency and effort to control leukemia have led in recent years to the development of new chemical agents which have increased the average span of life of the leukemic patient. Previously, a diagnosis of acute leukemia meant that death would occur within six months from the onset of the disease. Now in some cases the life span has at least been doubled in children, and research scientists are striving for even more solid gains in the near future.

II. DESCRIPTION AND BACKGROUND

Definition

Leukemia is a disease of the blood-forming organs. These organs consist primarily of the bone marrow and, under certain conditions, the lymph nodes, spleen and liver. As a result of an unexplained overproduction of abnormal immature white blood cells (leukocytes), these cells over-run the bone marrow and infiltrate and enlarge the liver, spleen and lymph nodes.

This new growth of white blood cells crowd the bone marrow, interfering with red blood cell and blood platelet production. The red blood cell suppression results in anemia. The platelet deficit decreases blood clotting capacity. As a result, bleeding from such areas as the gums and nose, easy bruising of the skin, can occur.

In leukemia patients the symptoms of pallor, breathlessness and increased heart rate are reflections of the anemia.

Bleeding and easy bruising may reflect the platelet deficiency.

Upper abdominal enlargement indicates swelling of the spleen and the liver or lymph nodes. Swellings in the neck, armpits, chest, and groin may be due to enlargement of the lymph nodes.

Method of Diagnosis

The problem of diagnosis of leukemia is not so simple as the foregoing description would suggest, however, because of several factors:

1. Not all patients with leukemia have fully developed symptoms. The order in which symptoms appear varies, and in the early stages of the disease only a few signs may be present.

2. Every known symptom of leukemia may also be characteristic of other diseases. Therefore, differential diagnosis is at times extremely difficult or virtually impossible.

When the blood of leukemia patients is examined under a microscope, the number of white cells is frequently found to be grossly abnormal. In a normal healthy person, the white blood count ranges from 5,000 to 10,000 cells per cubic millimeter; in a well-marked case of leukemia the count can go as high as 800,000 or drop below 1,000. Since many infections can drastically increase or decrease the white count, such changes are not diagnostic.

The only reliable diagnostic criteria are the type and number of abnormal and immature white cells being produced. This evidence of leukemia is obtained by microscopic examination of a small specimen of bone marrow which can be obtained without difficulty by aspiration from the breast bone or hip bone, the spine, leg or arm.

Different types of leukemia

There are two basic types of leukemia which are differentiated by the predominating type of white blood cell. There may be an abnormality of quality either of lymphocytes or of myelocytes, two distinct types of white cells. (Lymphocytes contain no granules and hence are called "agranular" white cells. Myelocytes contain characteristic granules and therefore are known as "granular" leukocytes. There are three kinds of myelocytes: neutrophils, eosinophils, basophils.)

When the predominant white blood cell is the lymphocyte, the disease is known as lymphatic or lymphocytic leukemia. When the predominant white blood cell is the myelocyte, the disease is known as myeloid or myelocytic leukemia.

Regardless of the type of cell, however, when symptoms are rapidly progressive and the blood picture reveals extremely immature white cells, the disease is called acute leukemia. Thus, there exists either acute lymphatic or acute myelocytic leukemia.

Generally, when the onset of the disease is less rapid and the white cells appear less immature, it is diagnosed as chronic leukemia. Thus, there exists either chronic lymphatic or chronic myelocytic leukemia.

The meaning of the differences

The acute leukemias are found most frequently in infants and young children. Life expectancy in acute leukemia used to be a matter of a few weeks or months, but in recent years new therapeutic agents have gradually stretched life expectancy in the occasional case to as much as a few years.

Chronic myeloid leukemia usually occurs after the age of 25, while chronic lymphatic leukemia is a disease of later life.

Chronic lymphatic leukemia is the most hopeful of all leukemias. A survival period of 10 or even 20 years has occurred in some cases.

Chronic myelocytic leukemia responds fairly well to various treatments and some patients may live with it for a number of years.

The incidence of leukemia

In the United States leukemia now claims about 11,000 lives annually; nearly 2,000 of these are children under the age of 15.

The number of recorded deaths from leukemia in all countries has been rising; the recorded incidence of the disease has doubled in the past 25 years. Until recently the rate of increase has amounted to about four or five per cent per annum.

In 1930 the leukemia death rate among males of all ages was 2.5 for each 100,000 population. It climbed steadily to 7.4 in 1956. Among females of all ages the increase in death rate was from 1.8 to 5.1 for the same period.*1

Undoubtedly some of this increase in incidence is due to improvements in techniques of diagnosis and reporting, but it is pointed out that it is to some extent due also to the increase in the proportion of older people in the population.

However, the steadily increasing incidence of leukemia cannot be entirely explained by improvements in diagnosis and by increased longevity.

Incidence of leukemia in children

Much has been written about leukemia in children in recent years. It is true that of all the malignant neoplasms (cancers), leukemia is the one found most frequently in children. Also, the disease in children is usually an acute leukemia which has a rapid and short course leading to early death.

The incidence of leukemia in children is higher under the age of four years than at any other age during childhood. After the age of four years the incidence curve falls, rises again between 15 and 19 years, then falls again, and rises sharply at age 40 to 44 years.

*1 see Appendix

However, although the over-all death rate from leukemia has been increasing, for reasons unknown, it is doubtful whether the death rate among children actually has been increasing.

The most recent report on this subject from the U.S. Department of Health, Education, and Welfare (Sept. 1958) points out that:

1. Among white infants in the United States under one year of age there has been an absolute decline in death rates from leukemia.

2. Among children in the first five years of life, the mortality rate has not changed since 1940, and since 1950 there has been a decrease in mortality among white children of this age group.

The scientific interest in leukemia

What all of these figures mean is as yet unknown to scientists. However, the determination to find out more about the disease has never been greater.

The American Cancer Society leads all private voluntary agencies in the subsidies made available for research on or indirectly related to leukemia.*2

The National Institute of Health of the U.S. Public Health Service, and other agencies of the government, including the Atomic Energy Commission, have also made sizeable research grants for leukemia research.

Some of the causative agents of animal leukemia have already been identified. They include x-rays, certain coal tar products, specific hormonal imbalances, and cell-free or virus-like agents.

In addition to the grants awarded for research directly or indirectly related to leukemia, the American Cancer Society is currently supporting many other research projects in the field of viruses, since there is considerable evidence that in certain animals cancer may be caused by viruses. If these findings apply also to man, some preventive measures may become feasible.

Scientists throughout the world are taking an increasing interest in the fight against leukemia. Investigators in the Soviet Union, as well as in other countries, are sending chemicals to the United States for screening, in a broad international effort to develop drugs which will effectively cure leukemia as well as other types of cancer.

Dr. Steven O. Schwartz, Director of the Hematology Laboratory, Hektoen Institute for Medical Research, Chicago, in an article appearing recently in "Today's Health," a monthly publication of the American Medical Association, points out that we cannot "eradicate or control a disease effectively by treating only its symptoms. We must treat the disease itself. We cannot do this without knowing its cause, and only by research can the cause of leukemia ever be disclosed."

Thus, the fight against leukemia and efforts to find its cause, its course, and its cure, will be intensified during the next few years.

III. EXPLORATION INTO CAUSES

It is known that leukemia is characterized by excessive formation of immature white blood cells. What causes the normal production of cells to suddenly get out of balance is not known. Research is currently probing several different pathways of possible etiological (causative) significance.

A. Environmental factors and the atomic age

It is an interesting and perhaps significant fact that the absolute incidence of recorded deaths from leukemia is highest in countries with the highest standards of living.

Furthermore, within any given country, the incidence of leukemia is greater in the more privileged than in the less privileged classes, and in urban as against rural populations.

It may be that better diagnostic methods explain in part this fact. A certain number of investigators in the field, however, are searching for environmental factors as an explanation of the over-all rising mortality rate.

It is known definitely, for example, that excessive exposure to ionizing radiation from X-rays or radioactive material can cause leukemia. There is no completely satisfactory explanation of how or why irradiation induces leukemia. The theory most often advanced is that the leukemic cell is a variant of the normal cell which has undergone a somatic and genetic mutation caused by irradiation. However, this theory is by no means conclusive.*3

Sir MacFarlane Burnet, Director of the Walter and Eliza Hall Institute of Medical Research, Melbourne, Australia, suggests that only five to 10 per cent of cases are caused by ionizing radiation, half of these being due to inescapable background radiations*4 and the other half to man-made radiation in the form of medical X-rays.

In a discussion of the environmental factors that relate to leukemia, Sir MacFarlane warns that the world is changing rapidly since the advent of atomic energy and that in the future precautions against ionizing radiation may have to be taken. He says:

"Ionizing radiation is inevitably going to become more prevalent in the human environment, and one can foresee that, just as nuclear military devices

are now the most important aspects of the world's structure of political power, so nuclear power will be the key to the world's economic structure in the near future, and that at about the same time protection of human beings from the somatic and genetic effects of ionizing radiation may well become the most important of all the problems of preventive medicine. Leukemia is likely to be the most clearly visible effect of an increasing population exposure to radiation, and therefore it seems to be of special importance that one discover as soon as possible what has been responsible for the increase between 1920 and 1955. In 10 years' time the increasing general exposure to ionizing radiation may make it virtually impossible ever to sort out the other causes of leukemia."

Sir Macfarlane's words become particularly significant when one realizes that in recent years X-rays and radioactive substances have been used increasingly in science, industry, commerce, and even art. X-rays are now widely employed in industry for studying physical structure, resistance to stress and for detecting imperfections in such things as rubber, rayon, and gems, to name only a few.

Other environmental factors

There is good reason to believe that certain chemical agents may be responsible for causing leukemia. Benzol, a commercial solvent used in a variety of manufacturing processes, has been found to induce the disease.

Atomic radiation

The leukemogenic effect of radiation from atomic bomb explosions has been well established by investigations on survivors in Hiroshima and Nagasaki. From 1948 to 1953, under the auspices of the U.S. Atomic Bomb Casualty Commission, observations were made on 75 verified cases of leukemia. Later, 17 additional

cases were encountered, bringing to 92 the total number of cases occurring as of January 1, 1954.

The incidence of leukemia was higher among persons who were at the epicenters of the atomic blasts than among those who were at the periphery of the blasts. Among the survivors of the atomic bomb explosion at Nagasaki who had been most heavily irradiated, the incidence of leukemia was one in 80 or greater.

Furthermore, it has now been determined that the time interval between the exposure to atomic blasts and the development of leukemia was about five to seven years. A similar time interval, referred to as the "latent period," has been reported among radiologists and physicists who develop leukemia as an occupational disease.

Atomic bomb fall-out

When an atomic bomb is detonated radioactive substances are released into the atmosphere. Some of these substances fall to earth quickly, but others remain in the atmosphere for longer periods.

One of the radioactive substances of fall-out is Strontium 90, a chemical analogue of radium. Strontium 90 may be carcinogenic, and when food and milk contaminated with it are taken internally, it follows metabolic pathways analogous to those of calcium and is finally stored in bone.

In commenting on the atomic blasts at Hiroshima, Dr. William C. Moloney, formerly Deputy Medical Director of the Atomic Bomb Casualty Commission, in his article in the New England Journal of Medicine, July 21, 1955, reported:

"It should be emphasized that, whereas a large single dose of ionizing irradiation was required for leukemogenesis in the survivors, repeated smaller doses under other circumstances may well have a much greater leukemogenic effect."

A Summary Report made in 1956 by the National Academy of Sciences, National Research Council, Washington, states:

"The fall-out from weapons testing has, so far, led to considerably less irradiation of the population than have the medical uses -- and has therefore been less detrimental. So long as the present level is not increased this will continue to be true; but there remains a proper concern to see to it that the fall-out does not increase to more serious levels."

A strong, although by no means conclusive, point in favor of the opinion that atomic bomb testing has had no appreciable leukemogenic effect on the world's population up to now is the evidence already noted: that despite the increase in the incidence of leukemia cases during the past 30 years, the rate of increase has been falling off slightly during the past 15 years, since the time when the first atom bombs were exploded. No one claims that the mortality rate has been dropping off because of the tests. However, the whole question of environmental influence in the causation of leukemia must be studied a great deal further.

B. The mysterious virus and a possible vaccine

Dr. John R. Heller, Director of the National Cancer Institute, and member of the Board of Directors of the American Cancer Society, stated recently that in our medical life-time it is possible that we may live to see several cancers proven to be caused by viruses and prevented or cured by vaccines.

Recent research into the causes of cancer, particularly into the causes of leukemia, prompted this opinion from Dr. Heller. He pointed to experiments in mice in which leukemia has actually been caused by the introduction of a virus.

What is a virus?

A virus is a submicroscopic infectious agent which lives and reproduces only within living cells. It invades cells, usurps their machinery and supplies, and often destroys them.

Some of the factors determining whether or not a virus will have an effect include:

1. The number and virulence of the invading virus particles.

2. The resistance of the host. This resistance may be a natural resistance, depending upon the physiological state of the host cells. Or the resistance may be an acquired one, as when antibodies to inactivate the viruses are produced by means of vaccines.

3. The environment in which the cells and viruses meet.

The discoveries of Gross and Friend

In 1954, Dr. Ludwik Gross of New York, following eight years of persistent research into viruses, inoculated newly born mice with cell-free filtrates extracted from the internal organs of leukemic mice and by so doing succeeded in producing a highly significant proportion of early leukemias in the recipients. Previously the disease could be transmitted to this particlar strain of mice only by introducing the leukemic blood cells of infected mice.

The significance of Dr. Gross's success was that for the first time it was possible to filter all of the cells out of the watery tissue extract and still transmit leukemia, suggesting that in this form of leukemia, at least, a virus or some similar subcellular unit is somehow related to its causation.

Dr.Charlotte Friend, of the Sloan-Kettering Institute for Cancer Research, New York, has isolated a virus that causes leukemia in mice of all ages, and has developed a vaccine which protects mice against this virus.

The possibility that human leukemia might also be caused by a virus was suggested by experiments performed in 1957 by Dr. Schwartz (see p. 7). He prepared, from brains of persons who had died of leukemia, a cell-free filtrate which, when injected into the mice, caused leukemia to develop in 163 out of 561 mice before the age of 22 weeks. Filtrates from non-leukemic human brains were completely inactive.

Despite these experiments, however, some authorities (namely Burnet) dismiss the viral approach as having "more flavor of laboratory curiosity than of a realistic approach to the human problem."

C. Heredity as a factor

Some researchers (notably Ange Videbaek, Copenhagen) have attempted to suggest that hereditary factors play an essential role in human leukemia, as they do in experimental animals in which inbreeding of certain strains enhances the incidence of the disease. However, studies of the genetics of human leukemia have failed to confirm Videbaek.

Arthur G. Steinberg, Children's Cancer Research Foundation, Inc., Boston, in a recent report on the subject, states that carefully controlled investigations on 249 leukemic children and their families led him to conclude: "that in general there is no important genetic component in the causation of leukemia." In his summary, however, Steinberg adds:

"I have said that <u>in general</u> there is no important genetic component in the causation of acute leukemia. Like all generalizations this one also must allow of exceptions. I know of three families with multiple cases of acute leukemia in them. In the first, five of eight children died of acute leukemia; in the second, three of seven children died of acute leukemia, a fourth of lymphosarcoma; in the third family, four of 12 children died of acute leukemia...

The parents of the second family are second cousins, and those of the third family are first cousins. This striking rate of parental consanguinity, combined with an absence of environmental factors which can explain the high incidence of acute leukemia, suggests that a recessive gene or genes plays an important role in determining susceptibility to leukemia in these families.

"It seems that very rarely, as in the three families described above, heredity may be of importance in determining susceptibility to acute leukemia. In general, however, it does not seem to play a significant role."

Leukemia is rarely present at birth. Only 20 cases of congenital leukemia are reported in medical literature. The association of other congenital defects -- mongolism, cardiac defects, abnormalities of the bone, etc., with congenital leukemia suggests that an intra-uterine disturbance may occur during gestation which initiates the leukemic process in the fetus.

Discussion

It is possible that any one or a combination of the factors enumerated may be the cause of leukemia. There are some doctors who suggest that injury and emotional stress may be important contributing factors. Some investigators believe that hormonal imbalances within the body play an important part in the causation of leukemia.

So little is known about the disease that it is even possible that the factors discussed above may only be triggers for some unknown factor within the body which eventually initiates the leukemic process. It is to answer these questions that research is now directed.

IV. CURRENT METHODS OF TREATMENT

There is a great variation in the length of survival in all forms of leukemia. The majority of patients die relatively soon after the onset of the disease, but a few live a surprisingly long time.

Spontaneous remissions

In acute leukemia, which is the most severe form, spontaneous remissions often occur. Remissions also occur in chronic leukemia, but less commonly.

Remissions are among the most remarkable phenomena in the natural history of malignant disease. In some cases all signs and symptoms of the disease disappear and the bone marrow may become practically normal. In others, some substantial improvement occurs, although symptoms may remain.

Spontaneous remissions are not common, occurring in six to ten per cent of cases. In most cases, the duration of a spontaneous remission is about four months.

Induced remissions

One of the great discoveries of the last decade in leukemia research has been the finding that remissions can be induced by treatment with certain agents. In acute lymphatic leukemia occurring in children remissions can be induced in 85 per cent of cases.

Induced remissions may last longer than spontaneous remissions because the therapeutic agent can be continued, but relapse eventually occurs because of the development of resistance to the agent. This may be circumvented by alternating the use of different agents. Theoretically at least, resistance to the agent could then be postponed indefinitely.

Until a few years ago, no form of treatment could provoke a remission in leukemia. The approach to treatment used to be to reduce the number of white cells in the blood; it was not realized that the organs which form these cells must really be the target of treatment. The disease invariably followed a rapidly fatal course -- usually terminating in death within three to five months. Only about five per cent of children with acute leukemia lived for as long as a year after its onset.

At the present time the course of the disease can be temporarily interrupted in about two-thirds of all children afflicted. About half of all leukemic children are enabled to live a year or more after the illness begins -- some of them for several years.

If this stretching out of life seems like a small gain, it should be borne in mind that the time won -- during which the children function almost completely normally and without pain -- is a precious gain to both the parents and the children. Time gained is time to live, and time for the possibility of finding through research a new remedy that will prove more effective than any yet known.

Methods of prolonging life

At the present time there are several methods of treating leukemia patients. The methods currently in use are:

A. Blood transfusions.

B. Radiation therapy and radioactive isotopes.

C. Anti-metabolites.

D. Steroid compounds.

E. Other chemical agents.

A. Blood transfusions

Blood transfusions seem to play a dual role. In part they alleviate

the anemia by the expedient of furnishing red blood cells which the patient cannot make himself, and in part by supplying something, via the plasma, the fluid part of the blood, which is helpful.

In children all forms of the disease are rapidly fatal without the use of blood transfusions. The modifying effect of transfusions is seen not only in the symptomatic improvement of the patient, but also in the spontaneous remissions which sometimes occur following the use of several transfusions. Spontaneous remissions without transfusion therapy are rare indeed.

There are several problems involved in transfusions. Blood platelets, which prevent bleeding, easily disintegrate in the process of handling blood for transfusion, and even when successfully transfused, they live only a short time in the patient.

In some cases, repeated transfusions may be detrimental at certain stages of the disease.

B. Radiation therapy

Radiation, it is now known, interferes with the enzyme systems within leukemic cells and destroys the cells. Treatment consists of cautious application of X-rays to the major areas of disease activity -- the spleen, enlarged lymph glands, and bones in chronic leukemia.

Occasionally, X-rays are used for total body spray in small doses to control slow-moving diseases such as chronic leukemia originating in the bone marrow. In this type of leukemia, radioactive phosphorus, known as P 32 -- for which blood cells have a particular appetite -- is sometimes administered. Its use, however, must be limited to institutions equipped to handle radioactive materials.

C. Anti-Metabolites

In order to live, leukemic cells require large quantities of a vitamin-like substance known as folic acid. In 1948, a new drug was synthesized which acts as a non-nourishing "double" to folic acid, but in fact, is antagonistic to folic acid. In presence of the "double," a folic acid antagonist, the leukemic cell could not live. The synthetic substance is known as pteroyltriglutamic acid, and from it have been evolved two chemicals useful against acute leukemias -- aminopterin and amethopterin.

As early as 1953 the Second Conference on Folic Acid Antagonists presented a compilation of reports from various institutions on the treatment, with these two agents, of a total of 425 children suffering from acute leukemia. Of these children, 68 per cent had shown definite improvement.

Another compound, 6-Mercaptopurine (called 6-MP), has been developed which is similar to the folic acid antagonists in that it interferes with the nuclear metabolism of another substance produced by the body and essential to the growth of leukemic cells.

Obstacles

The practical application of the analogue or "double" principle is complicated by numerous obstacles. The first is that normal cells make the same kind of chemical demands that leukemic cells do. Fortunately, leukemic cells differ from most normal cells in that they grow more rapidly and therefore suffer more harm from the use of "counterfeit" material in a given span of time than do the normal cells. But there is always the danger of "fooling" the normal cells as well.

A second difficulty, and one not so easy to circumvent, is the ingenuity of the leukemic cells. It has been learned through experiments that if the leukemic cells are prevented from synthesizing the substances they need, they may survive by synthesizing them in other ways.

At the present time it is the aim of researchers to develop chemicals which will block as many of these routes as possible.

D. Steroid Compounds

It has been known for a long time that the adrenocortical hormones such as cortisone, control in some fashion the normal process for disposal of white blood cells in the body. Administration of these hormones causes a fall in the count of certain types of white cells in the blood.

ACTH, a natural hormone stimulating adrenocortical hormone production, acts rapidly to reduce the overabundance of white cells and tends to restore the normal function of the bone marrow.

By combining ACTH and cortisone -- or using one or the other -- it is possible to keep a child reasonably well and free from prolonged discomfort and hemorrhagic complications. Some 25 to 30 per cent of children so treated live beyond a year, and some live as long as two to two-and-a-half years.

E. Other Chemical Agents

During World War II, scientists, studying sulfa mustard, a poison gas, discovered the useful medical properties of a related compound, nitrogen mustard. This agent is now widely used in the treatment of leukemia and certain other forms of cancer.

In clinical tests with patients it was quickly discovered that while nitrogen mustard caused brief nausea and vomiting, treatment for only a few days

could slow the progress of certain types of chronic leukemia from one to six months. In addition, the course of treatment could be repeated when the white count again began to rise. Nitrogen mustard cannot produce a cure, but it can prolong life in some cases.

Stimulated by this progress, widespread experiments were begun in an effort to develop other similar agents which could be given without discomfort and which would not damage normal tissues or permanently curtail the blood-making ability of the blood-forming organs.

Some of the new chemical compounds include TEM (triethylene-melamine) which was borrowed from industry, where it is used as a chemical plastic to give wet strength to paper towels. A related compound is thio-TEPA.

From the meadow saffron or autumn crocus comes colcemid, a relative of the classical gout remedy, colchicine. Another is Myleran, developed in England. One of the newer drugs carries the chemical name, oxapentamethylene-diethylenethiophosphoramide, shortened to OPSPA.

Discussion

None of the above mentioned methods of treatment have offered a cure for leukemia.

"We are getting new drugs for the treatment of this condition at a rate of one every two or three months," one leading researcher said recently. "There is always the chance that one of them will be the final answer. If it is not, it may still keep the patient alive for another period of time when all other known methods have begun to fail. This has happened already time and again."

V. PROGRESS ALONG THE RESEARCH TRAIL

Only by continued research can the cause of leukemia be eventually disclosed. At the present time much of the research that is being done is financed by lay contributions to private research foundations and organizations.

Support of leukemia research by the American Cancer Society is exceeded only by Federal Government grants through the National Cancer Institute. Some of the most recent research projects made possible by these grants are turning up vital pieces of information that are spurring on other researchers all over the world.

Recent research discoveries

Leukemia induced in animals has been cured. Transplanted leukemia in mice has been halted by giving them drugs or serums shortly after they were inoculated with the deadly cells.

Also, spontaneous leukemia has been cured in animals by means of massive doses of X-rays, which destroyed bone marrow cells. To cure the disease, researchers gave the animals what would normally be lethal doses of radiation. They then saved the irradiated animals' lives again by injecting them with normal bone marrow from other mice or rats.

In many cases a strange and deadly sort of allergy developed in the animals as much as a year or so after the marrow transplants. One of the big problems now is how to rescue the animals -- cured of leukemia and cured of X-ray disease -- from death by transplant shock.

These methods now have been used experimentally in terminal leukemia patients, mostly children, in many parts of the country. They have been applied cautiously, however -- with perhaps too little radiation and undoubtedly

too little of the precious marrow donated by the children's near relatives, by other cancer patients and by generous anonymous givers to marrow banks.

It is certain up to now that no leukemia patient has been cured by these techniques. It is debatable as to whether this treatment has lengthened lives by a single day. A few scientists, however, believe they have seen transient improvement in some cases.

At least two other recent experiments give promise for the future.

Marrow transplantation in the use of chemicals

One of the limiting factors in the treatment of leukemia with chemicals is that these agents destroy normal marrow tissue as well as malignant cells.

Experiments are under way aimed at either protecting the marrow before or transplanting marrow after treatment so that it will be able to grow.

Present experimental methods involve removing good marrow from the posterior ilium (lower back). The chemical compound is then injected into the patient. After some hours the patient's marrow is reinjected. This method is called autotransplantation, and the marrow is not subject to rejection.

Preliminary results indicate that such a procedure is helpful in some cases.

In cases in which the bone marrow is involved with malignant cells, researchers give the chemical in very high dosage and then inject normal marrow from a donor, usually a member of the family. This method is called homotransplantation. In this method, however, the bone marrow may be subject to rejection.

These results, of course, are preliminary and must be considered as entirely experimental in nature.

Experiments with control of bleeding

Bleeding tendency is one of the major hazards following the use of many chemotherapeutic agents of anti-leukemic value. Control of the hemorrhagic tendency in such patients can make possible the use of these agents over periods of time sufficient to produce regression of the neoplastic process. In the cases of bleeding due to bone marrow depression following exposure to ionizing radiation or due to immunological, toxic or undetermined mechanisms, a temporary control of the hemorrhagic tendency during a critical period of time might result in the spontaneous recovery of the patients.

While the mechanism of the hemorrhagic tendency in the above-mentioned conditions is of a rather complicated nature, platelet deficiency is a constant feature closely related to the appearance and severity of the bleeding manifestations.

In the course of studies at the Children's Cancer Research Foundation, Boston, human platelet concentrates prepared from 4,000 pints of fresh blood were administered to over 300 patients with bleeding manifestations due to acute leukemia. Clotting (hemostasis) was observed in over 70 per cent of the patients. The effectiveness of such concentrates did not decrease on repeated administration.

The extent of real progress

Although current methods of treatment and most recent research discoveries are by no means satisfactory, they do represent real progress and give extra years of life to those afflicted with leukemia.

What the medical profession is now able to offer to leukemia patients might be called "palliative" measures. Palliative treatment often brings precious years of comfort to patients and their families.

In human terms, what the medical profession has accomplished was described most eloquently in an article appearing not too long ago in the Saturday Evening Post.

Mrs. Dorothy Hennings, a farmer's wife living in Cygnet, in Western Ohio, died of leukemia at the age of 29 after just 10 years of marriage to her husband, John. She had leukemia, and knew it, for eight years before her death, yet her last years were constructive, happy and comfortable years -- by no means years of invalidism and pain. The Saturday Evening Post described Mrs. Hennings' last years in these terms:

"They were active years, full of accomplishment and fun, years in which the young couple worked together to make their farm flourish, took vacations in Florida and New England and Canada, and -- best of all -- watched their family grow. Sharon, now nine, was less than a year old when her mother became sick. Their physicians advised against more children because of Mrs. Hennings' short life expectancy, but she and her husband wanted a larger family. So Betty Jane, Mary Lou and Jo Ann came along at intervals of three years or less. And no little girls ever had more devoted or attentive parents.

"'We were happy in spite of leukemia,' their father said. 'The doctors not only kept Dorothy alive, they kept her in fairly good health. She had a near normal blood count and felt very well during those three last pregnancies. People who didn't know she had leukemia couldn't tell anything was wrong with her.

"'Between her trips to the Ohio State University hospital, in Columbus, for treatments, she did as much as any two other women, and she didn't worry

about anything. She knew what she had and that she probably wouldn't get over it. But she went right ahead with things, keeping house, gardening, preserving, making dresses for the girls, winning blue ribbons in baking contests. She was active in the Grange and P.T.A. and church. And she enjoyed it all. Dorothy's life was short in years, but it was a well-spent life as a good wife, mother and leader in the community, and she set a good example for the community.'"

If this is the best that medical science can offer in the fight against leukemia today, many have the feeling that it is quite a bit. Tomorrow cannot give less. It will give more.

- END -

May 1959

VI. APPENDIX

*1. See chart attached.

*2. See attached listing of A.C.S. grants for leukemia research.

*3. "There is far from uniformity of opinion on the somatic mutation theory of leukemia or of malignant change in general. Most workers in experimental leukemia would, I think, take the point of view that, although somatic mutation or some enforced equivalent inheritable change may be one necessary feature, the balance of physiologic forces that maintain a normal homeostasis of cell number and relation plays a more vital part in determining whether or not an animal is leukemic." -- Sir Macfarlane Burnet, The Cutter Lecture on Preventive Medicine, delivered at the Harvard School of Public Health, Boston, May 26, 1958.

*4. Background radiation is the radiation which results from natural causes -- cosmic rays, naturally occurring radium, etc. -- not under the control of man. Each person receives on the average a total accumulated dose of about 4.3 roentgens over a 30 year period. At high altitudes this dose is greater, because of the increase of cosmic rays. Thus, this background is as high as 5.5 r in some places in the United States.

CHART

The following table shows the increase in the reported death rate from leukemia for persons over the age of 50 for each 100,000 of the U.S. population:

Males

Age	1930	1935	1940	1945	1950	1955
50-54	3.6	4.3	6.5	7.1	8.2	8.6
55-59	5.8	6.8	8.7	10.0	11.3	12.8
60-64	6.6	10.5	12.8	13.7	17.9	19.2
65-69	8.3	12.5	14.4	17.9	24.1	31.1
70-74	8.4	12.2	15.4	21.4	36.1	38.5

Females

50-54	3.0	4.0	5.2	4.9	6.6	5.4
55-59	5.1	5.5	6.0	7.7	9.0	8.5
60-64	5.2	6.1	8.7	9.5	11.8	13.5
65-69	5.8	8.4	9.5	12.0	15.0	19.1
70-74	4.7	7.3	11.5	14.8	18.4	22.2

GRANTS, AND ALLOCATIONS FROM INSTITUTIONAL RESEARCH GRANTS, FROM THE AMERICAN CANCER SOCIETY FOR SUPPORT OF RESEARCH RELATED DIRECTLY OR INDIRECTLY TO LEUKEMIA -- AS OF APRIL 30, 1959

GRANTS

Grant Number	Investigator and Institution	Purpose	Term	Amount
P-1B	Ambrus, Julian L., M.D., Ph.D. Roswell Park Memorial Institute Buffalo, New York	To Study the Life Cycle of Normal and Pathoglogical Leukocytes.	7/1/59 through 6/30/60	11,600
rc-IR-66D(t)	Bauer, Franz K., M.D. School of Medicine Univ. of Southern California Los Angeles, California	To Make Radioisotope Investigations into the Causes and Effects of Cancer.	9/1/57 through 8/31/59	12,765 (in part)
E-84	Beard, Joseph W., M.D. School of Medicine Duke University Durham, North Carolina	To Study the Role of Viruses in the Causation of Cancer.	9/1/57 through 8/31/60	73,406
E-85A	Beard, Joseph W., Ph.D. School of Medicine Duke University Durham, North Carolina	(Ancillary to Program Grant #E-84)	9/1/58 through 8/31/59	25,104
E-142	Beck, William S., M.D. Massachusetts General Hospital Boston, Massachusetts	To Study Genetic Transformation in Mammalian Cells.	9/1/58 through 8/31/61	23,547
E-143	Beck, William S., M.D. Massachusetts General Hospital Boston, Massachusetts	(Ancillary to Program Grant #E-142)	9/1/58 through 8/31/59	12,936
T-13A	Bennett, L.L., Jr., Ph.D. Southern Research Institute Birmingham, Alabama	To Conduct a Search for Chemotherapeutic Agents and Study Mechanisms of Action of Known Anticancer Agents.	3/1/59 through 2/29/60	25,130

Grant Number	Investigator and Institution	Purpose	Term	Amount
T-45A	Burchenal, Joseph H., M D. Sloan-Kettering Institute for Cancer Research New York, New York	To Conduct Leukemia Studies.	9/1/58 through 8/31/59	14,970
P-225	Craddock, Charles G., Jr., M.D. School of Medicine University of California Los Angeles, California	To Study the Role of the Spleen in the Physiology of Formed Elements.	7/1/59 through 2/28/61	30,584
P-219	Dameshek, William, M. D. New England Center Hospital Boston, Massachusetts	To Investigate the Pathogenesis of Auto-immune Hemolytic Anemia Associated with Lymphoproliferative Diseases.	3/1/59 through 2/29/60	13,915
E-97A	Dickie, Margaret M., Ph.D. Roscoe B. Jackson Memorial Laboratory Bar Harbor, Maine	To Study the Leukemogenic Action of a Transplantable Adrenal Cortical Carcinoma.	3/1/59 through 2/29/60	2,956
E-94A	Dmochowski, Leon, M.D. College of Medicine Baylor University Houston, Texas	To Study Characterization of the Agent Inducing or Accelerating Leukemia in Mice.	9/1/58 through 8/31/59	13,145
T-32	Dougherty, Thomas F., Ph.D. College of Medicine University of Utah Salt Lake City, Utah	To Study the Chemotherapy of Leukemia.	9/1/57 through 8/31/62	51,704
T-33A	Dougherty, Thomas F., Ph.D. College of Medicine University of Utah Salt Lake City, Utah	(Ancillary to Program Grant #T-32)	9/1/58 through 8/31/60	13,232

Grant Number	Investigator and Institution	Purpose	Term	Amount
T-118	Eliel, Leonard P., M.D. Oklahoma Medical Research Foundation Oklahoma City, Oklahoma	To Study the Mechanism of Action and Metabolism of the Folic Acid Antagonists in Man and Experimental Animals.	3/1/59 through 2/28/62	52,284
T-119	Eliel, Leonard P., M.D. Oklahoma Medical Research Foundation Oklahoma City, Oklahoma	(Ancillary to Program Grant #T-118)	3/1/59 through 2/28/60	22,916
P-149A	Engle, Ralph, Jr., M.D. Medical College Cornell University New York, New York	To Study Ion Binding Properties of Serum and Urinary Proteins of Patients Having Multiple Myeloma.	9/1/58 through 8/31/59	16,681
T-69	Freedlander, B.L., M.D. Mount Zion Hospital San Francisco, California	To Study the Chemotherapy of Experimental Mouse Tumors.	7/1/58 through 6/30/59	8,510 (in part)
E-95A	Gross, Ludwik, M.D. Committee for Promotion of Medical Research New York, New York	To Study Biological and Pathogenic Properties of the Mouse Leukemia and Parotid Tumor Agents.	9/1/58 through 8/31/59	8,363
P-143A	Harrington, William J., M.D. School of Medicine Washington University St. Louis. Missouri	To Make Studies on Basic Biochemical Lesions in Leukemias and Lymphomas.	9/1/58 through 8/31/59	14,960
P-203	Huennekens, Frank M., Ph.D. School of Medicine University of Washington Seattle, Washington	To Study the Biochemical Difference Between Normal and Leukemic White Cells.	9/1/58 through 2/29/60	31,306

Grant Number	Investigator and Institution	Purpose	Term	Amount
T-107	Hutchinson, Dorris J., Ph.D. Sloan-Kettering Institute for Cancer Research New York, New York	To Study Mechanisms of Resistance to Anti-Leukemia Agents.	9/1/58 through 8/31/59	7,429
VI-7B(t)	Kalfayan, Bernard, M.D. Roosevelt Hospital New York, New York	To Study Destruction of Human Leukemia Cells by Means of Serum of Rabbits Immunized with Human Tissues, Normal and Neoplastic.	7/1/56 through 6/30/59	5,000
T-34	Kidd, John G., M.D. Medical College Cornell University New York, New York	To Conduct Attempts to Cure Experimental Lymphomas and Leukemias by Means of Serum Therapy.	9/1/57 through 8/31/62	42,809
T-35A	Kidd, John G., M.D. Medical College Cornell University New York, New York	(Ancillary to Program Grant #T-34)	9/1/58 through 8/31/59	17,665
E-30A	Levin, Morton L., M.D. Roswell Park Memorial Institute Buffalo, New York	To Conduct an Epidemiological Research Program to Study Cancer of the Important Sites.	7/1/59 through 6/30/61	29,304 (in Part)
E-58B	Levin, Morton L., M.D. Roswell Park Memorial Institute Buffalo, New York	(Ancillary to Program Grant #E-30A)	7/1/59 through 6/30/60	52,640 (in part)
E-158	Lynch, Clara J., Ph.D. Rockefeller Institute New York, New York	To Study Spontaneous and Transplanted Leukemia and the Effect on Mice of DNA from Leukemic Tissues.	3/1/59 through 8/31/60	13,653

Grant Number	Investigator and Institution	Purpose	Term	Amount
P-223	Perry, Seymour, M.D. School of Medicine University of California Los Angeles, California	To Study the Causes of Bleeding in Multiple Myeloma and Other Dysproteinemias.	7/1/59 through 2/28/61	13,504
P-47A	Ponder, Eric, M.D., Sc.D. Nassau Hospital Mineola, L. I., New York	To Study the Hemolysins and Agglutinins of Normal and Malignant Tissue.	9/1/58 through 8/31/59	4,600
P-49A	Putnam, Frank W., Ph.D. College of Medicine University of Florida Gainesville, Florida	To Determine the Terminal Amino Acids of Normal Human Plasma Globulins and of Multiple Myeloma Proteins.	9/1/58 through 8/31/59	10,000
E-43	Schwartz, Steven O., M.D. Hektoen Institute for Medical Research Chicago, Illinois	To Study the Etiology and Pathogenesis of Human Leukemia; with Emphasis on the Filterable Agent in Human Leukemic Brain.	9/1/57 through 8/31/60	27,600
E-61A	Schwartz, Steven O., M.D. Hektoen Institute for Medical Research Chicago, Illinois	(Ancillary to Program Grant #E-43)	9/1/58 through 8/31/59	16,705
T-133	Shen, S. C., M.D. Medical School Tufts University Boston, Massachusetts	To Study the Mechanism of Endogenous Control of Cancer.	7/1/59 through 6/30/60	19,090 (in Part)
T-111	Skipper, Howard E., Ph.D. Southern Research Institute Birmingham, Alabama	To Study Basic Factors Responsible for Failure of Anti-Leukemic Drugs and Cellular Demands for Extracellular Metabolites.	9/1/58 through 8/31/59	30,015

Grant Number	Investigator and Institution	Purpose	Term	Amount
E-27	Trentin, John J., Ph.D. College of Medicine Baylor University Houston, Texas	To Study the Non-cellular Agent (or Agents) of Tissue Origin in the Induction of Mouse Leukemia.	7/1/57 through 6/30/62	37,395
E-56B	Trentin, John J., Ph.D. College of Medicine Baylor University Houston, Texas	(Ancillary to Program Grant #E-27)	7/1/59 through 6/30/60	11,931
P-68A	White, Abraham, Ph.D. Albert Einstein Coll.of Med. Yeshiva University New York, New York	To Study Effects of Steroids on Normal and Malignant Lymphocytes.	3/1/59 through 2/29/60	10,976
T-125	Zipf, Robert E., M.D. Miami Valley Hospital Dayton, Ohio	To Study the Development of and in Vitro Technique as an Aid in the Control of Leukemia in Man.	3/1/59 through 8/31/60	18,757

ALLOCATIONS FROM INSTITUTIONAL RESEARCH GRANTS

IN-2A	Buffalo, University of Buffalo, New York Hauschka, T. S.	To Conduct a Marrow Transplantation Program.	9/1/58 through 8/31/59	552
IN-3	California, University of Los Angeles, California Clark, William G.	To Study Biogenesis of Pharmacologically Active Amines in Neoplasms, Including Basophils of Chronic Myelogenous Leukemia.	9/1/58 through 8/31/59	2,000

Grant Number	Investigator and Institution	Purpose	Term	Amount
IN-41	Chicago, University of Chicago, Illinois Thomson, Andrew	To Study Transfer of Leukemia in Adult Mice Via the Supernate from 105,000 g Centrifugation of Leukemia Tissue Extract.	9/1/58 through 8/31/59	816
IN-4	Columbia University New York, New York Jungeblut, Claus W.	To Conduct Pilot Experiments on Guinea-Pig Leukemia.	9/1/57 through 6/30/59	1,000
IN-46	Indiana University Bloomington, Indiana Hodes, M.E. and Palmer, C.G.	To Determine the Route of Transfer of Leukemia Virus from Father to Offspring.	9/1/58 through 8/31/59	1,270
IN-46	Indiana University Bloomington, Indiana Schulz, Dale M.	To Determine the Route of Transfer of Leukemia Virus from Father to Offspring.	9/1/58 through 8/31/59	1,350
IN-42	Massachusetts General Hospital Boston, Massachusetts Raker, John W.	To Study the Application of Techniques for the Detection of Malignant Cells in Blood to Bone Marrow Aspirates.	9/1/58 through 8/31/59	5,750
IN-51	Miami, University of Coral Gables, Florida Morris, David N.	To Conduct Pilot Studies on the Role of the Thymus in Irradiation-induced Leukemia in Mice.	9/1/58 through 8/31/59	1,815
IN-44	Michigan State University East Lansing, Michigan Belding, Ralph C.	To Conduct a Study of Avian Lymphomatosis.	9/1/58 through 8/31/59	800

Grant Number	Investigator and Institution	Purpose	Term	Amount
IN-40	Michigan, University of Ann Arbor, Michigan Korst, Donald R.	To Conduct (a) Studies of the Development, Growth and Survival of Human Lymphomas in Preconditioned Animals; (b) Studies of Tumor Immunity in Mice.	9/1/58 through 8/31/59	989
IN-40	Michigan, University of Ann Arbor, Michigan Stiles, R. Martin	To Study the Synthesis of Imidazopyridazines as Possible Chemotherapeutic Agents in the Control of Cancer (Particularly Leukemia).	9/1/58 through 8/31/59	4,600
IN-14A	New York University New York, New York Weiner, Leo	To Study Myeloid Metaplasia.	9/1/58 through 8/31/59	3,450
IN-14A	New York University New York, New York Yoeli, Meir	To Make an Attempt to Transmit Human Leukemia to Experimental Laboratory Animals through Mosquitoes.	9/1/58 through 8/31/59	860
in-IR-62F	Oklahoma, University of Oklahoma City, Oklahoma Condit, Paul T.	To Study the Metabolism and Mechanism of Action of the Folic Acid Antagonists in Human Leukemia Patients.	9/1/57 through 8/31/59	5,033
IN-38	Pennsylvania, University of Philadelphia, Pennsylvania Nowell, Peter C.	To Conduct an Investigation of Leukocyte Regulatory Mechanisms.	9/1/58 through 8/31/59	2,020
IN-19	R. B. Jackson Memorial Laboratory Bar Harbor, Maine Kaliss, N.	To Study "Viral" Transmission of Murine Cancer.	9/1/57 through 6/30/59	4,482

Grant Number	Investigator and Institution	Purpose	Term	Amount
IN-18	Rochester, University of Rochester, New York Mason, W. B.	To Develop a Reliable Method for Determination of Histamine as a Preliminary Study of Immune Phenomena in Leukemia.	3/1/59 through 2/29/60	1,500
IN-21	Southern California, Univ. of Los Angeles, California Polhemus, Donald W. and Koch, Richard	To Conduct an Evaluation of Radiation Exposure of Leukemic Children.	3/1/59 through 2/29/60	518
IN-32	Stanford University Stanford, California Creger, William P.	To Study Maternofetal Passage of Immunologically Functioning White Cells.	9/1/58 through 8/31/59	2,820
IN-32	Stanford University Stanford, California Desai, R. G.	To Study the Cause of Myleran Pigmentation in Chronic Granulocytic Leukemia.	9/1/58 through 8/31/59	2,350
IN-32	Stanford University Stanford, California Kriss, Joseph	To Investigate the Marrow Inhibiting Effects of Whole Blood Transfusion.	9/1/58 through 8/31/59	2,370
IN-23	Tufts University Boston, Massachusetts Reif, Arnold E.	To Reduce the Incidence of Spontaneous Leukemia in AKR Mice by Immunological Means, with a View to Eventually Applying to Human Leukemia Patients a Therapy Based on	10/1/58 through 9/30/59	500
IN-24A	Tulane University New Orleans, Louisiana Schueler, D.W. and Fujimoto, J.M.	To Study the Possibility of Enhancing the Chemotherapeutic Action of Certain Carcinostatic Agents in Mice with Ehrlich Ascites Tumors or L-1210 Leukemia.	9/1/58 through 8/31/59	2,000 (in part)

Grant Number	Investigator and Institution	Purpose	Term	Amount
IN-24A	Tulane University New Orleans, Louisiana Nice, Charles M.	To Study the Tumor Bed in Relation to Acquired Radioresistance in Mouse Lymphoma.	9/1/58 through 8/31/59	2,000
IN-24A	Tulane University New Orleans, Louisiana Sprague, Charles C.	To Evaluate Effectiveness of Autologous and Homologous Bone Marrow Transplants in Man and Animals.	9/1/58 through 8/31/59	1,800
IN-48	Wake Forest College Winston-Salem, North Carolina Spurr, C.L.	To Conduct Studies on Chemotherapeutic Sensitivity of Human Neoplastic and Leukemic Cells.	9/1/58 through 8/31/59	2,750
in-IR-32K	Washington University St. Louis, Missouri Jones, Barbara	To Study the Erythropoietic Stimulating Factor in Plasma of Children with Various Pathological Conditions Including Leukemia.	7/1/58 through 6/30/59	7,602 (in part)
IN-36	Washington University St. Louis, Missouri Tolmach, L.J.	To Conduct a Comparison of in vivo with in vitro Sensitivity of Normal and Malignant Cells to Ionizing Radiation.	9/1/58 through 8/31/59	4,300 (in part)
IN-36	Washington University St. Louis, Missouri Yunis, Adel	To Attempt to Define the Mechanism of Remission in Local Irradiation Therapy of Leukemia.	9/1/58 through 8/31/59	2,982
IN-26	Washington, University of Seattle, Washington Everett, N.B.	To Study the Rate of Lymphocyte Production in the Guinea Pig.	9/1/57 through 6/30/59	2,000

Grant Number	Investigator and Institution	Purpose	Term	Amount
IN-26	Washington, University of Seattle, Washington Huennekens, F.M.	To Study Biochemical Differences between Normal and Leukemic White Cells.	9/1/57 through 6/30/59	3,278
IN-26	Washington, University of Seattle, Washington Huff, Rex L.	To Study the Effect of Reduction in the Normal Potassium-40 Abundance on Growth and Form of Human Leukemic White Cells in Artificial Culture.	9/1/57 through 6/30/59	3,050
IN-26	Washington, University of Seattle, Washington Weiser, R. S. and Evans, C.A.	To Study the in Vitro Interaction of the Cells of Transplantable Tumors with "Lymphoid Cells" of the Immune Host.	9/1/57 through 6/30/59	2,825
IN-31	Yale University New Haven, Connecticut Detre, K.	To Study Radioprotective Effects of Purines and Pyrimidines.	9/1/58 through 8/31/59	2,760

Number of Grants and Allocations 73

Total Amount $ 933,279

Marrow, Alfred J.

October 31, 1958

to: ALFRED J. MARROW EMPIRE STATE BUILDING NEW YORK 1

DELIGHTED TO JOIN YOU AND OTHERS ON COMMITTEE TO REBUILD CLINTON HIGH SCHOOL. REGARDS.

EDWARD R. MURROW

514-70

Alfred J. Marrow
Empire State Building
New York 1, N.Y.

October 28, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, N. Y.

Dear Mr. Murrow:

The dynamiting of the Clinton High School in Tennessee several weeks ago shocked and revolted the conscience of America. All of us who abjure violence have instinctively sought a constructive program through which we could condemn this desecration of our way of life and help restore the facilities for the education of the children of Clinton.

A number of my friends have proposed that, in a demonstration of national unity, the American people join in contributing the funds for the rebuilding of Clinton High School. Without relieving the Federal or municipal government of their responsibilities, this Citizens' Fund would be a genuine expression of our resolve that violence shall not intimidate or deprive us of the right to exercise our freedoms as Americans.

Because I believe that such an effort will enlist the enthusiastic support of all Americans regardless of their political or sectional differences, I should like to invite you to join with me in sponsoring such a national appeal.

Mrs. Eleanor Roosevelt, Governor Averell Harriman, and Mr. Nelson Rockefeller have already accepted our invitation to join this committee.

We have also invited the following distinguished Americans to serve on this committee: Marion Anderson, Dr. Edwin Dahlberg, president, National Council of Churches, Winthrop Rockefeller, George Meany, Roy Larsen, Dr. Joachim Prinz, president, American Jewish Congress, Dr. Henry T. Heald, president, Ford Foundation, Senator Lyndon Johnson, David Sarnoff, William Paley, Henry Ford II, Adlai Stevenson, Governor Herbert H. Lehman, Governor Leroy Collins, Senator John Sherman Cooper, Dr. Arthur H. Edens, president, Duke University, and Dr. William C. Friday, president, University of North Carolina.

Will you be good enough to let me know, by wire if possible, that you will accept this invitation.

Sincerely yours,

Alfred J. Marrow

Alfred J. Marrow
Acting Chairman of Citizens
Committee to Rebuild
Clinton High School
Chairman, New York City Commission on Intergroup Relations

Dear Ed:

You will be surprised to hear from me, but this is to let you know that Dorothy is flying to New York on June 2nd and will be in the Wellington Hotel, W. 55th Street, for a couple of weeks, whence she will take pleasure in 'phoning you at your office. She is very anxious to have a talk with you and, if possible, be permitted to witness one of your programmes and if you happen to be available about that time she will be very grateful if you will see her as I shall of course be also. When she was in the States two years or so ago, she 'phoned you but was told that you were in Chicago.

You may gather that we heard and read about you recently in connection with SMALL WORLD. It caused the usual political row at this end, but has now died down!

With my best regards and wishes

Yours ever,

George L. Marshall

Marshall.

Dear Ed,

You will be surprised to hear from me, but this is to let you know that Dorothy is flying to New York on June 2nd & will be in the Wellington Hotel, W. 55th Street for a couple of weeks, whence she will take pleasure in phoning you at your office. She is very anxious to have a talk with you & if possible be permitted

to witness one of your
programmes & if you happen
to be available about that
time she will be very
grateful if you will see
her as I shall of course
be also. When she
was in the States 2 years
or so ago, she showed
you but was told that
you were in Chicago.
You may gather that
we heard & read about
you recently in connection
with 'Small World'. It
caused the usual ~~the~~ political
row at the end, but has
now died down!
With my best regards & wishes
Yours ever,
George L. Marshall.

Sara Marshall

March 9, 1959

Mrs. Sara Marshall
Neiman-Marcus
Dallas 1, Texas

Dear Mrs. Marshall:

Thank you for your recent letter about your South American Fortnight in October. It will be a month or so before I make any plans for my sabbatical year but I shall certainly try to visit Texas some time during that period. Whether it can be during your South American Fortnight I cannot tell as yet.

Sincerely yours,

KRM:skh

March 3, 1959

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Last week, I was privileged to hear your very interesting broadcast about Latin America, and the thought occurred to me that you might be interested in a presentation we are planning for this fall.

Neiman-Marcus, The Grace Organization, The Grace Line and Pan American-Grace Airways are jointly sponsoring a "South American Fortnight", October 18th through November 1st in Dallas. It will cover all 13 of the South American countries and will be the largest project that Neiman-Marcus has ever undertaken. I am enclosing a press release for your information.

I thought perhaps our Fortnight might make an interesting follow-up to your broadcast. We have invited Vice President Nixon to open the two-week festivities and are planning an opening ball to honor the ambassadors of the 13 South American countries. The entire city of Dallas will participate in the Fortnight, and it promises to be very colorful and widespread.

I have read of your plans to retire for a year beginning July 1st, but perhaps you would enjoy a visit to Texas in October. We would certainly be greatly honored if you should so decide. I will be waiting to hear from you.

Most sincerely yours,

Sara Marshall

(Mrs.) Sara Marshall

FOR IMMEDIATE RELEASE
From: Sara Marshall
Neiman-Marcus
Dallas, Texas

12859

Neiman-Marcus, W. R. Grace & Co., The Grace Line and Pan American-Grace Airways have announced plans for the largest and most complicated presentation in the history of the Dallas specialty store...a "South American Fortnight", October 18th through November 1st.

"Exhibitions, cultural manifestations and celebrities from all 13 of the South American countries will be featured throughout Neiman-Marcus and the City of Dallas during the two-week event," Mr. Stanley Marcus, President of Neiman-Marcus, said.

Announcement of the Fortnight was made at a luncheon held at Neiman-Marcus attended by prominent officials of the Grace Organization, city officials and businessmen. Included were Mr. Godfrey Macdonald, Vice President of The Grace Line; Mr. James P. Freeborn, Assistant Vice President, W. R. Grace & Co.; Mr. Frederick P. Sands, Director of Public Relations, The Grace Line; Mr. Edward L. Farrell, Jr., Vice President and Director, Pan American-Grace Airways; Mr. Luis Garcia, Public Relations Director, Pan American-Grace Airways, and Mr. Jose-Gomez Sicre, from the Pan-American Union in Washington, D. C.

Braniff Airlines will also be represented in the South American Exposition.

Neiman-Marcus has held two Fortnights previously. Its "French Fortnight" was in October of 1957, and "British Fortnight" in October, 1958,

(more)

"The French Fortnight placed its emphasis on women, while the British Fortnight was slanted toward men", Mr. Marcus said. "However, the South American Exposition will honor men and women equally."

"Our past Fortnights have shown how important internationally the old buying and selling game is," he continued. "In addition to encouraging a lot of buying and selling, we hope to call attention to the beauty and cultural manifestations of South America."

Mr. Macdonald said "We know the Fortnight will arouse great interest here in the United States, and the news will be received with pride and enthusiasm throughout Latin America."

He added "When you see some of the truly marvelous displays, we hope can be shown through the courtesies of friends and governments of our Neighbors to the South plus many other exhibits ranging from the field of sports to the culinary arts, you will be as happy as we are that Stanley Marcus and his great store have once again showed the imagination and talents for which they are justly famous."

Both the interior and exterior decor of Neiman-Marcus will carry out colorful South American designs during the Fortnight. The Zodiac Room will be transformed into a replica of the "Inn of the Thirteen Coins" in Lima, Peru.

In addition to extensive South American merchandise, there will be many articles inspired by South American design, but created in the United States and Europe.

Mr. Marcus said it is hoped to open the Fortnight with a dinner honoring the Ambassadors to the United States from each South American country: Colombia, Venezuela, Peru, Ecuador, Chile, Argentina, Brazil, Uruguay, Paraguay, Bolivia, and British, Dutch and French Guiana. The dinner will be jointly sponsored by the Dallas Council on World Affairs.

(more)

Add 2--South American Fortnight

A music festival in the City of Dallas is planned during the Fortnight with two or three concerts by the Dallas Symphony Orchestra, featuring South American artists. The country's best-known composer, Villa Lobos, has been invited to conduct the orchestra playing his own music.

Folk artists, dancers, singers and musicians from each South American country will be imported to Dallas for events at Neiman-Marcus and throughout the City of Dallas during the two-week event.

The Dallas Museum of Fine Arts will feature an exhibition of art gathered by Mr. Sicre of the Pan American Union. It will include exhibitions of Art through the history of South America.

Smaller exhibitions of art, one featuring Colombian gold, will be displayed at Neiman-Marcus.

It is planned to correlate the Pan-American Livestock Exhibition, held at the State Fair of Texas, with the Fortnight. Dates of the Fair and the Fortnight are similar.

Marti, Fritz

F

March 17, 1959

Dear Dr. Marti:

I write at once to thank you for your letter of March 1. It reached my desk only today.

Frankly, I do not see much hope of keeping alive the knowledge we have, much less fertilizing and expanding it. I think we are merely witnessing the rapid decline of a great power ever recorded, and I fear that those of us who are attempting to record it are not even asking the right questions, much less producing the right answers.

If I get a clue as to the answer, I shall write you forthwith. Meanwhile, thanks again for writing as you did.

Sincerely yours,

Dr. Fritz Marti

Mr. Edward R. Murrow,
Pawling, N.Y.

Dear Mr. Murrow:

I am presuming on our very old acquaintance dating from the days when I met you in Stephen Duggan's office.

At a moment when I am wearied more than usually by the interminable and fatiguing office work which even so little a school as ours requires, grinding work which leaves little time for reading and thinking, almost none for real writing, and none at all for my true calling, the teaching of philosophy, the Dayton Daily News brings an AP column by Charles Mercer who claims you are similarly tired.

My very best wishes for your year of contemplation. I cannot permit myself the luxury of envy. At sixtyfive, with four of our six children still in our school, the youngest only twelve, I am neither officially tired nor of any mind to retire. I trust I'll drop in harness some fifteen or twenty years hence.

What does worry me is that my talent is buried in a napkin. My best ability is the vivid oral plain exposition of the great historical findings of philosophy. And they are - to my view - an indispensable ingredient in the multiform effort of our occidental tradition to keep its level and life, in the face of mass culture (or Unkultur) on both sides of the iron curtain.

Everybody knows the symptoms. Our highschool kids cannot read the Federalist papers any more; too difficult English. Scott and Dickens are out too. - Our church folk cannot distinguish between Stoicism and Christianity and, of the latter, they can give no true account. Most of them will deny the very existence of theological or philosophical knowledge. - In a recent local meeting of physicians, lawyers, engineers, there was astonishment when I casually stated the Platonic fact that simple arithmetic is "supernatural" if, by natural, we mean what is bound in the chain of cause and effect. - Anyone can see the symptoms.

Mercer says you believe this country is in grave and perhaps mortal danger. So do I. But where are <u>our</u> monasteries to keep us through the new dark age? Under a communist or other totalitarian regime, no awe will strengthen monastic walls. How do we set up our underground as long as there is time? And even if no nuclear war occurs, we are in dire need of keeping alive the knowledge we have. - Do you see any way? Sincerely,

Fritz Marti

Fritz Marti — The mission of philosophy. — February 8, 1959

Philosophical discipline has always been the property and privilege of a minority. As long as this minority, through the church, the school, the press, determines the cultural climate and, as far as the mentality of the masses permits, lets them share the benefits of the discipline, a given society is sound.

Hitherto such a society could boast of standing in the van of nations. What, in 1930, Ortega y Gasset called the rebellion of the masses has brought a radical change. The masses no longer recognize the leadership of their betters, and the result is that the public at large does not know even the existence of philosophic discipline, ignores its benefits, nay, declares that the discipline offers no benefits. Some deny outright the very possibility of the discipline.

In our occidental society, this dire condition has been brought about, in a large measure, by the treason of the clercs, of which Julien Benda wrote in 1927. The learned professions and more especially we, the academic teachers, have been remiss in our duty to make our contemporaries aware of the philosophic discipline.

In the population at large, the results are such things as Biblicism and political intolerance among the more bigotted, or agnosticism among the more indolent. In general there has arisen a more or less pronounced opposition to things intellectual, nay to the very concerns of reason and taste.

This condition makes any nation extremely vulnerable when confronted with an opponent whose internal and external propaganda is deliberately dogmatic. To be sure, our opponent's indoctrinated masses would show less resilience than a truly free nation, that is, a nation benefitted by philosophic discipline. Yet the indoctrinated herd appears stronger than the amorphous mass of bigots and agnostics and of unthinking and undecided people. The latter have no firm stand; agnostics cannot cohere; and bigots always split into sects. And none of them can understand the opponent, therefore cannot fight him, except eventually with arms.

Our nation has suffered from the lack of a concerted and consistent foreign policy. Of course, such a policy would have required the backing of an electorate enlightened by some degree of insight into the ideas which move our century.

One of the main traits of the century is the fact that the religious situation has matured. We have finally been blessed with a clear conceptual understanding of the dignity and function of myth. We no longer need to split into two camps, protagonists of myth as the last word of wisdom, and antagonists in whose eyes myth is meaningless and religion opium for the people.

To be sure, the protagonists are still with us, and will be. But that does not force us into the camp of the antagonists, be they men of the Enlightenment, or nineteenth century materialists, or contemporary pragmatists and humanists and adherents of scientism. Ours is the liberty and the duty of those who can thoroughly know the history of the religions, and who, consequently, need not adhere to any one, yet who can also know the ontological problems with which religions deal, and who, therefore, can and must recognize the dignity of all religions.

Moreover, the fact that large segments of the population have become doubtful of their former beliefs, or are feeling foreign to religion as they know it, is a second characteristic signature of our century. It is a fact which makes imperative our task to teach these people. Instead, they have been left at sea and an easy prey to piratical raids from the communist camp and an even easier prey of the fellow-travellers. The latter may have the best intentions, but their blindness to ontological problems, and their ignorance of the results of the philosophy of these 200 years or 2500 years, turns their honest efforts into unaware yet actual collaboration with the communists and other totalitarians.

The situation is really simple. The time is past for unalterable formulations of the truth. We face an alternative. Either the truth has a dignity of its own and therefore can be known, in its ever novel wordings, only by diligent study, or else it is nothing but a quirk in the human mind and, therefore, has to be defined, arbitrarily and changingly, by some dictatorial power. The simplicity of this alternative is well within the grasp of highschool pupils and college students, public school teachers and university professors. If we philosophers can not "put it across" we can claim no eminent fitness for our calling.

In short, the mission of philosophy is to bring into its discipline that nowadays very substantial minority of minds whose clear insight is necessary in a sound society dedicated to freedom.

Martin, Dean

February 25, 1958

Dear Dean:

Many thanks. It was a most enjoyable visit.

Herewith the small check.

I am assuming you could have beaten me ten times hand-running.

My warmest regards to your wonderful family.

THE TRUE CHALLENGE OF ASIA AND AFRICA

ADDRESS BY

Dr. Charles Malik,
President of the General Assembly
of the United Nations,
before the Life Insurance Association of America
at a luncheon on the occasion of its 52nd Annual Meeting,
at the Waldorf-Astoria on Thursday, December 11, 1958

One is granted a certain amount of light. One may be judged not absolutely but according to how faithful he is to his limited vision. I do not know everything, but the little I know and feel I shall endeavour to put before you as vigorously and as frankly as possible.

It is both unprofitable and false to set up a scale of priorities among the challenges facing the Western world in general and the United States

in particular. The West has its own internal problems in all sectors of its life; the United States has its own problems with its friends and allies in Europe and elsewhere; the West must face up to the formidable challenge of international Communism; and the West must somehow understand and accommodate itself to the new life surging in Asia and Africa. Some hold the internal situation to be the most important; some the relations of the United States to Europe; some the challenge of Communism; some the challenge of Asia and Africa. I know the argument for each one of these positions. But in focussing my remarks today on Asia and Africa I must not be understood to imply that this is the most important issue facing the United States and the Western world in general. I treat it in its own right, and also because the other three challenges receive a measure of elucidation from it. But I attach the greatest importance also to the other three challenges in their own right.

Fundamentally Asia and Africa want four things: they want political independence; they want economic development; they want a free opportunity to take up and develop their own cultures in their own way; and most of those countries want non-entanglement in the cold war. All four urges are perfectly natural and they simply mean that the Asians and Africans just want to be themselves.

With few exceptions the right to independence is now universally recognized. From the moment the Republics of India and Pakistan were proclaimed in 1947, the immediate political development of the rest of Asia was determined; and from the moment the independence of Libya was voted at the United Nations in 1949, the immediate political development of the rest of Africa was foredoomed. There are certain irreversible processes in history; this is one of them. Every people in Asia and Africa is now destined to achieve self-determination and independence.

The causes of this process, whether it could

have been arrested or delayed, how much Europe's weakening by the two wars hastened it, how much Communist anti-colonialism and American anti-colonialism each in its own way contributed to it, how much the natural maturation of the peoples themselves under the impact of Western ideas finally clenched it -- all these are fascinating themes for inquiry. I shall not enter into them here. The fact is that the movement towards independence, which consecrates itself finally in membership in the United Nations, cannot now be reversed.

There is therefore no longer any particular political challenge involved. The Western world, and especially the United States, has fully recognized the right to independence and is gradually adjusting to the new political realities. There is only the question of peacefully tending and nursing the inevitable change -- and here the United Nations plays a crucial role; and there is the question of promoting friendly relations on a basis of equality with the new and independent nations.

In these residual questions there is no general principle involved; there is no theorem that applies to every country and every people in Asia and Africa. On the two matters of the timing and the rate of peaceful change, and of the establishment of friendly relations with the emergent nations, each case has its own independent, inherent merits. In the nature of the case the rate and the manner of change varies from people to people, and in the nature of the case friendship cannot be indiscriminately proffered or sustained.

But there is one general negative judgment that is of the utmost importance today. The West will be mistaken if it insists on the form of democracy as it knows it. This is sheer formalism. It took the West centuries to evolve its present form of government; there is in Asia and Africa, however, a certain job to be done in a hurry; for any eventual stability and peaceful development the people must immediately feel their security and dignity; and there is no reason to believe that the Atlantic

forms of democracy are best suited to these needs. It is quite true that Atlantic democracy, grounded as it is in the love for freedom and in the consequent respect for the individual human person, presupposes and breeds a certain view of man and society which could be demonstrated as the highest and most worthy of man. But this is one of the failings of Western society in its intercourse with other societies: it has either not wanted to transplant this view of man beyond its borders, or it has not succeeded in doing so. Be that as it may, it appears that the exigencies of the moment exclude any squeamish formalism, and that all that the West can expect and sometimes demand is a reasonable absence of hostility towards it, a clear absence of aggressive policies, and a genuine concern for the public good. To go beyond that at this moment is neither realistic nor necessary.

The economic challenge presents some problems, and here I want to be as frank as possible.

The United States has not been altogether callous in this field. It has felt the pinch of Communist competition and of the desperate native needs. As a result it has evolved its own programme of technical and economic assistance and has been a major contributor to similar modest programmes run by the United Nations. Private American capital has ventured forth on some investments. Philanthropic American institutions have done what they could in sponsoring pilot projects and furthering technical knowledge. There is also the recently established Development Loan Fund. Both the Export-Import Bank and the International Monetary Fund have recently received substantial boosts from the United States. The International Bank for Reconstruction and Development enjoys the full support of this country. The Reciprocal Trade Agreements Act has been extended for four years. President Eisenhower last August declared America's readiness to take part in important schemes of development in the Middle East. The cumulative

effect of these diverse American initiatives is far from negligible, and one can demonstrate the great good accomplished by American aid or American participation in specific instances.

But substantial and useful as all this effort has been, it is nevertheless inadequate. People are just beginning to wake up to the actual and potential magnitude of the Communist competition. The native needs are much more desperate than people had known or imagined. And the pace of history, including the development of people's consciousness of their own poverty and privation, is feverishly quickening. For these three reasons America's economic effort in Asia and Africa appears to me to require serious reconsideration.

A natural question arises: "Do you want us then to share our substance, the fruit of our honest labour, with the world? Have we not shared enough? What did we get in return? What do we owe the world?"

In answer I should say, would that things were as simple as all that! There is a much greater delicate unity about the world than the complacent are prepared to admit. Barring unforeseen developments, you will be very lucky if you can get away with half of your substance before the present age of troubles is over. Nor is one advocating that money be thrown away, or that many, many considerations should not always be kept in mind. For it is quite clear that there is a certain pace of development for any one country that cannot be feasibly exceeded, a pace determined by the economic, technological, political and educational conditions of that country. But I know not a few instances in which if only the economic assistance were not too little and too late the whole course of history would have been different.

For a decade I have been advocating a bold programme for economic development in the Middle East, comparable in magnitude to the Marshall Plan. I know these things do not come about because a man here or a

man there advocates them: a total situation must ripen first. Always in the past political difficulties of the most varied orders prevented the rapid development of the Middle East. Whether these difficulties are now surmountable and whether these schemes can be launched, it is not for me here to speculate. One thing I know: the Middle East is patient for large-scale development.

I am confident the United States will rise to the economic challenge of Asia and Africa. I hope it will rise in time. I hope also it will see not only its security and its happiness bound up with this response, but its economic prosperity as well. For an economically developing Asia and Africa can contribute mightily to the economic development of the United States itself. But my deepest hope is that all this will happen within the framework of freedom and for the sake of freedom; for the genuinely free man and the genuinely free society are infinitely more important than all material

prosperity and all standards of living.

The real challenge is neither in the political nor in the economic sphere. The real challenge is in the domain of the spirit.

The question is: Who is going to win the mind and heart of Asia and Africa? This raises issues of quite a different order from political independence and economic advancement. For a country may enjoy all the independence and all the economic prosperity in the world, and still it may nurture hatred, aggression, tyranny, subversive design, or at least non-cooperation with this or that foreign nation or culture. Nor is it certain that political liberation and economic assistance, no matter how generous, alone buy or retain friends. Friendship, affinity, cooperation, sympathy, non-hostility, identification of destiny, all these are not matters of independence or prosperity; they are matters of the mind, of the inward attitude, of one's ultimate outlook on things.

In the nineteenth century and in the early part of the twentieth America meant ideas of freedom and opportunity; through its missionaries it meant education, hospitals, acts of mercy, and some reference to a love and a providence not from this world. America's meaning was not primarily political and economic: its message was profoundly human, intellectual, spiritual.

Are we to regard the change of accent in America's meaning to Asia and Africa from the human and humane, from the intellectual and spiritual, to the military, the political and the economic, a sign of progress?

Questions of security in this ruthless age are absolutely essential, especially at times when a firm stand of force in self-defence can alone speak, and can produce a recovery of respect and a stiffening of moral nerve everywhere. And it is a great spiritual grace to be able to help, whether directly or indirectly, in the liberation of peoples so that they can rule themselves in dignity, and to assist them

economically so that they can better their material lot in peace. But to confine America's meaning to Asia and Africa only to the military, the political, the economic, is to do grievous injustice to the wonderful spiritual riches with which this country is blessed.

It is true many American private organizations are still actively at work in hospitals, schools, colleges and universities, and in scientific, social and humanitarian endeavours. When the history of America in its meaning to Asia and Africa is written, it is these humble men and women, coming from Massachusetts, from Illinois or maybe from Missouri, and going to distant and strange lands where they pour out their heart and their life in teaching and preaching and healing and serving, who will emerge as the real spiritual heroes. May their number increase.

I attach the greatest importance to intellectual and spiritual contacts with Asia and Africa. In their sudden awakening all these cultures are earnestly

seeking the virtues of the mind and spirit. In the past they had to be jolted out of their slumber; now they are on the search themselves. Others are trying to fill their thirsty soul with their own interpretation of the universe, an interpretation based on hatred, contradiction, conflict and lust for power, but sufficiently seasoned with dynamism and with the lure of attainment to make it most appealing. Is America going to say, I will not enter the arena of intellectual and spiritual competition, I will not try to present to Asia and Africa my own interpretation of life, I have no message for them? It is easy to give money and it is easy to grant independence, but the competition for the soul and mind of Asia and Africa is infinitely more crucial and more demanding than any other competition, and he who, for any reason, abdicates before this challenge does not know that he is failing not only Asia and Africa but his own culture with its infinite spiritual riches.

I am then pleading for a much more serious attention to the human and intellectual and spiritual needs of Asia and Africa. I am pleading for books and magazines; for a deeper use of the radio and television; for propaganda in the authentic sense of the term; for extended programmes of cultural exchange; for the thousands of students coming into this country receiving more care and attention, so that they do not go back disaffected and negative but they return home having seen the deepest in America; for helping as much as possible in the development of the educational systems; for Churches and private organizations and foundations continuing and expanding their good work; for many more Americans going deeper into the languages and cultures of these lands; and for armies of young men finding their calling not in the quest of profit and comfort but in the joy of self-identification, without losing their soul, with the struggles and trials and ordeals of Asia and Africa.

Deeper than and as the ground and origin of all this is the subtle attitude of a whole culture towards another. Where there is genuine respect and a genuine attitude of equality, you do not need to fear. Where despite all differences our common humanity stands out, you do not need to fear. Where there is genuine love for the condition of men, you do not need to fear. Where one approaches another, not from outside, not as a stranger, not in order to use him and exploit him, but as a brother and a co-worker in the great task of creating happiness and justice and peace and civilization, you do not need to fear.

Now respect, equality, humanity, love and brotherhood abide at the base of American life and culture. It is possible therefore to hold that despite every estrangement and failing, and provided three dangers are faced and met, America will in the end fare well in the battle for the heart and mind of Asia and Africa.

The three dnagers are: a possible weakening in

America's faith in its own ultimate values; the wave of complacency, ease and comfort that is threatening not only America but many another land; and the existence of organized, dark forces in league with each other all over the world, whose only concern is to blacken the name of America and equate it with everything that is avaricious and evil. No greater and more urgent task faces America in its dealings with Asia and Africa than that of accurately defining and effectively overcoming these three dangers.

I do not subscribe to grand statements lightly and perhaps sensationally made these days that Asia is lost or that Africa is lost. Asia and Africa are exceedingly complex propositions differing essentially from region to region. The only true statement is to say that an independent will is emerging all over the two continents, that competition for the friendship of this will is keen, and that the challenge is likely to mount. But there are wonderful opportunities also. The seizing of these

opportunities requires important changes, in some cases revolutionary changes, in policy and approach.

Historic challenges are not met easily. Before them the worth of a whole civilization is weighed. Your brethren in Asia and Africa are asking that they be understood, respected, trusted and helped. He alone who has a dynamic concern, a real message, for others, he alone who is in a deep sense incomplete without them and who therefore needs them, can meet their needs and earn their friendship.

Great historic challenges are not met easily. They always call for a process of self-overcoming, of rising above oneself. The ultimate challenge then is whether one can thus overcome oneself. Without this grace, the grace of effecting fundamental changes in idea and attitude and practice, I am not optimistic. The first step is the utter destruction of all complacency.

It cannot be repeated too often that it is not what America makes that counts, but what makes

America, and therefore what makes America make what it makes. This maker of America is its view of man and his dignity, and the wonderful traditions in which this view is enshrined; the traditions of the home, the school and the university, the government, the Church and the customs and goodness of simple folk. Let there be renewed faith in the maker of America and there will be faith well founded in the future.

BILL MARTIN, AMERICAN

Bill Martin and Molly Radford Martin

Biography—$5.00

Approx. 254 pages, large 12mo

Frontispiece illustration from photograph and end-sheet maps

Born in Switzerland, Bill Martin emigrated to Canada — alone — while he was still in his teens. He worked on a large cattle ranch and made one lucrative freighting trip with his employer to the Far North. Leaving ranch work, he took up boxing, then fulfilled a long-time ambition by going to police school in New York City. Interested in the detective side of police work, he did counterespionage for the United States prior to our entry into World War I.

After the war he married a French-Canadian girl and took her to Santa Fe because of her poor health. At first circumstances compelled him to be a real-estate salesman and to do his detective work on the side, but eventually he was able to devote his full time to law-enforcement activities. He became a well-known detective in northern New Mexico, investigating hundreds of criminal cases (including 174 murders) between 1923 and 1942. He handled federal, state, district, county, and city cases, as well as many private investigations. Following his first wife's death, he remarried in 1937.

At the age of forty-seven he became a captain in the United States Army (later a major) and served as an intelligence officer and transport commander in World War II, crossing the Pacific twelve times. He died in 1950 as a result of disabilities acquired in the South Pacific while in the service of his adopted country.

About the book, Molly Radford Martin writes, "Out of a large mass of files, clippings, court records, remembered stories and wire recordings from my Bill's fifty-five years, I have chosen those adventures which seem to me, and to his friends, to be outstanding. Some of these he told many times, and later people of all ages listened, fascinated, to the wire recordings when Bill was too ill to tell them himself. Although it wasn't easy to listen to his recorded voice after his death, I found great enjoyment in writing down this testimony to a way of life which Bill demonstrated still does exist."

Molly Radford Martin was born in Oshkosh, Wisconsin. She received her M.D. degree from the University of Chicago in 1935. Moving to Santa Fe, she and William (Bill) Martin were married in January, 1937. She practiced medicine from 1939 to 1948. She is now Division Director of Gerontology in the New Mexico State Department of Public Health at Santa Fe.

Marx, Groucho

March 23, 1959

Dear Groucho:

Thanks for your note of March 2.

My admiration for you as a man and as a performer perhaps leads me to make suggestions which are not suitable. But so long as you are not irritated by the proposals and I am not offended by the rejection, all is well.

As you say, some other time, some other show.

Believe me, after July 1, I am going to enjoy keeping silent.

As ever yours,

Mr. Groucho Marx
806 North Foothill Road
Beverly Hills, California

Groucho Marx

March 2, 1959

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York 22, N.Y.

Dear Ed:

A man by the name of Jack Beck called me (you notice how carefully I avoid the word "contact") and invited me to appear with Thurber and A.P. Herbert on SMALL WORLD.

Much as I admire you professionally and socially, I turned him down. I saw Rubenstein and Victor Borge on your show and I truly believe it is no place for a comic.

So, while you're touring red China, don't be angry with me. Some other time, some other show ... and we're certainly all going to miss you, even though you are on C.B.S.

Regards,

Groucho

Massey, Raymond

Raymond Massey Honey Hill Road, Georgetown, Conn. Wilton (Conn.) 7-7459

Jan 17/55

P.S. This goat doesn't like melodiana! R.

Dear Ed:

I am still glowing with pride about your telephone call and the fact that you like my melodiana. Judging from the unsolicited Massey poll (one of the oldest and most unreliable in the country) the show went over very well in the east and middle west. The hot time on the coast, after the first ten minutes, had no picture

and the dialogue was transmitted in conflict with a tell-tored announcer who timed his "swing & mechanical difficulties ...." to obliterate all key lines such as the jury's verdict etc.! But you liked it Ed, and that makes it a thoroughly successful venture for me. I'm off to Hollywood again on Sunday for a C.B.S. "spec" of "No Day Laurels" was shot playing Guess Who" but am determined the Memorial jamboree will take place here after I get home on Feb. 14th.

All the best,

Sincerely

Ray

Jack O'Brian Says:

Groucho Art 'Refreshing'

Jack O'Brian

Groucho Marx' amazing durability as a Top Ten TV Star seems safe enough and last night's half hour was a refreshing explanation why, or at least how, Groucho can remain impudent without ever lopping over into insolence. His test came in cheerfully delicate fashion. One of his guests was a priest, Father Thomas Regan, and the exchange walked a wonderfully thin tightrope strung expertly above the customary pitfalls threatening the attempts of anyone to be funny with a clergyman. Groucho's methods were bubbly, bright and uproarious.

Faced with the unmistakable Roman collar, Groucho asked Father Regan what business he was in. Then he asked "How long have you been a rabb—a priest?" He gently admonished Father Regan: "Do you realize that while you're talking to me, Bishop Sheen is speaking on another network?"

When Father Regan said good comedy and the church had similar objectives, Groucho demanded in mock outrage: "Well, why is Bishop Sheen trying to put me out of business?"

It was a fine, funny, admirable 30 minutes, ample illustration of Groucho at his consistent best.

(Groucho appeals to an Unsheen Audience?)

• • •

"CLIMAX" FIELDED a florid old-style melodrama, "The Hanging Judge," written by and starring Raymond Massey. Its methods were simple enough to any whodunit fan, and its performances intense, brooding, gaudy and a bit out of date, the fault being the writing, direction and total mood of the piece. But "Climax" for all its rich thick ham, also was an expensive Westphalian display with a cast no Broadway play could afford: Massey, Sir Cedric Hardwicke, John Williams, John Carradine, Hurd Hatfield, etc. Quite a team; game called on account of too obvious literary perspiration.

Mathieu, Aron

March 17, 1959

Dear Mr. Mathieu:

First of all congratulations on the Spring issue of FARM QUARTERLY. It's really an outstanding publication and I congratulate you most sincerely.

Delighted you are taking a year off. Where will your travels take you? Perhaps our paths may cross. I hope so.

Sincerely yours,

Mr. Aron Mathieu

March 3, 1959

Mr. Edward R. Murrow,
Pawling, New York

Dear Mr. Murrow:

This note, and the enclosed copy of our new Spring issue of FARM QUARTERLY are coming to you at your farm because I believe that is the spot where you will most enjoy looking through it.

I picked up the paper this morning, and read that you plan to take a year's leave of absence from CBS -- we're going to miss you, and look forward to your return. Curiously enough I too have chosen 1959 as the year in which to take a similar step. Some time this Fall I plan to withdraw for several years for the purpose of writing a book, and am looking forward with great eagerness to travel and research.

If you have a chance it would be nice to hear what you think of FARM QUARTERLY. Because of your close association with publishing I am also enclosing a reprint of an article I did, thinking perhaps you might find it of some interest.

With all good wishes to you,

Sincerely,

Aron Mathieu

By Aron M. Mathieu

Man Against White Space

IN A MAGAZINE publishing shop of a hundred employees, it would be remarkable to find three who understand the basics of publishing. And, because magazine publishing is becoming more specialized, fewer people each year have a chance to learn more than one part of it. This article will introduce the fundamentals by which each of the five divisions of magazine publishing are operated, and the web of understanding that holds them together.

Of the five divisions (editorial, circulation, advertising, production, and administration) we'll look first at the editorial end of magazine publishing.

Editorial Division

Within pretty wide limits, a magazine rises or falls on the aptitude of one man: the editor-in-chief.

The essential difference between the editor and his circulation manager, advertising manager, and mechanical superintendent is that the editor is presumptively not only a professional at editing, but also is culturally aware. The reason the editor is at a loss when it comes to seeking advice in his own shop is that normally his *vis-a-vis* departmental chiefs are good pros at their given work, but culturally are relatively less hep.

When sales fall, the newsstand sales manager generally has one piece of advice to offer the editor: "Put red on the cover!"

The mechanical superintendent can be counted on to say: "If you make your schedule a day ahead of time we will give you a good clean book," and the circulation manager, who perhaps is weak in certain States, will come up with a resonant plea for more stories about the Rocky Mountains so that he can get some some good licks in that area.

The advertising manager, when his advice is solicited, will produce a copy of a certain article published two years back. It was this article that the President of "Chuckles Nut Bar" liked so well he ordered 4,000 reprints for all his dealers and followed this with an advertising contract. Placing the reprint on the editor's desk, and leaning forward for emphasis, he says: "Now *that's* what we need more of."

The staff, on the editor's executive level, put most of their time into being experts in printing, or circulation, or advertising, and very little of their time into studying the history of ideas. Lacking this experience, they are often trite in the editorial concepts they offer because they cannot relate their ideas to the significant ideas of the past.

The editor's mind is splashed with names of authorities who can be reached and who are articulate. This knowledge, plus his own

No book gives the principles of magazine publishing. No college offers a course on the subject. Here, for the first time, you see the working parts of magazine publishing.

Mr. Mathieu founded The Writer's Year Book, 1930; The Writer's Market, 1933; Modern Photography, 1937; Farm Quarterly, 1946.

point of view, enables him to take any situation and integrate it into a concept with contemporary meaning. This is the pro at work.

For instance, if the circulation manager is shown a copy of Edward Steichen's picture of J. P. Morgan, made in 1910, he will take delight in being able to say, "Oh, that's J. P. Morgan, isn't it?" But the editor sees more than the familiar face. He recognizes that the picture of this man seated and gripping the arm of the chair, as though it were a dagger about to be plunged into you, is one of those which set up the attitude of a generation of magazine photographers who followed Steichen. He knows the history, development and present status of the altitude, and it is in *accepting, changing,* or *rejecting* this photographic-attitude that the editor shows himself.

Behind any great magazine is the "flash" concept of its editor. Usually he is something of a missionary, a reformer, a zealot. He speaks his piece with an intense belief that what he has to say is worth hearing.

When Beatrice Gould came back from Russia and said the attitude of the Russian people toward the Americans, and toward their own leaders, would be radically changed if everyone of them could read a copy of the LADIES' HOME JOURNAL for a year, she wasn't kidding. She meant what she said with her whole heart and soul.

Edward Steichen made this photograph of J. P. Morgan in 1905. It was published in "Camera Work."

The lesser magazines are edited by lesser editors who have nothing to say for the simple reason that ideas are not the thing that matter most to them. They are interested in their own recreation, or family, or security—*ideas* and *influencing others* aren't the consuming interest in their lives. These people should not be editors, and when they become editors they are invariably lesser editors, and their publications come down to their level. An editor is part messiah, and, since he needs to have a lot of people dancing his tune, he is part a honky-tonk guy, because crowds don't follow straight Bach.

Mostly, individuals who are all these things cannot stay in the high seat decade after decade. The world changes, but individuals do not. For every Mary Wollman Chase, who successfully headed up VOGUE for almost 50 years, there are a score of Frank Vizatellis of LITERARY DIGEST, who appear to pass their hey day, but remain in the saddle till death do them part.

How Do We Get Dated?

It's no disgrace to become dated. This happens to all of us. It just about has to happen as, if we are writers, we cannot be creative forever, and at one point of our life we stop being creative and for the rest of our lives simply try to reaffirm the credos and conditions that previously brought us success and recognition. Some of us get dated a little earlier than others. But few editors can expect to go into their 60s, and remain good editors. The thing that happens to them is that they lose their enthusiasm for volunteering new ideas. Already, because of their years of experience they know the new idea won't work.

As an example, a young editor of 30 might suggest a great new agricultural program that will take America out of its

VOGUE 1919

Just before the twenties, a magazine page looked like this. Vogue itself was made up of neatly symmetrical arrangement like pictures over an old fashioned mantlepiece.

Pietre Mondrian created painting of such purity that the misplacing of a single line could upset the balance of his composition. Modern magazine layouts are inspired by his abstracts.

market glut. But a 60-year-old editor already knows there is no hope for a farm solution. He knows it is too complex for any solution. He knows that through technology the farmers are producing too much and that through political log rolling, the Congress is going to vote some kind of a high-price support program to farmers, even though farmers already are producing food for which there is no market. He knows that any approach to reducing the farm surplus without consideration of the farm vote is foolish, so to him the problem is too intricate, and, through years of living with it, he is mute. But the thirty-year-older hasn't been hit by 75 ideas that were squashed under selfish political appraisal, so he comes up with something that may be screwy, but at least it's new and fresh, and in the long run he shoves the 60-year-old editor out of his seat. That is not to say the 60-year-older was at fault; but it is to say that the public is willing to bite at new suggestions and the 30-year-older had them, while the 60-year-older knows too well that they won't work.

It is interesting to see that LIFE, come what may, is always ready with an editorial solution answering the burning question of the day. If you are not sure of what to do, or where to go, or how to think or where to turn, at least one week out of three, LIFE'S editorial page gives you a packaged answer. Remember years ago in LIFE when Ambassador Bullitt treated China like a hard-boiled egg, peeled it down, and said we should take it over. Now! Before the Russians completed what even then only a few people suspected as their goal. He gave the costs, the risks, the rewards. A blue print. "Take over China," he said. *"Now."* Sometimes nationalistic, sometimes idealistic, LIFE puts down a step-by-step solution to big-time problems as fast as they rise.

Will Mr. Luce find these ready solutions within himself 10 years from today, when, looking back 20 years and reading his previous programs, he can savor the sting of hindsight?

Will a coma settle over him? If so, Luce, himself, prophetized what will happen. Speaking to a journalism class, he once said: "I have no fear of competitors who imitate us as closely as they can. They don't have what we have, and they can never out-copy us. The man who is going to put LIFE out of business is in a journalism school today, and he's picking up our magazine and saying: 'My God, what a bore this is!' Then he is going to put out something that doesn't bore him, and if it has the same effect on millions of other people, we are through." It was Mr. Luce himself, who, through the invention of TIME, put LITERARY DIGEST out of business because when Mr. Luce was in journalism school LITERARY DIGEST relentlessly bored him to tears.

VOGUE 1935

Then came Dr. M. F. Agha who put into Vogue the art and typographical principles of Germany's Bauhaus school. Note how the design is now a symmetrical. Most magazines soon adopted this fashion.

No editor is afraid of a slavish imitator. The only man he needs fear is the editor who picks up his book and is bored by it, and as a result of his boredom creates something so new and fresh and wonderful that it counteracts all the ideas and layouts, and pages, and captions, and points of view that he found so deadly dull. Mr. Luce was once young and had nothing, and he enjoys the wisdom of knowing that probably the only man who will ever overtake him is a person who is now as he once was, rather than some manufacturer who merely tries to copy him.

The motor that drives the editor is the message he wants to get over to people, and his utilization of communicative techniques that to him, at least, are not boring. That means the editor must have a more sensitive and impulsive reaction to each and every little thing than anyone else. If you feel, he feels 10 times as much. If you hurt, he hurts 100 times as much. If your eyes moisten, he is bathed in tears. This is figurative, of course, but it is the editor's acute awareness that makes him struggle to make each word, and each paragraph and each spot on a page a fraction better than it otherwise would be.

As a group, magazine editors have no clear firm message and are ignorant of all but the editorial side of the publishing business. It is interesting to recall that William Randolph Hearst picked Herb Mayes to edit GOOD HOUSEKEEPING because he was young, tough, ambitious, had done a good job with THE AMERICAN DRUGGIST and, as Hearst added, "was experienced in advertising, circulation, and merchandising." That's what it takes to run a big book.

The pay for magazine editors on small books runs from about $6,000 a year to $15,000. An experienced professional editor knows which cartoons to call upon for children's pieces; who can write tenderly of women past sixty (My God, Joe, there's 11 million over sixty. They all get two bits. Let's go after 'em); where to get stone rubbings of ancient Mexican friezes, and what writer can meet a given personality on his own level and impale his significance on a sheet of paper. The editor has a thousand strings out to all kinds of talent that he can call upon to fill a given space on a page.

But when, in addition, this is laced together with a message this editor has to give to people, he has pushed himself into the salary realm where he is equal to the President of the United States—and he earns it, too.

Often publishers ask, "How do you pick an editor?" There is no test to guide the publisher, no outline of mistakes not to make. For the truth is, on a great book, someone has The Word, and passes it down the line where it is picked up, echoed, resounded, and implemented. But The Word is always there, clear and bright and loud to every ear, like a trumpet soaring over a band. And who gives The Word? It could be either the publisher or editor-in-chief or both. But without it, one is a manufacturer who is about to lose a lot of money and the other is a pedestrian set loose on a race track.

There are a lot of magazines, for instance, edited for business and professional people. One of these is U. S. NEWS AND WORLD REPORT with David Lawrence as editor and publisher. And David has The Word. He picks, and often writes those incredibly timely front cover headlines and assigns the story to writers who grasp the Lawrence idea. And they gave him a U. S. NEWS AND WORLD REPORT which employs as original and creative editorial techniques as we have on the newsstands.

What is The Word that Mr. Lawrence gave his staff? He puts it this way:

> "I wanted a point of communication between the government and people—where the people could learn what their government was up to. And also a two-way street that would let the government know what the people were doing. We want to give the consequences of events what will flow from them. In a tax law, we tell whom it affects; in a treaty, we tell its consequences in relieving or exert-in tension."

When a publisher relays The Word for public relations consumption it never is the same as when he sits in a little room with

his editors and angles out a story. The one is bland; the other is full of [redacted] barbs.

If you seriously want to study publishing, ask your library to give you U. S. NEWS AND WORLD REPORT of 1948. Then catch every 12th issue thereafter for a few years. Break it down into The Word itself and the editorial techniques by which it is implemented. No school, no book does that for any editor. In fact, he hasn't even a trade journal to call his own. Do it for yourself and be the gainer.

Would you like another example of The Word. This time as applied to art and layout rather than editorial policy? Condé Nast hired Dr. M. F. Agha, who was working for the German VOGUE, to come to America and take over the art direction of the American VOGUE. Agha had The Word.

Dr. Agha knew and loved the asymmetrical abstracts of Pietre Mondrian and the modern ideas of Paul Klee, Walter Gropius, and Herbert Bayer—artists, architects, typographers who attended Germany's Bauhaus, a school for creative people. From them, Agha had The Word. He simply wanted to apply this Bauhaus revelation to magazine layout. Want to see it happen before your very eyes? Ask your librarian to give you VOGUE for 1919. Then ask for a book of Mondrian's abstracts—especially a slim little volume that came out around 1920. This book, which doomed symetrical art and layouts that looked like pictures set over a mantle, set Agha afire. Now get yourself 10 years of VOGUE, 1928-1938, and flip the pages. The change did not come all at once, nor in a straight line. Agha had obstacles. But by the time 10 years passed, VOGUE had it; the rest were also ran.

The buoys that set the course of magazine publishing are established by editors who have The Word.

When Arnold Gingrich took over ESQUIRE in 1952, there occurred one of those astonishing reversals of editorial appeal.

What did Mr. Gingrich do?

"I got rid of the mysteries and westerns and brought fashion out of its eclipse. Our layouts were like a road company of COSMOPOLITAN. The big garish spreads were killed."

What he actually did and how he did it will never be put into words for these are the dearest of all trade secrets. But you can gauge it yourself by a 100-hour study of ESQUIRE for 1950 against the first 6 issues of 1957.

Lucky is the editor who has a "pusher," an assistant of wit and energy who tries to lead rather than follow him. Good editorial staffs are rife with intellectual feuds (never personal grudgings) that tear apart the issue of the day so the editor may better make a decision. Editorial decisions are not made by jury, unless the editor feels it is politic to do so. He makes all judgments and suffers all consequences of every published word. When he dodges this fact, the publisher, if he knows publishing, goes editor-hunting.

Since, in truth, most magazines say very little, the avenue for a job on a publication is to analyze what the publication has said in the last six issues. Has it vacillated? Can you put down what it *did* say? Was it mute while its competition gave tongue? Are its readers aware of what it stands for? And finally, what *should* it say and *how* should this be implemented? A job application along this line equates you on the level of deepest conviction with anyone reading your letter who is anxious for the magazine to succeed.

Any editor is on the World Stage. It is a game which he plays for keeps. The prospective reader sits in a chair about to read but he has a stomach ache from something he ate, outside a dog is barking, and next door the radio drills a commercial into his ear. The reader picks up the editor's magazine and challenges him, "Entertain me if you can!"

Mostly, printed matter is thrown away, but sometimes odd things happen. An idea of yours can cause more change than a thousand earthquakes. That is why all editors, large or small, have a pot shot at humanity with each issue. It is ideas, not the passage of time or the ris-

ing or lowering of seas that cause real changes. Ideas come mostly from the printed word and so it is given to editors to have the greatest power of man: to change man himself.

Will They Read It?

Writers often want to know if the material they send to a magazine is read. Disallowing the occasional one-man inefficient operations, it is the law of competition (rather than any sense of fair play or cordiality to an unknown) that assures each writer of a hearing. At each editorial shop are article editors, fiction editors, etc., each with their staff of two or three assistants. The assistant has but one way to keep his job and to advance. He needs to discover in a morning mail a manuscript, sell it to his own editor, who in turn has to sell it to the editor-in-chief. If the printed manuscript pulls fan mail, is quoted and reprinted, and generally pushes the magazine ahead, then the assistant who found the manuscript, goes up the line; assuming he does this with some regularity. He is not unlike a baseball talent scout. Find new talent or get a new job, are his standing orders. The American way of competition and the unknown editorial staff assistant assure every manuscript not only of a hearing, but of a prejudiced hearing; prejudiced insofar as your first reader is rooting to find something to stake his judgment on.

Being dated is the suicidal act of many writers. Essentially a writer needs to know only a few of the well-known writers from the Greeks till now—perhaps one hundred are plenty. But it *is* required that he understand the significance of these writers. Certain things, once said and repeated, unless said differently, are trite.

For instance, to repeat the point of view of Thomas Mann, unrefreshed by the changes in the world's thinking, is to do what he did in his later books: whip a dead horse. Styles, just like point of view, date you.

Can we be more precise about this? Take Ulysses. All that matters is that you are aware of the catalytic influence of James Joyce's style. Now, you can deny Joyce and create your style in the very act of denying him, or you can alter your style by accepting some of his techniques and practicing them with alterations of your own. But *not to know* the significance and effect of his techniques is to be unaware and therefore dated.

We speak of Hemingway as a great writer. Hemingway's historical significance is his contribution to American style. This appears primarily in his book, "The Sun Also Rises." Copy out one thousand words and try to edit, change, and rewrite it. That's one way of savouring the other man's style and making it part of you. You can love, hate or be bored by "The Sun Also Rises" but not to take a postion on it all, and not to have your own literary style affected by your position is to be dated. This is what few journalism school teach; in other words, they have missed the point of why writers read.

For professionals in writing or editing, the purpose of reading is to learn the ideas that have changed people's way of life; second, to understand, as a result of this reading, which ideas are old hat because the world has caught up with them, and third, to recognize literary styles that have influenced other writers.

In the personal act of accepting or rejecting parts of these styles, you create your own. Most scripts that editors read are dated; that is, the author simply isn't aware of the 100-odd ideas that have mattered in the past 5,000 years and the succession of literary styles that have put them over.

Editorially, for writers and editors, the business of not being dated, of truly being *au courant* with the times, and being able to express it in the idiom of the day, is the force that lets you communicate.

We are glad to recommend another article on the subject of professional magazine editing. This is "The Fruit of The Bittersweet," by Ken Purdy, which appears in The Writer's 1958 Year Book.

Man against white space

Part 2: Circulation

This is the second of five articles on magazine publishing.

By Aron M. Mathieu

Reprinted from WRITER'S DIGEST

THERE ARE FEW circulation managers in the business who call themselves successful because the demands made upon them by publishers are so great, that almost by definition, their goals are out of reach. The publisher wants complete circulation coverage in his field. His competition already claim they possess it. Only the circulation manager knows that since complete paid circulation coverage in any field means that you have sold nearly everybody, its accomplishment is impossible. General Motors, with but three competitors, sells 47% of its market. To beat that is some trick.

For the most part a magazine's circulation is divided into two categories: mail and newsstand. Paid-mail circulation, almost without exception, is secured at a direct loss; that is, the cost of securing three dollars for a one-year subscription is greater than the three dollars the individual pays. To this loss must be added the cost of printing and delivering the magazine. Within the several implications of this single business fact is the first key to understanding magazine publishing.

The net loss of securing one paid-mail subscriber may run from as little as 5c to as high as $1.00. The cost of printing and delivering the actual magazine is from 12c to 40c a copy for most publications. Thus, each subscriber costs the publisher about $2.00 a year. On a magazine of one million circulation, this means $2,000,000 must be picked up some other way to meet the loss of the circulation department.

Here are some of the usual methods by which circulation is secured.

Catalogue Agencies

A catalogue agency is a clearing house for thousands of part-time, independent agents. These agents receive a printed catalogue from the agency (from whence it derives the name catalogue agency). In the catalogue itself is an alphabetical list of perhaps 500 different magazines, along with the subscription price of each one, and the commission paid to the agent for selling the subscription. Should the agent collect $3.00 from a subscriber, he pockets 75c for himself and sends the remaining $2.25 to the catalogue agency. The catalogue agency keeps approximately 75c and sends $1.50 to the publisher. This is one type of circulation, for which the publisher expends little effort

and the money he receives is greater than his selling cost.

Subscriptions sold by catalogue agencies take care of anywhere from 1% to 5% of the total paid-mail list of major magazines. The people who work for the catalogue agencies are housewives, handicapped people, shut-ins, or old folks who call up their friends and say: "When you renew your subscription to your favorite magazine, please send me the money. It won't cost you any more, and I will make a little commission."

The catalogue agency does not generate much additional circulation but does deliver another little peck at the stone. Some of the leaders are Hanson-Benett, Crowley and Turner.

A few publishers such as Hearst and Curtis conduct their own catalogue agency. The catalogues they distribute push their own books in various attractive combinations with other magazines, but also sell individual subscriptions to all publications. Any bright young man desirous of getting into publishing need only establish his own catalogue agency, run it well for two or three years, and dump perhaps a thousand or fifteen hundred subscriptions into the lap of the publisher whose employment he covets. Then, with this record and experience, ask for a job.

A young man with this kind of push would start for $6,500 as assistant catalogue manager and be welcomed like Lindbergh. A catalogue agency is one of the few remaining businesses that can be started on small capital, and then continued as a business or used as an "in" to get on a big book.

It seldom occurs to a job seeker in publishing to learn the nuts and bolts of the trade first, and then reward his prospective employer with a little concrete testimonial. Every publishing shop has its queue of job applicants whose evident desire is to be on the payroll, but who demonstrate no itch to communicate, no ability to sell.

Direct Mail

When 100,000 letters, soliciting a subscription to a magazine, are dropped in the mail, the cost of the envelopes, stationery, order blank, postage, printing, addressing, inserting is $6,000. If a magazine sells for $2.50 a year, the publisher can expect between 1,000 and 3,000 orders from a 100,000 mailing. His gross income from these orders will run from $2,500 to $7,500. Thus if he sells 2,000 subscriptions and collects $5,000, and the job costs him $6,000 to mail, he loses $1,000 on the transaction, or a net loss of 50c for each subscription that he sold plus, of course, the cost of printing and fulfilling the 12 issues to each subscriber.

Once in a while a subscription letter to a "cold" list closes better than 2%. There are instances where direct mail letters do almost 7 or 8 per cent. On the average, today, a mailing sent to a cold list, offering a magazine at $3.00 a year, "pulls" a 1½% return; i. e., 1,500 orders from a 100,000 mailing.

Every specialized publisher is hungry to circularize lists that contain high income subscribers who will buy from his advertisers because they *need* the products. A young man who would beat the bushes in his home state and locate 20 or 30 such lists which a single specialized publisher could use, and then lay on the publisher's desk the name and address of the list owner, the cost of renting the list ($10.00 to $20.00 a thousand), a strip list sample of the first 50 names on each list and a description of the list itself would be regarded as a sharp-as-a-tack young operator and grabbed vigorously by the neck before anyone else got him. This inside track approach has as its competitor, "I have an M.A. at Southern Idaho Missionary and will start as a proofreader."

Renewal Subscriptions

Circulation managers send from 5 to 12 letters to individuals whose subscriptions expire. These letters begin 3 months before the subscription expires and continue to be mailed at a rate that varies from every ten days to every 6 weeks, until the series is completed.

The first letter, mailed 90 days prior to the subscription expiration, will produce from 3% to 6% returns (i.e., from 3,000 to 6,000 cash orders come back to the publisher for every 100,000 letters mailed to

"pre-expires") and shows a profit on the actual cost of the mailing.

The "renewal" letter which comes to the subscriber a few days before he receives the last issue of his magazine subscription will close from 6% to 20%. This is the only "letter" in the whole series of "renewal letters" that shows a real profit. With the next letter, the returns drop sharply to around 3%. With the fifth and succeeding letters, the redoubtable circulation manager offers premiums, cut rates and deals. If the series of renewal letters were stopped with the third letter, there would be a tidy profit for the publisher. However, in order to acquire the desired amount of circulation, these letters soliciting renewals are continued for a series up to 12, and their total cost is usually about 10 to 20% under the total income.

Some magazines back up their renewal letters, especially in big cities, with "telephone campaigns" to expired subscribers. This increases the number of renewals but the added cost of telephoning is not equalled by increased revenue. However, the *increase* in the per cent of renewals is passed along to advertisers as evidence of the strong desire on the subscriber's part to want the magazine.

On today's market, with free TV and half-price long-term magazine subscriptions offering abundant cheap reading or looking matter, a consumer magazine would do well to renew 25% using only three letters and no deals. A mass circulating farm paper, with its reader interest spread between town and country, would be excellent at 20% on the same arrangement while a trade paper should do 30% before bearing down.

The methods, as well as the number of times they are employed by the circulation manager on the same subscriber, to secure

his renewal is revealed so casually by the publisher to the advertiser that the advertiser never grasps the difference between a high renewal rate under pressure and a high renewal rate. Thus, with a few outstanding exceptions, like the NEW YORKER, a high renewal rate reflects more on the skill of the circulation manager than on the reader interest which advertisers want readers to shower on their printed message.

Does this amiable illusion matter? It matters to all publishers, especially trade paper publishers, as paid advertising is placed in one magazine over another because of 30 or 40 factors of which a high renewal per cent is one.

A young person seeking a job with the Circulation Department of a magazine could do no better than painstakingly interview 100 subscribers of a given publication and then submit, on the basis of this research, a series of 12 letters showing the kind of efforts he could produce to secure renewal subscriptions for that magazine. An approach with this calculated initiative is as foreign to job seekers in the publishing business as it is today to see a man going West with a wife, a mule, an ax and a bag of beans. Yet a young man with this approach would not only be hired enthusiastically, but way would be made for him to move directly into management level.

Inserts

Circulation managers make arrangements with department stores, seed and other catalogue distributors, for the inclusion of a card offering a subscription to their magazine that rides along in a mailing produced by the department store or other company. The commission exacted by the department store, and the cost of producing the card, are generally in excess of the income received for such subscriptions.

The charm of such inserts is that they may give the publisher access to the particular kind of reader his advertisers are seeking because of the selectivity employed by the catalogue distributor; as for instance, a catalogue of architect's supplies would be a perfect carrier for a subscription insert from ARCHITECTURAL FORUM.

Combinations

Publishers of daily newspapers have found that they can increase their own carrier sales by offering their readers the choice of a magazine along with the newspaper. Such circulation is known in the trade as "no net." The newspaper reader pays a few cents a week more and gets a magazine (at a cut price) in addition to his daily newspaper. The magazine publisher receives nothing for the magazine and, of course, has to pay to print and deliver it. The extra weekly pennies paid by the newspaper reader are split between the newspaper (which gets the least) and the magazine subscription company that originated the deal and provides the promotion.

Field Sold Subscriptions

There are a number of organizations in the country who specialize in hiring crews that travel door-to-door and town-to-town selling magazine subscriptions. After selling a subscription, the "field sellers" keep all the money, and the publishers receive none. In some cases, when a publisher has made a guarantee to his advertisers for a given amount of circulation and is at a loss to secure it, or when he seeks to "bury" a competitor, he will offer "field selling" organizations 5%, 10%, 15% and 30% bonus on every subscription sold; i.e., for each one-year $2.50 subscription the publisher receives no money whatsoever, and lays out from 15c to 75c *per subscription* which is paid to the crew members as a special bonus to push that particular magazine.

Here's how it's done.

To capture the attention of the door-to-door salesman who may have 100 magazines on his list (but rarely carries copies of any of them) the publisher offers "points" in addition to the regular commission. These "points" are the bonus which the salesman receives for pushing one particular magazine over all others. "Points" given to crew salesmen are paid off by way of an expense-paid trip to Florida, a portable T.V. set, a suit of clothes, etc. The publisher is not required (i.e., forced) to state what percent, if any, of his circulation is secured in this manner.

The following quote is from Warren Brubaker, known jokingly but respectfully in the trade as "Honest Bru, the farmer's friend." Mr. Brubaker heads up Globe Reader's Service, a volatile and vibrant group of crew managers and crew salesmen who solicit magazine subscriptions door-to-door in small towns and farms.

(*Mr. Brubaker is speaking:*)

"No, I never dictate a letter. My wife does all that for me. Hell, I can't write. I sell.

"We travel from 50 to 125 at a time. We go by private car, 4 to 5 sales people in a car. We have men crews and girl crews.

"So we hit a town like Cincinnati. We'll put up at the Metropole. I'll pay maybe $8 for a room and we sleep 4 to a room. We all eat breakfast together at 7:30 A.M. There's a prize for the best song on how to sell one of our magazines. Maybe that morning we offer $10 for the best song. After breakfast we break into car crews and each car has a Captain. The Captain works under an Assistant Crew Manager who watches 5 cars. Each car works a territory.

"Each Captain briefs his crew on the books to sell and checks their sales pitch. I mean, he says, 'all right now, boy, give it to me.' He lets it come to him; then tones it up if he can. Every man and woman checks in at noon so we know where they are. We meet again for dinner at 6:30. Anyone in the bar is fined 50c. Anyone collecting under $30 for the day's work goes to evening session on magazine selling.

"Twice a week I take the gang to a movie treat. About once a week we have a steak and beans on the side banquet. Bed check is at 11:30. Anyone missing is fined 50c. The fines are used for prizes.

"I stake a new member to meals and room to get him started. If he fails on the job, I give him a bus ticket back to the town where I found him. College kids don't go the job. Too lazy. A good man or woman will make themselves $100 a week over and above all expenses. A bum won't last a day with me. Bonuses from publishers for pushing their book, give my people paid vacations, travel bags, portable TV sets.

"Assistant Crew Managers easily make $150 a week. Crew Managers, however, make money. Everything is commission. Me, too."

I have been a publisher for 30 years. I have never met a literate, educated, civilized young man or woman who cared enough about publishing to spend a year with a pro like Warren Brubaker and then seek out a job with a publisher. What Warren knows and doesn't tell (his business isn't educating publishers) would be welcomed with a hosanna in any magazine shop.

At each magazine shop are people who deal with organizations headed up by men like Warren Brubaker. But often the men holding down such jobs have no real personal understanding of the task faced by the crew manager. Therefore the field selling boss, in facing up to the publisher for all the irregularities that come up, slips readily into amiable double talk as the simplest way of answering and yet not answering.

Here is a morsel of conversation between the publisher of an automotive trade paper and Jack Martin, one of the founding fathers of "field sold subs" in the trade field.

Publisher: "Jack, how many men do you have in the field selling subscriptions?

Martin: "More than ever before."

Publisher: "I mean, how many men do you have now selling SERVICE DIGEST."

Martin: "Never had so many as we have today."

People who know and love Jack Martin would not call him evasive. His amiable patter is part and parcel of the way many field selling representatives talk. It's their way. Few of these people came to field selling from publishing. Mostly they came up the hard way—through door-to-door selling, car captaincy, assistant crew managers, crew managers and, finally, owners of small field selling set-ups themselves.

It is a rare one among field salesmen who fits into the cultural background of editorial Ivy Leaguers, with their crews cuts, and advertising executives with their grey flannel. When a publisher wants to find a person to head up his field selling department, he seeks someone with *both* practical experience and the manner of speech, so to put it, that fits into his own organization. Usually all he can find is a man who has written a lot of letters to field selling organizations, but who, himself has never written up an order. Any person (young or old) understanding this *need,* who will join up with a firm like Martin's or Brubaker's for a year or two and learn the trade, and then possessing the cultural and educational background to work on a national magazine, has himself a good job.

Robert Haig, formerly of Hearst, and now with Martin, heads up a group of 300 men who sell trade magazine subscriptions to owners of hardware stores, feed and hay dealers, drug stores, printing plants, etc. Bob puts it this way:

> "We have 300 mature men selling trade subscriptions for trade journal publishers and about 100 of these men do 90% of our business. In the trade field, we find a man over 35 does the best job because he seems to get more respect from the businessmen on whom he calls. Our men all operate on a commission basis and a man who works has no difficulty in grossing $250 a week. Our problem is in finding men. My best method is to go to one of my 25 key salesmen and offer them an override on the first $10,000 worth of business sold by a new man. Afterwards, naturally, they tell them to beat it out of their territory.
>
> "The colleges feed every profession: law, medicine, architecture, insurance selling, etc. But we have no talent pool flowing into field selling. I hope some college, perhaps a night college, specializing in adult education, will work with an established field selling organization to get teachers and offer training courses in trade sub selling."

The Audit Bureau of Circulation, Chicago, Illinois, will supply the addresses of reliable field selling companies, such as Globe or Martin, in both the trade and consumer field to any institution of learning.

Organizations

Any fraternal, social or religious organization that desires to make money by selling magazine subscriptions can do so. Usually the organization is permitted to retain a minimum of 35% of the money it collects, but prizes, premiums and bonuses may carry that up to 80%. The cost of locating an organization and then communicating to it the job to be done, when added to the commissions given to the organization, result in all such subscriptions being sold at a loss of 5 to 15 cents per subscription.

Let's say you want to get into the publishing business and happen to be friendly with a few garden clubs in your area. By lining up these garden clubs as a subscription sales organization, and then contacting one of the publishers in either the garden or shelter field, you can receive a quick reply to a query from a publisher asking if you can sell subscriptions for him using the garden club members as agents. If you can deliver to BETTER HOMES & GARDENS, HOUSE AND GARDEN, or POPULAR GARDENING, 500 subscriptions sold by the local garden club (in which you would make perhaps $250 and the garden clubs $1,000), you will capture such favorable attention from the publisher that you'll feel like a 10-0 school pitcher with Pittsburgh and Cincinnati ball teams on the trail.

Which Way Is Up?

Generally speaking, the lay public, as well as people in the magazine business themselves, do not understand that circulation is dead loss. Publishers themselves hold back on the subject. They rightly feel it undercuts the sales story of their advertising staff to have it known that their circulation has been pushed to the point where every new subscriber added means either an added burden of cost to the advertiser or a loss in net to the publisher. Whenever added circulation reflects readers who

genuinely want the magazine, who have a faith and interest in it, and who read it with care, this burden of cost can well be paid by the advertiser. But when the additional circulation goes to individuals who are induced to buy the magazine by a device, whether it be cut price, a premium or a keyed-up bonus salesman calling door-to-door, then the added burden of cost may give the advertiser doubtful value because such readers bring less genuine personal affection to the publication and glance at it with but casual interest when it comes into the home.

Thus it becomes readily apparent that as publishers fight to be top dog in their field and push their circulation beyond the point where people have deep-rooted desires to read it, that the advertiser is asked to pay for circulation, a growing part of which is of decreasing value.

If advertisers understood this, they would not encourage publishers to vie so frantically with each other for increased circulation, as this increase in circulation eventually reflects numbers rather than devoted readers. The advertiser profits best when his message is given time and consideration in the home of the reader who needs his product.

Who cares?

You care!

Not only as a writer, but as a citizen. For the closer a magazine publisher is to the red, in his business operation, the more iron goes out of his spine, the more likely he is to yield to every pretext to publish editorial copy that ties in with the advertiser's desires, regardless of merit, citizenship or integrity. Publishers are people. Pushed hard enough, they give. Not all—of course, but enough to sully our American free press.

A kept press comes about when it is profitless press to the owner. Demands for increases in circulation, beyond the point of gain to the publisher, are a force that harms.

A.B.C.—The Cop

Guardian over most circulation managers is an organization of publishers and advertisers called Audit Bureau of Circulation.

Once a year an independent auditor comes into the publisher's office and lifts, at random, out of the circulation files, the names of approximately one-half of one per cent of the net-paid subscriptions. It is then the job of the circulation manager to show that each and every one of these names qualify as net-paid subscribers. He must produce the paid orders.

The Audit Bureau of Circulation is naturally willing to accept a modest few subscriptions that do not qualify as paid, because of clerical errors, etc., but if the subscriptions that do not qualify run over a dozen, then the auditor may deduct from a magazine's circulation the per cent of the whole that does not qualify in the random test. The publisher must then refund percentage-wise to the advertisers the money he received if, after this deduction is made, his total net paid subscribers are under the amount of paid circulation he guaranteed.

The unfortunate part about the Audit Bureau of Circulation is that the advertisers who are a member of this group, are individuals who are international successes at making soap, or perfume, or motor cars, but know little about the magazine publishing business. The publishers, who are important committee members of the Audit Bureau of Circulation, know the publishing business thoroughly and are very much aware of the conditions and directions of the rules that are adopted. As a result of this, the publisher's trade know-how tends to overwhelm the representatives of the various advertisers, so that an Audit Bureau of Circulation statement is 100% correct on quantity, but with each passing year the quality is a little more unknown than it was before.

For instance, it follows that if a magazine sells long-term subscriptions, say a twenty-year subscription for $15.00, a number of its readers who bought the magazine in 1940 might no longer voluntarily buy the magazine today if they had to make their choice. Therefore, such long-term subscriptions are of less value to the advertiser than are short-term subscriptions of one year or two years since the short-term subscription reflects the more immediate interests of the subscriber. In spite of this, in some divi-

sions of Audit Bureau of Circulation, the publishers have managed to "simplify" the Audit Bureau of Circulation statement so that long-term subscriptions are grouped under one umbrella heading: "Subscriptions received for 5 years or more." That the advertiser failed to grasp why this was being done to him is routinely accepted by publishers because the advertiser is an outlander. Although he may know the hotel business better than anybody else in the world, he is no match for a publisher when it comes to trading points on publishing. Here and there talk is heard today that the entire publishing business would be helped were the Audit Bureau of Circulation to include as part of its goal the surveying and reporting of the quality of the magazine's subscriptions list as well as its precise and exact quantity.

The average rate of pay for a circulation manager runs from $5,000 to $15,000 with three dozen individuals getting up to three times that. The job is underpaid only because the current demands made upon the circulation manager are greater than he can fulfill. Every time he adds circulation he comes closer to, if not passing, the point of diminishing returns. That is, each new 10,000 subscribers bring him over the line into the area of readers who really don't *need* the magazine; and so to secure a profitable rate of renewal from them becomes impossible rather than difficult.

Who Dares But Go Up?

In his own field, the advertiser is very much aware that he can never hope to sell half of his prospects. Most businessmen would consider themselves next to immortal if they sold 25% of their prospects. The same businessman, however, is willing to believe that the publisher, though made of the same flesh and blood as he, is able to sell 80%, 90%, or even 100% of his total market. Thus, in a field in which there are 50,000 bona fide prospects within a given state, the publisher comes up with 50,000 circulation and claims that he has complete coverage of all the prospects. The advertiser will accept this, even though common sense should tell him that no one can sell his entire market, and few people have ever sold one-half of it. In most cases, where there are 50,000 prospects in a given area and the publisher claims 50,000 circulation, or complete coverage of all those prospects, he may actually have 20,000 of the prospects as subscribers and the other 30,000 are also-rans who paid their money and get the magazine, but are not the prospects the advertiser thinks they are.

And does this matter? Yes. Because this is the cross on which the publishing field rests today. By forcing its circulation beyond the point where it is profitable to take it and then, by surveys, attempting to prove that all of the circulation is exactly what the advertiser desires, the publisher has boxed himself in. He has no place to go but up, and every step up is more costly than the income he can get from it. Magazine publishers make a net profit, national average, of 3%. If a publisher takes in $20,000 a week or $1,000,000 a year, his net is $30,000. Thirty years ago the publisher was making $80,000 and the dollars bought more. Five years from now the publisher may be making 1½% or 2% if he continues the same way. Should the national average drop to 1½% or 2%, this means that some magazines will be losing money and folding.

Bold magazine thinking, suggests double crossing the field by flat-footed honesty in setting up circulation goals. That is, make no claim for impossible "coverage," and credit the advertiser with being a reasonable man. A few magazines sought out this fantastic principle and stuck by it. THE NEW YORKER is one. Their profits in 1957 were 11%.

A less ingenious but easier way of circumventing circulation problems is "controlled circulation," that is, free circulation. You, the publisher, select the list and mail your magazine to it. Then you spend the rest of your life proving to advertisers that your list is bona fide. Trade books in fields of five to over one hundred thousand accomplish this, and, the auditing organization that reports to advertisers on whether they do precisely as they say is called C.C.A.

Controlled Circulation Audit. The idea of free circulation gives an easier access to publishing to individuals who have a trade book in mind.

Newsstand

Some 110,000 stores have newsstands and sell magazines. To arrive at its final destination on one of these newsstands, slightly ruffled from travel and ⅓ covered up by several non-related publications, a magazine goes through many hands. First, there is the national distributor. This company, (such as Macfadden, Hearst, Popular Publications, Kable, Fawcett, Curtis, etc.) usually issues a string of its own periodicals. Then, having created a distributing organization, it feels six can eat at a table set for five without anybody getting up hungry. Sometimes the distributing company itself prospers better than the publishing venture and the personnel at the head of it become primarily interested in selling magazines. Except for a publisher who has his own distributing organization, and there are barely a dozen in the country, other publishers uneasily shift from one foot to the other when they eye the newsstand looking for their books.

Macfadden, for instance, distributes its own eleven publications along with a number from other publishers. One of these is the one you are reading, WRITER'S DIGEST. In our case, here is exactly how the distribution works.

We set our own "newsstand press run" determined by our guess as to the number of copies we should send to the newsstands. That figure is transmitted to Macfadden who in turn sends us a list of some 400 independent newsstand distributors throughout the United States. There are almost double that number but a small specialized magazine cannot reach into every islet and inlet in this broad land. Alongside the name and address of each distributor is a recommended order, supplied by Macfadden. This represents the copies of WRITER'S DIGEST to be sent to that distributor for a given issue.

The copies are shipped prepaid and the independent distributor at Peoria or Portland opens them up and then decides which newsstands in his territory will receive WRITER'S DIGEST. In this work he is helped by the Macfadden local representative who has cased the town and knows which neighborhoods may sell this magazine better than another.

A check-up is made within the first two weeks after it is placed on sale and stands that are sold out are given more copies and stands that have moved no magazines at all

are relieved of their copies which are shipped off to other stands.

On a monthly magazine that sells for 35c, the publisher receives between 19c and 22c a copy depending on the importance of his magazine. "Importance" has nothing to do with its literary value but only with its net sale on the newsstand and frequency of issue. Since a news dealer has only so many square feet to display his wares, a weekly is thirteen times more important to him than a quarterly. The news dealer buys the 35c magazine from 28 to 30 cents. The 8 or 10 cent spread between what the publisher gets and what the newsstand dealer pays is split up by the national distributor and the local wholesaler. All magazines are shipped on a consignment basis.

Few magazines sell more than 75% of their print order; i.e., if a magazine gives their national newsstand distributor 100,000 copies on a consignment basis, it is fortunate if 75,000 are sold.

Magazines *do* sell over 75%, and a few whip out a sale in excess of 90%. This, however, is accomplished at great cost to the publisher. He does this first by newspaper advertising to tell the public his magazine is on sale on the newsstands. Second, he may back this up with T.V. or radio advertising. Third, he sends a paid employee, called a newsstand supervisor, into each major town. The job of the newsstand supervisor is to distribute and display his magazine on the kind of newsstands where it will move best.

Publishers take a dim view of the news wholesalers. For every good one there is another who, granted 300 newsstands in his area and 300 copies of a given magazine to distribute, will place ten copies on thirty stands and call it a day. Some of those stands should in truth receive only two copies, and some should receive twenty. It is the job of the newsstand supervisor to ferret out which stand will sell his magazine best. Newsstand supervisors receive from $5,000 to $8,000 a year plus expenses. Curtis has 450 such newsstand supervisors working for them; Macfadden has 60.

When a publisher sells half the magazines that he sends on a consignment basis to the newsstand priced retail at 35c, and the wholesaler pays him 20c for every copy that sells, he will end up getting 20c a copy for those that he sells and nothing for those that do not sell, or an average of 10c for each copy distributed.

If 75% of his magazines sell on the newsstands and he receives 20c a copy for each one sold, he winds up with 15c for each copy distributed.

It is generally believed in the trade that newsstand sales are superior circulation, since each sale is voluntary. The reader buys the magazine in open choice with 200 other books. Nobody pressures him. He walks in with his 35c and walks out with a magazine. The Fawcett organization has built a great deal of its success by proving to advertisers that most of their sales come in this voluntary, low-pressure way.

An indication of a magazine's level of popular acceptance can often be seen from its newsstand sale as compared to its competitors.

Occasionally an individual field will flourish into an uproar overnight, led by some spectacular single success. In this case, both the leader and the followers make money on newssttand sales alone, since the public's appetite for this field is so keen that for a limited time a high price (35c to 50c) and a thin book (48 to 64 pages) do not beat down the sale. Examples are the CONFIDENTIAL wave in 1954 and the PLAYBOY'S torrent in 1956.

The Game Is Played For Keeps

The life-or-death earnestness in the race for circulation is seen in a statement by an executive of LOOK magazine who said:

> "If the POST drops a million and we pick it up, they're through."

In other words, more than 150 years of consecutive publishing and high reputation is no antidote for being third in the field of three. If they are close together they may all live. If one falls far behind, he is through.

Meanwhile, you can assume that someone at the POST has cast a long and thoughtful glance towards Des Moines and New

York and pondered the same thing about LOOK and LIFE.

The game is played for keeps and the stakes are very high. In almost every field of American manufacturing from book publishing to steel, and in all the professions, the leaders get together, if not to hold up prices, at least to maintain a truce. In big-time magazine publishing the stakes are Life and Death.

Lots of Room at the Top

We are now in front of the gate marked "Magazine Publisher" and want in.

A flesh-eating dragon in front of the gate offers us a free pass. All we need have in exchange for our pass is an idea for a 35c retail book that will sell 50% on the newsstands and be printed for 7c.

And there is yet another door, also with its dragon handing out free passes or taking a mouthful (of you) instead. This one asks for an idea for a 50c retail book that will sell 50% and can be printed for 12c.

Books like either of the above can prosper without advertising.

The tranquilizing thought that a new publication without advertising, newsstand supervisors, or wide national publicity can sell over 50% is dreamy. Indeed, a new publication may go over 50% on newsstand sale and reach 70 or 75%, but this is effected only when the publisher's budget is enlarged to include the cost of letting the public know that it is there waiting for them.

In the next ten years, if the past is to judge, we can anticipate a dozen publishers to originate a field for themselves wherein they will make a profit on newsstand sales alone. Around their publications will circle the imitating satellites.

It should follow that the man or woman who pioneers one of these fields and breaks in with a new book should be a person of solid and sober judgment, blessed with years of experience in publishing who has figured out the whole matter in dollars and cents. If the future follows the past, this won't be so. The books will be founded by kids out of school who know little about costs, and have more credit than they do dollars, and are more full of the love of publishing than a desire to make money. It is this lambent, human and statistic-defying quality that is continually beating down the manufacturers who come into the field and try to convert paper and ink into a publication in order to make a profit. In this day of fast communication, magazine publishing offers world recognition to individuals who believe in what they have to say and intend to say it because communication is their very being.

In any brief discussion of a segment of the publishing business, there must of necessity be a limiting group of examples, and a superficial touching on hard nut problems. This, surely, is the case here. One purpose prompted this series, and if it is effective, we shall be grateful. To date, very little has been published about the innards of magazine publishing. ADVERTISING AGE and PRINTER'S INK, for instance, are hell on wheels when it comes to ferreting out news of one executive leaving a company to go with another. Perhaps their able editors will be stimulated to publishing critical, interpretative probings into publishing methods so that young publishers have a library of research to consult.

Our company issues a small string of magazines and also prints magazines for many publishers. Many publishing ideas are placed on our desk by customers. Usually, the entrepreneur has no working knowledge, even the scant bare bones given here, about publishing management. This is a contributing cause to the short and upsy-downy life of many new books.

Our second reason for this series is that it gives free lance writers a whiff of the matters with which publishing people contend, while with one part of their minds they read the manuscript in front of them, and with the other weigh the nuances of its total effect on their business.

This is the second of a series of articles about magazine publishing.

Man against white space

Part 3: Advertising

This series of articles on the magazine publishing business is the first of its kind. There is no text, or college course available on the subject. The series is intended to acquaint writers and editors with the working principles of publishing.

By Aron M. Mathieu

OF THE FIVE DEPARTMENTS of the magazine publishing business, one of them, advertising, is profitable, and the others spend more than they take in. The ones operating in the red are Editorial, Production, Administration., and, more often than not, Circulation .How can one department carry four?

Advertising Is an Intangible

The chief difference between selling advertising and almost any other product is that advertising is an intangible. The advertiser buys a given amount of white space in a periodical that is distributed to a given number of people. To the man who lays out his money to buy this white space, these are the things he wants to know: *one,* who are the people who will read my ad?; *two,* do these people respect this magazine, or do they merely break the wrapper, glance at it, and throw it away?; *three,* what interest, if any, do these people have in my product and can they afford it?

The charm of selling advertising is that *none* of these questions may be answered factually. The only question that can be answered to the decimal point is the actual ABC* circulation of the magazine.

Balanced against these 3 points, the manufacturer needs also answer these questions to himself: Is my product any good or

---

* Practically all national magazines of every sort and description are members of the Audit Bureau of Circulation. An independent, qualified auditor, employed by the Bureau, whose expenses are paid by national advertisers as well as by all publishers, so that the auditor is responsible not only to the advertiser but also to the competitors of the publisher, analyzes and reports on the circulation of each magazine annually. These audits are sober, precise, correct and unqualifiedly accurate. An error of ½ of 1% is almost unknown. The auditors explore the paper, postage, and printing bills and the total circulation files. Their reports, however, and this is the weakness of the Audit Bureau of Circulation, re-

am I just kidding myself? Is is competitive from the point of view of quality and price? Does my dealer organization follow the general pattern of the magazine circulation that I'm thinking about buying? Does the magazine have any plus values, such as dealer and jobber influence? Is it read by influential people generally—that is, people influential to the success of my product? Are there special merchandising tie-ups offered me?

Who Sells Space?

The job of selling white space has attracted two kind of minds both of which have had success. The one is cagey, full of guile, trigger quick on its feet, always punching, never retreating, alert to every opportunity to seek out the manufacturer's needs, whims, or ambitions and illustrate how the publication in question fulfills them. He is inventive with figures to prove the publication's story and disprove its competitors'—all of this being bedded down with a personality that is warm, social, and convincing.

The other type of mind in the advertising business has all of these qualities in varying degrees, but due to the responsibilities, commitments and dignities that go with big business, his mind is more thorough, careful and serious in its approach. It is pervaded by a compultion to understand the manufacturer's problems, his product and his market, and soberly to work with him to solve them through the use of the publication's white space.

Both kinds of mind work on almost every magazine, but the bigger books tend to attract to themselves more men of the latter type because, although conjuring often accompanies the sale of an intangibe, the sober desire to give the other people a fair and square run for their money is the real quality that differentiates between the footloose peddler and the superior salesman.

The men who perform best range themselves among the country's largest salaried executives. A page in LIFE in black and white sells for $26,275. Let's say you are Henry Luce, the publisher of LIFE. At your desk is a man named Joe who, because of his ability to sell an intangible, is able to add to your publication one page an issue that you otherwise wouldn't have; a gross annual additional billing of $1,350,000. How much would you be willing to pay such a man?

LADIES' HOME JOURNAL sells one page in black and white for $19,250. Being a monthly, it is fatter than a weekly, having more time to build up pages for each issue. If you were Richard Ziesing, Jr., director of the JOURNAL, how much would you pay a man who was able to add four pages a month that you otherwise wouldn't sell?

Granted two publications of the same size and quality, with page rates of approximately $5000 for black and white, the difference between an annual gross advertising billing of $4,000,000 and $6,000,000 is the difference between the advertising manager, the merchandising manager and the two top advertising salesmen on the publication. That is $2,000,000 additional billing hangs on the talents of four men. If these men would normally earn $25,000 a year, how much more would you be willing to pay each of them to get that extra $2,000,000? Income taxes being what they are, publishers cannot buy advertising talent. First, the talent isn't available; second, the men are held in place more by the respect and dignity of their job, by fringe benefits, retirement plans, friendship, courtesies, and affection than by an offer down the street for an additional $300 a week more.

How Do I Get In?

A young man seeking entry into the publication business might well pick up a magazine of his choice and analyze the advertising in each issue for the last two years, noting the

---

flect only upon the numerical content of the magazine's circulation and have little to do with its quality. The quality of the magazine's circulation is so wound around and etiolated in the ABC report that its true quality, even to a competitive circulation manager himself, is not easy to ascertain. To someone not actively engaged in day to day circulation work, the quality of the magazine's readers as seen through an A.B.C. report alone, is a relatively unknown factor. Generally speaking, individuals who are responsible for buying advertising space are unaware of this significance. This is the hole in the sale of advertising space in which the white rabbits live.

category of advertisers in the book (car, food, perfume, etc.) and the advertisers under each category. Then he would do the same thing with the magazine's competitors. This lays bare what no one but a few people in the trade know—the categories in which the publication is strong, the categories, in which it is weak, and the big basic advertisers in each category which this publisher does not have and which all or some of its competitors do have.

This chore-boy research lifts this young man from the welter of practically everybody else seeking a job in the publishing business. Having done this, and no more, a young man or woman could gain, a job on the magazine's research department. But bigger things are to be had. The next step is to outline to the publisher exactly what he ought to do to land contracts from those big basic advertisers not now using the publisher's pages. Young men with this kind of mind are sought after with such terrifying earnestness that their appearance by the method described in any publisher's office would be met with a hush followed by a swoop and the young man would be gobbled, hobbled and had.

To understand the enthusiasm a publisher has for this type of approach you need merely see the applicants who walk in for a job in the Advertising Department, whose bachelor of arts degree is equal to something handed out by the University of Indiana and whose conformity is best understood by their opening sentence which is: "I would like a career in Advertising."

What Do They Earn?

The man in the single-breasted grey flannel suit, wearing a blue shirt, a quiet tie, and carrying an attaché case, is the ten-pin humorously known to the trade as the Space Cadet, Space Pilot, Space Salesman, or more dignifiedly, as the publisher's representative. On the smaller books with page rates ranging around $300, he receives 20% of all the money the publisher collects for the white space that he sells. Out of this he has to pay all of the expenses—automobile, train, plane, hotel, motel, tips, laundry, pressing, secretarial, postage, telephone, wires—and make a profit if there is anything left. In the lower reaches of publishing such a space salesman will be fortunate to sell $50,000 worth of space a year out of which he will receive $10,000 and be lucky to make himself $90 a week. Such jobs are stepping stones. On monthlies with page rates ranging up to $1500 and perhaps even $2000 for one page, the space salesman has the same arrangement, but his commission is 15%. Here, a good man moves $150,000 worth of space a year and receives $22,500 gross of which he will generally keep about $12,000.

In publications with page rates of $1500 and up, space salesmen will frequently be on a salary, plus expenses, plus a bonus for all net paid advertising they sell over a given amount. Thus, a space salesman working for a monthly magazine with a $4000 page rate might receive a salary of $200 a week, plus all of his expenses, plus 4% of the net paid business that he sells over $400,000 a year, and 8% of the net paid business that he sells over $750,000 a year. Such a man would make a bonus of perhaps $1500 a month from September through March, and scrape by on his salary from May through August, unless the publication has a special issue during the warm weather months.

"Scrape by" may sound odd to writers earning $125 a week, but space salesmen lead a tense, driving life and are often under compulsion to "live high" just to get rid of the irritations heaped on them.

Most publications divide up the country into territories and each space salesman has a territory ranging from 100 to 250 accounts. This may cover one state, or, in the west, 15 states. On other publications men are assigned types of accounts. Thus, one man will handle all food accounts regardless of where they are located. He becomes a specialist in the food business.

The T. O.

Heading up the Advertising Department of a big book is the advertising director and under him three assistant advertising managers, each one in charge of certain categories as, for instance, new cars, trucks, gasoline, oil, and car tools, while another assistant ad-

vertising manager might specialize in foods. Working with the three assistant advertising managers is a production manager and an artist who creates literature proving the value of the publication. On the same level as the promotion manager is a merchandise manager who thinks up techniques to hold accounts in the book, or to attract to the publication accounts that are not readily sold.

The merchandise manager offers ideas to all advertisers in the publication, but the heat is naturally turned on the more difficult accounts, i.e., "difficult" to sell or "difficult" to hold. For instance, let's say you are a manufacturer of a light meter and about to enter the photographic field. Of the three regular consumer photographic books in this field, and the two fringe consumer books, you select one. The others have hammered at your door to no avail. One of them, however, steps in front with some merchandising ideas and tries to turn you around. Let's peek in at the merchandising manager at work. Here is his offer as stated in his letter to you:

Dear Mr. Light Meter Manufacturer:

As you know, light meters in the early days of photography were hand held and apart from the camera. As late as 1950 only two cameras (both imported) had a light meter attached to them. Today, buyers of middle and upper price cameras believe the light meter should be an integral part of the camera itself. Therefore, one of your biggest markets for light meters are the camera manufacturers themselves who can purchase your equipment and make it an integral part of their camera. We know this is part of your sales plan and that you, yourself, as well as your salesmen are now calling on camera manufacturers.

When you send your order to us for six pages in CAMERA CORNER we will send a copy of the magazine (CAMERA CORNER) containing your advertisement to 116 camera manufacturers with a letter from us outlining the 32 advantages that your advertising has for them in this publication when they use *your* light meter as part of their camera. These 32 advantages are listed on a separate sheet.

As a separate part of your light meter selling program, your salesmen call on jobbers. Today, there are 186 jobbers in the United States whose agents sell light meters to camera stores. When you contract for six pages in CAMERA CORNER, we will send a copy of CAMERA CORNER to the owner, the sales manager and one of the salesmen of each of these jobbers with a step-by-step outline of 27 advantages that your meter has for them because of the fact that you are now using CAMERA CORNER as an advertising media.

Although these are over 5000 retail outlets for light meters in the country, you will know from your own research, that 85% of the light meter business is really done by 635 retail camera stores. We will send to each of these 635 stores, when you order six pages in CAMERA CORNER, a copy of CAMERA CORNER containing your advertisement and a list of 14 reasons why this advertising of your light meter in CAMERA CORNER makes it advantageous for them to order your meter, to display it on their counters, and to put one in the window.

Last, we will equip all of your salesmen with plastic-covered copies of CAMERA CORNER to show the trade when they call. As you know, CAMERA CORNER sells for 35c a copy on newsstands. We will pay all of the costs of the above merchandising and bill you only for 50% of the retail price of the magazines used and will pay the postage, addressing, letter writing, inserting, mailing, sealing and stuffing charges of this three-star one-package deal.

We have asked our publisher's representative, Johnny Jones, to see you this Monday at 11 o'clock in the morning and hope you will have your order ready for him for six pages in CAMERA CORNER.

This is a typical sally exerted by a merchandise manager. It is no more than one drum in his orchestra. It is something that he does with his left hand and his eyes shut and without thinking. He is capable of a hundred ideas like this and he is the kind of a man who has only to point an arm and idea run out of all fingers. The manufacturer gets ideas like this from other publications. They are not new to him.

But the merchandise manager needs help. It isn't that he hasn't ideas—it is that he runs out of energy to dictate them, to push them around, to implement them. To put one idea like this into effect, once the light meter manufacturer is sold, is no tiddledywinks job. He looks each day for the bright young man who can come to him and say: "I noticed that in 1955 you carried 24 pages of General Electric; in 1956 you carried 18 pages; in 1957 you carried 12 pages and one four-page insert. My figures show you are not quite holding your own with the rest of the books in the field, in regard to General Electric. Surely, there are special reasons

for this of which I know nothing. However, I have created four merchandising programs for GE tying in with their product, dealers and their service stations. Here is my plan."

Such a program given to a merchandising manager can only evoke from him the sigh that is reserved for the fulfillment of desire.

The Promotion Manager

The promotion manager in the Advertising Department office has the most fun. His is the job of creating ticklers of one sort or another that pepper the advertising fraternity and let them know who's on first.

The big books don't push hot and heavy for this kind of promotion as they rely more on their space salesmen; they have them in depth. They can call on an account five, even six times a year, and make a full-dress presentation. The smaller books lack the manpower to do this because their page rate is too low to justify hiring enough help.

The middle-size books, running from 200,000 to perhaps 500,000 circulation,, are the ones that produce peppy fanfare. Let's look up a specific example of what one publication did. We have selected *Farm Quarterly,* part of our own chain, because we are on top of it and can detail the matter factually. Here's what *Farm Quarterly* did promotionwise in the last three months:

(1) Sent its prospective advertisers, and their agencies an advance editorial outline of what will appear in the next issue.

(2) Sent the same group a little box of soybean seeds that the Madison Avenue Fraternity could plant in a cigar box next to some sunny window and watch the beans sprout and then cut them at about 3 or 4 inches height and use in a green salad. The beans were grown by a *Farm Quarterly* reader who was particularly proud of his certified soy bean seed crop, and the letter *Farm Quarterly* sent to its advertisers detailed the farm interests to this particular typical reader, his equipment, his acreage, his income, *and his ability to buy from the advertiser.*

(3) The next promotion consisted of a half dozen leaves of the fragrant Lemon Verbena plant and a short letter accompanying it tied in the fragrance of these delicate lemon-scented leaves with the pleasant manner in which advertising returns from *Farm Quarterly* hang on and on to the advertisers who grace its pages.

(4) A folder of statistics secured from the Agricultural Census Department in Washington, D. C., detailed, year by year, the number of farmers since 1900 (6,000,000 in 1900; 4,500,000 to day), the dollar value of all crops sold each year and the continuing increase in revenue secured by one relatively small group of farmers who, because of their annual increase in production, are the prime prospests for farm manufacturers. A letter accompanying the booklet then made clear that the circulation of *Farm Quarterly* paralleled this particular group of farmers.

(5) A cow bell with a little Happy New Year card attached to it cheerfully related that the New Year of the farmer came early in spring when he sprayed liquid fertilized on the pastures, cut his first furrow, and repaired his fences against the nuzzling of the new born. A tie-in was made of the fact that the Spring issue of the *Farm Quarterly* came to farmers on March 6th, just when the farmer's "New Year" begins and they start to buy equipment.

(6) A list of *Farm Quarterly* subscribers in the farm town closest to the advertiser so that he could personally inspect the readership of this magazine and recognize the buying power of its readers in regard to farm equipment.

Do such high jinks sell space? Here is an actual letter from an advertiser:

"Sir:

Well now, I am but human. After soy beans, verbena leaves, lists of well-to-do farmers who subscribe to *Farm Quarterly* in Boone County, Oklahoma, statistics, the plaintive note of a cow bell, which still haunts my ears, we are going to give you a third of a page for ——— in your spring issue. Small indeed, but a beginning. If ——— gets enough inquiries and sales, you will get a contract for the rest of 1958. From then on it's up to you."

A few minutes back we asked a question: "Does mail promotion really sell space?" Actually, no letter, telegram, gimmick, statistics, or the like gets an order. The order is secured by the space salesman who calls on the advertiser and by dint of hard labor rattles the order loose. But the promotion helps.

How can a young man or woman get a job in the promotion division of the Advertising Department? First, it is important where you apply. The big books already are filled up and have a standing line. The small "break-even" books can't afford you. They may pay your salary but they are not willing to make the long-term investment that mail promotion requires before it pays off. In addition, the small books don't have enough space salesmen on the road to get the benefit of the warm-up that the promotion awakens in the mind of the prospect. So the book you want to choose, as a job applicant, is one that appears prosperous, but perhaps is not getting in full share of space like, for instance, PLAYBOY OR CHRISTIAN HERALD. Or, select a trade journal in a field of four other magazines, so that the publisher needs be relentless to get every order or the other three books will scrape it up and there won't even be a grease spot left.

Select a trade paper with at least 50% of its pages filled with advertising and one that you respect editorially because nothing beats good editorial content. Try for a book with a relatively higher rate per page per thousand readers than the other books in the field because it shows the publisher is realistic. Then create a series of four promotion mailings. *Before* doing this, call on five advertisers and see how they feel about the book. Call on five non-advertisers that are in the competing books but not in this one, and get their reaction. Call on five advertising agencies who are placing space in the book and get their viewpoint. Without this independent exhaustive research there can be no real foundation and what you do will be airy-fairy. But, if you have a promotion mind, and the time and willingness to do research, and then put on the publisher's desk a complete package of four suggested promotion mailings, he will hire you if someone gives his some smelling salts first, to recover. You must remember that you have been preceded by 360 applicants who said: "The employment agency said you didn't need anybody, but I thought I would come over anyway."

Who's For Research?

One of the most interesting divisions of the Advertising Department is Research. Save for a few great big books, most publishers have no idea what people think of them. They know this is a tremendous hole in their makeup, but truly, they have never found the time, opportunity, personnel, and the energy to get into it seriously. You may ask, how can it be that a going business, operating for perhaps fifty years, doesn't really know what the public thinks of them.

Well, take yourself.

If twenty people who know you would fill three 8½x11 sheets of paper giving an honest analysis of YOU and someone read these twenty reports, they would likely think it was written about twenty different people. If YOU read them you would be amazed. Most of all, you would be shocked by the unfairness, the injustice, the rank prejudices, without facts and true understanding, that would be presented by your friends and acquaintances.

Magazines are just like people. To individuals, working with magazines all their lives, magazines *are* people. They have quarrels, hates, loves, bickerings, good luck, bad luck, windy moments, spurts, temperamental days and moments of wild genius but the publisher, editor, advertising manager and the other departmental heads never

really and truly get to know how the public has analyzed them.

The public doesn't go in for independent exhaustive research. As a result, the public's analysis of any magazine is biased, unjust, naive, and uninformed. Yet, if the publisher knew precisely how his property was regarded, he would be better able to turn the public's attitude into the direction where he wanted it to go. He could do this first by changing the publication in certain areas; second, by directing his promotion at that segment of the public thinking which was biased or uninformed about his product.

Most research that the publisher sees is angled. The king cannot get away from his sycophants. Occasional research instituted by the magazine, that goes against the grain of what the executives on the magazine want to believe, is expostulated against and buried like an undeserved, uncomplimentary remark.

Most books in the half-million-or-less ciculation field have no Research Department that honestly, and in depth, and in an absolutely unbiased way, lets them know what the public is thinking about them. Only when this is truly known is the publisher able to deflect public thinking along the routes where he wants it to go. Here is obviously a wonderful opening for a competent person.

A job applicant who would call upon a hundred people in the trade, using a Polaroid camera to take a picture of each, and then paste this picture on a 8½x11 sheet of white paper, and, alongside it type the person's comment on the publication would

"Two lemons and a bell. You're getting better at it."

be recognized instantly as a young man or woman of rare perspicacity.

Most important, however, would be the cherry on top of this job. The cherry is a page summary of what people said and a step-by-step detailed program of how to improve the public's attitde in regard to this publication. Publishers are extraordinarily sensitive as to what advertisers, agencies, dealers, jobbers, and wholesalers in their particular field think of their book. This is the kind of a job that a girl who takes dictation and has a sharp business mind can handle beautifully. If the publication were fifty years old and had never had a Research Department and the publisher was dead set from the day he was born against wasting money on a Research Department, the chances are such a presentation would spin him around like a top.

If it didn't, this same presentation could be shown to several other publishers as an example of what the job applicant could produce. Because journalism schools rarely present significant informed publishing personalities to their classes, the pool from which publishers have to draw is unaware of what is expected of them.

What Should A Page Cost?

On what are advertising rates based? While there are about as many ways to figure the rate that a magazine should charge for one full page of white space as there are publishers themselves, there remains one unchallenged, realistic method that is used by people who are in publishing not only as a way of life, but as a means of sustenance.

This method is simplicity itself.

On the left-hand side of a sheet of paper you list the total monthly loss of the Editorial Department. Since the Editorial Department, like the furnace of a steel mill, has no income whatsoever, all of its expenses are total loss. On a monthly magazine of approximately 500,000 circulation this loss including copy, art, pix, engravings, travel, salaries, layout, and incidental editorial office expenses will come to about $20,000 in the east, perhaps less further west.

Next, we list the Production Department which includes printing, paper, binding, and wrapping of of 500,000 magazines a month. On a magazine somewhere between 96 and 112 pages this will come to about 16c a copy or $80,000. The Production Department takes in no money at all so this, too, is total loss.

So far, we have $100,000 a month shot.

Next, we list the Circulation Department which has income as well as expenses. Since our publication has a press run of approximately 500,000, we will assume that 200,000 copies go to the newsstands of which 140,000 are sold, the other 300,000 are net paid mail. After the total income of the Circulation Department is balanced against its expenses, its loss will be in the vicinity of $2000 to $5000 a month, and we will arbitrarily fix it at $3000. Perhaps this publication will build up a "house business" which will sell a book or a pattern or maybe produce business movie film, as FORTUNE magazine is doing now, that in itself will make enough profit to offset the loss of the Circulation Department. At this time, the net of this future "house business" cannot be counted. So, we have $3,000 monthly loss.

Under the Administration Department we list all those expenses which cannot conveniently be allocated to any of the above departments without such intricate bookkeeping that it is simply cheaper and easier to set up one department called Administration and charge to it such items as rent, PBX board, light, heat, publisher's salary, social security taxes, legal fees, interest, air conditioning, etc. The administrative cost of a magazine, is in the vicinity of 4% to 10% of its gross income; the big books running 4% and the little books running 12% or even 15%. When the gross income is only $100,000 or $200,000 a year items such as those named above can quickly come to 15% of the gross. In this case we are going to figure the administration cost at $5000 a month. The above, save for the cost of selling advertising, represents the total cost of issuing our monthly of 500,000 net paid circulation, a matter of $108,000 per month.

Now for the finite business of figuring what the advertising rate should be.

How much should my page advertising rate be?

500,000 circulation, 100 page book, published monthly

	Cost	Income
Editorial	20,000	0
Production	80,000	0
Circulation	3,000	← after income is rec'd a $3,000 loss is anticipated
Administration	5,000	0
	$ 108,000	

If I can sell 40 pages of advertising

$ 2700 — the cost per page that advertising has to carry to bring me back my costs.
40) 108,000

My costs to sell the advertising

4 men + office help to back them up } $12,500

$ 312 — cost to sell 1 page of adv.
40) 12,500

My actual cost per page →

2700
312
$ 3012

I know I have to pay the advertising agency 15% commission on my page rate

So I add on → $.3012
533
which makes my published page rate → $ 3545

If I sell 40 pages I break even

When publishing a magazine of approximately 100 pages the minimum number of net paid pages of advertising that should be carried are forty, the maximum is sixty. So the problem is really very simple. On 40 pages, the publisher should be able to break even; on 50 pages he should make a moderate profit; on 55 pages he should make a good profit, and as he moves from 55 to 60 pages he should be able to move with the tides, adding additional editorial pages if his printer is ahead of him mechanically and can do so reasonably. Normally, on a 100-page book, 60% advertising is heavy.

To get the page rate, we simply divide 40 into the monthly expenses and that gives us a figure of $2700. To this figure we must add the cost of selling the advertising. In this case the publisher will need a staff of five men representing the East, Mid-Central, Mid-West, Far West, and South. These men with their expenses, plus an advertising director, merchandise manager, promotion manager, advertising artist and lay-out man, secretaries, stenographers, and incidental office expense, will come to approximately $12,500 a month. Forty into this equals $312. We add this figure to our basic rate of $2700 and now have $3012. But this is still not the final figure.

The advertising agency gets 15% of the business that it sends the publisher. If a black and white page costs $1000, the advertising agency sends the publisher $850, keeping $150 for their profit and expenses in sending that piece of business to the magazine. This 15% must now be added to the last figure we had of $3012, and so we now come up with $3540, which is the rate which this particular publication would have to charge for one page of black and white advertising on a publication of approximately 100 pages with a 500,000 net paid circulation, to break even when it sells and collects for 40 pages of advertising.

The next step is to look around and see what the other publications in this field charge. If they are charging half as much —whoa! You can't start. If they're charging twice as much, then maybe your figures are wrong. As the publication adds additional pages, the publisher naturally doesn't put in his back pocket the gross of, let us say, 10 additional pages at $3540 per page. First, the advertising agency takes off 15%. Second, there are additional selling costs in getting those 10 pages. Finally, the supply wolves who live off of the publisher are quick to notice the publication has moved from 40% advertising to 55% and they firm up their prices. Printer, compositor, labor unions, paper jobbers, photographic agencies—every big supplier keeps a finger on the publisher's pulse and if his magazine moves from 40% advertising to 55% or a shade over 55% advertising, all the suppliers crowd in for a bite. They don't need charts; they can smell it.

Let's watch a supplier try for an extra nibble. Bill Waters walks in. Bill has been making the four-color plates for this particular magazine. He lowers himself comfortably into a chair next to the publisher's desk, smiles gently and says:

"Jake, we've been working with you now at 35% off union scale since you fellows started a year and a half ago and I have been catching hell from the International. Our trade association stood me up at our meetings and lashed me. Jake, these engravings you send over mean a lot and I've stood by you, but the last raise of 5% I had to give my men and the raise of 2½% on copper and the last 3% raise an acid has knocked me out and I can't give you 35% off scale no more. We are prepared to let you have 23%, but, Jake, if I have to take it out of my own commission, I'm going to try to sell the old man on giving you 26%."

All the above is, of course, complete double talk and Bill Waters knows it. The publisher knows it, and both know the other knows it. They settle at 32% off scale. But twenty settlements like that and the bloom is gone from moving a book from 40% advertising to 55%.

That is why the publisher at his next meeting with his advertising staff gets up and says:

"Bill, nobody here wants to raise page rates and even though you fellows get a little bigger bonus when we have higher advertising rates because your commissions are going to be a little bigger, I still don't want

to raise rates. Our costs are terrible and we are going to have to do something. I think we will let the black and white alone, but just bump the color."

Which Book Should I Buy?

Why is one magazine bought over another? If you were to read the advertising story of some state farm paper that is issued on newsprint and sells for 50c a year, and compare that with the advertising story of FORTUNE, VOGUE, or a fraternal magazine of some ancient order whose publication is included with the dues, and whose members number into the hundred of thousands, but whose actual readers can be counted by the dozen because the members simply throw the publication away on receipt — what would it say? The incredible thing is that the advertising story of these publications would read alike. They all say the same thing.

They say: *one,* we have quality circulation; *two,* we have high-buying power per reader; *three,* we offer valuable trade interest; *four,* we have extraordinary reader interest; *five,* ours is an influential market; *six*, our prosperous readers demonstrably have great and immediate need of your product right now.

How can such varied and unlikely publications as the above claim the same thing? The answer is simple. The above six points are what the advertiser wants, so magazine salesmen simply lay claim to them. The technique in selling advertising space, therefore, is being able to prove to the advertiser that you actually have each of the above six points. Granted a reasonably good publication, an able advertising director can prove each of these points up to the very hilt and then a little bit more besides. This places the space buyer in one hell of a position. Whom is he to believe? Everybody tells him the same thing and everybody proves it. Yet even Coca Cola can't use the back cover of every magazine every month. Which one should they use? How often should they use them? The people who buy advertising space have many answers to this.

One gentleman by the name of Jack Martin of Martin Advertising Agency of Milwaukee, who certainly isn't the brainiest or even the best advertising man in the country, has a system which I have long respected. He puts it this way:

"You can't beat a space peddler at his own game—those guys stay up all night thinking things to tell me and they've got a whole staff of people to prepare charts to prove it. They come in my office with three or four assistants, they barrel me in, and they pour on statistics. I don't say I don't listen, but I got a system of my own. This is my system. All I do is take a magazine home and read it. If it entertains, instructs and educates me and animates me to want to do something then I feel it's got reader interest. If editorially it builds up in me a hospitable climate for a particular product or a particular class of products, and I got a products of that sort in the house, then I'm going to recommend to my clients to advertise in this magazine. That's all there is to it."

Edward Grauel, one of the advertising managers of Eastman Kodak, has been buying advertising space for some 20 years. At one time he bought strictly mass circulation that offered him the cheapest rate per page per 1000 readers; then he bought on the basic of printing quality and general appearance; then he developed an abiding interest in surveys which showed him how one magazine's audience represented a disproportionately high market for camera equipment; and finally, out of it all, Ed Grauel evolved this theory in regard to all the 20 or

30 trade and consumer photographic publications. Here's Ed:

"Confidentially, I don't pay too much attention to a magazine's circulation or its advertising rates. If I read every issue of a photographic book for two years and at the end of that time I feel that this publication contributes to the good and welfare of photography, I recommend that Kodak be in it."

Stanley Wildrick, president of a large eastern advertising agency, has a rare method of his own by which he decides which publications will be his particular friends and that he will recommend to his clients. Mr. Wildrick arrives unexpectedly at a magazine office and goes directly to the circulation manager. He introduces himself and asks permission to open the morning mail.

Mr. Wildrick will sit at a desk in the circulation office for four straight hours opening one letter after another, analyzing the circulation mail received by a publication that day. He will note whether the subscriptions are paid for in stamps, coins, dollar bills, express orders, money orders or checks. He will note whether the checks are counter checks or printed. He looks at the stationery on which readers write, the envelopes they use. He scans the handwriting to indicate the age, as there is quite a difference between the handwriting of a group of people between 20 and 40 and a group of people between 60 and 80 years of age. He looks to see how many subscriptions are coming in "over the transom" (that is, unsolicited), how many come in from sheet writers, etc. Partly on this experience, Mr. Wildrick makes his judgments.

There remains one last and intricate method to judge a publication. This is practiced by a Buffalo gentleman I know by the name of Morse Flagler. He takes a magazine for the last five years and lists, issue by issue, all the 1″, 2″, 3″, and 4″ ads and also the one-column advertisers who use a coupon with a key (*viz.,* 100-A 10th St., 100-B 10th St., etc. Thus, the answers to the ad reveal the media that evoked them). He charts the frequency with which these particular advertisers have used the publication. Whenever he finds any one magazine harboring the same group of keyed or coupon ads month after month and year after year in their pages, he is able truthfully to say: "For these advertisers, at least, this publication must pay out." Thus, he is able to go to his clients who have similar products and say with some justice, "I recommend this particular publication to you." Other advertising agencies also follow this system, which is not unique but merely tedious. It is easy to think the idea up, but a tremendous chore-boy job to implement. Is it worth it?

Among my acquaintances are people in various kinds of business and profession. I know a surgeon who loves to operate. He schedules operations for 8:00 A.M. because he rises happiest with nothing to do but go straight "to the cutting room." I know several well-fixed attorneys who, having inherited great wealth, still prefer their daily work. But everyone else I know, and I have asked almost all my friends, are not in their line of work by preference.

They don't like it. They want out.

Here is an amenity of the publishing business: the people who are in it like it. You pit yourself against the ablest men and women—not in your state or city—but the ablest people *nationally.* Unlike retailers or wholesalers, you will meet top-level executives almost exclusively. Some, of course, are culturally illiterate, but two or three times a day you come into contact with people of sensitivity and education who carry their job with dignity. This doesn't happen often in other trades.

Were it not for advertising, there would be an entirely different kind of press; freer, no doubt, but poor pickings and with so little pay that talent would go elsewhere. Advertising keeps the press oiled with the money to buy literary, editorial and art talent. Without it, our press would be equal to the American ballet.

This is the third of five articles on magazine publishing. The last two will deal with the production and administrative departments.

Mattfield, F. R.

October 30, 1958

Dear Mr. Mattfield:

Thank you for your letter enclosing your idea for a television program.

I have taken the liberty to forward it on to Mr. Irving Gitlin, Director of Public Affairs programs for CBS.

Sincerely yours,

Mr. Frederic R. Mattfield
69 Fort Street
Fairhaven, Massachusetts

Columbia Broadcasting System
New York

Gentlemen:

Are you interested in a new television show that has high viewer interest and which performs a most worthwhile public service ? If you are, the program you want is SCHOLARSHIP.

What is SCHOLARSHIP ? It is the new quiz show that will remove the bad taste from the dull present-day shows.

SCHOLARSHIP works like this: The contestants are high school seniors who are going to college. The prizes which they can win may be any of these - free text books for from one semester to four years; a complete college wardrobe for from one to four years, supplied by well-known manufacturers or stores; room and board for from one to four years; tuition for from one to four years. In addition the sponsors present to the college of the winning student's choice an amount equal to the winnings of the student. In the middle of the program we have a short break to introduce the president of the institution to which last week's winner is going. He can give a dignified plug for the school. If he has a fund-raising campaign in progress we can show pictures of old Siwash and the alumni can kick in. Some sponsor may want to present a check to get the campaign going.

The questions can be prepared by the College Entrance Examination Board, with a board of review consisting of the Deans of Admission of three New York City colleges.

A program such as this would be of interest to students, to alumni, to parents, and to the general public. It would alert the public to the potential of Education in America.

Sincerely,

Frederic R. Mattfield

Dear Mr. Murrow:

After a lifetime of study, I have found several astonishing facts which I wish to share with the Public.

Namely: That the Universe and all life is controlled by pure air electronic energy. That Ancient Man was far more advanced in the fields of science and nuclear physics and astronomy than we of today. This may sound fantastic, but we have been misinformed about life and it's true origin, as well as many other facts, which the inclosed complimentary copy of "Unveiling The Mystery of Creation" discloses.

For the sake of humanity, please give this your personal serious attention. Please read the story and express your own comments to your Public. It is time for an awakening. Unveiling The Mystery of Creation is covered by copyright Number Aa321839, February 10, 1958, which I own and control. I give you permission to quote from the booklet.

I would like to hear from persons of your radio and T.V. audience who are really concerned and willing to help clarify the present existing confusion, and help place this truth before the Public. Not for the money, but for the sake of humanity, that it may know the truth and survive. I need your help and the help of sincere persons.

At this time I am also sending to each of your associate Commentators a copy of "Unveiling The Mystery of Creation", making the same request.

Thanking you and trusting in your cooperation, I remain,

Sincerely yours,

Arthur James Maurer Sr.

Dear Mr. Murrow,

I am taking the liberty of writing to you because, for its Christmas issue, Realites is gathering opinions on France from the leading personalities throughout the world. Our plan for the whole issue is to make a synthesis of France's past greatness and the values and forces which are forging her present and her future.

We are particularly anxious to have your opinion as one of the outstanding figures on the American scene today.

Your contribution, which can, if you like, be simply an anécdote or a reminiscence, seems to us to be indispensable for this particularly important issue. That is why we should be grateful if you would answer, briefly, these two questions:

S. E. P. E. Société à Responsabilité Limitée au Capital de frs : 8.350.000 R. C. Seine 54 B 6117 C. Ch. Post. 5.110.58 Paris

1° - In your opinion, what is most striking in France today ?

2° - In your own field, how do France's achievements, compare with those of other countries ?

May we point out that because of delays in our production schedules, we should like if it is at all possible to have this text by 1st September.

Allow me to thank you in advance for your help in enriching our inquiry.

Sincerely yours,

The Editor in Chief,

alfred max

NEW YORK
U.S.A.

Dear Mr. Murrow :

As Margaret Biddle has just written you, we have a rather ambitious project. I wonder whether you would consider accepting the following invitation.

I will be coming to the States on the 11th of January. I will interview personally some of our subscribers in the New York area and then fly to California and do the same around San Francisco. But on Saturday the 14th of January, I am holding a one-day meeting in Princeton, presided over by George Gallup with a number of newspaper and magazine editors who have been kind enough to advise me that they would gladly help us in solving the various problems we have at the moment on our hands. I wonder whether you would consider coming to such meeting, at our expense of course. Margaret Biddle will probably be there and she too would be delighted if you would care to come. Our main problem is to bring our present circulation in America, which is around 40.000, to roughly 100.000, which is our target. Any new ideas that may come up during the course of the meeting in regard to editorial content, promotion, advertising and sales would be of considerable help to us.

I hope very much you will come. In any case, I shall be very glad indeed to make your acquaintance on some further opportunity and I remain,

Yours very sincerely,

alfred

Dear Ed:

Confirming my conversation today with your secretary, we hope your time will permit a look at the motion picture we've made of the Glen Canyon Dam project. The picture turned out better than our fondest hopes, and we believe it will finally turn out to be an outstanding documentary.

We've recorded a temporary sound track so that the story can follow the picture, and we're going to show it to officials of Merritt-Chapman & Scott, the contractors, this Thursday at 11 a.m. in the projection room at Movielab, 619 W. 54th Street. We hope you can join us there and have lunch with us afterward.

I expect to have Bill Wilson from Young & Rubicam along as well as C. E. Jones, our fleet sales manager, and Harold Claus, the director.

I'll be here in the office tomorrow and Wednesday and would appreciate a call when you have a moment. Best regards.

Cordially,

Dear Ed:

The short clip in the Chicago press about the fire at Glen Arden Farm certainly distresses us. That isn't the reason, however, for calling off our date for this week-end.

The Associated Equipment Distributors which includes all of our Construction Equipment Division distributors called a meeting here in Chicago beginning this Sunday and have served us with a "bill of particulars," and I am called upon to answer for the Company on questions concerning advertising and promotion. That's one I can't delegate. Last Friday it didn't look like a problem, but today it's a "must."

I'm embarrassed, naturally, to have to break two dates with you and am hopeful that we can make another one in the near future that will work out. Our field clothes were already packed and the reservations made.

We thought Pete Martin did a real good job for you and your team last week from a PR standpoint--even better than Time's editors.

Let me know about machine losses, if any, because we certainly want to be of assistance if you need emergency help. Best regards.

Cordially,

Sid

W. O. Maxwell

Dear Ed:

On my return from the West Coast; Glen Canyon, Utah; and way stations this week I find your letter and much appreciated order.

Bill and I have looked over our schedules, and the last January week-end -- the 24th, 25th, and 26th -- looks good to us and, if nothing upsets your schedule, let's call it a date.

The adventure out there in Utah was far beyond my expectations, and I hope to have some very unusual pictures to show you at Pawling. Each of the projects you, Bill, and I talked about at lunch last fall have progressed quite a ways, and it will be a pleasure to bring you up to date. Maybe we'll be able to persuade you to bring us up to date on what's going on in Paris this week.

You'll have word on the delivery of your No. 40 spreader within the next few days. Thanks for the business.

All the best.

Cordially,

Bill

W. U. Maxwell

PRESIDENT

February 11, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Mr. Murrow:

The attached script, a recorded documentary radio program, was prepared by the Radio-TV section of our Department of Public Information. Except for the narrative portions, interlocking the other voices, the program is complete. I have listened to the finished tapes of Debbie Dixon, her mother, and the others, and must say I am quite impressed. Those portions by Debbie are truly remarkable. Listening to her voice, full of bright, cheerful warmth and spontaneity, one would never suspect she spends her days in a wheel chair. It is a truly moving experience.

We would be highly honored and most grateful if you would act as narrator for "MEET DEBBIE DIXON". I know you must be very busy, but if you could find time to do this for us, we would consider ourselves forever obligated to you. Once completed, the program will become an integral part of our library. The recording will be distributed to our more than 300 chapters across the nation, and will be made available to radio stations as a public service, thus fulfilling the important function of enlightening the American people on a vital aspect of public health.

Should you wish to hear the tapes before making a decision, we would be most happy to arrange it.

Hoping to hear from you soon, I remain...

Sincerely yours,

William Mazer

William Mazer,
President

WM:tr
Enc.

"MEET DEBBIE DIXON"

MUSCULAR DYSTROPHY ASSOCIATIONS OF AMERICA, INC.

1790 Broadway, New York 19, N.Y.

NARR: This is _____. The following is a special program.

(MUSIC: : IN AND UNDER)
- - - - - - - - - - - - - - - - - -

DEBBIE: Y'know...I think...Everytime I fergit where we live... It's a long ways into...it's in Dallas...I mean... I think it's in Dallas...Yeah, it's in Dallas... If you see a green house, that's our house...If you see a German Shepherd, that's ours...

(MUSIC : UP....UNDER)
- - - - - - - - - - - - - - - - - -

NARR: If you happen to be in Texas...in the little town of Arlington about 25 miles from Dallas...and if you come to a green house...and you see a German Shepherd outside...then you'll most probably meet Miss Debbie Dixon, whose voice you've just heard...She's six years old. She has red hair and a smile just as broad as her Texas drawl...And if you sit and pass the time of day, Debbie might tell you about her toys, her Shetland pony, or about a trip she made to New York...

(MUSIC: : SNEAK OUT)
- - - - - - - - - - - - - - - - - -

NARR: But she'll talk to you from a wheel chair...She can't walk...Debbie Dixon has muscular dystrophy...

MRS. DIXON: (TAPE) I felt like I just might as well stop living... I just...I thought all of this was just the end... There just isn't any need to...to go on. I just...I just didn't feel like I could go on with the...thought of muscular dystrophy.

NARR: Those were the feelings of Debbie's mother when she first learned that her child had muscular dystrophy... Since then, she has learned to hope...Louise Dixon is in her late twenties...Her husband, Bill, works as a production foreman in an automobile plant...The Dixons have three children...One of them, Debbie, has never known what it is to walk...

Perhaps as this point, muscular dystrophy means no more to you than two more words to describe one more disease...But after you've met Debbie...after you've heard from Louise Dixon...when you've listened to the medical people and to others who have made the conquest of M-D their life's work, we feel that the words will have assumed a deeper meaning...It is our hope that you'll know what M-D is...what it does...what is being done about it...The bare words will have taken on a new reality in your mind...and perhaps you'll have sensed, a little bit, what it feels like to be the parent of a dystrophic child...

DR. MANSON: (TAPE) Muscular dystrophy is a chronic, progressive disease of muscles, the cause of which is not known at the present time, and there is no known effective treatment. It can occur at any age, although about two-thirds of the cases occur in children between the ages of three and thirteen.

NARR: Dr. Melville H. Manson is Scientific Director of Muscular Dystrophy Associations of America...His job is to know <u>everything</u> about M-D...Louise Dixon knows too--she learned early...

MRS. DIXON: We noticed that...she had something when she was about 14 months old...she began to lose her strength...her ability to grip...She <u>had</u> been able to pull up in a chair...and to walk around holding onto things like a young baby does...and we noticed when she was about 14 months old that she wasn't...she was <u>losing</u> this... <u>strength</u>.

NARR: When a child is ill, a doctor is called, a treatment prescribed. If it is within the power of present medical knowledge, a cure is effected. But with muscular dystrophy there are difficulties...To begin with, diagnosis...

MRS. DIXON: (TAPE) We put her in a hospital in Ft. Worth...And they did some spinal taps...and worked with her for about a week...that time...the first time we had her in a hospital...They could find nothing wrong with her...Of course, they could tell there was something... She was about 18 months old...at this time...They both...both of the doctors felt like she should be able to stand and walk...but she couldn't...My husband and I had never heard of a biopsy...and you know...that that would be the way to tell what was wrong with her...So we just kept on with her therapy... and one doctor would tell us it was polio, and we'd

MRS. DIXON: go along with him for a while and she wouldn't seem to gain strength or be able to do any more...so we would go to another doctor...

She was nearly five years old before we found out what was wrong with her...This pediatrician is the one that diagnosed it...the same one we have had with her all of her life...And he didn't know till then... that it was muscular dystrophy.

NARR: Muscular dystrophy is not a rare disease...It afflicts over 200,000 people in this country alone...Nobody knows for certain how many victims there are throughout the world...But not all doctors can be specialists. The American pediatrician these days has a hard enough time keeping up with the succession of colds, virus infections, broken bones, and other assorted ailments of childhood...If he is presented with a case of M-D, it's not snap judgement that turns the diagnosis in the wrong direction...Muscular dystrophy is not easy to recognize. It is slow in developing. There is no pain...There is no fever. Because the brain is not involved, the child remains as alert and intelligent as any other. There is only a gradual weakening, a slow but insidious loss of strength. This poses a major problem for medical men...and thus professional education...the process of making doctors, nurses and clinical workers aware of M-D and its symptoms...has become a primary aim of Muscular Dystrophy Associations of America. (PAUSE) In many diseases,

NARR: knowing affords at least some relief. The problem is out in the open...There is a prescribed course of treatment, a prognosis, often a note of hope. A man with heart disease, if he follows his physician's directions, may realize a rich and full life. Insulin assures the diabetic of the opportunity for active achievement and success. One man, stricken with polio at the age of 39, later rose to become president of our country. (PAUSE) But again...with muscular dystrophy, there is a difference...

DR. MANSON: The principal difference between muscular dystrophy and other crippling diseases is the fact that muscular dystrophy is inevitably progressive. Very few children with muscular dystrophy live past the ago of adolescence.

NARR: But a child lives in the present...and the present is full of joy and wonder...

(MUSIC: : IN AND UNDER)

- - - - - - - - - - - - - - - - - -

DEBBIE: (TAPE) And y'know what I got?...I got a stove...an' a sink...and...an' a ice box...An' you c'n put real water in there...but you have to put somethin' under it...Got some clay...I used to have some clay, but my mother throwed it away...You know why?...'Cause Stevie eat it...and she throwed it away...'Cause it sticked on the floor...Everytime when you just drop it, it sticks on the floor.

(MUSIC: : OUT)

- - - - - - - - - - - -

NARR: What is muscular dystrophy then...A chronic disease of muscle...A progressive disease that never gets better, only worse...These, it would seem, are problems enough...but there are others...hidden problems... What are the feelings of a child in a wheel chair and of the parent who stands behind it?...We know that most children work off their excess energy in play... that they work out their feelings of anger in a game of ball, or by acting out the drama of cowboys and Indians. But a child in a wheel chair cannot play ball, cannot run after or away from the cowboys. What, then, does the M-D child do? What does a mother do...the mother of a child who requires constant care, almost undivided attention...

In a sense, the physician attending an M-D family must be two people...part doctor, part psychologist...At the Albert Einstein Medical College in New York, Dr. Arthur S. Abramson is professor and chairman of the Department of Rehabilitation Medicine. He has attended many M-D patients...

DR. ABRAMSON: (TAPE) I believe that the patient should receive whatever physical treatment is indicated. But when we take care of such a patient in a comprehensive fashion, we realize that we have to give, not only the patient himself, but even his family, strong phychological support. Because it is disturbances in these areas that very often make the disability so much harder to bear.

MRS. DIXON: They will let her go to our school...if I can bring her...go back at recess...tend to her needs...and go back at lunch and see that she has her dinner...Take her to the cafeteria and get her tray for her...Then see that she is out in the sunshine for a while...or whatever the occasion is that I attend to her at lunch ...Then I go back at recess and tend to her needs again...Then I have to go back after her...when school is out.

NARR: It's not hard, then, to understand the drain on the mother of a dystrophic child. It's not too difficult to imagine the emotional problems that could develop within the entire family...the primary problem of adjustment, for example. It takes strength...the kind of strength Louise Dixon has...

MRS. DIXON: (TAPE) It takes a while to adjust to it...I'm sure that I couldn't have made the adjustment like I did, if it hadn't been for our Greater Ft. Worth Chapter... If I hadn't met some of the members there and started going to our meetings...right away...All of these people in our chapter have been wonderful to us... They know too how we feel . . . It's something you can't live with by yourself. You've got to tell someone else about it.

NARR: The people Louise Dixon can talk to...the people who understand how she feels...are members of the Ft. Worth Chapter of Muscular Dystrophy Associations of America...MDAA was formed in 1950. It was then a

NARR: small group, a few families with dystrophic children. It now has thousands of members, well over 300 local chapters throughout the country, and has raised in its short history some 20 million dollars to fight the battle against M-D. For people like Louise Dixon and her daughter, Debbie, MDAA provides an extensive patient service program, and supports over 40 clinics in the United States. MDAA clinics operate on a "team approach" basis. The team, consisting of medical personnel, social workers, physical and occupational therapists, examines the needs of the patient, then carries out the program indicated, both for the patient and his family. In some areas where clinics are not available, MDAA social workers, trained and experienced in family problems, are on hand to assist in every way possible. Chapters help purchase prescribed orthopedic equipment for the patient...wheel chairs, braces, lifts, a hospital bed if the disease has progressed that far. (PAUSE) Meanwhile, the patient waits and hopes...for a cure.

MRS. DIXON: She knows she has muscular dystrophy but she doesn't know any of the other facts about it. When she plays with the other children, we always carry her outside or have the children come in and play with her. All of the children seem to know that there's something wrong, and they don't...they don't let Debbie know that...they notice the difference...but they just play with her like any other...

MRS. DIXON: Mentally, she has grown just as alert as any other child...she has a wonderful disposition...I don't know how...She has an awful lot of patience...and she...she loves life...

(MUSIC: : IN AND UNDER)

- - - - - - - - - - - - - - - - - - -

DEBBIE: My mother says, "I don't care...I don't care if it's not brand new! I'm gonna keep it!" My mother says, "I don't care if she falls off...but we're still gonna keep it!" I'm gonna go to the rodeo...one of these times when I have my Shetland pony...I can ride ...can ride my Shetland pony as long as I want to... My sister thinks I'll fall off...But I won't fall off.

(MUSIC: : OUT)

- - - - - - - - - - - -

NARR: The Shetland pony was given to Debbie Dixon by Steve Allen on his TV program. Each year, during its annual appeal for funds, MDAA selects one little boy or girl to be National Muscular Dystrophy Poster Child. Debbie Dixon was one such child...one child to symbolize tens of thousands of others...to make public appearances on TV and elsewhere...to bring not only the story... but the sight of M-D to the attention of the American people. For Debbie, the trip to New York was a high point in her life...an experience never to be forgotten...

(MUSIC: : IN AND UNDER)

- - - - - - - - - - - - - - - - - - -

DEBBIE: We had to fly on the airplane...it was too far to drive in the car...It got us sick. My daddy didn't get sick...I got sick three times...My mother only got sick one time...We eat there...one time on the airplane...We had turkey and some beans and some corn...And the, when we was in New York, we went to a cafe to eat...and that man of ours, he didn't even know we eat on the airplane...We had to tell him... My mother did...

(MUSIC: : OUT)

- - - - - - - - - - - -

PART II

NARR: Muscular dystrophy is a progressive disease...Once started, it spreads slowly throughout the body until the entire muscular system is affected, until the patient cannot turn over in bed without assistance. There is no effective policy of containment...and for every victim of M-D, there comes a time when the wheel chair becomes part of everyday living...

MRS. DIXON: Well, we had carried her all these years...and she... she knew she was getting too heavy...especially for me to carry...So last year it was suggested by her physical therapist that we get her a wheel chair... and she just fell in love with the idea. She wanted one...and she took right to it.

DEBBIE: You know Central Park?...We had to walk, walk, walk, down to Central Park!

NARR: She fell in love with the idea -- she wanted one...To most of us a wheel chair would seem like a prison. But to a child who has never walked, never been able to move by herself...who has had to sit by and watch from the sidelines while other children run and play... the wheel chair means a kind of freedom. (PAUSE) Because muscular dystrophy is a progressive disease, because once started there is no stopping it, physical therapy...exercise to help stretch shortened muscles, the use of splints to prevent deformity...brings far from miraculous results...Yet, physical therapy goes

NARR: on...It goes on because of a philosophy of medicine held to by the kind of medical man who will never accept defeat, no matter what the prognosis...a philosophy that is perhaps best expressed by Dr. Arthur S. Abramson...

DR. ABRAMSON: It is our belief that the sick and disabled deserve the best possible care that our society can provide. Medical thinking is often obscured by the hopeless prognosis placed upon many medical conditions. It is becoming more evident that many of the so-called hopelessly ill can be helped towards a fuller life within the limitations of their diagnosis and prognosis. This help will be forthcoming only with the conviction, on the part of the physician and therapist, that even limited gains from therapy may make the difference between happiness and despair.

NARR: A philosophy of medicine from a man who well knows what it means to be crippled...Arthur S. Abramson, M.D. ...winner of the President's Trophy in 1955 for the most outstanding contribution to the field of employment of the handicapped, is himself a World War II paraplegic...He practices from the cramped space of his own wheel chair...But his mind is not cramped, and he looks forward with hope to the future ...a future to be filled with greater, more certain knowledge...and knowledge is man's only weapon in the fight against disease.

NARR: That knowledge is being furthered...day by day, year by year...slowly yet surely, by medical men throughout the world. Perhaps the greatest single source of hope in the battle against muscular dystrophy is medical research. MDAA supports nearly one hundred research projects in colleges and universities both here and abroad. Through these grants-in-aid, awarded to medical scientists in the fields of bio-chemistry, bio-physics, pathology and numorous other categories, new knowledge is slowly gathered, new lines of inquiry are opened...and man begins to understand himself and the world about him a little more each day. Every small discovery is another step forward to the time when muscular dystrophy will no longer take its toll in lives and happiness. To bring that day closer, to speed the pace of scientific investigation, and to provide a clearing house for the study of muscular dystrophy and other related diseases of muscle, MDAA is building a new research center. At the cost of millions of dollars, an eleven story building is now nearing completion in New York City. It has been named The Institute for Muscle Disease.

DR. MANSON: The Institute will house facilities for some forty to fifty scientists working on all aspects of muscle pathology. It will not supplant our present system of grants-in-aid, but rather will supplement it. One of its features, for example, will be a muscle registry, a center for the examination and evaluation of muscle

DR. MANSON: biopsy slides and specimens gathered from all parts of the country and abroad. The Institute will become a repository of information on all aspects of muscle study, serving scientists throughout the world. The building itself will, of course, house the most modern of laboratories and equipment. It has been designed to meet not only the present needs of muscle research, but the needs of the future as well. For example, not many years ago it was almost impossible to predict the extensive use of intricate electronic equipment which is today a vital part of all medical research. Thus, even recently constructed laboratory facilities are now found inadequate because of ever increasing reliance upon electronic tools.

In order to avoid such a situation, an unusual amount of electrical facilities are being installed at The Institute for Muscle Disease in anticipation of even greater use of electronic research equipment in the future.

NARR: Upon completion of the Institute, Dr. Ade T. Milhorat, presently Professor of Clinical Medicine at The New York Hospital-Cornell University Medical Center, will move across the street to take up his ~~shoulders~~ duties as its Director. One of the original founders of MDAA, and Chairman of its Medical Advisory Board, Dr. Milhorat is one of the world's leading authorities on muscular dystrophy. To him, the new building represents the attainment of a long-sought goal...In his words:

VOICE: The Institute for Muscle Disease will be a structure of beauty, representing the highest aspirations of the patients it will serve. Let us not forget, however, that it is primarily a research facility, a tool which must be used with skill and vigor in order to achieve the goals to which both those who will work in it and those responsible for its creation are firmly dedicated.

NARR: Those responsible for its creation are numbered in the millions...they are you. And the goal to which you are dedicated is that a little girl in a wheel chair, and tens of thousands like her, will some day see their dreams come true.

DEBBIE: You know Central Park?...We had to walk, walk, walk down to Central Park!

NARR: The people who will work at the Institute are only a handful...but they hold in their hands, the key, the answer to muscular dystrophy. Their work is complicated...not readily understood by the layman.
If we take at random a few of the grants-in-aid, present and past, awarded by MDA, they would read like this...

VOICE I: The Composition of Isolated Skeletal Muscle, Dr. Gilbert H. Glaser, Yale University School of Medicine...

VOICE 2: Chemical and Mechanical Studies of Actomyosin, Dr. Teru Hayashi, Columbia University.

VOICE 3: Studies on the Specific Reactivity of the End Plate to Quaternary Ammonium Ions...Dr. Walter F. Riker, Jr.,

Cornell University Medical College...

VOICE 4: Integrated Cytological Distribution of Enzyme Systems in Skeletal and Cardiac Muscle...Dr. John W. Harman, St. Kevin's Hospital, Dublin, Eire...

NARR: Translation of these projects into lay language would not only be difficult...it would require more time than we have available. But, taken together, they mean in essence, one thing...basic research...detailed investigations into the fundamental processes by which man lives...into the very nature of living matter. With the conquest of polio -- last of the serious infectious diseases -- now almost a certainty, science now turns its major attention to the diseases of degeneration, the diseases that come from <u>within</u>... and not from <u>without</u> in the form of bacteria or viruses...

And it is in pure, basic research that the answers will be found...Answers, according to Dr. Manson, to many things...

DR. MANSON: When we consider that before birth we are encased in a mass of muscle, the womb...that during life we are sustained by a mass of muscle, the heart...that even in the course of an ordinary day we rely upon the sound functioning of muscle to do such apparently simple things as to sit, walk, lift a cigarette, open a book, turn on a television set...and when we remember that we don't actually know what makes a muscle relax or contract at the present time, the basic importance

DR. MANSON: of this research may be realized. It is not inconceivable that the results of these investigations will extend to other fields such as heart disease, arteriosclerosis, and other conditions of bodily degeneration.

NARR: In basic research then lies the major hope of a future...for Debbie Dixon...for her mother, Louise...

MRS. DIXON: Right now, I feel that...something is going to be done in time...for Debbie...for a lot of them...And I just feel wonderful about it, that's all...I don't know how to explain it...We just...we're going ahead with her schooling. I think that is a step for us... looking forward to the future...I believe we are going to have one...I really do.

NARR: A future...for Debbie...for a lot of them...both children and adults...For we must not forget grown people account for one-third of the total number of M-D cases...And the dystrophic adult faces special problems...problems, we might say, of the spirit... problems of faith and belief...Perhaps no one has expressed this difficulty better than Louise Yount, vice president of MDAA...and herself a dystrophic since the age of 18...Of the person stricken later in life, Louise Yount has this to say...

MISS YOUNT: There is imposed upon the dystrophic adult the necessity to relinquish many things which the average man considers normal to existence. And he must guard against wallowing in the mud of self-pity. Yet, as he continually retreats from life, he might come to

MISS YOUNT: see himself trapped like an animal. Then it is that he might even cry out against God and this poses the most significant problem in the life of the dystrophic adult for his faith in God is put to a supreme test. First, he might quiz himself saying, "Why did this happen to me? Is there a just God in heaven that permits these things?" And as the victim tries to keep his faith, his burden is more than doubled by the faulty thinking of some who insinuate that illness is a compensation for past sins. And so he might come to find himself so rebellious with God that he would quickly cast away his only source of strength and salvation -- the only avenue through which he can sustain his soul and spirit. This, without question, is the most difficult problem of all.

NARR: But where many of us who are older look too much into the past -- a young child looks forward...And so, no matter in what faith or creed a child is reared, that faith is not easily shaken...Debbie Dixon lives in a wheel chair...She is weak...and yet, she is strong.

DEBBIE: Yes, Jesus loves me
For the Bible tells me so...
He is weak but he is strong,
Yes, Jesus loves me
For the Bible tells me so
Little ones to him belong,
He is weak but he is strong

(MUSIC: : IN AND UNDER)

- - - - - - - - - - - - - - - - - -

NARR: To a child with muscular dystrophy, the world is a small place...the space of a wheel chair, the length of a bed...In an effort to make the world a little larger for these children, MDAA prepared the program you have just heard. You have met Debbie Dixon, and have listened to her mother...You have heard from the doctors, and from a woman who, although an M-D victim since the age of 18, has not lost her courage or her faith, but who has devoted her life to the conquest of a disease she must fight every day of her life. You have heard...and we hope that now you understand... You have heard...and we hope, in a way, you have seen, in your mind's eye, what muscular dystrophy is, what it means...For in the words of Dr. Ade T. Milhorat... "To see is to know...To know is to be convinced...in muscular dystrophy...to be convinced, is to act."

(MUSIC: : UP TO FINISH)
